(1) The name of the applicant to whom the permit may be issued.

(2) A map of the proposed permit area and a map and list, including names and addresses, of all known owners of surface and mineral estates within the proposed permit area as shown by the most recent county assessor's property tax schedule.

(3) Documents evidencing the applicant's right to enter the proposed permit area and conduct mining and reclamation.

(4) A listing of all parties, including addresses and telephone numbers, that have an ownership and controlling interests in the operation. Alternatively, the applicant may submit the applicant's most recent 10K form required by the United States Securities and Exchange Commission.

(5) A statement of all mining operations within the United States owned, operated or directly controlled by the applicant, owner or operator and by persons or entities that directly control the applicant and the names and addresses of regulatory agencies with jurisdiction over the environmental aspects of those operations and that could provide a compliance history for those operations over the preceding 10 years.

(6) The applicant shall designate an agent and provide the agent's street address for the service of notices and orders from the Director. This information shall be kept current if a permit is granted.

(7) To avoid duplication and conflicting requirements, the applicant may include information from environmental permit relevant to the application. Permits

issued by other governmental agencies shall be accepted by the Director to the extent such permits satisfy the requirements of the Act and 19.10 NMAC.

(8) A copy of the proposed form of notices required under 19.10.9 NMAC.

(9) The permit fee as determined pursuant to 19.10.2 NMAC.

(10) Where physically separate but interrelated mining operations are located in close proximity to each other and are under the control of the same owner or operator, the applicant may request or the Director may determine to issue one permit for all of the operations and require only one permit application.

(11) A listing of all federal and state permits required for the operation.

(12) Sampling and Analysis Plan

(a) The applicant shall submit a proposed sampling and analysis plan (SAP) to the Director for review prior to baseline data collection. Six copies should be submitted to facilitate the review. The proposed SAP should contain, at a minimum, the following information for each relevant resource:

- (i)** sampling objectives;
- (ii)** a list of data to be collected;
- (iii)** methods of collection;
- (iv)** parameters to be analyzed for;
- (v)** maps stating proposed sampling locations;
- (vi)** sampling frequency;
- (vii)** laboratory and field quality assurance plans; and
- (viii)** a brief discussion supporting the proposals.

(b) The Director shall distribute the proposed SAP to the Environment Department, Department of Game and Fish, and other agencies as determined by the Director. The agencies will have 30 days from receipt of the proposed SAP to submit written comments to the Director. Any written comments received within 30 days shall be provided to the applicant. The Director shall also provide written comments and recommendations to the applicant on the adequacy of the SAP.

(c) The applicant may request a conference with the Director to discuss the SAP.

(13) Baseline Data The level of detail required for environmental baseline information may vary depending on the location, size, scope and type of mining operation and site-specific characteristics. Baseline data shall describe the environment of the proposed permit area and, to the extent practicable, the affected area. Data gathered or available to the applicant for other purposes, such as a site assessment previously submitted, may be used in part to meet the requirements of this Part. Baseline data shall be collected over a period of at least 12 months for evaluation of water quality and quantity, wildlife and wildlife habitat and vegetation. The Director may require studies of longer duration than 12 months to address unique, site-specific factors. Baseline data shall include, as applicable:

(a) A description of the climatological factors representative of the permit area including precipitation, prevailing winds and temperature.

(b) Topographic maps clearly showing: the boundaries of the permit area, and the location of all buildings within 1/2 mile of the permit area; the kinds of information set forth on U.S.G.S. topographic maps; and all man-made features within the permit area existing on the date of application. The map shall be at a scale of 1 inch equals 2000 feet (1:24,000) or a scale approved by the Director to accurately represent the permit and potentially affected area.

(c) A map which delineates existing vegetation types and a description, including cover, density, and productivity of the plant communities within the proposed permit area. The description of the vegetation types and plant communities may be based upon data from adjacent areas if vegetation within the permit area has been adversely impacted by previous mining operations or other disturbances. Included in this description shall be the results of an inventory conducted for any sensitive, threatened or endangered plant species within the permit area.

(d) Wildlife information shall be developed for the permit area and, to the extent practicable, the affected area. Where species may be impacted beyond these areas, the information shall include, to the extent practicable, the area of potential impact. Wildlife information shall include the following:

(i) a map showing habitat types. The applicant is encouraged to contact the Director for recommendations on the preferred habitat classification system. Special or unique wildlife habitat features (e.g., cliffs, talus slopes, ponds, springs, known nests, etc.) within the area of potential impact by the mining operation, shall also be mapped.

(ii) a list of species potentially occurring on the permit or affected area and any additional species potentially impacted by the mining operations. This list must also indicate legal status of each species and which species were confirmed present during baseline studies.

(iii) data gathered shall include: presence/absence, distribution by season and habitat type, and relative abundance. Key habitat areas shall be identified such as calving/fawning, nesting, foraging, wintering areas, etc. The quality and quantity of the data must be suitable for measuring the success of reclamation and the impacts of the mining operation. Survey methods must be suitable for each species.

(iv) information collected pursuant to this Part shall be summarized in a report which includes a discussion of the faunal characteristics of the habitats in the permit and affected area. The report shall discuss the anticipated direct, indirect, short- and long-term impacts associated with the proposed operation.

(e) If revegetation is part of the reclamation plan, a description of the thickness and nature of the topsoil, if any, over the proposed permit area. A soil survey and soil analyses conducted in accordance with standard methods acceptable to the Director may be required to show variations in topsoil depth and suitability. Where the applicant proposes to use something other than topsoil, the application shall provide the results of analyses as necessary to determine the suitability of the proposed materials for use as a topdressing.

(f) A description of the ore body in the proposed permit area, including geologic plans and cross-sections depicting the nature and depth of overburden, mineralized zone or ore body, aquifers and springs. A description of the potential for geochemical alteration of overburden, ore body and other materials present within the permit area. Detailed analyses may be required if the substrata is suspected to contain substances that are likely to create acid drainage or might degrade surface water or ground water or hinder reclamation.

(g) Surface water and ground water information shall include the following:

(i) a map indicating the location of surface waters and the location and size of watersheds in and adjacent to the proposed permit area. The map shall depict all watercourses, lakes, reservoirs, springs, and riparian and wetland areas. Streams shall be classified as ephemeral, intermittent or perennial. The map shall identify all watercourses, lakes, springs, and riparian and wetland areas into which surface or pit drainage will be discharged or may possibly be expected to reach;

(ii) a description of surface drainage systems sufficient to identify the seasonal variations in surface water quantity and quality within the proposed permit and affected areas to the extent possible;

(iii) lithology and thickness of each geologic unit below the site indicating which units are water bearing, cross sections and potentiometric maps indicating the location of wells and the ground water flow direction in the vicinity of the site, and references or sources for this information;

(iv) a description of the aquifer characteristics including total dissolved solids concentration, maximum and minimum depths to ground water, direction of flow and gradients, transmissivity and storativity, and a general description of ground water quality, and references or sources for this information; and

(v) a determination of the probable hydrologic consequences of the operation and reclamation, on both the permit and affected areas, with respect to the hydrologic regime, quantity and quality of surface and ground water systems that may be affected by the proposed operations, including the dissolved and suspended solids under seasonal flow conditions.

(h) A description and delineation on topographic maps of any prior mining operations which may have affected the permit area including, if known, the type of mining and processing method and a list of any processing chemicals or reagents used.

(i) A list and accompanying map indicating all sites on or eligible for listing on either the National Register of Historic Places and/or the State Register of Cultural Properties and known cemeteries and human burials within the proposed permit area. Included with this list and map shall be a description of the effects the proposed mining operations may have on these sites and any proposed mitigation measures.

(j) A description of the present and historic land use of the permit area, the general patterns of land use in the surrounding areas, and a narrative of land capability and productivity based upon U.S. Soil Conservation Service land use capability classes or a similar classification.

(14) The Director may contract with and the applicant shall pay for qualified experts for the following:

(a) Review and comment to the Director on the adequacy of baseline data prior to submission of the permit application.

(b) Recommend to the Director additional baseline data that may be necessary in the review of the proposed mining activity.

(c) Recommend to the Director methodology guidelines for the collection of baseline data;

(d) Review and comment on the permit application;

(e) Prepare an environmental evaluation, analysis and assessment of the permit application which complies with Subsection D of 19.10.6.605 NMAC.

(15) A detailed description of the proposed mining operation and reclamation plan, including:

(a) A description of the type and method of mining and the engineering techniques proposed, and how the operation will meet the performance and reclamation standards and requirements of this Part.

(b) A map or maps at a scale approved by the Director and an approximate schedule or timetable indicating the mining operations including number of acres of land to be disturbed. A permittee will be required to follow the sequence described in the schedule or timetable, unless modified or revised. A permittee will not be required to meet specific dates for initiation or completion of mining according to the schedule or timetable.

(c) Maps and plans indicating the location, size and capacities for the mine facilities including:

- (i)** leach pads, heaps, ore dumps and stockpiles;
- (ii)** impoundments;
- (iii)** ponds;
- (iv)** diversions;
- (v)** disposal systems;
- (vi)** pits;
- (vii)** tailings disposal facilities;
- (viii)** mills;
- (ix)** water treatment facilities;
- (x)** storage areas for equipment, vehicles, chemicals and solutions;
- (xi)** topsoil and topdressing stockpiles;
- (xii)** waste rock dumps; and
- (xiii)** other facilities or structures.

(d) A contingency plan to mitigate impacts to wildlife when there has been an emergency or accidental discharge of toxic substances that may impact wildlife.

(e) A description of measures which will be undertaken to reduce sedimentation from the permit area and a plan for the monitoring of non-point source sediment pollution from the disturbed area.

(f) If a post-mining land use is proposed, a detailed description of how the disturbed area will be reclaimed to achieve that use and written approval of the surface owner for the proposed use.

(g) A description of the proposed reclamation plan, including, a detailed description of how the disturbed area will be reclaimed to meet the requirements of Section 69-36-7(H)4 and the performance and reclamation standards and requirements of this Part.

(h) A map or maps at a scale approved by the Director and an approximate schedule indicating the reclamation activities to take place on disturbed areas of the mine site including the number of acres to be reclaimed. A permittee will be required to follow the sequence described unless modified or revised.

(i) A topographic map of the anticipated surface configuration of the permit area upon the completion of reclamation operations. The map shall be at contour intervals and scale approved by the Director.

(j) A description of the potential for the generation of acid or other toxic drainage from overburden and waste materials following reclamation and a design that incorporates measures to reduce, to the extent practicable, the formation of acid or other toxic drainage that may otherwise occur following reclamation to prevent releases that cause federal or state standards to be exceeded.

(k) A detailed description of how all waste, waste management units, pits, heaps, pads and any other storage piles will be designed, sited and constructed in a manner that facilitates, to the maximum extent practicable, contemporaneous reclamation and are consistent with the approved reclamation plan.

(16) Additional information necessary for evaluation of the application as required by the Director. [7-12-94, 2-15-96; 19.10.6.602 NMAC – Rn, 19 NMAC 10.2.6.602, 05-15-2001; A, 05-31-2001]

19.10.6.603 PERFORMANCE AND RECLAMATION STANDARDS AND REQUIREMENTS:

The permit area will be reclaimed to achieve a self-sustaining ecosystem appropriate for the life zone of the surrounding areas following closure unless conflicting with the approved post-mining land use. Each reclamation plan must be developed to meet the site-specific characteristics of the mining operation and the site.

A. Most Appropriate Technology and Best Management Practices The mining operation and the reclamation plan shall be designed and operated using the most appropriate technology and the best management practices.

B. Contemporaneous Reclamation Contemporaneous reclamation is required to the maximum extent practicable and in a manner that is consistent with the approved reclamation plan.

C. Assure Protection The mining operation and completed reclamation shall meet the following requirements established to assure protection of human health and safety, the environment, wildlife and domestic animals.

(1) Signs, Markers and Safeguarding Measures will be taken to safeguard the public from unauthorized entry into shafts, adits, and tunnels and to prevent falls from highwalls or pit edges. Depending on site-specific characteristics, the following measures shall be required:

- (a)** closing shafts, adits or tunnels to prevent entry;
- (b)** posting warning signs in locations near hazardous areas;
- (c)** restricting access to hazardous areas;
- (d)** marking the permit area boundaries;
- (e)** posting a sign at the main entrances giving a telephone number of a person to call in the event of emergencies related to the mine; or
- (f)** other measures as needed to protect human safety.

(2) Wildlife Protection Measures shall be taken to minimize adverse impacts on wildlife and important habitat. Based on site-specific characteristics, the following measures will be required:

- (a)** restricting access of wildlife and domestic animals to toxic chemicals or otherwise harmful materials;
- (b)** minimizing harm to wildlife habitat during mining; and
- (c)** reclaiming areas of wildlife habitat if not in conflict with the approved post-mining land use.

(3) Cultural Resources Cultural resources listed on or eligible for listing on the National Register of Historic Places or the State Register of Cultural Properties, and any cemeteries or burial grounds shall be protected until clearance has been granted by the State Historic Preservation Office or other appropriate authority.

(4) Hydrologic Balance Operations shall be planned and conducted to minimize change to the hydrologic balance in both the permit and potentially affected areas. If not in conflict with the approved post-mining land use, reclamation shall result

in a hydrologic balance similar to pre-mining conditions unless non-mining impacts have substantially changed the hydrologic balance.

(a) Operations shall be designed so that non-point source surface releases of acid or other toxic substances shall be contained within the permit area, and that all other surface flows from the disturbed area are treated to meet all applicable state and federal regulations.

(b) The disturbed areas shall not contribute suspended solids above background levels, or where applicable the Water Quality Control Commission's standards, to intermittent and perennial streams.

(c) To provide data to determine background levels for surface water entering the permit area, appropriate monitoring shall be conducted on drainages leading into the permit area.

(d) All diversions of overland flow shall be designed, constructed and maintained to minimize adverse impacts to the hydrologic balance and to assure the safety of the public.

(i) No diversion shall be located so as to increase the potential for landslides.

(ii) Unless site-specific characteristics require a different standard which is included in the approved permit, diversions which have watersheds larger than 10 acres shall be designed, constructed and maintained to safely pass the peak runoff from a 10-year, 24-hour precipitation event.

(iii) All diversion designs which have watersheds larger than 10 acres shall be certified by a professional engineer registered in New Mexico as having been designed in accordance with 19.10 NMAC. Diversion designs shall be kept on-site or otherwise be made available, upon request, to the Director for inspection.

(iv) When no longer needed, temporary diversions shall be removed and the disturbed area reclaimed.

(5) Stream Diversions When streams are to be diverted, the stream channel diversion shall be designed, constructed, and removed in accordance with the following:

(a) unless site-specific characteristics require different measures to meet the performance standard and are included in the approved permit, the combination of channel, bank and flood plain configurations shall be adequate to safely pass the peak run-off of a 10-year, 24-hour precipitation event for temporary diversions, a 100-year, 24-hour precipitation event for permanent diversions;

(b) the design and construction of all intermittent and perennial stream channel diversions shall be certified as meeting 19.10 NMAC by a professional engineer registered in New Mexico. As-built drawings shall be completed promptly after construction and be retained on site or otherwise made available upon request to the Director; and

(c) when no longer needed, temporary stream channel diversions shall be removed and the disturbed area reclaimed.

(6) Impoundments If impoundments are required they shall be designed, constructed and maintained to minimize adverse impacts to the hydrologic balance and adjoining property and to assure the safety of the public.

(a) Unless site-specific characteristics require different measures to meet the performance standard and are included in the approved permit, impoundments having earthen embankments but not subject to the jurisdiction of the Mine Safety and Health Administration or the State Engineer shall:

(i) have a minimum elevation at the top of the settled embankment of 1.0 foot above the water surface in the pond with the spillway flowing at the design depth;

(ii) have a top width of the embankment not less than 6 feet;

(iii) have combined upstream and downstream side slopes of the settled embankment not less than 5 horizontal : 1 vertical with neither slope steeper than 2 horizontal : 1 vertical. Slopes shall be vegetated or otherwise stabilized to control erosion;

(iv) have the embankment foundation cleared of all vegetative matter, all surfaces sloped to no steeper than 1 horizontal : 1 vertical and the entire foundation area scarified;

(v) have fill material free of vegetative matter and frozen soil;

(vi) have spillways provided to safely discharge the peak runoff of a 25-year, 24-hour precipitation event, or an event with a 90-percent chance of not being exceeded for the design life of the structure; or

(vii) have other site-specific design criteria for embankments as long as they result in a minimum static safety factor of 1.3 with water impounded to the design level;

(viii) be designed and certified by a professional engineer registered in New Mexico as having been designed and constructed in accordance with 19.10

NMAC. As-built drawings shall be completed promptly after construction and be retained on site or otherwise made available upon request to the Director; and

(ix) if necessary for sediment control be, in place before any other disturbance to the watershed for the impoundment.

(b) When no longer required, impoundments shall be graded to achieve positive drainage unless:

(i) the surface estate owner has requested in writing that they be retained;

(ii) they are consistent with the approved reclamation plan; and

(iii) they are appropriate for the post-mining land use or the self-sustaining ecosystem.

(7) **Minimization of Mass Movement** All man-made piles such as waste dumps, topsoil stockpiles and ore piles shall be constructed and maintained to minimize mass movement.

(8) **Riparian and Wetland Areas** Disturbance to riparian and wetland areas shall be minimized during mining. Adverse effects to riparian and wetland areas shall be mitigated during reclamation unless the mitigation conflicts with the approved post-mining land use.

(9) **Roads** Roads shall be constructed and maintained to control erosion.

(a) Drainage control structures shall be used as necessary to control runoff and to minimize erosion, sedimentation and flooding. Drainage facilities shall be installed as road construction progresses and shall be capable of safely passing a 10-year, 24 hour precipitation event unless site-specific characteristics indicate a different standard is appropriate and is included in the approved permit. Culverts and drainage pipes shall be constructed and maintained to avoid plugging, collapsing, or erosion.

(b) Roads to be constructed in or across intermittent or perennial streams require site-specific designs to be submitted with the permit application.

(c) Roads to be made permanent must be approved by the surface owner and be consistent with the approved post-mining land use.

(10) **Subsidence Control** Underground and in situ solution mining activities shall be planned and conducted, to the extent technologically and economically feasible, to prevent subsidence which may cause material damage to structures or property not owned by the operator.

(a) Underground and in situ solution mining activities near any aquifer that serves as a significant source of water supply to a public water system shall be conducted so as to avoid disruption of the aquifer and consequent exchange of ground water between the aquifer and other strata.

(b) Underground and in situ solution mining activities conducted beneath or adjacent to any perennial stream must be performed in a manner so that subsidence is not likely to cause material damage to streams, water bodies and associated structures.

(11) Explosives Blasting shall be conducted to prevent injury to persons or damage to property not owned by the operator. Fly rock shall be confined to the permit area. The Director may require a detailed blasting plan, pre-blast surveys or specify blast design limits to control possible adverse effects to structures.

D. Site Stabilization & Configuration The permit area shall be stabilized, to the extent practicable, to minimize future impact to the environment and protect air and water resources. The final surface configuration of the disturbed area shall be suitable for achieving a self-sustaining ecosystem or approved post-mining land use.

(1) Final slopes and drainage configurations must be compatible with a self-sustaining ecosystem or approved post-mining land use.

(2) Backfilling or partial backfilling shall be required only when necessary to achieve reclamation objectives that cannot be accomplished through other mitigation measures.

(3) All reconstructed slopes, embankments and roads shall be designed, constructed and maintained to minimize mass movement.

(4) Measures must be taken to reduce, to the extent practicable, the formation of acid and other toxic drainage that may otherwise occur following closure to prevent releases that cause federal or state standards to be exceeded.

(5) Nonpoint source surface releases for acid or other toxic substances shall be contained within the permit area.

E. Topsoil Where sufficient topsoil is present, the operator shall take measures to preserve it from erosion or contamination and assure that it is in a usable condition for sustaining vegetation when needed. The following requirements shall be met unless site-specific characteristics mandate different requirements and those requirements are included in the approved permit.

(1) Topsoil and topdressing shall be sampled and analyzed for vegetation establishment suitability:

(a) sample spacing and interval shall be based on site-specific materials; and

(b) suitability will be identified by analysis based on site-specific materials.

(2) If revegetation is a component of the reclamation plan and if sufficient topsoil is present in the disturbed or borrow areas, it shall be collected and preserved to the extent practicable. Sufficient topsoil means that it is of sufficient quality to conform to the definition of topsoil. Any necessary topdressing may be obtained from areas to be disturbed or borrow areas and shall be salvaged separately from other materials as needed to ensure its availability for distribution when needed for reclamation.

(3) Where direct distribution of topsoil or topdressing is not possible, it shall be stockpiled separately and in a manner to prevent loss of the resource.

(4) Topsoil and topdressing shall be distributed in a manner to establish and maintain vegetation, consistent with the approved permit.

(5) After distribution, topsoiled and topdressed areas shall be stabilized to protect loss of the resource.

(6) Where topsoil has been stockpiled for more than one year, the permittee may be required to conduct analyses to determine if amendments are necessary.

F. Erosion Control Reclamation of disturbed lands must result in a condition that controls erosion. Revegetated lands must not contribute suspended solids above background levels, or where applicable the Water Quality Control Commission's standards, to streamflow of intermittent and perennial streams. Acceptable practices to control erosion include but are not limited to the following:

(1) stabilizing disturbed areas through land shaping, berming, or grading to final contour;

(2) minimizing reconstructed slope lengths and gradients;

(3) diverting runoff;

(4) establishing vegetation;

(5) regulating channel velocity of water;

(6) lining drainage channels with rock, vegetation or other geotechnical materials; and

(7) mulching.

G. Revegetation To obtain the release of financial assurance revegetated lands must meet the following standards:

(1) Revegetation success for a self-sustaining ecosystem shall be determined through comparison of ground cover, productivity and diversity and shall be made on the basis of the following approved reference areas; through the use of technical guidance procedures published by the U. S. Department of Agriculture; other reasonably attainable standards approved by the Director; or a combination. Data collection shall be performed using the same methods and techniques on reference areas and reclaimed areas.

(a) foliage or basal cover and productivity of living perennial plants of the revegetated area shall be established equal to 90 percent of the reference area or equal to the approved revegetation standard to within a 90-percent statistical confidence;

(b) diversity of plant life forms (woody plants, grasses, forbs) shall consider what is reasonable based on the physical environment of the reclaimed area; and

(c) woody plant species shall be established to the approved density with an 80 percent statistical confidence.

(2) For areas for which the approved post-mining land use is for wildlife habitat or forest land, success of vegetation shall be determined on the basis of tree or shrub stocking (density) and ground cover.

(a) The ground cover of living perennial plants shall be equal to 90 percent of the native ground cover of the reference area or the approved standard to within a 90 percent statistical confidence and shall be adequate to control erosion.

(b) Tree stocking for forest land shall have stocking rates of plant species equal to 90 percent of the approved reference area or other approved standard with an 80 percent statistical confidence and shall be adequate to control erosion.

(c) If wildlife habitat is to be the post-mining land use, the operator shall select and use plant species on reclaimed areas based on the following criteria:

(i) their proven nutritional value for fish and wildlife;

(ii) their uses as cover and security for wildlife;

(iii) their ability to support and enhance fish and wildlife habitat; and

(iv) distribute plant life forms to maximize benefits of edge effect, cover and other benefits for fish and wildlife.

(3) Revegetation for other post-mining land shall be consistent with the approved post-mining land use. Site-specific standards may include standards for foliar or basal cover, production and diversity and will be included in the approved permit.

H. The operation will be designed to meet without perpetual care all applicable environmental requirements of the Act, 19.10 NMAC and other laws following closure.

[7-12-94, 2-15-96; 19.10.6.603 NMAC – Rn, 19 NMAC 10.2.6.603, 05-15-2001]

19.10.6.604 COMPLIANCE WITH OTHER APPLICABLE LAWS:

A. Enforcement of other state or federal laws, regulations or standards shall be conducted by the agency charged with the responsibility under the applicable state or federal law, regulation or standard.

B. Enforcement of non-point source surface releases of acids or other toxic substances shall be performed by the Environment Department.

C. During the term of a permit issued pursuant to 19.10 NMAC, the permittee must maintain environmental permits required for the permit area. Revocation or termination of such a permit or the forfeiture of financial assurance related to the permit area by another governmental agency is adequate grounds for the Director to issue a cessation order pursuant to 19.10.11 NMAC.

[7-12-94, 2-15-96; 19.10.6.604 NMAC – Rn, 19 NMAC 10.2.6.604, 05-15-2001]

19.10.6.605 PERMIT APPROVAL REQUIREMENTS:

A. As soon as practicable after receipt of a permit application, the Director shall notify the applicant in writing whether the application is complete. If the application is not complete, the notice shall specify the items missing from the application.

B. Within 30 days of receipt of a notice from the Director that the application is complete, the applicant shall, in the form approved by the Director, give public notice of the application pursuant to 19.10.9 NMAC.

C. The Director shall deliver copies of the complete application or appropriate sections (except those parts of the application designated confidential under Subsection B of 19.10.6.602 NMAC, provided, however, that the Director shall include with the application a list of the parts withheld and will provide such parts at an agency's specific request) to the following agencies which shall have 60 days in which to provide comments to the Director: the Environment Department; the Department of Game and Fish; the State Forestry Division; the State Historic Preservation Office; and the State Engineer; if the operation is on state or federal land, the appropriate state or federal land management agency; and any other agency the director deems appropriate.

D. The Director shall prepare a draft environmental evaluation which shall include an analyses of the reasonably foreseeable impacts of proposed activities on the pre-mining and post-mining environment and the local community, including other past, present and reasonably foreseeable future actions, regardless of the agency or persons

that undertake the other action or whether the actions are on private, state or federal land. The Director may contract with, and the applicant should pay for, a third party to prepare the analysis and assessment.

E. The Director shall, within 30 days after completion of the technical review of the application and the draft environmental evaluation, notify the applicant in writing whether the application is approvable, or, if not approvable, shall specify in detail what additional submittal or changes are required. The Director shall, upon submittal of additional information or changes, notify the applicant whether the resubmitted application is approvable or if the additional submittal or changes are not sufficient.

F. After receipt of written notice from the Director that the application is approvable, the applicant shall submit a proposal for financial assurance as determined under 19.10.12 NMAC.

[7-12-94, 2-15-96; 19.10.6.605 NMAC – Rn, 19 NMAC 10.2.6.605, 05-15-2001]

19.10.6.606 PERMIT APPROVAL OR DENIAL:

A. The Director may issue a permit subject to conditions necessary to meet the requirements of the Act and 19.10 NMAC.

B. No permit shall be issued until the Director finds, in writing, that:

(1) The permit area will achieve a self-sustaining ecosystem appropriate for the life zone of the surrounding areas following closure unless conflicting with the approved post-mining land use.

(2) The applicant has provided evidence that all other applicable state and federal permits required to be obtained by the new mining operation either have been or will be issued before the activities subject to those permits begin.

(3) The Secretary of the Environment Department has provided a written determination stating that the permit applicant has demonstrated that the activities to be permitted or authorized will be expected to achieve compliance with all applicable air, water quality and other environmental standards if carried out as described in the permit application. This determination shall address applicable standards for air, surface water and ground water protection enforced by the Environment Department, or for which the Environment Department is otherwise responsible.

(4) The permit application is complete.

(5) The permit application fee, and any fees for the environmental evaluation, have been paid and the financial assurance is adequate and has been provided.

(6) Reclamation in accordance with the proposed reclamation plan is economically and technically feasible.

(7) The mining or reclamation operation is designed to meet, without perpetual care, all applicable environmental requirements following closure.

(8) The applicant, the operator or owner or any persons or entities directly controlled by the applicant, operator, owner or any persons or entities that directly control the applicant, operator or owner:

(a) Are not currently in violation of the terms of another permit issued by the Division or in violation of any substantial environmental law or substantive environmental regulation at a mining operation in the United States, which violation is unabated and is not the subject of appeal, and have not forfeited or had forfeited financial assurance required for any mining, reclamation or exploration permit in the United States. For purposes of this Section, a substantial environmental law or substantive environmental regulation is one which is intended to protect natural resources from degradation and does not include violations of recordkeeping or reporting requirements. If a violation occurred prior to the initiation of a legal relationship between the permit applicant and the violator, it shall not be considered for this purpose; and

(b) Have not demonstrated a pattern of willful violations of the Act or other New Mexico environmental statutes. If a violation occurred prior to the initiation of a legal relationship between the permit applicant and the violator, it shall not be considered for this purpose.

(9) An environmental evaluation has been prepared which meets the requirements of Section 69-36-9 of the Act.

(10) If the proposed mining operation is on state or federal lands, the appropriate land management agency approves the proposed mining operation if approval by the land management agency is required under that agency's regulations.

(11) The public participation requirements of 19.10.9 NMAC have been met.

(12) The applicant has submitted a notarized statement that he agrees to comply with the performance and reclamation standards and requirements of the permit, the Act, and 19.10 NMAC and allows the Director to enter the permit area without delay until release of the financial assurance.

[7-12-94, 2-15-96; 19.10.6.606 NMAC – Rn, 19 NMAC 10.2.6.606, 05-15-2001]

19.10.6.607 PERMIT TERM:

A. The permittee shall maintain a permit until financial assurance is released under 19.10.12 NMAC.

B. The term of a permit shall not exceed 20 years. The term of renewals of a permit shall not exceed 10 years.

C. For any permits issued for more than five years, the Director shall review these permits at least every five years to determine compliance with the Act and 19.10 NMAC and to determine if the conditions are accurately reflected in the approved permit.

(1) In determining the frequency of review, the Director shall consider, among other factors:

(a) the current level of activity at the operation;

(b) the compliance history of the operation;

(c) complaints received about the operation;

(d) the effect amendments to the Act and 19.10 NMAC may have on the operation; and

(e) the status of other environmental permits and compliance thereunder.

(2) After this review, the Director shall notify the permittee of any required modifications or revisions of the permit necessary to ensure compliance with the Act and 19.10 NMAC.

(3) If an approvable application for the required modification or revision has not been made within 90 days of the date of initial notification, the Director may order the cessation of the mining operation.

D. A permit shall be reviewed and may be required to be modified or revised for any of the following:

(1) additional applicable requirements under the Act or 19.10 NMAC; or

(2) the Director determines that the permit contains a material mistake or that inaccurate statements were made in establishing the terms or conditions of the permit.

E. The Director shall periodically review the amount of financial assurance filed with the Director under 19.10.12 NMAC. The Director may require adjustments to the amount of financial assurance to reflect inflationary increases or increases in the anticipated costs of reclamation.

F. If the permit area contains property owned by the federal or state government, the expiration or termination of the government's authorization for the permittee to conduct mining operations on the property automatically suspends the permittee's authority to continue mining operations on the property, although not necessarily reclamation operations, by the permit issued under 19.10 NMAC.

[7-12-94, 2-15-96; 19.10.6.607 NMAC – Rn, 19 NMAC 10.2.6.607, 05-15-2001]

19.10.6.608 PERMIT MODIFICATIONS OR REVISION:

A. A permit modification or revision for a mining operation is required for each new discrete processing, leaching, excavation, storage or stockpile unit located within the permit area and not identified in the permit and for each expansion of such a unit identified in the permit that exceeds the design limits specified in the permit.

B. A permit modification or revision shall be required for any change in the approved reclamation plan.

C. An application for a permit modification or revision shall be in a format acceptable to the Director. A permit modification or revision will not be granted unless the Director determines that the proposed modification or revision meets the requirements of 19.10.6 NMAC.

D. Revisions are modifications that require public notice and an opportunity for public hearing pursuant to 19.10.9 NMAC. The Director shall review each request for a permit modification to determine whether it must be processed as a revision.

(1) The Director shall consider the following factors and their level of impact to determine whether a permit modification would have a significant environmental impact:

(a) Whether the proposed change would authorize an expansion of design limits beyond that currently authorized by the permit that:

(i) Would be located in or is expected to have a direct surface impact on wetlands, springs, perennial or intermittent streams, lakes, rivers, reservoirs or riparian areas.

(ii) Is expected to have a direct impact on ground water that has a total dissolved solids concentration of less than 10,000 mg/l.

(iii) Is expected to result in point or non-point source surface or subsurface releases of acid or other toxic substances from the permit area.

(iv) Would be located in designated critical habitat areas as determined in accordance with the federal Endangered Species Act of 1973 or in areas determined by the Department of Game and Fish likely to result in an adverse impact on an

endangered species designated in accordance with the Wildlife Conservation Act, Sections 17-2-37 through 17-2-46 NMSA 1978 or by the State Forestry Division for the Endangered Plants Act, Section 75-6-1 NMSA 1978.

(v) Would adversely impact cultural resources listed on either the National Register of Historic Places or the State Register of Cultural Properties.

(vi) Would be located in a known cemetery or other burial ground.

(vii) Would be located in an area designated as a Federal Wilderness Area, Wilderness Study Area, Area of Critical Environmental Concern, or an area within the national Wild and Scenic River System.

(b) Whether the proposed change would result in a significant increase in the amount of financial assurance as determined by the Director; or

(c) Whether the proposed change would significantly depart from the nature or scale of the permit.

(2) An application for a permit modification or revision shall be accompanied by sufficient information for the Director to determine whether any of the factors listed in 19.10.6.608 NMAC are present.

(3) The Director shall consult with the Department of Environment, the Department of Game and Fish, State Forestry, applicable state or federal land management agency, or the State Historic Preservation if factors listed in Subsection D of 19.10.6.608 NMAC are present relevant to the agency's area of expertise.

E. The following actions do not require permit modifications:

(1) the construction, relocation or modification of roads within the disturbed area that does not change the reclamation plan;

(2) placement or movement of support buildings, equipment areas, maintenance shops, monitoring facilities, wells, power lines, power poles, substations, and communications facilities within the disturbed area that does not change the reclamation plan;

(3) the movement of tanks, pipelines, utilities, and portable units; and

(4) changes to facilities subject to regulation under the Solid Waste Act.

[7-12-94, 2-15-96, 12-29-2000; 19.10.6.608 NMAC – Rn, 19 NMAC 10.2.6.608, 05-15-2001; A, 05-31-2001]

19.10.6.609 PRIOR RECLAMATION:

A. The owner or operator of a new mining operation who has completed some or all reclamation measures prior to the effective date of 19.10 NMAC may apply for an inspection of the reclaimed areas prior to August 31, 1994.

B. The Director shall release the owner or operator from further requirements of the Act and 19.10 NMAC if, after an inspection of the reclaimed areas, he determines that the reclamation measures satisfy the requirements of the Act and 19.10 NMAC. The Director shall make the determination as soon as practicable, but not later than September 30, 1995.

[7-12-94, 2-15-96; 19.10.6.609 NMAC – Rn, 19 NMAC 10.2.6.609, 05-15-2001]

19.10.6.610 ANNUAL REPORT:

Every permittee, including those holding minimal impact mining permits, shall, on or before April 30 of each year after a permit has been issued, submit, on a form provided by the Director, a report for the preceding calendar year. The report must:

A. provide the status of the operation;

B. provide production figures for the operation;

C. identify, on a separate map, the location of the disturbed areas and if reclaimed, the year in which the work was done;

D. identify the number of acres disturbed, the number of acres reclaimed during the reporting year and the number of acres which have not yet been reclaimed;

E. indicate the current market value of any collateral posted as financial assurance in accordance with Part 19.10.12 NMAC; and

F. indicate the compliance status for all existing state and federal environmental permits held by permittee for this operation.

[7-12-94, 2-15-96; 19.10.6.610 NMAC – Rn, 19 NMAC 10.2.6.610, 05-15-2001]

PART 7: STANDBY

19.10.7.1 ISSUING AGENCY:

New Mexico Mining Commission.

[19.10.7.1 NMAC - N, 05-15-2001]

19.10.7.2 SCOPE:

19.10.7.4 DURATION:

Permanent.

[19.10.7.4 NMAC - N, 05-15-2001]

19.10.7.5 EFFECTIVE DATE:

February 15, 1996, unless a later date is cited at the end of a section.

A. All references to the Mining Act Parts 1-13 in any other rule shall be understood as a reference to 19.10 NMAC.

B. The amendment and replacement of The Mining Act Parts 1-13 shall not affect any administrative or judicial enforcement action pending on the effective date of this amendment nor the validity of any permit issued pursuant to the Mining Act Parts 1-13.

[19.10.7.5 NMAC - N, 05-15-2001]

19.10.7.6 OBJECTIVE:

The objective of Parts 1-14 of 19.10 NMAC is to establish regulations to implement the New Mexico Mining Act as directed in NMSA 69-36-7A. These regulations are designed to ensure proper reclamation through permitting for operations subject to the Mining Act, in accordance with provisions and standards outlined in the Mining Act.

19.10.7.7 DEFINITIONS:

[RESERVED]

[19.10.7.7 NMAC - N, 05-15-2001]

[Definitions for this Part can be found in 19.10.1.7 NMAC.]

19.10.7.8-19.10.7.700 [RESERVED]:

[19.10.7.8 - 19.10.7.700 NMAC - N, 05-15-2001]

19.10.7.701 STANDBY STATUS:

A. If, due to a temporary cessation of mining operations exceeding 180 days, a permittee desires to suspend reclamation pursuant to a permit for an existing or new mining operation, the permittee shall submit an application for a permit revision for standby status pursuant to this Part and 19.10.5.505 NMAC or 19.10.6.608 NMAC.

B. An application for a permit revision for standby status shall indicate the portions of the permit to be revised, the proposed changes, and for each unit subject to the proposed revision, shall, at a minimum, provide the following:

- (1)** identify the projected term of standby status;
- (2)** describe the measures to be taken to reduce, to the extent practicable, the formation of acid and other toxic drainage and to prevent releases that cause federal or state environmental standards to be exceeded;
- (3)** describe how applicable federal and state environmental standards and regulations will be met during the duration of standby status and provide to the Director a written determination from the Secretary of the Environment Department stating that the permittee has demonstrated that the operation will be expected to achieve compliance with all applicable air, water quality and other environmental standards of the Environment Department during standby status if carried out as described;
- (4)** describe how waste and storage units, leach piles, impoundments and pits will be stabilized during the duration of standby status;
- (5)** describe how the applicable requirements of the Act and 19.10 NMAC will be met during the term of the standby status for the operations proposed for standby status; and
- (6)** provide an analysis of the anticipated future economic viability of the units proposed for standby status.

C. An application for a permit revision for standby status must contain a copy of the notices required pursuant to 19.10.9 NMAC and the permit revision fee pursuant to 19.10.2 NMAC.

D. The Director may require additional information to ensure that an operation in standby status minimizes adverse impacts to the environment and complies with applicable regulations.

E. The Director shall provide notice of receipt of the application for standby status to the Environment Department, the Office of the State Engineer, the Department of Game and Fish, the State Historic Preservation Division, the Forestry Division, other agencies he deems appropriate, and, if the operation is on state or federal land, to the appropriate state or federal land management agency.

F. An application for a permit revision for standby status will be approved if the permittee has paid the permit revision fee pursuant to 19.10.2 NMAC, and the Director finds:

(1) that the permittee agrees to take measures to reduce, to the extent practicable, the formation of acid and other toxic drainage and to prevent releases that cause federal or state environmental standards to be exceeded;

(2) that the permittee agrees to meet applicable federal and state environmental standards and regulations during the period of standby status, and the Secretary of the Environment Department has indicated environmental standards of that Department are expected to be met during the term of standby status.

(3) that the permittee agrees to stabilize waste and storage units, leach piles, impoundments and pits during the term of standby status;

(4) that the permittee agrees to comply with the applicable requirements of the Act, 19.10 NMAC and the permit during the term of standby status; and

(5) that the permittee has provided an analysis of the economic viability for each unit proposed for standby status.

G. Standby status will not be granted until the public participation requirements of 19.10.9 NMAC are met. Standby status will not be granted for an existing mining operation until a closeout plan has been approved and financial assurance provided, nor for a new mining operation until a permit has been issued and financial assurance provided.

H. Standby status will end upon revision or modification of the permit to return to operating status or expiration of the permit term or renewal period.

I. Standby status shall be granted for a maximum term of five years; the Director may renew the standby status for no more than three additional five-year terms.

J. Standby status will not be granted beyond the term of any mineral lease. Should the mineral lease terminate or the claims become invalid during the term of standby status, then standby status shall also end.

[7-12-94, 2-15-96; 19.10.7.701 NMAC - Rn, 19 NMAC 10.2.7.701, 05-15-2001]

[19.10.8.7 NMAC - N, 05-15-2001]

[Definitions for this Part can be found in 19.10.1.7 NMAC.]

19.10.8.8-19.10.8.800 [RESERVED]:

[19.10.8.8 - 19.10.8.800 NMAC - N, 05-15-2001]

19.10.8.801 GENERAL REQUIREMENTS:

No transfer of any permit issued pursuant to the Act shall be made without the prior written approval of the Director. The transferor will not be released from obligations under the permit until the transferee has assumed such obligations.

[7-12-94, 2-15-96; 19.10.8.801 NMAC – Rn, 19 NMAC 10.2.8.801, 05-15-2001]

19.10.8.802 TRANSFER OF PERMIT:

A. To obtain a permit transfer, an applicant, i.e., the person proposing to succeed by such transfer, shall prior to the date of such transfer:

(1) obtain financial assurance coverage as required by 19.10.12 NMAC for the permit area;

(2) provide proof to the Director that the transfer complies with the terms of the mineral lease, if any;

(3) apply to the Director for approval of such proposed transfer including the following:

(a) the name and address of the current permittee;

(b) the name and address of the applicant and the name and street address of the applicant's resident agent; and

(c) the information required by Section 69-36-7(I)(1)&(2) of the Act; and

(4) pay the permit transfer fee pursuant 19.10.2 NMAC.

B. Except for applications for permit transfer for minimal impact operations, the applicant shall advertise the filing of the application in a newspaper of general circulation in the county of the mining, exploration or reclamation operation, indicating the name and address of the applicant, the permittee, the permit number and particular geographic location of the permit area, and the Director's address to which written comments may be sent.

C. Any person whose interests are or may be adversely affected, may submit written comments on the application to the Director within 30 days of the public notice. Notice also shall be provided by the Director to the Environment Department, the Office of the State Engineer, the Department of Game and Fish, the Forestry Division, the State Historic Preservation Division, other agencies he deems appropriate, and, if the operation is on state or federal land, to the appropriate state or federal management agency.

D. The Director shall, upon the basis of the applicant's compliance with the requirements of Subsection A of 19.10.8.802 NMAC, grant written approval for the transfer of a permit, if the Director first finds, in writing, that:

(1) the applicant has, in accordance with Subsections A and B of 19.10.8.802 NMAC, submitted financial assurance as required by 19.10.12 NMAC;

(2) the applicant agrees to continue to conduct the operations involved in full compliance with the Act, 19.10 NMAC and the terms and conditions of the original permit, unless and until the applicant has obtained a new, revised or modified permit;

(3) for existing or new mining operations, the applicant would be eligible to receive a permit for new mines in accordance with Section 69-36-12(B)(5); for exploration operations the applicant would be eligible to receive a permit in accordance with Section 69-36-13(B) of the Act; and

(4) the applicant has paid the permit transfer fee.

E. The Director shall notify the current permittee, the applicant, and the owner of the mineral estate of his findings.

F. The applicant shall immediately provide notice to the Director of the consummation of the transfer of the permit. Upon the Director's written approval, the applicant becomes the permittee and may continue mining, exploration or reclamation operations according to the permit.

[7-12-94, 2-15-96; 19.10.8.802 NMAC – Rn, 19 NMAC 10.2.8.802, 05-15-2001]

PART 9: PUBLIC PARTICIPATION

19.10.9.1 ISSUING AGENCY:

New Mexico Mining Commission.

19.10.9.8-19.10.9.900 [RESERVED]:

[19.10.9.8 - 19.10.9.900 NMAC - N, 05-15-2001]

19.10.9.901 APPLICABILITY:

A. No action on any of the following applications will be taken by the Director until the applicant has complied with the requirements of notice and opportunity for public hearing contained in this Part:

(1) application for the issuance, renewal or revision of a mining or exploration permit, except that minimal impact operations need not comply with public notice requirements contained in this Part;

(2) application for standby status; and

(3) application for a variance.

B. The Director may hold one hearing on more than one application by a permittee for the same mining operation.

C. Public notice and opportunity for a hearing for applications for the release of financial assurance and for any inspection prior to such release are provided for in 19.10.12 NMAC.

D. 19.10.9 NMAC does not apply to applications related to minimal impact operations.

[7-12-94, 2-15-96; 19.10.9.901 NMAC - Rn, 19 NMAC 10.2.9.901, 05-15-2001]

19.10.9.902 CONTENTS OF NOTICE:

The notice shall contain, at a minimum, the following information:

A. the name and address of the applicant;

B. a description of the location and boundaries of the proposed permit area;

C. the purpose of the application and a general description of the mining operation;

D. the Director's name and address to whom written comments may be submitted and where a copy of the application is available for public inspection; and

E. the procedure and deadline for requesting a hearing.

[7-12-94, 2-15-96; 19.10.9.902 NMAC - Rn, 19 NMAC 10.2.9.902, 05-15-2001]

19.10.9.903 PUBLICATION REQUIREMENTS:

The applicant shall provide the Director at the time of filing the application with the Director proof that notice of the application has been:

A. provided by certified mail to the owners of record, as shown by the most recent property tax schedule, of all properties within 1/2 mile of the property on which the mining, exploration or reclamation operation is located or is proposed to be located on or before the newspaper publication date required by Subsection C of 19.10.9.903 NMAC;

B. provided by certified mail to all municipalities and counties and tribal organizations within a 10 mile radius of the property on which the mining, exploration or reclamation operation is or is proposed to be located on or before the newspaper publication date required by Subsection C of 19.10.9.903 NMAC;

C. published once in a newspaper of general circulation in each county in which the property on which the mining, exploration or reclamation operation is or is proposed to be located; provided that this notice shall appear in either the classified or legal advertisements section of the newspaper and at one other place in the newspaper calculated to give the general public the most effective notice, and shall be printed in both English and Spanish;

D. posted in at least four publicly accessible and conspicuous places on or before the newspaper publication date required by Subsection C of 19.10.9.903 NMAC, including the entrance to the new or existing mining operation or exploration operation if that entrance is publicly accessible and conspicuous;

E. mailed to the mineral lessor, if any, on or before the newspaper publication date required by Subsection C of 19.10.9.903 NMAC;

F. mailed to all persons who have made a written request to the Director for notice of this application on or before the newspaper publication date required by Subsection C of 19.10.9.903 NMAC;

G. mailed by certified mail to all persons on a list maintained by the Director of individuals and organizations who have requested notice of applications under this Act; and

H. mailed to the Environment Department, the State Engineer, the Department of Game and Fish, the Forestry Division and the State Historic Preservation Division.

I. When the application is determined to be administratively complete by the Director, the applicant shall provide to the Director timely proof that notice of that determination has been provided by first class mail to everyone who has indicated to the applicant in writing that they desire information regarding the application and to a list maintained by the Director of individuals and organizations who have requested notice of applications under this Act.

[7-12-94, 2-15-96, 7-31-97; 19.10.9.903 NMAC - Rn, 19 NMAC 10.2.9.903, 05-15-2001]

19.10.9.904 OPPORTUNITY FOR PUBLIC HEARING:

A. Any interested person may request that the Director conduct a public hearing on the application. Such request must be made within 30 days of the date of the newspaper publication of the notice of application unless the Director determines a longer period in which to make the request is appropriate and such period is specified in the published notice. If a hearing is timely requested, the Director shall set a hearing unless the request is clearly frivolous. The Director may hold a public hearing absent any request.

B. The date, time and location of the public hearing shall be advertised by the Director in a newspaper of general circulation in the locality of the operation. The advertisement shall also identify the applicant, the operation, the purpose of the hearing, and how to contact the Division for additional information. All persons who have submitted written requests in advance to receive notices of hearing to the Director or who have provided comments on the application to the Director shall be mailed notice at least 30 days prior to the hearing.

C. The nearest community to the mining or exploration operation with adequate and accessible public facilities will be the site for any public hearing.

D. All interested persons may submit written comments regarding the application to the Director. Written comments must be received by the Director prior to the close of the hearing record following any public hearing that is held. If no public hearing is held, written comments will be considered only if they are received by the Director within 60 days after the newspaper publication of the notice of the application or within 60 days after the person filling the comment received notice of the application, whichever is later.

E. An additional opportunity for a public hearing may be provided if the applicant makes substantial changes in the proposed action, if there are significant new circumstances or information bearing on the proposed action or if the applicant proposes to substantially increase the scale or substantially change the nature of the proposed action and there is public interest and a request for a public hearing.

[7-12-94, 2-15-96, 7-31-97; 19.10.9.904 NMAC - Rn, 19 NMAC 10.2.9.904, 05-15-2001]

19.10.9.905 HEARING PROCEDURES:

A. The Director may act as the hearing officer or appoint a hearing officer to conduct the hearing. The hearing officer shall have authority to take all measures necessary for the maintenance of order and for the efficient, fair and impartial consideration of issues arising in hearings including, but not limited to:

(1) taking, admitting or excluding evidence, examining witnesses and allowing post-hearing submissions;

(2) making such orders as may be necessary to preserve decorum and to protect the orderly hearing process; and

(3) preparing and filing a report of the hearing and if requested by the Director, making recommendations for action.

B. The rules of civil procedure and the rules of evidence do not apply to hearings under this Part.

C. Any interested person may testify at the hearing. A person who wants to present testimony should indicate this desire on the sign-in sheet before the hearing begins. Any person who testifies at the hearing is subject to cross-examination on the subject matter of his direct testimony. Any person attending the hearing is entitled to conduct such cross-examination as may be required for full disclosure of matters at issue in the hearing. The hearing officer may limit cross-examination to avoid harassment, intimidation, needless expenditure of time or undue repetition.

D. All testimony will be taken under oath or affirmation.

E. Any interested person may submit a written statement containing data, views or arguments to the hearing officer for inclusion in the record. The hearing officer may set a deadline for such submittal at the conclusion of the hearing.

F. Any person offering exhibits at the hearing shall mark the exhibits identifying the person offering it and the date of the hearing.

[7-12-94, 2-15-96; 19.10.9.905 NMAC - Rn, 19 NMAC 10.2.9.905, 05-15-2001]

19.10.9.906 HEARING RECORD:

A. The Division will make a verbatim record, by audio tape or stenography, of each public hearing.

B. Any person may obtain a copy of the verbatim record of the hearing. It shall be obtained directly from the court reporter, or if no reporter was employed, the Director will provide a copy of the audio tape. The person requesting the copy shall pay the court reporter or Director for the cost of the transcript or the audio tape copy, respectively.

C. The administrative record includes all documents related to the application and received by the Director prior to the beginning, during or after the conclusion of the hearing, including, but not limited to:

- (1) the application that is the subject of the hearing;
- (2) correspondence related to the application;
- (3) the notice of hearing;
- (4) affidavits of publication of the notice;
- (5) written statements submitted to the Director including post-hearing submissions, if allowed;
- (6) the verbatim record of the hearing;
- (7) the hearing officer's report, if any;
- (8) the Director's decision and the reasons therefor; and
- (9) any other material used by the Director in reaching the decision.

PART 10: VARIANCES

19.10.10.1 ISSUING AGENCY:

New Mexico Mining Commission.

[19.10.10.1 NMAC - N, 05-15-2001]

19.10.10.2 SCOPE:

All persons subject to the New Mexico Mining Act NMSA 1978, Section 69-36-1 et. seq.

[19.10.10.2 NMAC - N, 05-15-2001]

19.10.10.3 STATUTORY AUTHORITY:

NMSA 1978, Section 69-36-1 et. seq.

[19.10.10.3 NMAC - N, 05-15-2001]

19.10.10.4 DURATION:

Permanent.

[19.10.10.4 NMAC - N, 05-15-2001]

19.10.10.5 EFFECTIVE DATE:

February 15, 1996, unless a later date is cited at the end of a section.

A. All references to the Mining Act Parts 1-13 in any other rule shall be understood as a reference to 19.10 NMAC.

B. The amendment and replacement of The Mining Act Parts 1-13 shall not affect any administrative or judicial enforcement action pending on the effective date of this amendment nor the validity of any permit issued pursuant to the Mining Act Parts 1-13.

[19.10.10.5 NMAC - N, 05-15-2001]

19.10.10.6 OBJECTIVE:

The objective of Parts 1-14 of 19.10 NMAC is to establish regulations to implement the New Mexico Mining Act as directed in NMSA 69-36-7A. These regulations are designed to ensure proper reclamation through permitting for operations subject to the Mining Act, in accordance with provisions and standards outlined in the Mining Act.

[19.10.10.7 NMAC - N, 05-15-2001]

[Definitions for this Part can be found in 19.10.1.7 NMAC.]

19.10.10.8-19.10.10.1000 [RESERVED]:

[19.10.10.8 - 19.10.10.1000 NMAC - N, 05-15-2001]

19.10.10.1001 GENERAL:

An applicant or a permittee may apply to the Director for a variance from the provisions of 19.10 NMAC.

[7-12-94, 2-15-96; 19.10.10.1001 NMAC – Rn, 19 NMAC 10.2.10.1001, 05-15-2001]

19.10.10.1002 APPLICATION:

A. Each application for a variance must:

- (1) state the applicant's name and address;
- (2) state the date of the application;
- (3) identify the mining operation for which the variance is sought;
- (4) provide the location of the property on which the mining operation is located;
- (5) identify the section of 19.10 NMAC from which the variance is sought;
- (6) state in detail the extent to which the applicant wants to vary from 19.10 NMAC;
- (7) present sufficient evidence to prove that failure to grant a variance will impose an undue economic burden on the applicant;
- (8) present sufficient evidence to prove that granting a variance will not result in a significant threat to human health, safety or the environment; and
- (9) include the fee for a variance application pursuant to 19.10.2 NMAC.

B. The Director may require the applicant to furnish additional information.

[7-12-94, 2-15-96; 19.10.10.1002 NMAC - Rn, 19 NMAC 10.2.10.1002, 05-15-2001]

19.10.10.1003 NOTICE REQUIREMENTS:

A. Applications for a variance are subject to the public notice and opportunity for public hearing requirements of 19.10.9 NMAC.

B. Notice also shall be provided by the Director to the Environment Department, the Office of the State Engineer, the Game and Fish Department, the State Historic Preservation Office, the Forestry Division, other agencies he deems appropriate, and, if the operation is on state or federal land, to the appropriate state or federal land management agency.

[7-12-94, 2-15-96; 19.10.10.1003 NMAC – Rn, 19 NMAC 10.2.10.1003, 05-15-2001]

19.10.10.1004 VARIANCE APPROVALS:

A. In granting the variance, the Director may impose conditions on the applicant to assure that the variance will not result in a significant threat to human health, safety or the environment.

B. An order of the Director granting a variance shall:

- (1)** state the applicant's name and address;
- (2)** state the date the order is made;
- (3)** identify the mining operation for which the variance is sought;
- (4)** state the address or location of the property upon which the mining operation is located;
- (5)** identify the section of 19.10 NMAC from which the variance is sought;
- (6)** find that the variance will not result in a significant threat to human health, safety or environment; and
- (7)** find that failure to grant the variance will impose an undue economic burden on the applicant.

[19.10.11.8 - 19.10.11.1100 NMAC – N, 05-15-2001]

19.10.11.1101 INSPECTIONS:

A. The Director shall conduct on-site inspections on an irregular basis according to the following schedule:

- (1)** at least two per year at each active existing and new mining operation;
- (2)** at least one per year at each inactive existing and new mining operation;
- (3)** at least one per year following completion of all significant reclamation activities, but prior to release of financial assurance; and
- (4)** at least one within the initial permit year and subsequently as determined by the Director for each minimal impact mining operation and for each exploration operation.

B. When the Director determines that a mining operation is conducting significant reclamation, the inspection must be on an irregular basis averaging not less than one inspection per month.

C. Inspections shall occur without prior notice to the permittee or its agents or employees except for necessary on-site meetings with such persons.

D. To avoid duplication and assist in coordination with other state and federal agencies, the Director is authorized to allow other state and federal regulatory agencies to conduct the required inspections or for the Division to conduct inspections for other agencies if the Division has entered into a joint powers agreement with the agencies. The joint powers agreement shall provide that the enforcement action for violations noted during such inspection shall be conducted by the agency charged with the responsibility under the applicable state or federal law.

E. The Director or his authorized representative, without advance notice, shall:

(1) have the right of entry to, upon or through any mineral exploration, mining operation, or reclamation operation at any time to determine if the permittee is in compliance with the permit requirements and conditions; and

(2) at reasonable times, and without delay, have access to and copies of any records associated with permitting and compliance required by the Act, 19.10 NMAC, or the permit.

[7-12-94, 2-15-96, 7-31-97; 19.10.11.1101 NMAC – Rn, 19 NMAC 10.2.11.1101, 05-15-2001]

19.10.11.1102 ENFORCEMENT:

A. Cessation Orders

(1) When the Director determines that a condition, practice or violation exists at any operation that violates the Act, 19.10 NMAC, a permit, or order and which condition, practice or violation also creates an imminent danger to the health or safety of the public or will cause significant imminent environmental harm, the Director shall immediately order a cessation of the operation or the portion of that operation relevant to the condition, practice or violation. Factors to be considered by the Director in determining significant imminent environmental harm include but are not limited to:

(a) whether there is a violation of Mining Act requirements that creates a reasonable probability of serious or widespread adverse environmental impact; or

(b) whether mining activities threaten important habitat, important wildlife, or domestic animals.

(2) When the Director determines that mining is conducted in violation of the Act, 19.10 NMAC, or a permit because the mining is conducted either (a) without a permit, (b) outside of a permit area, or (c) on previously undisturbed land within a permit area but where mining is not authorized by the permit, the Director may issue a cessation order with respect to activities in the area where the unauthorized mining occurs.

(3) The permittee shall advise the Director when the condition practice or violation has been abated. Within 10 days of receiving such information the Director shall determine if the condition practice or violation has been abated.

(4) The cessation order shall remain in effect until the Director determines that the condition practice or violation has been abated or until modified, vacated or terminated by the Director or the Commission.

B. Notices of Violation

(1) When the Director determines that an owner or operator is in violation of a requirement of the Act, 19.10 NMAC, a permit, or order but such condition or practice does not create an imminent danger to the health or safety of the public or will not cause significant imminent environmental harm, the Director shall issue a notice of violation, ordering abatement and fixing a reasonable time, not to exceed 60 days unless extended for good cause shown, for the abatement of the condition or practice. Such an order may be appealed to the Commission pursuant to Section 69-36-15 of the Act.

(2) If, upon expiration of the period of time fixed for abatement, the Director finds that the condition or practice has not been abated, the Director shall order a cessation of operations or a portion thereof. The permittee shall advise the Director when the condition or practice has been abated. Within 10 days of receiving such information the Director shall determine if the condition or practice has been abated. The cessation order shall remain in effect until the Director determines that the condition or practice has been abated.

C. Order to Show Cause When the Director determines that a pattern of violations of the Act, 19.10 NMAC, or the permit exists or has existed, and if the Director also finds that such violations are caused by the unwarranted failure of the permittee to comply with the Act, 19.10 NMAC, or the permit or that such violations are willfully caused by the permittee, the Director shall issue an order to the permittee to show cause as to why the permit should not be suspended or revoked. The order shall be in writing, signed by the Director and shall set forth: the nature of the violations, including a citation to the Act, 19.10 NMAC, or the permit allegedly violated; and set a hearing before the Director on these issues. Following the hearing, the Director may dismiss the action or issue a final order suspending or revoking the permit. Such an order may be appealed to the Commission pursuant to Section 69-36-15 of the Act.

D. Effective Date of Orders, Conferences, and Appeals

(1) Unless otherwise stated in the order, each order issued pursuant to this section shall be effective upon service pursuant to Subsection B of 19.10.11.1104 NMAC.

(2) A permittee who is served with a notice of violation or a cessation order may request a conference pursuant to 19.10.11.1111 NMAC. A request for conference shall not operate as a stay. A request for a conference may include a request for the director to extend the time for abatement or cessation of operations, subject to the Director's approval, pending completion of the conference.

(3) A permittee who is served with a notice of violation or a cessation order may file a petition for review with the Commission pursuant to NMSA 1978, Section 69-36-15 and 19.10.14 NMAC without first requesting a conference pursuant to 19.10.11.1111 NMAC.

[7-12-94, 2-15-96, 12-29-2000; 19.10.11.1102 NMAC – Rn, 19 NMAC 10.2.11.1102, 05-15-2001]

19.10.11.1103 PERMIT SUSPENSION OR REVOCATION:

For purposes of determining the propriety of an order to show cause why a permit should not be suspended or revoked, the following definitions shall apply:

A. Willful violation means an act or omission which violates the Act, 19.10 NMAC, the permit or an order committed by a person who intends the act or omission which occurs.

B. Unwarranted failure to comply means the failure of the permittee to prevent the occurrence of any violation of the Act, 19.10 NMAC, the permit or an order because of indifference, lack of diligence, lack of reasonable care or the failure to abate any violation of the Act, 19.10 NMAC, the permit or an order because of indifference, lack of diligence or lack of reasonable care. Violations by any person conducting mining, exploration or reclamation operations on behalf of the permittee shall be attributed to the permittee.

C. The Director may determine that a pattern of violations exists or has existed, based upon:

(1) the number and seriousness of violations cited on more than one occasion of the same or related requirements of the Act, 19.10 NMAC, the permit or an order;

(2) the number and seriousness of violations cited on more than one occasion of different requirements of the Act, 19.10 NMAC, the permit or an order; and

(3) the extent to which the violations are isolated departures from lawful conduct.

[7-12-94, 2-15-96; 19.10.11.1103 NMAC – Rn, 19 NMAC 10.2.11.1103, 05-15-2001]

19.10.11.1104 SERVICE:

A. A notice of violation shall be in writing, signed by the Director and shall set forth:

(1) the nature of the violation, including a citation to the requirement allegedly violated;

(2) time for abatement;

(3) description of the portion of the operation to which the notice applies; and

(4) a notice of the opportunity to submit information in response and to request a conference under 19.10.11.1110 NMAC and 19.10.11.1111 NMAC.

B. A notice of violation, cessation order, order to show cause or final order suspending or revoking a permit shall be served promptly after issuance as follows:

(1) By tendering a copy at the operation to the designated agent or to the individual who, based upon reasonable inquiry by the Director, appears to be in charge of the operation referred to in the notice or order. If no such individual can be located at the site, a copy may be tendered to any individual at the site who appears to be a supervisory employee or agent of the permittee to whom the notice or order is issued. Service shall be complete upon tender of the notice or order and shall not be deemed incomplete because of refusal to accept.

(2) As an alternative, service may be made by sending a copy of the notice or order by certified mail, return receipt requested, or by hand to the permittee to whom it is issued or to his designated agent. Service shall be complete upon tender of the notice or order to the mail and shall not be deemed incomplete because the permittee refuses to accept the certified mail.

C. The Director shall cause copies of notices and orders to be furnished to the owner of the permit area, a corporate officer of the permittee or the financial assurance company when so requested in writing.

[7-12-94, 2-15-96; 19.10.11.1104 NMAC – Rn, 19 NMAC 10.2.11.1104, 05-15-2001]

19.10.11.1105 PENALTY ASSESSMENT:

A. The Director shall review each notice of violation and cessation order in accordance with the assessment procedures described in this Part to determine whether a civil penalty will be assessed, the amount of the penalty and whether each day of a continuing violation will be deemed a separate violation for purposes of the total penalty assessed.

B. The Director may assess a penalty for each violation. In determining whether to assess a penalty, the Director shall consider the factors listed in this Part.

C. The Director shall assess a penalty for each cessation order.

[7-12-94, 2-15-96; 19.10.11.1105 NMAC – Rn, 19 NMAC 10.2.11.1105, 05-15-2001]

19.10.11.1106 POINT SYSTEM FOR PENALTIES:

A. History of previous violations The Director shall assign up to 25 points based on the history of previous violations. One point shall be assigned for each past violation. Five points shall be assigned for each violation contained in a cessation order. The

history of previous violations, for the purpose of assigning points, shall be determined and the points assigned with respect to a particular mining, exploration or reclamation operation activity. Points shall be assigned as follows:

(1) a violation shall not be counted if the violation is the subject of pending administrative or judicial review, or if the time to request such review or to appeal any administrative or judicial decision has not expired. Thereafter, it shall be counted for only 12 months following the date of final disposition of the violation;

(2) no violation for which the notice or order has been vacated shall be counted; and

(3) a violation not resulting in a civil penalty assessment shall not receive more than 50% of the points that would have been assigned if the violation had resulted in an assessment.

B. Seriousness The Director shall assign up to 25 points based on the seriousness of the violation, as follows:

(1) Foreseeability of occurrence. The Director shall assign up to 10 points based on the foreseeability of the occurrence of the event which a violated standard is designed to prevent. Points shall be assessed according to the following schedule:

Foreseeability of Occurrence	
Points	
(a) Not foreseeable	0
(b) Unlikely	1-5
(c) Likely	6-9
(d) Almost certain	10

(2) Extent of potential or actual damage. The Director shall assign up to 15 points, based on the extent of the potential or actual damage in terms of area and impact on the public or environment, as follows:

(a) If the damage or impact which the violated Section is to prevent remains within the permit area, the Director shall assign zero to seven points, depending on the duration and extent of the damage or impact.

(b) If the damage or impact which the violated Section is to prevent extends outside the permit area, the Director shall assign eight to fifteen points, depending on the duration and extent of the damage or impact.

(3) Alternative. In the case of a violation of an administrative requirement such as a requirement to keep records or submit reports, the Director shall, in lieu of subparagraphs a. and b. above, assign up to 10 points for seriousness.

C. Negligence

(1) The Director shall assign up to 25 points based on the degree of fault of the permittee in causing or failing to correct the condition or practice which led to the notice or order, either through act or omission. Points shall be assessed as follows:

(a) violation which occurs through no negligence shall be assigned no penalty points for negligence;

(b) violation which is caused by negligence shall be assigned 12 points or less, depending on the degree of negligence; or

(c) violation which occurs through a greater degree of fault than negligence shall be assigned 13 to 25 points, depending on the degree of fault.

(2) In determining the degree of negligence involved in a violation and the number of points to be assigned, the following definitions apply:

(a) No negligence means an inadvertent violation which was unavoidable by the exercise of reasonable care.

(b) Negligence means the failure of a permittee to prevent the occurrence of any violation because of indifference, lack of diligence or lack of reasonable care, or the failure to abate any violation because of indifference, lack of diligence or lack of reasonable care.

(c) A greater degree of fault than negligence means reckless, willful, or intentional conduct.

(3) In calculating points to be assigned for negligence, the acts of all persons working on the permit area shall be attributed to the permittee.

D. Good faith in attempting to achieve compliance

(1) The Director may reduce points based on the degree of good faith of the permittee in attempting to achieve rapid compliance after notification of the violation. Points shall be assigned as follows:

Points	Degree of Good Faith
---------------	-----------------------------

(a) Rapid compliance	-1 to -15
----------------------	-----------

(b) Use of additional equipment or labor	-1 to -25
(c) Normal compliance	0

(total not to exceed -25)

(2) The following definitions shall apply for Paragraph 1 of Subsection D of 19.10.11.1106 NMAC:

(a) Rapid compliance means that the permittee took extraordinary measures to abate the violation in the shortest possible time and that abatement was achieved before the time set for abatement.

(b) Use of additional equipment or labor means rapid compliance and the employment of equipment and/or labor in amounts and at a cost greater than would normally be employed.

(c) Normal compliance means the permittee abated the violation within the time given for abatement.

[7-12-94, 2-15-96; 19.10.11.1106 NMAC – Rn, 19 NMAC 10.2.11.1106, 05-15-2001]

19.10.11.1107 DETERMINATION OF AMOUNT OF PENALTY:

The Director shall determine the dollar amount of any civil penalty by using the following schedule: [19.10.11.pdf – Table]

Points	Dollars	Points	Dollars
1	25	36	3200
2	25	37	3400
3	25	38	3600
4	25	39	3800
5	25	40	4000
6	25	41	4200
7	25	42	4400
8	25	43	4600
9	25	44	4800
10	25	45	5000
11	100	46	5200
12	100	47	5400
13	100	48	5600
14	100	49	5800
15	100	50	6000
16	500	51	6200
17	500	52	6400
18	500	53	6600

19	500	54	6800
20	500	55	7000
21	1000	56	7200
22	1000	57	7400
23	1000	58	7600
24	1000	59	7800
25	1500	60	8000
26	1500	61	8200
27	1500	62	8400
28	1500	63	8600
29	1500	64	8800
30	1500	65	9000
31	2200	66	9200
32	2400	67	9400
33	2600	68	9600
34	2800	69	9800
35	3000	70 and above	10000

[7-12-94, 2-15-96; 19.10.11.1107 NMAC – Rn, 19 NMAC 10.2.11.1107, 05-15-2001]

19.10.11.1108 ASSESSMENT OF SEPARATE PENALTY FOR EACH DAY:

A. The Director may assess a separate penalty for each day from the date of the violation to the date of abatement of the violation. In determining whether to make such an assessment, the Director shall consider the factors listed in 19.10.11.1106 NMAC and may consider the extent to which the person to whom the notice or order was issued gained any economic benefit as a result of a failure to comply. For any violation which continues for two or more days and which is assigned more than 70 points, the Director shall assess a penalty for a minimum of two separate days.

B. Any penalty assessed shall not exceed \$10,000 per day of noncompliance for each violation.

[7-12-94, 2-15-96; 19.10.11.1108 NMAC – Rn, 19 NMAC 10.2.11.1108, 05-15-2001]

19.10.11.1109 WAIVER OF USE OF FORMULA TO DETERMINE PENALTY:

A. The Director may waive the use of the formula contained in this Part to set the penalty, if he determines that, taking into account factors present in the particular case, the penalty is unjustified. However, the Director shall not waive the use of the formula or reduce the proposed penalty simply because reduction in the proposed penalty would provide more resources to abate violations of the Act, 19.10 NMAC, the permit or an order. In no event shall the Director assess or accept a penalty of less than the economic benefit realized as a result of a failure to comply. The basis of every waiver shall be fully explained and documented in the records of the case.

B. If the Director waives the use of the formula, the criteria set forth in Section 69-36-17 of the Act shall be used to determine the appropriate penalty. When the Director elects to waive the use of the formula, a written explanation of the basis for the assessment made shall be provided to the permittee.

[7-12-94, 2-15-96; 19.10.11.1109 NMAC – Rn, 19 NMAC 10.2.11.1109, 05-15-2001]

19.10.11.1110 PROCEDURE FOR PENALTY ASSESSMENT:

A. The permittee may submit written and oral information about the alleged violation to the Director and to the inspector who issued the notice of violation or cessation order. The Director shall consider any information so submitted in determining the facts surrounding the alleged violation and the amount of the penalty.

B. The Director shall serve a copy of the proposed penalty assessment and of the worksheet showing the computation of the proposed penalty on the permittee, in the manner prescribed in Subsection B of 19.10.11.1104 NMAC. The Director shall serve the proposed penalty assessment no later than 30 days after the date set for abatement of the violation or issuance of the cessation order. Failure by the Director to serve the proposed penalty within 30 days shall not be grounds for dismissal of all or part of such violation or penalty unless the permittee:

(1) proves actual prejudice as a result of the delay; and

(2) makes a timely objection to the delay. An objection shall be timely only if made in the normal course of administrative and judicial review.

[7-12-94, 2-15-96, 12-29-2000; 19.10.11.1110 NMAC – Rn, 19 NMAC 10.2.11.1110, 05-15-2001]

19.10.11.1111 PROCEDURE FOR CONFERENCE:

A. A permittee who receives a notice of violation or a cessation order pursuant to 19.10.11.1102 NMAC or a proposed penalty assessment may request a conference for a review of the Director's action by submitting a written request to the Director within 15 days from the date of service. The Director shall arrange for a conference if a timely request for a conference is made. The Director, in his sole discretion, may arrange for a conference if a late request for a conference is made.

(1) If the permittee requests a conference, the Director may assign a conference officer to hold the conference. This person shall not be the inspector signing the notice or order. The conference shall be informal in nature and not be governed by the rules of evidence for adjudicatory hearings. The conference shall be held within 30 days from the date of issuance of the notice of violation, cessation order, or proposed penalty assessment unless the Director grants an extension for good cause shown.

(2) The conference officer shall consider all relevant information. The conference officer shall make his recommendation to the Director to affirm, modify or vacate the notice of violation or cessation order or affirm, decrease or vacate the proposed penalty, if any.

B. The Director, within 30 days after the conference, shall serve the permittee with his order regarding the violation and penalty. When a conference is held, the period for filing a petition for review of the director's action pursuant to Section 69-36-15 NMSA 1978 shall run from the date of service of the director's order pursuant to this subsection.

C. When the permittee notifies the Director that the violation has been abated, the permittee may request a reduction of points under Subsection D of 19.10.11.1106 NMAC. The Director may reduce any penalty by awarding points for good faith compliance.

D. All penalties must be paid within 30 days after the penalty assessment, or any Director's order issued following a conference held pursuant to 19.10.11.1111 NMAC.

[7-12-94, 2-15-96, 12-29-2000; 19.10.11.1111 NMAC – Rn, 19 NMAC 10.2.11.1111, 05-15-2001]

[Material previously under this Section was repealed effective 6-30-99]

PART 12: FINANCIAL ASSURANCE REQUIREMENTS

19.10.12.1 ISSUING AGENCY:

New Mexico Mining Commission.

[19.10.12.1 NMAC - N, 05-15-2001]

19.10.12.2 SCOPE:

All persons subject to the New Mexico Mining Act NMSA 1978, Section 69-36-1 et. seq.

[19.10.12.2 NMAC - N, 05-15-2001]

19.10.12.3 STATUTORY AUTHORITY:

NMSA 1978, Section 69-36-1 et. seq.

[19.10.12.3 NMAC - N, 05-15-2001]

19.10.12.4 DURATION:

Permanent.

[19.10.12.4 NMAC - N, 05-15-2001]

19.10.12.5 EFFECTIVE DATE:

February 15, 1996, unless a later date is cited at the end of a section.

A. All references to the Mining Act Parts 1-13 in any other rule shall be understood as a reference to 19.10 NMAC.

B. The amendment and replacement of the Mining Act Parts 1-13 shall not affect any administrative or judicial enforcement action pending on the effective date of this amendment nor the validity of any permit issued pursuant to the Mining Act Parts 1-13.

[19.10.12.5 NMAC - N, 05-15-2001]

19.10.12.6 OBJECTIVE:

The objective of Parts 1-14 of 19.10 NMAC is to establish regulations to implement the New Mexico Mining Act as directed in NMSA 69-36-7A. These regulations are designed to ensure proper reclamation through permitting for operations subject to the Mining Act, in accordance with provisions and standards outlined in the Mining Act.

[19.10.12.6 NMAC - N, 05-15-2001]

19.10.12.7 DEFINITIONS:

[RESERVED]

[19.10.12.7 NMAC - N, 05-15-2001]

[Definitions for this part can be found in 19.10.1.7 NMAC.]

19.10.12.8-19.10.12.1200 [RESERVED]:

[19.10.12.8 - 19.10.12.1200 NMAC - N, 05-15-2001]

19.10.12.1201 REQUIREMENT TO FILE FINANCIAL ASSURANCE:

A. Except for existing mining operations without new units, the applicant for a permit shall provide a financial assurance proposal to the director following the director's determination that the permit application is approvable, but prior to the permit issuance. An applicant's financial assurance proposal shall be based upon estimates for a third-party contractor to complete reclamation work. The permit shall not be issued until receipt of the approved financial assurance by the director.

B. The permittee of an existing mining operation shall provide a financial assurance proposal in an amount adequate to complete the proposed closeout plan as soon as practicable after the permittee receives notice from the director that the closeout plan is approvable. The permittee shall provide the approved financial assurance prior to the director's approval of the closeout plan.

C. Financial assurance shall be payable to the state of New Mexico and conditioned upon the performance of all the requirements of the act, 19.10 NMAC, the permit, and the reclamation plan or closeout plan.

D. Financial assurance proposals submitted by applicants or permittees may be required to be reviewed by a third party contractor as ordered by the director. All costs for such review shall be paid by the applicant or permittee.

[7-12-94, 2-15-96; 19.10.12.1201 NMAC - Rn, 19 NMAC 10.2.12.1201, 05-15-2001; A, 10-15-03; A, 04-30-09]

19.10.12.1202 AREA TO BE COVERED BY FINANCIAL ASSURANCE:

A. The permittee or applicant shall file, with the approval of the director, financial assurance under one of the following schemes to cover the reclamation or closeout plan costs as determined in accordance with 19.10.12.1205 NMAC:

(1) financial assurance for the approved reclamation plan or closeout plan for the entire permit area; or

(2) financial assurance may be provided and approved to guarantee specific increments of reclamation within the permit area provided the sum of incremental financial assurance equals or exceeds the total amount required under 19.10.12.1205 NMAC and 19.10.12.1206 NMAC. The area to be reclaimed and the amount of financial assurance required for each increment shall be specified in detail, and the permittee shall comply with the following:

(a) An incremental financial assurance schedule and the financial assurance required for full reclamation of the first increment in the schedule shall be provided.

(b) Before mining, exploration or reclamation operations on succeeding increments are initiated and conducted within the permit area, the permittee shall file

with the director additional financial assurance to cover such increments in accordance with 19.10.12 NMAC.

(c) The permittee or applicant shall identify the initial and successive areas or increments on a map submitted with the permit application and shall specify the financial assurance amount to be provided for each area or increment.

(d) Identified increments shall be of sufficient size and configuration to provide for efficient reclamation operations should reclamation by the director become necessary pursuant to 19.10.12.1211 NMAC.

B. A permittee or applicant shall not disturb any area prior to acceptance by the director of the required financial assurance.

[7-12-94, 2-15-96; 19.10.12.1202 NMAC - Rn, 19 NMAC 10.2.12.1202, 05-15-2001]

19.10.12.1203 FORM OF FINANCIAL ASSURANCE:

A. The director may accept the following forms of financial assurance:

- (1) cash;
- (2) trusts;
- (3) surety bonds;
- (4) letters of credit;
- (5) collateral bonds;
- (6) third party guarantees;
- (7) insurance; or
- (8) a combination of any of the above.

B. The director shall not accept any type or variety of self-guarantee or self-insurance for the required financial assurance.

[7-12-94, 2-15-96; 19.10.12.1203 NMAC - Rn, 19 NMAC 10.2.12.1203, 05-15-2001; A, 10-15-03]

19.10.12.1204 PERIOD OF LIABILITY:

A. The permittee shall maintain the financial assurance in effect, except as reduced pursuant to 19.10.12 NMAC, until such time as the director releases the financial

assurance pursuant to 19.10.12.1210 NMAC. For areas to be revegetated, the director shall retain the amount of financial assurance necessary for a third party to re-establish vegetation for a period of 12 years after the last year of augmented seeding, fertilizing, or irrigation, unless a post-mining land use is approved by the director that does not require revegetation. Interseeding to establish diversity shall not be considered augmented seeding. Interseeding may not be performed within the last three years of the liability period.

B. For new mining operations only, no part of the financial assurance necessary for a third party to re-establish vegetation shall be released so long as the lands to which the release would be applicable are contributing suspended solids above background levels to streamflow of intermittent or perennial streams.

C. Isolated and clearly defined portions of the disturbed area not qualifying for financial assurance release may be separated from the original area and assured separately with the approval of the director. Access to the separated areas for remedial work may be included in the area under extended liability if deemed necessary by the director.

D. For exploration permits, financial assurance may be released after the permittee has submitted a termination report that meets the requirements of 19.10.4.407 NMAC and the director has determined, after inspection, that the reclamation requirements of 19.10.3 NMAC and 19.10.4 NMAC, as applicable, and the permit have been satisfied.

[7-12-94, 2-15-96; 19.10.12.1204 NMAC - Rn, 19 NMAC 10.2.12.1204, 05-15-2001; A, 04-30-09]

19.10.12.1205 DETERMINATION OF FINANCIAL ASSURANCE AMOUNT:

A. The amount of the financial assurance shall be determined by the director and take into account, but not be limited to, the estimated cost submitted by the permittee or the applicant. This estimated cost should include at a minimum the following costs: contract administration; mobilization; demobilization; engineering redesign; profit and overhead; procurement costs; reclamation or closeout plan management; and contingencies. Credit for salvage value of building materials or abandoned equipment and supplies shall not be allowed. Equipment normally available to a third party contractor should be used in determining the estimated cost;

(1) reflect the probable difficulty of reclamation or closure, giving consideration to such factors as topography, geology, hydrology, revegetation potential and approved post-mining land use;

(2) depend on the requirements of the approved permit;

(3) not duplicate any federal or state financial requirements for the same area so long as those entities' financial assurance requirements are at least as stringent as this part; and

(4) not be less comprehensive than the federal requirements, if any.

B. The amount of the financial assurance shall be sufficient to assure the completion of the reclamation plan or closeout plan if the work has to be performed by the state of New Mexico or a contractor with the state in the event of forfeiture.

C. The director may accept a net present value calculation for the amount of financial assurance required pursuant to Subsections A and B of 19.10.12.1205 NMAC, if the scheduled completion date for the reclamation or closeout plan exceeds five years following closure, not including the 12 year period described in Subsection A of 19.10.12.1204 NMAC for re-establishing vegetation, and if the financial assurance will be provided in the form of cash or other allowable form of financial assurance to be converted into cash upon forfeiture. The director shall require an appropriate adjustment be made to the net present value calculation to exclude anticipated delays for converting financial assurance into cash.

(1) The net present value calculation shall be based upon projected inflation rates and projected rates of return over the term of the reclamation plan and shall be based upon publicly available indices and data. The director shall determine whether a proposed net present value calculation is acceptable and complies with the requirements of Subsection B of 19.10.12.1205 NMAC. The director shall issue guidance on acceptable methods for calculating net present value within one year from the effective date of this rule.

(2) The director shall review any approved net present value calculation as needed, but at least once every five years, to take into consideration additional information regarding rates of return and inflation rates.

D. The amount of financial assurance for a minimal impact existing and new mining operations shall be as provided for in Subsection F of 19.10.3.303 NMAC and Subsection E of 19.10.3.304 NMAC, respectively.

[7-12-94, 2-15-96; 19.10.12.1205 NMAC - Rn, 19 NMAC 10.2.12.1205, 05-15-2001; A, 10-15-03; A, 12-30-03]

19.10.12.1206 ADJUSTMENT OF AMOUNT:

A. The amount of the financial assurance required and the terms of its acceptance shall be adjusted by the director from time-to-time as the area requiring financial assurance is increased or decreased or when the future reclamation or closeout costs change. The director may specify periodic times or set a schedule for re-evaluating and adjusting the financial assurance amount.

B. The director shall:

- (1)** notify the permittee, the surety, any person with a property interest in collateral who has requested notification under Subsection C, Paragraph 4 of 19.10.12.1208 NMAC and any person who has requested notification of actions concerning the mining operation, of any proposed adjustment to the financial assurance amount; and
- (2)** provide the permittee an opportunity for an informal conference on the adjustment.

C. Permittee may request reduction of the amount of the financial assurance upon submission of evidence to the director demonstrating that the permittee's methods of operation or other circumstances reduce the estimated cost for the state of New Mexico or its contractor to reclaim or complete the closeout plan for the area. Adjustments which involve undisturbed land or revision of the cost estimate for reclamation or closeout plan completion are not considered financial assurance release subject to procedures of 19.10.12.1210 NMAC.

D. In the event that the approved permit is revised or modified, the director shall review the financial assurance for adequacy, and if necessary, shall require adjustment of the financial assurance to conform to the permit as revised or modified.

[7-12-94, 2-15-96; 19.10.12.1206 NMAC - Rn, 19 NMAC 10.2.12.1206, 05-15-2001; A, 12-30-03]

19.10.12.1207 GENERAL TERMS AND CONDITIONS OF FINANCIAL ASSURANCE:

A. The financial assurance shall be in an amount determined by the director as provided in 19.10.12.1205 NMAC.

B. The financial assurance shall be payable to the state of New Mexico.

C. The financial assurance shall be conditioned upon performance of all the requirements of the act, 19.10 NMAC, and the approved permit, including completion of the reclamation or closeout plan.

D. The duration of the financial assurance shall be for the time period provided in 19.10.12.1204 NMAC.

E. Failure of Financial Providers

(1) The financial assurance shall provide a mechanism for a bank or surety company or guarantor to give prompt notice to the director by certified mail and the permittee of any administrative or judicial action filed or initiated alleging the insolvency

or bankruptcy of the surety company, the bank, or the permittee, or alleging any violations which would result in suspension or revocation of the surety or bank charter or license to do business.

(2) Upon the incapacity of a bank or surety company or guarantor by reason of bankruptcy, insolvency, suspension or revocation of charter or license or for any other reason, the permittee shall be deemed to be without financial assurance coverage and shall promptly notify the director in writing. Upon notification, the director shall specify to the permittee in writing a reasonable period, not to exceed 90 days, to replace the financial assurance coverage. If adequate financial assurance is not provided by the end of the period allowed, the permittee shall cease mining and shall immediately begin to conduct reclamation or closeout measures in accordance with the reclamation or closeout plan. The director may, for good cause shown, grant up to two 30-day extensions. Mining operations shall not resume until the director has determined that an acceptable replacement financial assurance has been provided.

[7-12-94, 2-15-96; 19.10.12.1207 NMAC - Rn, 19 NMAC 10.2.12.1207, 05-15-2001]

19.10.12.1208 FINANCIAL ASSURANCE MECHANISMS:

A. Surety Bonds.

(1) A surety bond shall be executed by the applicant or the permittee and a corporate surety licensed to do business in the state of New Mexico.

(2) Surety bonds shall be noncancellable during their terms, except that surety bond coverage for lands not disturbed may be cancelled with the prior written consent of the director. The director shall advise the surety, within 30 days after receipt of a notice to cancel bond, whether the bond may be cancelled on an undisturbed area.

(3) Surety bond terms shall be established for a minimum of five years. One hundred and twenty (120) days prior to the expiration of the term, the operator must provide the director with evidence that the current surety bond will be continued, another surety company is to provide a financial assurance, or another form of financial assurance will replace the surety bond. Upon receiving notification, the director shall respond to the permittee within 30 days, in writing, indicating whether or not the proposed form and amount of financial assurance will be acceptable. If adequate financial assurance is not provided 30 days prior to the expiration of the term of the original surety bond, the permittee shall cease operations and shall forfeit the existing surety bond. Mining operations shall not resume until the director has determined that an acceptable replacement financial assurance has been provided. If an acceptable financial assurance is provided within a time frame specified by the director, not to exceed 180 days, the forfeited funds, less any costs associated with the forfeiture, will be refunded to the surety company. If adequate financial assurance is not provided within the specified time frame, the director will authorize reclamation of the mining operation using the forfeited funds.

B. Letters of Credit.

(1) The letter of credit must be issued by a bank organized or authorized to do business in the United States. The director may require an independent rating of the proposed bank and the cost of any such rating shall be paid by the applicant or permittee.

(2) Letters of credit shall be irrevocable during their terms. A letter of credit used as security in areas requiring continuous financial assurance coverage shall be forfeited and shall be collected by the state of New Mexico if not replaced by other suitable financial assurance or letter of credit at least 30 days before its expiration date.

(3) Mining operations shall not resume until the director has determined that an acceptable replacement financial assurance has been provided. If an acceptable financial assurance is provided within a time frame specified by the director, not to exceed 180 days, the payment amount, less any costs associated with the demand for payment, will be refunded to the bank. If financial assurance is not provided within the specified time frame, the director will authorize reclamation of the mining operation using the payment from the letter of credit.

(4) The letter of credit shall be payable to the state of New Mexico upon demand, in part or in full, upon receipt from the director of a notice of forfeiture issued in accordance with 19.10.12.1211 NMAC.

C. Collateral Bonds.

(1) Valuation of Collateral.

(a) If the nature of the collateral proposed to be given as security for financial assurance is subject to fluctuations in value over time, the director shall require that such collateral have a fair market value at the time of permit approval in excess of the financial assurance amount by a reasonable margin. The amount of such margin shall reflect changes in value anticipated over a period of five years, including depreciation, appreciation, marketability and market fluctuation. In any event, the director shall require a margin for legal fees and costs of disposition of the collateral in the event of forfeiture.

(b) The annual report filed by the permittee must indicate the current market value of any collateral accepted by the director pursuant to this part.

(c) The financial assurance value of collateral may be evaluated at any time, but it shall be evaluated as part of permit renewal and, as necessary, its amount increased or decreased. In no case shall the value attributed to the collateral exceed its market value.

(2) Collateral bonds, except for cash accounts and real property, shall be subject to the following conditions:

(a) the director must have custody of collateral deposited by the applicant or permittee until authorized for release or replacement as provided in this part;

(b) the director shall value collateral at its current market value, not at face value;

(c) the director shall not accept as collateral shares of stock issued by the following: applicant or permittee; an entity that owns or controls the applicant or permittee; or an entity owned or controlled by the applicant or permittee;

(d) the director shall require that certificates of deposit be made payable to or assigned to the state of New Mexico, both in writing and upon the records of the bank issuing the certificates; if assigned, the director shall require the banks issuing these certificates to waive all rights of setoff or liens against those certificates prior to the director's acceptance;

(e) the director shall not accept an individual certificate of deposit in an amount in excess of one hundred thousand dollars (\$100,000) or the maximum insurable amount as determined by the federal deposit insurance corporation or the federal savings and loan insurance corporation.

(3) Real property provided as a collateral bond shall meet the following conditions:

(a) the real property must be located in the state of New Mexico. The real property cannot be within the permit or affected area of a mining operation;

(b) the permittee shall grant the state of New Mexico a first mortgage, first deed of trust, or perfected first-lien security interest in real property with a right to sell in accordance with state law or otherwise dispose of the property in the event of forfeiture under 19.10.12.1211 NMAC;

(c) for the director to evaluate the adequacy of the real property, the permittee must submit the following information for the real property, unless the director, for good cause, waives any of the requirements:

(i) a description of the property, which shall include a site improvement survey plat to verify legal descriptions of the property and to identify the existence of recorded easements;

(ii) the fair market value as determined by a current appraisal conducted by an independent qualified appraiser, previously approved by the director;

(iii) proof of ownership and title to the real property;

(iv) a current title binder which provides evidence of clear title containing no exceptions, or containing only exceptions acceptable to the director; and

(v) phase I environmental assessment.

(d) in the event the permittee pledges water rights, the permittee shall provide such additional information as may be required by the director to meet any additional conditions prescribed by him for accepting water rights as collateral.

(4) Persons with an interest in collateral provided as financial assurance who desire notification of actions affecting the collateral shall request the notification in writing to the director at the time collateral is offered.

D. Cash accounts shall be subject to the following conditions.

(1) The director may authorize the applicant or permittee to meet its financial assurance obligations through the establishment of a cash account in one or more federally-insured or equivalently protected accounts made payable upon demand to, or deposited directly with, the state of New Mexico.

(2) Any interest paid on a cash account must be retained in the account and applied to the account unless the director has approved the payment of interest to the permittee.

(3) Certificates of deposit may be substituted for a cash account with the approval of the director.

(4) The director shall not accept an individual cash account in an amount in excess of one hundred thousand dollars (\$100,000) or the maximum insurable amount as determined by the federal deposit insurance corporation or the federal savings and loan insurance corporation, unless the cash account has been deposited with the state of New Mexico.

E. Trusts shall be subject to the following conditions.

(1) The director may approve the use of a trust to hold and manage funds for the purpose of implementing reclamation as prescribed in the closeout plan. The trustee must be an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency and which has been approved by the director. The director must be notified of any change of trustee and any successor trustees must be approved by the director.

(2) The trust fund is also subject to the following conditions:

(a) the initial payment into the trust must be made by the date established by the director;

(b) the trust shall be funded in accordance with the terms of the permit;

(c) investments of the trust shall be reviewed and approved by the director and may include fixed income investments such as U.S. treasury obligations, state issued securities, time deposits and other investments of similar risk as approved by the director;

(d) income accrued on trust funds shall be retained in the trust, except as otherwise agreed by the director under the terms of an agreement governing the trust;

(e) the trustee may be compensated under terms defined by the director, upon approval of the director;

(f) the trust may be terminated by the permittee only if the permittee substitutes, with the approval of the director, alternate financial assurance as specified in this section or the permittee has completed reclamation in accordance with Subsection E of 19.10.12.1210 NMAC;

(g) a copy of the trust agreement, as well as quarterly and annual reports of the trustee on the trust fund balance shall be provided to the director upon request;

(h) any disbursement of funds from the trust shall be approved by the director in writing.

F. Insurance.

(1) The insurer must be authorized to transact the business of insurance in the state of New Mexico and a licensed carrier or a registered carrier of surplus lines of insurance or reinsurance and authorized to transact business of insurance in the state of New Mexico, and have an AM BEST rating of not less than A- or the equivalent rating of other recognized rating companies.

(2) The insurance policy shall be issued for the amount equal to the closeout plan cost estimate as approved by the director or for a lesser amount if used in conjunction with other forms of financial assurance and approved by the director.

(3) The insurance policy shall guarantee that funds will be available for reclamation in accordance with the closeout plan and that the insurer will be responsible for paying out funds, up to an amount equal to the face amount of the policy, upon direction of the director. Actual payments by the insurer will not change the face amount, although the insurer's future liability may be reduced by the amount of the payments, during the policy period.

(4) The permittee must maintain the policy in full force and effect until the director approves termination or replacement of insurance with another form of financial assurance acceptable to the director.

G. Third party guarantee.

(1) A third party guarantee is a written agreement from a guarantor, which provides that if the permittee fails to complete the performance requirements of the permit, including closure and reclamation, the guarantor shall do so or, upon forfeiture in accordance with 19.10.12.1211 NMAC, shall fund such account(s) as the director may instruct in the full amount of that portion of the financial assurance covered by the third party guarantee.

(a) A third party guarantee may not exceed seventy-five percent of the total amount of the financial assurance for a permit established pursuant to 19.10.1205 NMAC. Any permittee with a third party guarantee in place at the effective date of this subparagraph shall meet the limitation within one year after the effective date of this subparagraph.

(b) A third party guarantee may not include any type of self-guarantee or self-insurance. The director may investigate to determine whether a sham relationship exists between the guarantor and the permittee. The director may reject a third party guarantee as a form of self-guarantee if the director concludes that substantial evidence supports a finding that either the guarantor or the permittee exercises dominion and control over the other so pervasive as to render the one a mere instrumentality of the other.

(2) The permittee or applicant shall submit financial information as requested by the director unless doing so would place guarantor in violation of an applicable legal requirement.

(3) The third party guarantee shall be signed by an authorized representative, and legal counsel of the guarantor shall certify that the guarantor can legally engage in the guarantee and shall certify the amounts and names of beneficiaries of all other guarantees for which the guarantor is obligated.

(4) If the guarantor is a corporation, the authorization documentation will include a board of directors' resolution or shareholder's vote or similar verification and proof that the corporation can validly execute a guarantee under the laws of the state or country of its incorporation, and its bylaws and articles of incorporation.

(5) If the guarantor is a partnership, joint venture, syndicate, or other business entity, each party or an authorized representative for the party with the beneficial interest, direct or indirect, shall sign the agreement.

(6) The guarantor's financial statements shall be audited by an independent certified public accountant and the accountant's certification provided to the director. All costs and fees for such audit and certification shall be paid by the applicant or permittee. If the accountant gives an adverse opinion of the financial statements, the guarantor cannot qualify for the third party guarantee. The permittee shall also pay for any evaluation and analysis by an independent reviewer selected by the director to evaluate and analyze for the director any information regarding the guarantor provided to the director or requested by the director to evaluate the guarantor's financial ability to provide a guarantee.

(7) The guarantor as well as its successors and assignees agree to remain bound jointly and severally liable for all litigation costs incurred in any successful effort to enforce the third party guarantee against the guarantor.

(8) The guarantor must demonstrate financial soundness by meeting either alternative I or alternative II soundness tests.

(a) Alternative I financial soundness test:

(i) guarantor has a tangible net worth of at least ten million dollars (\$10,000,000);

(ii) guarantor's tangible net worth and working capital are each equal to or greater than six times the sum of the proposed financial assurance and all other guarantees for environmental permits issued in the U.S. for which the guarantor is obligated;

(iii) guarantor's assets located in the United States amount to at least ninety percent of its total assets or its total assets in the United States are at least six times the sum of the proposed financial assurance and all other guarantees for environmental permits issued in the U.S. for which the guarantor is obligated; and

(iv) guarantor meets at least two of the following three financial ratios: the ratio of total liabilities to net worth is less than 2:1; the ratio of the sum of net income plus depreciation, depletion, and amortization to total liabilities is greater than 0.1:1; the ratio of current assets to current liabilities is greater than 1.5:1.

(b) Alternative II financial soundness test:

(i) guarantor's most recently issued senior credit obligation are rated "BBB" or higher by standard and poor's corporation, or "Baa" or higher by moody's investors service, inc.;

(ii) the guarantor has a tangible net worth of at least ten million dollars (\$10,000,000) and is greater than six times the sum of the proposed financial assurance

and all other guarantees for environmental permits issued in the U.S. for which the guarantor is obligated; and

(iii) guarantor's assets located in the United States amount to at least ninety percent of its total assets or its total assets in the United States are at least six times the sum of the proposed financial assurance and all other guarantees for environmental permits issued in the U.S. for which the guarantor is obligated.

(9) The director may require monitoring of the guarantor's financial condition by a contractor with the state during the time that a third party guarantee is used for financial assurance. The costs of such monitoring shall be paid by the permittee. The frequency of such monitoring shall be determined by the director.

(10) At any time that the guarantor's financial condition is such that the guarantor no longer qualifies pursuant to this part, the permittee shall be deemed without financial assurance coverage. The director shall specify to the permittee in writing a reasonable period, not to exceed 90 days, to replace the financial assurance coverage. If adequate financial assurance is not provided by the end of the period allowed, the permittee shall cease mining and shall immediately begin to conduct reclamation or closeout measures in accordance with the reclamation or closeout plan. The director may, for good cause shown, grant up to two 30-day extensions. Mining operations shall not resume until the director has determined that an acceptable replacement financial assurance has been provided.

[7-12-94, 2-15-96, 12-14-96, 6-30-98, 12-29-2000; 19.10.12.1208 NMAC - Rn, 19 NMAC 10.2.12.1208, 05-15-2001; A, 10-15-03; A, 12-30-03]

19.10.12.1209 REPLACEMENT OF FINANCIAL ASSURANCE:

A. The director may allow a permittee to replace existing financial assurance with other approved financial assurance mechanisms that provide equivalent coverage.

B. The director shall not release existing financial assurance until the permittee has submitted, and the director has approved, acceptable replacement financial assurance. Replacement of financial assurance pursuant to 19.10.12.1209 NMAC shall not constitute a release of the financial assurance under 19.10.12.1210 NMAC.

[7-12-94, 2-15-96; 19.10.12.1209 NMAC - Rn, 19 NMAC 10.2.12.1209, 05-15-2001]

19.10.12.1210 RELEASE OF FINANCIAL ASSURANCE:

A. Release Application.

(1) The permittee may file an application with the director for the release of all or part of the financial assurance. The permittee may file multiple release applications per year for each permit.

(2) The application shall describe the reclamation or closeout measures completed and shall contain an estimate of the cost of reclamation that has not been completed.

(3) At the time the release application is filed with the director, the permittee shall submit proof that the notice of application has been provided in accordance with 19.10.9.902 NMAC and 19.10.9.903 NMAC. The notice shall be considered part of any release application and shall contain: the permittee's name; permit number and approval date; notification of the precise location of the real property affected; the number of acres; the type and amount of the financial assurance filed and the portion sought to be released; the type and appropriate dates of reclamation or closeout plan performed; a description of the results achieved as they relate to the permittee's approved reclamation or closeout plan; and the name and address of the director, to whom written comments, objections, or requests for public hearings on the specific financial assurance release may be submitted pursuant to Subsection C of 19.10.12.1210 NMAC.

(4) The director shall promptly provide notice of receipt of the application for release of all or part of the financial assurance to the environment department, the office of the state engineer, the department of game and fish, the forestry division, the state historic preservation division, other agencies he deems appropriate, and if the operation is on state or federal land, to the appropriate state or federal land management agency.

B. Inspection by director. Upon receipt of the complete financial assurance release application, the director shall, within 30 days, or as soon thereafter as weather conditions permit, conduct an inspection and evaluation of the reclamation or closeout measures completed. The evaluation shall consider, among other factors, the degree of difficulty to complete any remaining reclamation. The surface owner or lessor of the real property, other state and federal agencies as listed in Subsection A, Paragraph 4 of 19.10.12.1210 NMAC above, and any other persons who have requested advance notice of the inspection shall be given notice of such inspection and may be present at the release inspection as may any other interested members of the public. The director may arrange with the permittee to allow access to the permit area, upon request by any person with an interest in the financial assurance release, for the purpose of gathering information relevant to the proceeding.

C. Public Hearing.

(1) Within 30 days from the date of the inspection, a person with an interest that is or will be adversely affected by the proposed financial assurance release may file written objections to the proposed release with the director. If written objections are filed and a hearing is requested, the director shall inform all persons who have requested notice of hearings and persons who have filed written objections in regard to the application of the time and place of the hearing at least 30 days in advance of the public hearing. The hearing shall be held in the locality of the permit area proposed for release.

(2) The date, time and location of the public hearing shall be advertised by the director in a newspaper of general circulation in the locality of the permit area once a week for two consecutive weeks. All persons who have submitted a written request in advance to the director to receive notices of hearings shall be provided notice at least 30 days prior to the hearing. The hearing procedures of 19.10.9.905 NMAC shall be followed.

D. Within 45 days from the inspection, if no public hearing is held pursuant to Subsection C of 19.10.12.1210 NMAC, or, within 45 days after a public hearing has been held pursuant to Subsection C of 19.10.12.1210 NMAC, the director shall notify in writing the permittee, the surety or other persons with an interest in the collateral who have requested notification under 19.10.12.1208 NMAC and the persons who either filed objections in writing or participants in the hearing proceedings who supplied their addresses to the director, if any, of the decision whether to release all or part of the financial assurance.

E. The director may release all or part of the financial assurance for the entire permit area or incremental area if the director is satisfied that the reclamation or closeout plan or a phase of the reclamation or closeout plan covered by the financial assurance, or portion thereof, has been accomplished in accordance with the act, 19.10 NMAC, and the permit.

F. If the director denies the release application or portion thereof, the director shall notify the permittee, the surety, and any person with an interest in collateral as provided for in Subsection C, Paragraph 4 of 19.10.12.1208 NMAC, in writing, stating the reasons for disapproval and recommending corrective actions necessary to secure the release.

G. The director may approve an application for release of financial assurance for a minimal impact operation without public notice or hearing.

[7-12-94, 2-15-96; 19.10.12.1210 NMAC - Rn, 19 NMAC 10.2.12.1210, 05-15-2001; A, 12-30-03; A, 07-15-15]

19.10.12.1211 FORFEITURE OF FINANCIAL ASSURANCE:

A. If a permittee refuses or is unable to conduct or complete the reclamation or closeout plan, if the terms of the permit are not met, or if the permittee defaults on the conditions under which the financial assurance was accepted, the director shall take the following action to forfeit all or part of the financial assurance for the permit area or an increment of the permit area:

(1) Send written notification by certified mail, return receipt requested, to the permittee and the surety, if any, informing them of the determination to forfeit all or part of the financial assurance, including the reasons for the forfeiture and the amount to be

forfeited. The amount shall be based on the estimated total cost of achieving reclamation or closeout.

(2) Advise the permittee and surety, if applicable, of the conditions under which forfeiture may be avoided. Such conditions may include, but are not limited to:

(a) An agreement by the permittee or another party to perform reclamation or closeout operations in accordance with the conditions of the permit, the reclamation or closeout plan, the act and 19.10 NMAC and a demonstration that such a party has the ability to satisfy the conditions; or

(b) The director may allow a surety to complete the reclamation or closeout plan, or the portion of the reclamation or closeout plan applicable to the financial assurance phase or increment, if the surety can demonstrate an ability to complete the reclamation or closeout plan in accordance with the approved reclamation or closeout plan. Except where the director approves partial release authorized under 19.10.12.1210 NMAC, no surety liability shall be released until successful completion of all reclamation or closeout under the terms of the permit, including applicable liability periods of 19.10.12.1204 NMAC.

B. In the event forfeiture of the financial assurance is required by this part, the director shall:

(1) proceed to collect the forfeited amount as provided by applicable laws if actions to avoid forfeiture have not been taken; and

(2) use funds collected from the forfeiture to complete the reclamation or closeout, or portion thereof, on the disturbed area or increment to which financial assurance coverage applies.

C. Upon default of the conditions under which the financial assurance was accepted, the director may cause the forfeiture of any and all financial assurance to complete reclamation or closeout for which the financial assurance was provided. Unless specifically limited, as provided in 19.10.12.1202 NMAC, financial assurance liability shall extend to the entire disturbed area under conditions of forfeiture.

D. In the event the estimated amount forfeited is insufficient to pay for the full cost of reclamation or closeout, the permittee shall be liable for remaining costs. The director may complete, or authorize completion of, reclamation or closeout of the area in accordance with the permit terms and may recover from the permittee all reasonably incurred costs of reclamation or closeout and forfeiture in excess of the amount forfeited.

E. In the event the amount of financial assurance forfeited was more than the amount necessary to complete reclamation or closeout and all costs of forfeiture, the

excess funds shall be returned by the director to the party from whom they were collected.

[7-12-94, 2-15-96; 19.10.12.1211 NMAC - Rn, 19 NMAC 10.2.12.1211, 05-15-2001]

PART 13: PROCESS OF REVIEW OF MINING AND RECLAMATION PRACTICES

19.10.13.1 ISSUING AGENCY:

New Mexico Mining Commission.

[19.10.13.1 NMAC - N, 05-15-2001]

19.10.13.2 SCOPE:

All persons subject to the New Mexico Mining Act NMSA 1978, Section 69-36-1 et. seq.

[19.10.13.2 NMAC - N, 05-15-2001]

19.10.13.3 STATUTORY AUTHORITY:

NMSA 1978, Section 69-36-1 et. seq.

[19.10.13.3 NMAC - N, 05-15-2001]

19.10.13.4 DURATION:

Permanent.

[19.10.13.4 NMAC - N, 05-15-2001]

19.10.13.5 EFFECTIVE DATE:

February 15, 1996, unless a later date is cited at the end of a section.

A. All references to the Mining Act Parts 1-13 in any other rule shall be understood as a reference to 19.10 NMAC.

B. The amendment and replacement of The Mining Act Parts 1-13 shall not affect any administrative or judicial enforcement action pending on the effective date of this amendment nor the validity of any permit issued pursuant to the Mining Act Parts 1-13.

[19.10.13.5 NMAC - N, 05-15-2001]

19.10.13.6 OBJECTIVE:

The objective of Parts 1-14 of 19.10 NMAC is to establish regulations to implement the New Mexico Mining Act as directed in NMSA 69-36-7A. These regulations are designed to ensure proper reclamation through permitting for operations subject to the Mining Act, in accordance with provisions and standards outlined in the Mining Act.

[19.10.13.6 NMAC - N, 05-15-2001]

19.10.13.7 DEFINITIONS:

[RESERVED]

[19.10.13.7 NMAC - N, 05-15-2001]

[Definitions for this Part can be found in 19.10.1.7 NMAC.]

19.10.13.8-19.10.13.1300 [RESERVED]:

[19.10.13.8 - 19.10.13.1300 NMAC - N, 05-15-2001]

19.10.13.1301 ANNUAL REPORT:

The Division shall prepare a report of mining and reclamation practices in New Mexico to be presented to the Commission annually at a public meeting with opportunity for public comment. [7-12-94, 2-15-96; 19.10.13.1301 NMAC – Rn, 19 NMAC 10.2.13.1301, 05-15-2001]

19.10.13.1302 CONTENTS:

The report shall contain:

A. a general description of mining operations and reclamation practices in the state including production figures for the state;

B. proposed amendments to 19.10 NMAC, if any, to provide for the protection of the environment and to consider the economic effects of 19.10 NMAC; and

C. any other information the Director considers necessary to be presented to the Commission pertinent to 19.10 NMAC or the Act.

[7-12-94, 2-15-96; 19.10.13.1302 NMAC – Rn, 19 NMAC 10.2.13.1302, 05-15-2001]

19 10.13.1303 COORDINATION AMONG AGENCIES:

A. Avoidance of duplicative and conflicting requirements will be accomplished through coordinated procedures that address the following:

(1) Avoid imposing requirements which are duplicative of or which conflict with any other applicable state or federal law, regulation or standard.

(2) Enforcement of other statutes or regulations to be conducted by the agency charged with that responsibility under the applicable state or federal statute or regulation.

(3) Information provided to other agencies may be provided to the Director to partially or completely meet these requirements.

(4) Financial assurance required under the Act shall not duplicate nor be less comprehensive than federal or state financial requirements.

(5) Maintain a location or locations for maps and other information to assist in the determination of whether lands are not subject to minimal impact exploration and mining.

(6) Coordination of inspections with other regulatory agencies.

B. Coordination of Review: The Director shall, as appropriate, consult with the staff of other federal and state agencies responsible for the review of mining operations for compliance with other applicable laws and the issuance of permits for the mining operations, for the purpose of avoiding duplication and conflicting requirements of the Act and 19.10 NMAC.

[[7-12-94, 2-15-96; 19.10.13.1303 NMAC – Rn, 19 NMAC 10.2.13.1303, 05-15-2001]

PART 14: MINING COMMISSION ADJUDICATORY REVIEW

19.10.14.1 ISSUING AGENCY:

New Mexico Mining Commission.

[19.10.14.1 NMAC – N, 05-15-2001]

19.10.14.2 SCOPE:

All persons subject to the New Mexico Mining Act NMSA 1978, Section 69-36-1 et. seq.

[19.10.14.2 NMAC – N, 05-15-2001]

19.10.14.3 STATUTORY AUTHORITY:

NMSA 1978, Section 69-36-1 et. seq.

19.10.14.4 DURATION:

Permanent.

[19.10.14.4 NMAC – N, 05-15-2001]

19.10.14.5 EFFECTIVE DATE:

June 30, 1999, unless a later date is cited at the end of a section.

A. All references to the Mining Act Parts 1-14 in any other rule shall be understood as a reference to 19.10 NMAC.

B. The amendment and replacement of The Mining Act Parts 1-14 shall not affect any administrative or judicial enforcement action pending on the effective date of this amendment nor the validity of any permit issued pursuant to the Mining Act Parts 1-14.

[19.10.14.5 NMAC – N, 05-15-2001]

19.10.14.6 OBJECTIVE:

The objective of Parts 1-14 of 19.10 NMAC is to establish regulations to implement the New Mexico Mining Act as directed in NMSA 69-36-7A. These regulations are designed to ensure proper reclamation through permitting for operations subject to the Mining Act, in accordance with provisions and standards outlined in the Mining Act.

[19.10.14.6 NMAC – N, 05-15-2001]

19.10.14.7 DEFINITIONS FOR 19.10.14 NMAC:

A. "Applicant" means the person whose application for a permit or variance or revision to a permit is the subject of the permitting action to which a petition applies.

B. "Date of notice" means the date on which the Director initiates service of the notice of a decision by mail or other means. For example, the date of notice of final permitting decisions authorizing new activities shall be the date on which the Director mails notice to participants in the permitting proceeding and others who requested notice.

C. "Document" means, except as used in 19.10.14.1423 NMAC, any motion, response, memorandum, decision, order, comment, other pleading or evidence filed in a proceeding under 19.10.14 NMAC.

D. "Final action" means a written order issued by the Commission that contains findings of fact and the final decision of the Commission.

E. "Hearing Clerk" means the person designated to maintain the official record of the proceeding.

F. "Hearing Officer" means the person designated under 19.10.14 NMAC or appointed by the Commission to conduct a proceeding under 19.10.14 NMAC.

G. "Interested participant" means any person, other than a party, who files a statement of intent to present evidence pursuant to Subsection D of 19.10.14.1434 NMAC.

H. "New activities" means a new mining operation, a new unit of an existing mining operation or a unit expansion that exceeds the design limits specified in a permit for an existing mining operation.

I. "Party" means, the Petitioner, the Applicant, if different from the Petitioner, the Division, or any person who has been permitted to intervene in the particular hearing pursuant to Section 19.10.14.1424 NMAC.

J. "Petition" means a petition for review of an order, penalty assessment or issuance or denial of a permit by the Director pursuant to NMSA 1978, Section 69-36-15 (1993).

K. "Petitioner" means any person who files a timely petition.

L. "Record" depending on the context, means all documents filed by or with the Hearing Clerk during a proceeding before the Commission and includes: the audio or stenographic recording of the hearing and all exhibits admitted into evidence at the hearing, or otherwise made a part of the record by the Commission; and the minutes, or an appropriate extract of minutes, of any Commission meeting where the Commission deliberated or acted on any procedural or substantive issue in the proceeding or the Hearing Record for decisions by the Director as described in 19.10.9.906 NMAC.

[6-30-99; 19.10.14.7 NMAC – Rn, 19 NMAC 10.2.14.1404, 05-15-2001]

[Additional Definitions for this Part can be found in 19.10.1.7 NMAC.]

19.10.14.8-19.10.14.1400 [RESERVED]:

[19.10.14.8 - 19.10.14.1400 NMAC – N, 05-15-2001]

19.10.14.1401 APPLICABILITY OF RULES OF CIVIL PROCEDURE:

In the absence of a specific provision in this Part or the Act governing an action, the Commission may look to the New Mexico Rules of Civil Procedure, Rules 1-001 to 1-102, NMRA 1998, and the New Mexico Rules of Evidence, Rules 11-101 to 11-1102, NMRA 1998, for guidance.

[6-30-99; 19.10.14.1401 NMAC – Rn, 19 NMAC 10.2.14.1401, 05-15-2001]

19.10.14.1402 SEVERABILITY:

If any portion or application of 19.10.14 NMAC is held invalid, the remainder of this Part, or its application to other persons or situations, shall not be affected.

[6-30-99; 19.10.14.1402 NMAC – Rn, 19 NMAC 10.2.14.1402, 05-15-2001]

19.10.14.1403 SAVINGS CLAUSE:

This Part does not apply to petitions before the Commission filed prior to the effective date of this Part, except as agreed to by the parties to such proceedings.

[6-30-99; 19.10.14.1403 NMAC – Rn, 19 NMAC 10.2.14.1403, 05-15-2001]

19.10.14.1404 [RESERVED]

19.10.14.1405 EFFECTIVE DATES:

A. Except as otherwise provided in the Director's decision or in these rules, the effective date of a Director's decision shall be the date of notice.

B. The effective date of final permitting decisions authorizing new activities shall be no sooner than the sixteenth day after the date of notice, but the Director may, in the decision itself, provide for an effective date up to 30 days after the date of notice upon finding good cause.

C. Upon finding good cause, the Director may, in any other decision, provide for a delayed effective date up to 90 days after the date of notice.

[6-30-99; 19.10.14.1405 NMAC – Rn, 19 NMAC 10.2.14.1405, 05-15-2001]

19.10.14.1406 REQUESTS FOR STAY OF NEW ACTIVITIES:

A. A person who is or may be adversely affected by a decision authorizing new activities may file with the Commission a request to stay the new activities no later than 15 days after the date of notice.

B. Upon the timely filing of a request to stay new activities, the effective date of the Director's decision shall be delayed until the Commission concludes an expedited hearing as provided in Subsection G of 19.10.14.1406 NMAC.

C. A request to stay new activities shall include, at a minimum:

(1) a petition initiating an appeal to the Commission, which petition may include a waiver of the hearing deadlines applicable to hearings on the merits, and;

(2) a statement of the basis for the request and showings to be made at the expedited hearing, including:

(a) the irreparable harm to the person requesting the stay if the stay is not granted,

(b) the likelihood that the person requesting the stay will prevail in the appeal on the merits,

(c) the lack of substantial harm to others if the stay is granted, and

(d) the lack of harm to the public interest if the stay is granted.

D. The person requesting the stay shall, at the time of filing, serve the request on all other parties. The other parties may file responses to the request at least 2 working days prior to the expedited hearing, and may separately respond to the petition as otherwise provided.

E. The petition, which must be filed as part of a request to stay new activities, need not include the detailed statement of objections required in Subsection B of 19.10.14.1417 NMAC; provided, however, the petitioner must supplement the petition to meet all requirements for a petition by no later than 60 days after notice of the decision being appealed. A waiver of the hearing deadlines in a petition under this section shall have the limited effect of tolling the deadlines for the hearing on the merits until the date on which petitioner supplements the petition.

F. A person filing a request to stay new activities need not provide financial assurance for the period of any resulting stay ordered by the Commission.

G. The hearing clerk shall distribute copies of any timely request to stay new activities to the Commissioners and schedule an expedited hearing no sooner than 16 days and no later than 30 days after notice of the decision. Only parties (including but not limited to all who filed a timely request for stay) shall be entitled to participate in the Commission's expedited hearing.

(1) The expedited hearing shall be completed and a decision rendered by the Commission no later than 30 days after notice of the decision, and the expedited hearing may be held on short notice.

(2) The Commission chairperson or another Commissioner designated by the chair shall conduct an orderly hearing, not to exceed 5 hours in length, and shall allow each party the opportunity to present evidence on the request(s).

(3) The Commission shall grant or deny the request at the conclusion of the expedited hearing. The Commission may grant a request to stay new activities only if it finds that:

- (a)** the request was timely and complete when filed,
- (b)** the person requesting the stay is or may be adversely affected by the Director's decision,
- (c)** irreparable harm to the person requesting the stay will result if the stay is not granted,
- (d)** there is a likelihood that the person requesting the stay will prevail on the merits in the appeal,
- (e)** no substantial harm will result to other interested persons if the stay is granted, and
- (f)** no harm will ensue to the public interest if the stay is granted.

H. If the Commission fails to decide a request to stay new activities within 30 days of the Director's notice of decision, the request(s) shall be deemed denied.

I. If the Commission denies a request to stay new activities, the effective date of the Director's decision shall be the date of such denial, and no further request to stay the same decision will be considered by the Commission. No person may appeal the denial of a request to stay new activities until after the Commission's final action in the appeal on the merits.

J. If the Commission grants a request to stay new activities, the effective date of the Director's decision shall be the date of the Commission's final action in the appeal on the merits.

[6-30-99; 19.10.14.1406 NMAC – Rn, 19 NMAC 10.2.14.1406, 05-15-2001]

19.10.14.1407 OTHER REQUESTS FOR STAY:

A. Any request for stay other than requests to stay new activities shall be filed with the Commission at or after the time of filing a petition. The request for stay must be served on all other parties and must meet the requirements of Subsection C, Paragraph 2 of 19.10.14.1406 NMAC.

B. Any other party shall have 10 days after service to file a response. The party filing the request for stay may submit a reply to any response within 5 days of service of the response.

C. The Commission may grant a request to stay under this Section only if, after a hearing, it makes the findings required under Subsection G, Paragraph 3 of 19.10.14.1406 NMAC.

D. Any party opposing a request for stay under this Section may request that financial assurance be provided if the stay is granted. If a stay is granted, the Commission shall determine whether the financial assurance is to be provided and set the other terms for it, including the form and amount of the financial assurance and the conditions for forfeiture or release of the financial assurance. In the event the appeal is ultimately denied by the Commission, the Commission's final action shall include a determination of what portion of any financial assurance that was provided shall be paid over to the party who requested that financial assurance be provided, and shall state what portion, if any, is to be released back to the provider of the financial assurance.

[6-30-99; 19.10.14.1407 NMAC – Rn, 19 NMAC 10.2.14.1407, 05-15-2001]

19.10.14.1408 POWERS AND DUTIES OF THE COMMISSION:

The Commission shall exercise all powers and duties as prescribed under the Act, the Regulations and this Part and not otherwise delegated to the Hearing Officer or the Hearing Clerk.

A. The Commission may issue procedural orders that either impose additional procedural duties or simplify the procedures provided in this Part. The Commission shall not eliminate any procedural requirements of the Act or regulations.

B. The Commission may appoint one or more of its members as Hearing Officers to perform the functions described in 19.10.14.1407 NMAC. From the date a petition is received by the Commission, the chairperson of the Commission shall serve as Hearing Officer until the Commission appoints another hearing officer.

C. No Commissioner with any financial interest affected or potentially affected by the outcome of an adjudicatory proceeding may serve as a Hearing Officer in that proceeding or otherwise participate in the proceeding.

D. The evidentiary hearings conducted under this Part shall take place at meetings of the Commission, unless the Commission specifically delegates, for good cause, the taking of evidence by the Hearing Officer.

E. The Commission may adopt, modify or set aside the Director's actions and can remand the matter to the Director for further action.

[6-30-99; 19.10.14.1408 NMAC – Rn, 19 NMAC 10.2.14.1408, 05-15-2001]

19.10.14.1409 POWERS AND DUTIES OF THE HEARING OFFICER:

The Hearing Officer shall exercise all powers and duties prescribed or delegated by the Commission under the Act or this Part, including, but not limited to:

- A.** Preside over the hearings under this Part;
- B.** Rule on motions and procedural requests that do not seek final resolution of the proceeding and issue all necessary orders;
- C.** Issue subpoenas, as authorized by the Act, for the attendance and testimony of witnesses and the production of documentary evidence;
- D.** Administer oaths and affirmations, examine witnesses, and admit or exclude evidence;
- E.** Require parties to attend conferences for the settlement or simplification of issues or proceedings;
- F.** Enter pre-hearing orders related to scheduling and other procedural issues; and
- G.** Impose sanctions, subject to review by the Commission, on parties who cause undue delay and fail to cooperate in the proceeding.

[6-30-99; 19.10.14.1409 NMAC – Rn, 19 NMAC 10.2.14.1409, 05-15-2001]

19.10.14.1410 COMPUTATION AND EXTENSION OF TIME:

A. In computing any period of time prescribed or allowed by this Part, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday or legal state holiday, in which event the time is extended until the end of the next day which is not a Saturday, Sunday or legal state holiday. Whenever a party must act within a prescribed period after service upon him, and service is by mail, 3 days is added to the prescribed period. The three-day extension does not apply to any deadline under the Act or in Sections 19.10.14.1405 NMAC, 19.10.14.1406 NMAC or 19.10.14.1407 NMAC.

B. The Commission or Hearing Officer may grant an extension of time for the filing of any document or the hearing upon consent of all the parties or upon timely motion of a party to the proceeding, if good cause is shown, and no prejudice will result to other parties.

[6-30-99; 19.10.14.1410 NMAC – Rn, 19 NMAC 10.2.14.1410, 05-15-2001]

19.10.14.1411 DISCUSSION OF ISSUES WITH COMMISSION:

At no time after the filing of a petition and before the conclusion of a proceeding shall any party, interested participant or their representatives discuss the issues involved in the proceeding with any Commissioner when all other parties to the proceeding are not present. This prohibition does not preclude any constituent agency Commissioner from conferring with agency employees who are not, and have not been, involved in the matter before the Commission.

[6-30-99; 19.10.14.1411 NMAC – Rn, 19 NMAC 10.2.14.1411, 05-15-2001]

19.10.14.1412 FILING, SERVICE, AND FORM OF DOCUMENTS:

A. The originals of all documents served in the proceeding shall be filed with the Hearing Clerk designated by the Director. Filing is complete when received by the Hearing Clerk or some other Division employee in his place. Filing may be completed between 8 a.m. and 5 p.m. on state work days. Additionally, a party filing a document must provide 12 copies of the document at the time of filing to the Hearing Clerk to distribute to the Commission and its counsel.

B. A party filing documents shall serve copies of the documents upon all other parties. A certificate of service, as shown in Attachment A, shall accompany each filed document.

C. All documents may be served by hand-delivery, facsimile transmission or first class mail. If facsimile transmission is used, the sending party must telephone and confirm receipt in order to complete service. If the parties agree, then service by electronic mail may also be used. Service by mail is not allowed within 10 days of the hearing.

D. All documents, except exhibits, shall be prepared on 8 1/2 x11-inch white paper, and where appropriate, the first page of every document shall contain the heading and caption illustrated in Attachment A.

E. The Hearing Clerk shall provide a docket number for the proceeding and maintain a file of documents submitted in the proceeding and a listing identifying those documents and their date of submittal.

[6-30-99; 19.10.14.1412 NMAC – Rn, 19 NMAC 10.2.14.1412, 05-15-2001]

19.10.14.1413 FILING AND SERVICE OF DOCUMENTS ISSUED BY COMMISSION OR HEARING OFFICER:

All documents issued by the Commission or Hearing Officer shall be filed with the Hearing Clerk. The Hearing Clerk shall promptly serve copies of the documents upon all parties.

[6-30-99; 19.10.14.1413 NMAC – Rn, 19 NMAC 10.2.14.1413, 05-15-2001]

19.10.14.1414 EXAMINATION OF DOCUMENTS FILED:

Any person may, during normal business hours, inspect and copy any document filed in any proceeding, except confidential documents. Such documents shall be made available by the Hearing Clerk. The person seeking copies of any documents shall pay the cost of copying the documents.

[6-30-99; 19.10.14.1414 NMAC – Rn, 19 NMAC 10.2.14.1414, 05-15-2001]

19.10.14.1415-19.10.14.1416 [RESERVED]

[6-30-99; 19.10.14.1415-19.10.14.1416 NMAC -- Rn, 19 NMAC 10.2.14.1415-1416, 05-15-2001]

19.10.14.1417 FILING OF PETITION:

The proceeding shall be started by the filing of a petition with the Commission within 60 days from the date of notice of the Director's action. The Petitioner shall file the original and 12 copies of the Petition with the Hearing Clerk and serve a copy on the Division and the applicant if the applicant is not the Petitioner. The Hearing Clerk shall promptly serve copies of the petition to the Commission. The Petition shall:

- A.** Identify the Petitioner, and state how the Petitioner is or may be adversely affected by the Director's action;
- B.** Identify the Director's action which is the subject of the appeal, specify the portions of the Director's action to which Petitioner objects and specifically state the objections. The Commission will consider only the objections included in the Petition;
- C.** Have attached a copy of the Director's action;
- D.** Be served on the Applicant on the date of filing if the Applicant is not the Petitioner.

[6-30-99; 19.10.14.1417 NMAC – Rn, 19 NMAC 10.2.14.1417, 05-15-2001]

19.10.14.1418 RESPONSES TO THE PETITION:

- A.** The Division shall file a response to the Petition responding to each of the objections in the Petition no later than 20 days after the petition is filed.
- B.** The Division shall deliver to the Hearing Clerk a list of all persons who have expressed in writing an interest in the subject of the Petition by requesting a public hearing, submitting written comments regarding the application to the Director, or by presenting testimony at any hearing conducted by the Division prior to the Director's action.

C. When the Petitioner is not the same person as the Applicant, then the Applicant may also file a response clearly and directly responding to each of the objections in the Petition within 30 days after the Petition is filed.

[6-30-99; 19.10.14.1418 NMAC – Rn, 19 NMAC 10.2.14.1418, 05-15-2001]

19.10.14.1419 NOTICE OF HEARING OFFICER ASSIGNMENT:

If a Hearing Officer other than the Commission chairperson is assigned, the Hearing Clerk shall notify the parties of the name and address of the Hearing Officer. The Hearing Clerk shall also, at that time, forward to the Hearing Officer copies of all documents filed to date. Any party may request a pre-hearing conference with the Hearing Officer to address scheduling, motions and other pre-hearing matters.

[6-30-99; 19.10.14.1419 NMAC – Rn, 19 NMAC 10.2.14.1419, 05-15-2001]

19.10.14.1420 SCHEDULING THE HEARING:

A. The Commission or Hearing Officer shall schedule the hearing to begin no earlier than 30 days and no later than 60 days after the date the Petition was filed, unless the parties waive the deadline in writing. The notice of waiver must be filed before the 60-day deadline.

B. The Hearing Clerk shall, upon direction from the Commission or Hearing Officer, but no later than 20 days prior to the hearing date, issue and serve upon the parties a Notice of Hearing with proof of service, setting forth the date, time, and location of the hearing, a brief description of the petition and information regarding participation in the hearing. This information shall include references to the procedures to intervene pursuant to 19.10.14.1424 NMAC, to present evidence as an interested participant by filing and mailing to the parties a statement of intent pursuant to Subsection D of 19.10.14.1434 NMAC, and to participate as a general public participant pursuant to 19.10.14.1434 NMAC.

C. The Hearing Clerk shall mail a copy of the Notice of Hearing to each person identified in Subsection B of 19.10.14.1418 NMAC at least 30 days prior to the hearing and shall include information regarding participation by the general public.

D. The Hearing Clerk shall send copies of the Notice of Hearing, with requests for publication, to at least one newspaper of general circulation in the state; and at least one additional newspaper published or distributed at least weekly in the county where the mining or exploration operation is located to be published at least 25 days prior to the hearing.

E. The Hearing Clerk shall file in the record a copy of the Notice of Hearing and any affidavits of publication attached.

F. A request for postponement of a hearing shall be granted if all parties agree or if good cause is shown.

G. Unless otherwise ordered or allowed by the Commission or Hearing Officer, the hearing shall be in Santa Fe.

[6-30-99; 19.10.14.1420 NMAC – Rn, 19 NMAC 10.2.14.1420, 05-15-2001]

19.10.14.1421 MOTIONS:

A. Any application or request by a party to the Commission for an order shall be made by motion in writing except those made orally during a hearing. The party making the motion shall specify the reasons for the motion and state the relief sought. Motions may be accompanied by an affidavit(s), certificate(s), or other evidence relied upon.

B. Motions should be filed within 30 days of when the Petition was filed.

C. Any party upon whom a motion is served shall have 10 days after service of the motion to file a response. A party failing to file a timely response shall be deemed to have waived any objection to the granting of the motion.

D. The party making the motion may, but is not required to, submit a reply to any response within 5 days after service of the response.

E. Motions shall be decided by the Hearing Officer without a hearing unless otherwise ordered by the Hearing Officer or upon written request of any party. The Hearing Officer shall refer any motion that would resolve the matter, and may refer any other motion, to the Commission for a decision. The Hearing Officer may make a recommendation to the Commission on dispositive motions. The Commission may reconsider a motion decided by the Hearing Officer if the reconsideration will not delay the proceeding. A procedural motion may be ruled upon prior to the expiration of the time for response; any response received after the ruling but prior to the expiration of the time for response shall be treated as a request for reconsideration of the ruling.

F. Motions seeking an extension of time may be filed at any time before the deadline for which the extension is sought.

[6-30-99; 19.10.14.1421 NMAC – Rn, 19 NMAC 10.2.14.1421, 05-15-2001]

19.10.14.1422 DISCOVERY:

A. At least 15 days prior to the hearing, the Petitioner shall file and serve on the Division and any other party the following information:

- (1)** The name of each witness to be called at the hearing;

(2) An estimate of the length of the direct testimony of each witness;

(3) A summary or outline of the anticipated direct testimony of each witness and, if the testimony includes expert opinions, a list of documents or other information that provides the basis for those opinions; and

(4) A list of exhibits, if any, to be offered into evidence at the hearing and copies of any such exhibits that are not in the administrative record.

B. At least 7 days prior to the hearing, the Division and any other party, other than an intervenor, shall file and serve on the Petitioner the information listed in Subsection A of 19.10.14.1422 NMAC.

C. If a request for discovery is made, the Rules of Civil Procedure for the District Courts, Rule 1-001 to 1-102, NMRA 1998, shall govern, except the Hearing Officer shall resolve any disputes and may shorten deadlines.

[6-30-99; 19.10.14.1422 NMAC – Rn, 19 NMAC 10.2.14.1422, 05-15-2001]

19.10.14.1423 SUBPOENAS:

The Hearing Officer may issue subpoenas to compel attendance of witnesses and for the production of documents relevant to the Petition.

A. The Hearing Clerk shall, upon request by any party and without the necessity for notice to other parties, forward the proposed subpoena to the Hearing Officer for issuance. The subpoena may be issued with the name and address of the witness blank, to be completed by the requesting party.

B. A subpoena must be served on the person to whom it is directed at least 7 days before the date set for the hearing.

C. Any person to whom the subpoena is directed may file a motion to modify the subpoena or quash the subpoena (declare it void) within 5 days after service of the subpoena. Unless the motion is granted in advance, the person to whom the subpoena is directed is expected to be in attendance at the hearing.

[6-30-99; 19.10.14.1423 NMAC – Rn, 19 NMAC 10.2.14.1423, 05-15-2001]

19.10.14.1424 INTERVENTION:

A. Any person may intervene as a matter of right or by permission of the Commission pursuant to the criteria set forth in Rule 1-024, NMRA 1998. Any agency represented on the Mining Commission pursuant to NMSA 1978, Section 69-36-6(A) (1993) shall be permitted to intervene as a matter of right by following the procedures set forth in this Section.

B. A person seeking to intervene must file and serve upon each party a motion to intervene at least 10 days before the hearing. The motion shall include the following information:

- (1)** The name of the person seeking to intervene;
- (2)** A pleading setting forth the objections to or support for the Director's action which is the subject of the appeal and for which intervention is sought;
- (3)** Unless the person is an agency that may intervene as a matter of right, an explanation of why intervention should be allowed based upon the criteria set forth in Rule 1-024, NMRA 1998;
- (4)** The name of each witness to be called at the hearing;
- (5)** An estimate of the length of the direct testimony of each witness;
- (6)** A summary or outline of the anticipated direct testimony of each witness and, if the testimony includes expert opinions, a list of documents or other information that provides the basis for those opinions; and
- (7)** A list of exhibits, if any, to be offered into evidence at the hearing.

C. Any party shall have 5 days after service of a motion to intervene to file a response.

D. The motion shall be decided pursuant to Paragraph F of 19.10.14.1421 NMAC.

[6-30-99; 19.10.14.1424 NMAC – Rn, 19 NMAC 10.2.14.1424, 05-15-2001]

19.10.14.1425-19.10.14.1428 [RESERVED]

[6-30-99; 19.10.14.1425-19.10.14.1428 NMAC -- Rn, 19 NMAC 10.2.14.1425-1428, 05-15-2001]

19.10.14.1429 CONDUCT OF HEARING:

A. In most circumstances, the hearing will be conducted in front of the Commission, with the Hearing Officer presiding. For good cause, the Commission may delegate the authority to take evidence to the Hearing Officer.

B. The Hearing Officer shall conduct the hearing to provide a reasonable opportunity for the parties and interested participants to present evidence without making the hearing unreasonably long or repetitious.

C. Members of organizations that are parties or interested participants will appear and participate only through counsel or authorized representatives.

[6-30-99; 19.10.14.1429 NMAC – Rn, 19 NMAC 10.2.14.1429, 05-15-2001]

19.10.14.1430 ORDER OF TESTIMONY:

The Hearing Officer may allow brief opening and closing statements. The Petitioner has the first opportunity to present evidence or argument to support its position. Other parties and interested participants supporting the Petition will then proceed. Following the presentation of evidence in support of the Petition, any party or interested participant opposed to the relief sought in the Petition may produce evidence or argument to support its position. The Hearing Officer may change the order of testimony as needed to accommodate parties, interested participants, witnesses, the public or for other good cause.

[6-30-99; 19.10.14.1430 NMAC – Rn, 19 NMAC 10.2.14.1430, 05-15-2001]

19.10.14.1431 PREPONDERANCE OF EVIDENCE:

Each matter of controversy raised by the Petition shall be determined by the Commission upon a preponderance of the evidence.

[6-30-99; 19.10.14.1431 NMAC – Rn, 19 NMAC 10.2.14.1431, 05-15-2001]

19.10.14.1432 EVIDENCE:

A. The Hearing Officer shall admit any relevant evidence, unless it is immaterial, repetitious, or otherwise unreliable. Evidence relating to settlement is not admissible.

B. All or portions of the administrative record before the Director shall be admitted into evidence at the request of any party or interested participant or at the Commission's request. The party or interested participant who requested the administrative record to be admitted into evidence shall pay for the cost of copies if the Commission requests such copies. Copies may be made by any party or interested participant so long as the copies match the documents in the record.

C. Witnesses shall be examined orally, under oath or affirmation. The Commission, Hearing Officer, parties and interested participants shall have the right to cross-examine a witness. The Hearing Officer will limit cross-examination that he determines to be unduly repetitious, harassment or beyond the scope of the witness' direct testimony.

D. All exhibits offered in evidence shall be marked with a designation identifying the party or interested participant offering the exhibit, and numbered in the sequence in which offered.

E. The Hearing Officer may take official notice of any matter that may be judicially noticed in New Mexico courts.

F. The Commission strongly urges the parties to enter into stipulations of fact to expedite the hearing process. Any stipulation of facts must be filed with the Commission at least 10 business days before the hearing.

[6-30-99; 19.10.14.1432 NMAC – Rn, 19 NMAC 10.2.14.1432, 05-15-2001]

19.10.14.1433 OBJECTIONS:

A. Any objection concerning the conduct of the hearing may be stated orally or in writing during the hearing at the time the issue arises. The party raising the objection must supply a short statement of the reasons for the objection. The ruling by the Hearing Officer on any objection and the reasons given for it shall be part of the record.

B. Whenever evidence is excluded from the record, the party offering the evidence may make an offer of proof, which shall be included in the record. The offer of proof for excluded oral testimony shall consist of a brief statement describing the nature of the evidence excluded and what such evidence would have proven. The offer of proof for excluded documents or exhibits shall consist of the insertion in the record of the documents or exhibits excluded.

[6-30-99; 19.10.14.1433 NMAC – Rn, 19 NMAC 10.2.14.1433, 05-15-2001]

19.10.14.1434 PARTICIPATION BY THE GENERAL PUBLIC:

A. Any member of the general public may present comments in support of or in opposition to a petition at the hearing. Such comments may be given orally or in a signed written statement with 12 copies. Such comments will be included in the record but will not be admitted as evidence. The Commission may consider the comments with respect to the weight of the evidence presented by the parties or interested participants or with respect to interpretation of law or matters of public policy within the Commission's jurisdiction and discretion.

B. If written submittals are allowed following the hearing, then any member of the general public may offer additional comments during the time allowed for such submittals, which shall be considered in the same manner as provided in Subsection A of 19.10.14.1434 NMAC. Comments received after the deadline will not be included in the record.

C. Members of the general public cannot file motions, need not be served with motions or pleadings filed by the parties, and cannot conduct cross-examination of witnesses.

D. Any person who wishes to present evidence at the hearing as an interested participant shall, not later than 10 days prior to the hearing, file a statement of intent to present evidence and send a copy of the statement by first class mail to each party at the address of record with the Hearing Clerk. The Hearing Clerk shall provide any interested person with the names and mailing addresses of the parties upon request. The statement of intent shall include:

- (1) the name of the person filing the statement;
 - (2) an indication of whether the person supports or opposes the Petition at issue;
 - (3) the name of each witness to be called at the hearing;
 - (4) an estimate of the length of the direct testimony of each witness;
 - (5) a summary or outline of the anticipated direct testimony of each witness;
- and
- (6) a list of exhibits, if any, to be offered into evidence at the hearing.

E. Upon the request of any party, the interested participant shall, prior to the hearing, provide a list of documents or other information that provides the basis for the testimony described in the statement of intent to present evidence as an interested participant pursuant to Subsection D of 19.10.14.1434 NMAC. Discovery from an interested participant shall be as provided in NMSA 1978, Section 69-36-15(F)(1993).

F. A person who has submitted a statement of intent to present evidence as an interested participant pursuant to Subsection D of 19.10.14.1434 NMAC may testify, offer witnesses to testify, or request the admission of exhibits as evidence at the hearing as disclosed in the statement of intent to present evidence, and may participate as otherwise provided in this Part.

G. An interested participant may not expand the issues at the hearing beyond the issues contained in the pleadings filed by the parties, may not file motions, and is bound by any stipulations filed by the parties. The parties are not required to serve motions or pleadings on interested participants.

[6-30-99; 19.10.14.1434 NMAC – Rn, 19 NMAC 10.2.14.1434, 05-15-2001]

19.10.14.1435-19.10.14.1438 [RESERVED]

[6-30-99; 19.10.14.1435-19.10.14.1438 NMAC -- Rn, 19 NMAC 10.2.14.1435-1438, 05-15-2001]

19.10.14.1439 RECORDING OF THE HEARING:

A. Unless otherwise ordered by the Commission, the Hearing Clerk shall make an audio recording of the hearing. Any person, other than the Commission, desiring a copy of the audio recording must order a copy from the Hearing Clerk and pay for the copying.

B. No later than 5 days prior to the hearing date, a party may request that the hearing be stenographically recorded at the cost of the party. The request shall be in writing, filed with the Hearing Clerk, and shall certify that the party hired a court reporter and that the court reporter will deliver 13 copies of the hearing transcript to the Commission and copies to the parties, if the Commission requests such copies.

[6-30-99; 19.10.14.1439 NMAC – Rn, 19 NMAC 10.2.14.1439, 05-15-2001]

19.10.14.1440 ATTENDANCE BY TELEPHONE:

Commission members may attend a meeting to take any action except on evidentiary matters by telephone if the following requirements are met:

A. The Hearing Clerk is able to arrange for a conference telephone or other similar communications equipment at the location of the meeting;

B. It is difficult or impossible for the Commissioner to attend the meeting in person;

C. Each Commissioner participating by telephone can be identified when speaking;

D. All participants are able to hear each other at the same time;

E. Members of the public attending the meeting are able to hear any Commissioner who speaks during the open portion of a meeting; and

F. Any documents to be considered in the meeting have been provided in advance to Commissioners attending by telephone.

[6-30-99; 19.10.14.1440 NMAC – Rn, 19 NMAC 10.2.14.1440, 05-15-2001]

19.10.14.1441 FINAL ORDER BY COMMISSION:

A. Following the hearing, the Commission may allow a period for written submittals from the parties and interested participants and comments from the general public. These submittals shall not contain evidence not presented previously. The Commission may ask for proposed findings of fact and conclusions of law from any or all parties and may ask for objections to proposed findings of fact and conclusions of law.

B. If the hearing was not held as part of a Commission meeting, then a recommendation based on the record shall be made by the Hearing Officer and presented to the Commission within 30 days of the hearing or the last day for written

submittals and comments. The recommendation will include findings of fact, conclusions regarding all material issues of law and reasons therefor, and a proposed final order. The recommendation shall be sent by the Hearing Clerk to all parties and the Commission. The Commission may allow written comments or oral argument regarding the recommendation.

C. The Commission shall reach a decision at the conclusion of the hearing or at a meeting within 30 days after the final deadline for written submittals by the parties or the Hearing Officer. After the Commission reaches an oral decision, the Commission or Commission counsel shall prepare a final written order. Unless otherwise ordered, the Commission shall approve the written order at a meeting within 30 days after the oral decision. Commission members may attend the meeting by telephone provided the requirements of 19.10.14.1440 NMAC are met. The written order shall include a decision granting or denying relief and the factual and legal basis for the decision, and may include a dissenting opinion.

D. The Hearing Clerk shall file the final order in the official public records of the Commission and within one day send copies of the final order to each party, interested participant and to all other persons who have made written requests for notification of the action taken.

[6-30-99; 19.10.14.1441 NMAC – Rn, 19 NMAC 10.2.14.1441, 05-15-2001]

19.10.14.1442 PENALTY:

For reviews of penalty assessments, the Commission may change the amount and nature of the civil penalty, if any, and shall set forth the reasons for the change. The Petitioner shall pay the full amount of the civil penalty, if any, assessed in the final order within 60 days after receipt of the final order, unless otherwise ordered by the Commission. Payment shall be made by forwarding to the Hearing Clerk a cashier's check or certified check in the amount of the penalty assessed, payable to the fund specified in the Act.

[6-30-99; 19.10.14.1442 NMAC – Rn, 19 NMAC 10.2.14.1442, 05-15-2001]

19.10.14.1443 NO AUTOMATIC STAY DURING JUDICIAL REVIEW:

The filing of an appeal does not stay any action or payment of penalty required by the final order. The Commission may enter a stay if it is requested by motion prior to any appeal to district court.

[6-30-99; 19.10.14.1443 NMAC – Rn, 19 NMAC 10.2.14.1443, 05-15-2001]

19.10.14.1444 PREPARATION OF THE RECORD:

The preparation of the record for an appeal or for any other reason shall be the responsibility of the Hearing Clerk. The Appellant shall make satisfactory arrangements for payment for the copies of the record with the Hearing Clerk, including the costs of transcribing the audio recording of the hearing if such transcription is necessary or desired.

[6-30-99; 19.10.14.1444 NMAC – Rn, 19 NMAC 10.2.14.1444, 05-15-2001]

19.10.14.1447 SETTLEMENT:

The Commission encourages the settlement of a proceeding at any time if the settlement is consistent with the provisions and objectives of the Act and Regulations. The Commission may approve a settlement agreement signed by all parties. If the Commission disapproves the settlement agreement, the matter shall proceed as if there had been no settlement agreement.

[6-30-99; 19.10.14.1447 NMAC – Rn, 19 NMAC 10.2.14.1447, 05-15-2001]

19.10.14.1448 WITHDRAWAL:

A Petitioner may withdraw a petition at any time prior to a decision by the Commission by filing a Notice of Withdrawal with the Commission and serving the Notice on all other parties and upon such withdrawal, the permitting action becomes final.

[6-30-99; 19.10.14.1448 NMAC – Rn, 19 NMAC 10.2.14.1448, 05-15-2001]

DATED [] No.

PERMIT NO. _____

[NAME OF PETITIONER],

Petitioner

CERTIFICATE OF SERVICE

I hereby certify that a true and correct copy of the foregoing [name of document] was [hand-delivered] [faxed] [mailed first class] to the following counsel of record on this ____ day of _____, 19__ and hand-delivered to the Clerk of the New Mexico Mining Commission.

[6-30-99; 19.10.14.1449 NMAC – Rn, 19 NMAC 10.2.14.1449, 05-15-2001]

PART 15: MINING COMMISSION RULEMAKING

19.10.15.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Mining and Minerals Division, and Mining Commission.

[19.10.15.1 NMAC - N, 3/27/2018]

19.10.15.2 SCOPE:

19.10.15 NMAC applies to persons or entities engaged in rulemaking proceedings before the commission.

[19.10.15.2 NMAC - N, 3/27/2018]

19.10.15.3 STATUTORY AUTHORITY:

19.10.15 NMAC is adopted pursuant to the New Mexico Mining Act, Sections 69-36-1 to 69-36-20 NMSA 1978 (1993, as amended), and the State Rules Act, Section 14-4-5.8 NMSA 1978 (2017).

[19.10.15.3 NMAC - N, 3/27/2018]

19.10.15.4 DURATION:

Permanent.

[19.10.15.4 NMAC - N, 3/27/2018]

19.10.15.5 EFFECTIVE DATE:

March 27, 2018, unless a later date is cited at the end of a section.

[19.10.15.5 NMAC - N, 3/27/2018]

19.10.15.6 OBJECTIVE:

The objectives of 19.10.15 NMAC are:

- A.** to establish procedures used in rulemaking proceedings before the commission;
- B.** to encourage the participation in the hearings the commission conducts for the promulgation of rules;
- C.** to make possible the effective presentation of the evidence and points of view of parties and members of the public; and
- D.** to assure that rulemaking hearings are conducted in a fair and equitable manner.

[19.10.15.6 NMAC - N, 3/27/2018]

19.10.15.7 DEFINITIONS:

See Section 69-36-3 NMSA 1978 and 19.10.1.7 NMAC for definitions. See also Section 14-4-2 NMSA 1978 (2017) for the definitions of "proceeding", "proposed rule" and "rule".

[19.10.15.7 NMAC - N, 3/27/2018]

19.10.15.8 LIBERAL CONSTRUCTION:

19.10.15 NMAC shall be liberally construed to carry out its purpose.

[19.10.15.8 NMAC - N, 3/27/2018]

19.10.15.9 SEVERABILITY:

If any portion or application of 19.10.15 NMAC is held invalid, the remainder, or its application to other persons or situations, shall not be affected.

[19.10.15.9 NMAC - N, 3/27/2018]

19.10.15.10 POWERS AND DUTIES OF COMMISSION AND HEARING OFFICER:

A. Commission. The commission shall exercise all powers and duties prescribed under 19.10.15 NMAC and not otherwise delegated to the hearing officer or the commission administrator.

B. Hearing officer. The commission shall designate a hearing officer for each hearing who shall exercise all powers and duties prescribed or delegated under

19.10.15 NMAC. The hearing officer may be an appointed member of the commission. The hearing officer shall conduct a fair and impartial proceeding, assure that the facts are fully elicited and avoid delay. The hearing officer shall have authority to take all measures necessary for the maintenance of order and for the efficient, fair and impartial consideration of issues arising in proceedings 19.10.15 NMAC governs, including, but not limited to:

- (1) conducting hearings under 19.10.15 NMAC;
- (2) taking, admitting or excluding evidence, examining witnesses and allowing post-hearing submissions;
- (3) making such orders as may be necessary to preserve decorum and to protect the orderly hearing process;
- (4) if requested by the commission, preparing and filing a report of the hearing, with recommendations for commission action;
- (5) requesting parties to file original documents with the commission administrator; and
- (6) requesting a party to submit a proposed statement of reason in support of the commission's decision.

[19.10.15.10 NMAC - N, 3/27/2018]

19.10.15.11 GENERAL PROVISIONS - COMPUTATION OF TIME:

A. Computation of time. In computing any time prescribed or allowed by these rules, except as otherwise specifically provided, the day of the event from which the designated period begins to run shall not be included. The last day of the computed period shall be included, unless it is a Saturday, Sunday or legal state holiday, in which event the time is extended until the end of the next day, which is not a Saturday, Sunday or legal state holiday. Whenever a party must act within a prescribed period after service upon him or her, and service is by mail, three days is added to the prescribed period. The three-day extension does not apply to any deadline under the act.

B. Extension of time. The commission or hearing officer may grant an extension of time for the filing of any document upon timely motion of a party to the proceeding, for good cause shown, and after consideration of prejudice to other parties.

[19.10.15.11 NMAC - N, 3/27/2018]

19.10.15.12 GENERAL PROVISIONS - RECUSAL:

No commission member shall participate in an action for which he or she would be disqualified under Section 69-36-6 NMSA 1978 of the Mining Act, the Governmental Conduct Act, or any other applicable law.

[19.10.15.12 NMAC - N, 3/27/2018]

19.10.15.13 GENERAL PROVISIONS - EX PARTE DISCUSSIONS:

At no time after the initiation and before the conclusion of a proceeding under 19.10.15 NMAC, shall the division, or any other party, interested participant or their representatives discuss ex parte the merits of the proceeding with any commission member or the hearing officer.

[19.10.15.13 NMAC - N, 3/27/2018]

19.10.15.14 DOCUMENT REQUIREMENTS - FILING AND SERVICE OF DOCUMENTS:

A. The filing of any document that 19.10.15 NMAC requires shall be accomplished by delivering the document to the commission administrator and the commission legal counsel.

B. Any person filing any document shall:

(1) provide the commission administrator with nine original hard copies of the document and one identical bookmarked PDF file via email or personal delivery on CD or jump drive;

(2) if the document is a notice of intent to present technical testimony filed by any person other than the petitioner, serve a copy thereof on the petitioner;

(3) any document filed pursuant to 19.10.15 NMAC shall be filed with the commission administrator at least 20 days before any meeting at which the commission will consider the document. If the document is a motion seeking an order from the hearing officer in a rulemaking hearing, the motion must also be served at the same time with the hearing officer and the commission's legal counsel.

C. Whenever 19.10.15 NMAC requires service of a document, service shall be made by delivering a copy to the person to be served by mailing it, or, if that person has agreed, by sending it by facsimile or by electronic transmission to that person. Agreement to be served by facsimile or electronic transmission may be evidenced by placing the person's facsimile number or email address on a document filed pursuant to 19.10.15 NMAC service shall also be made upon the commission's legal counsel. If a person is represented by an attorney, service of the document shall be made on the attorney. Service by mail is complete upon mailing the document. Service by facsimile

or electronic transmission is accomplished when the transmission of the document is completed and acknowledged by designated recipient.

[19.10.15.14 NMAC - N, 3/27/2018]

19.10.15.15 EXAMINATION OF DOCUMENTS FILED:

A. Examination allowed. Subject to the provisions of law restricting the public disclosure of confidential information, any person may, during normal business hours, inspect and copy any document filed in any rulemaking proceeding before the commission. Such documents shall be made available on the division's website.

B. Cost of duplication. The person seeking copies of documents shall bear the cost of duplicating documents.

[19.10.15.15 NMAC - N, 3/27/2018]

19.10.15.16 PREHEARING PROCEDURES - PETITION FOR RULE CHANGE:

A. Any person, may file a petition with the commission to adopt, amend or repeal any rule within the commission's jurisdiction.

B. The petition shall be in writing and shall include a statement of the reasons for the rule change. The petition shall cite the relevant statutes that authorize the commission to adopt the proposed rules and shall estimate the time that will be needed to conduct the rules hearing, if possible. A copy of the entire rule, including the proposed rule change, indicating any language proposed to be added or deleted, shall be attached to the petition. The entire rule and its proposed changes shall be submitted to the commission in redline fashion, and shall include line numbers. Any document that does not include all the items required to be in a petition shall be returned to the petitioner along with a copy of these rules and a check-off list of required items, and the petitioner will be asked to resubmit his or her petition in the form 19.10.15 NMAC requires.

C. The commission shall determine at a public meeting within 60 days of submission of a petition for rule change whether to hold a hearing on the petition. Any person may respond to the petition for rule change either in writing prior to the public meeting or in person at the public meeting. If the commission determines not to hold a hearing, the commission's determination shall be subject to review as contemplated by Section 69-36-16 NMSA 1978.

D. If the commission determines to hold a public hearing on the petition, it may issue such orders specifying procedures for conduct of the hearing, in addition to those provided by 19.10.15 NMAC, as may be necessary and appropriate to fully inform the commission of the matters at issue in the hearing or control the conduct of the hearing. Such orders may include requirements for giving additional public notice, holding pre-

hearing conferences, filing direct written testimony prior to the hearing or limiting testimony or cross-examination.

[19.10.15.16 NMAC - N, 3/27/2018]

19.10.15.17 RULEMAKING NOTICE:

A. The commission shall distribute a notice of proposed rulemaking at least 60 days before the hearing on the rule change by:

- (1) posting the notice on the division website;
- (2) posting the notice on the sunshine portal;
- (3) making the notice available in the division's district offices, if any;
- (4) sending the notice by mail or electronic mail to persons who have made a written request to the commission for advance notice of hearings and who have provided a mail or an electronic mail address to the commission;
- (5) providing the notice to the New Mexico legislative council for distribution to appropriate interim and standing legislative committees; and
- (6) publishing the notice in the New Mexico register and in a newspaper of general circulation in the state.

B. Content. The notice shall include:

- (1) a summary of the full text of the proposed rule;
- (2) a short explanation of the purpose of the proposed rule;
- (3) a citation to the specific legal authority authorizing the proposed rule and the adoption of the rule;
- (4) information on how a copy of the full text of the proposed rule may be obtained, including an internet link to the full text;
- (5) information on how a person may comment on the proposed rule, where comments will be received and when comments are due;
- (6) information on where and when a rulemaking hearing will be held and how a person may participate in the hearing; and

(7) a citation to technical information, if any, that served as a basis for the proposed rule, and information on how the full text of the technical information may be obtained.

[19.10.15.17 NMAC - N, 3/27/2018]

19.10.15.18 ENTRY OF APPEARANCE:

Any person who is or may be affected by the proposed rule change may file an entry of appearance as a party. The entry of appearance shall be filed no later than 10 days before the date of the hearing on the petition. In the event of multiple entries of appearance by those affiliated with one interest group, the hearing officer may consolidate the entries, or divide the service list to avoid waste of resources. The filing of a petition or a notice of intent to present technical testimony shall serve as an entry of appearance.

[19.10.15.18 NMAC - N, 3/27/2018]

19.10.15.19 MOTIONS:

A. General. Any person who has filed an entry of appearance may file a motion. All motions, except those made orally during a hearing, shall be in writing, specify the grounds for the motion and state the relief sought. Each motion shall be accompanied by an affidavit, certificate or other evidence relied upon and shall be served as provided by 19.10.15.14 NMAC.

B. Unopposed motions. An unopposed motion shall state that the concurrence of all other parties was obtained. The moving party shall submit a proposed order approved by all parties for the hearing officer's review.

C. Opposed motions. Any opposed motion shall state either that concurrence was sought and denied, or why concurrence was not sought. A memorandum brief in support of such motion may be filed with the motion.

D. Response to motions. Any party upon whom an opposed motion is served shall have 15 days after service of the motion to file a response. A non-moving party failing to file a timely response shall be deemed to have waived any objection to granting the motion.

E. Reply to response. The moving party may, but is not required to, submit a reply to any response within 10 days after the response is served.

F. Decision. The hearing officer shall decide all motions without a hearing, unless otherwise ordered by the hearing officer sua sponte or upon any party's written request. The hearing officer shall refer any motion that would effectively dispose of the matter, and may refer any other motion to the commission for a decision. A procedural motion

may be ruled upon prior to the expiration of the time for response; any response received thereafter shall be treated as a request for reconsideration of the ruling. The hearing officer shall file all original documents with the commission administrator.

[19.10.15.19 NMAC - N, 3/27/2018]

19.10.15.20 TECHNICAL TESTIMONY:

A. Any person, including the petitioner, who intends to present technical testimony at the hearing shall, no later than 10 working days prior to the hearing, file a notice of intent to present technical testimony. The notice shall:

- (1) identify the person for whom the witness(es) will testify;
- (2) identify each technical witness the person intends to present and state each witness's qualifications, including a description of their educational and work background, and the anticipated duration of each witness's testimony;
- (3) if the hearing will be conducted at multiple locations, indicate the location or locations at which the witnesses will be present;
- (4) summarize or include a copy of the direct testimony of each technical witness in narrative form;
- (5) include the text of any recommended modifications to the proposed rule change; and
- (6) list and attach all exhibits anticipated to be offered by that person at the hearing, including any proposed statement of reasons for adoption of rules.

B. The hearing officer may enforce 19.10.15.20 NMAC's provisions through such action as the hearing officer deems appropriate, including exclusion of the technical testimony of any witness for whom a notice of intent was not timely filed. If such testimony is admitted, the hearing officer may keep the record open after the hearing to allow responses to such testimony. The hearing officer may also require that parties submit written rebuttal testimony prior to hearing.

[19.10.15.20 NMAC - N, 3/27/2018]

19.10.15.21 PARTICIPATION BY PUBLIC:

A. Any member of the public may testify at the hearing. No prior notification is required to present non-technical testimony at the hearing. Any such member may also offer non-technical exhibits with his or her testimony, so long as the exhibit is not unduly repetitious of the testimony.

B. A member of the public who wishes to submit a written statement for the record, in lieu of providing oral testimony at the hearing, shall file the written statement prior to the hearing or submit it at the hearing. Written comment may be submitted electronically, mailed or delivered to the commission administrator.

[19.10.15.21 NMAC - N, 3/27/2018]

19.10.15.22 PARTICIPATION BY CONFERENCE TELEPHONE OR SIMILAR DEVICE:

A. A commission member may participate in a meeting or hearing of the commission by means of a conference telephone or other similar communications equipment, when it is otherwise difficult or impossible for the member to attend the meeting or hearing in person, provided that each member participating by conference telephone can be identified when speaking, all participants are able to hear each other at the same time and members of the public attending the meeting or hearing are able to hear any member of the commission who speaks at the meeting or hearing. A commission member's participation by such means shall constitute presence in person at the meeting or hearing. A commission member who wishes to participate in a rulemaking hearing in this manner must receive permission from the hearing officer sufficiently in advance of the rulemaking hearing so as to permit the commission administrator to arrange for adequate telephone hookup.

B. A witness may participate in a rulemaking hearing of the commission by means of a telephone conference or other similar communications equipment when an emergency or circumstances make it impossible for the witness to attend the hearing in person. A witness who wishes to participate in a rulemaking hearing in this manner must receive permission from the hearing officer in advance of the rulemaking hearing. No witness may participate in a rulemaking hearing by telephone conference unless he or she makes a request sufficiently in advance of the rulemaking hearing to permit the commission administrator to arrange for an adequate telephone or electronic hookup. Each witness participating remotely must be identified when speaking, all participants must be able to hear each other at the same time and members of the public attending the hearing must be able to hear any witness who speaks during the hearing.

[19.10.15.22 NMAC - N, 3/27/2018]

19.10.15.23 HEARING PROCEDURES - CONDUCT OF HEARINGS:

A. The rules of civil procedure and the rules of evidence shall not apply.

B. The hearing officer shall conduct the hearing to provide a reasonable opportunity for all persons to be heard without making the hearing unreasonably lengthy or cumbersome, or burdening the record with unnecessary repetition. The hearing shall proceed as follows.

(1) The hearing shall begin with an opening statement from the hearing officer. The statement shall identify the hearing's nature and subject matter, and explain the procedures to be followed.

(2) The hearing officer may allow a brief opening statement by any party who wishes to make one.

(3) Unless otherwise ordered, the petitioner shall present the proposed rule first.

(4) The hearing officer shall establish an order for the testimony of other participants. The order may be based upon notices of intent to present technical testimony, sign-in sheets and the availability of witnesses who cannot be present for the entire hearing.

(5) If the hearing continues for more than one day, the hearing officer shall provide an opportunity each day for testimony from members of the public. Members of the public who wish to present testimony should indicate their intent on a sign-in sheet.

(6) The hearing officer may allow a brief closing argument by any person who wishes to make one.

(7) At the close of the hearing, the hearing officer shall determine whether to keep the record open for written submittals in accordance with 19.10.15.27 NMAC. If the record is kept open, the hearing officer shall determine and announce the subject(s) on which submittals will be allowed and the deadline for filing the submittals.

C. If the hearing is conducted at multiple locations, the hearing officer may require the petitioner's witnesses to summarize their testimony or be available for cross-examination at each location. Other participants are not required to testify at more than one location, and the hearing officer may prohibit a witness from testifying at more than one location.

[19.10.15.23 NMAC - N, 3/27/2018]

19.10.15.24 TESTIMONY AND CROSS-EXAMINATION:

A. The hearing officer shall allow all interested persons a reasonable opportunity to submit arguments and to examine witnesses testifying at the hearing.

B. All testimony will be taken under oath or affirmation, which may be accomplished in mass or individually.

C. The hearing officer shall admit any relevant evidence, unless the hearing officer determines that the evidence is unduly repetitious. The hearing officer shall require all

oral testimony be limited to the position of the witness in favor of or against the proposed rule.

D. Any person who testifies at the hearing may be subject to cross-examination on the subject matter of his or her direct testimony and matters affecting his or her credibility. Any person attending the hearing may conduct such cross-examination if required for a full and true disclosure of matters at issue in the hearing. The hearing officer may limit cross-examination to avoid harassment, intimidation, needless expenditure of time or undue repetition.

[19.10.15.24 NMAC - N, 3/27/2018]

19.10.15.25 EXHIBITS:

A. Any person offering an exhibit at hearing shall provide at least an original and 12 copies for the commission, and a sufficient number of copies for persons attending the hearing.

B. All exhibits offered at the hearing shall be marked with a designation identifying the person offering the exhibit and shall be numbered sequentially. If a person offers multiple exhibits, he or she shall identify each exhibit with an index tab or by other appropriate means.

C. Large charts and diagrams, models and other bulky exhibits are discouraged. If visual aids are used, legible copies shall be submitted for inclusion in the record.

[19.10.15.25 NMAC - N, 3/27/2018]

19.10.15.26 TRANSCRIPT OF PROCEEDINGS:

Unless specified by the commission or hearing officer, an audio recording and index shall be made of the hearing. If the hearing officer allows verbatim stenographic transcripts, the petitioner shall bear the cost of the original verbatim transcript of the proceeding and of providing a copy for each commission member and commission counsel.

[19.10.15.26 NMAC - N, 3/27/2018]

19.10.15.27 POST-HEARING SUBMISSIONS:

The hearing officer may allow the record to remain open for a reasonable time following the hearing's conclusion for written submission of additional evidence, comments and arguments and proposed statements of reasons. The hearing officer's determination shall be announced at the hearing's conclusion. In considering whether the record will remain open, the hearing officer shall consider the reasons why the material was not

presented during the hearing, the significance of the material to be submitted and the necessity for a prompt decision.

[19.10.15.27 NMAC - N, 3/27/2018]

19.10.15.28 HEARING OFFICER'S REPORT:

If the commission directs, the hearing officer shall file a report of the hearing. The report shall identify the issues addressed at the hearing, identify the parties' final proposals and the evidence supporting those proposals, including discussion or recommendations as requested by the commission, and shall be filed with the commission administrator within the time specified by the commission. The commission administrator shall promptly notify each party that the hearing officer's report has been filed and shall provide a copy of the report along with a notice of any deadline set for comments on that report.

[19.10.15.28 NMAC - N, 3/27/2018]

19.10.15.29 DELIBERATION AND DECISION:

A. If a quorum of the commission attended at the hearing, and if the hearing notice indicated that a decision might be made at the hearing's conclusion, the commission may immediately deliberate and decide on the proposed rule.

B. If the commission does not reach a decision at the hearing's conclusion, the commission administrator, following receipt of the transcript, will promptly furnish a copy of the transcript to each member that did not attend the hearing and, if necessary, to other members, commission counsel and the hearing officer. Exhibits provided to those persons at the time of the hearing need not be supplied again.

C. The commission shall reach its decision on the proposed rule within 60 days following the close of the record or the date the hearing officer's report is filed, whichever is later.

D. If the commission determines during its deliberations that additional testimony or documentary evidence is necessary for a proper decision on the proposed rule change, the commission may, consistent with the requirements of due process, reopen the hearing for such additional evidence only.

E. The commission shall issue its decision on the proposed rule change in a suitable format, which shall include its reasons for the action taken.

F. The commission's written decision is the official version of the commission's action, and the reasons for that action. Other written or oral statements by commission members are not recognized as part of the commission's official decision or reasons.

G. The adoption of the commission's written decision shall constitute the adoption of the rule. Within 15 days after adoption of the written decision, the commission shall file the rule and the written decision in accordance with the State Rules Act.

[19.10.15.29 NMAC - N, 3/27/2018]

19.10.15.30 NOTICE OF COMMISSION ACTION:

The commission administrator shall provide notice of the commission's action in accordance with the State Rules Act.

[19.10.15.30 NMAC - N, 3/27/2018]

19.10.15.31 APPEALS AND STAYS - APPEAL OF RULES:

A. Appeal of any rule change by the commission shall be taken in accordance with governing law.

B. The appellant shall serve a copy of the notice of appeal on the commission and on each party.

C. The appellant shall be responsible for preparation of a sufficient number of copies of the hearing record at the appellant's expense.

D. Unless otherwise provided by governing law, the filing of an appeal shall not act as a stay of the rule change being appealed.

[19.10.15.31 NMAC - N, 3/27/2018]

CHAPTER 11: GEOTHERMAL RESOURCES DEVELOPMENT

PART 1: GENERAL PROVISIONS

19.11.1.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Energy Conservation and Management Division.

[19.11.1.1 NMAC - N, 2/27/2018]

19.11.1.2 SCOPE:

All persons who engage in the exploration, development or production of a geothermal resource.

[19.11.1.2 NMAC - N, 2/27/2018]

19.11.1.3 STATUTORY AUTHORITY:

Geothermal Resources Development Act, Section 71-9-1 et seq. NMSA 1978 (2016).

[19.11.1.3 NMAC - N, 2/27/2018]

19.11.1.4 DURATION:

Permanent.

[19.11.1.4 NMAC - N, 2/27/2018]

19.11.1.5 EFFECTIVE DATE:

February 27, 2018, except where a later date is cited at the end of a section.

[19.11.1.5 NMAC - N, 2/27/2018]

19.11.1.6 OBJECTIVE:

The objective of 19.11.1 NMAC is to set forth general provisions and definitions pertaining to the authority of the energy conservation and management division pursuant to the Geothermal Resources Development Act, Section 71-9-1 et seq. NMSA 1978 (2016).

[19.11.1.6 NMAC - N, 2/27/2018]

19.11.1.7 DEFINITIONS:

These definitions apply to 19.11.1 through 19.11.4 NMAC. See Section 71-9-3 NMSA 1978 (2016) for the definitions of "**correlative rights**", "**division**", "**geothermal reservoir**", "**geothermal resources**" and "**person**".

A. Definitions beginning with the letter "A".

(1) "**Act**" means the Geothermal Resources Development Act, Section 71-9-1 et seq. NMSA 1978 (2016).

(2) "**Affected person**" means a person having a property interest, water right or geothermal resource interest (correlative right) within the public notice area specified in Subsection B of 19.11.2.13 NMAC.

(3) **"Applicant"** means any person who applies with the division for a permit to construct, modify or operate a well or facility used for the exploration, development or production of geothermal resources.

(4) **"Annular space"** means the space between the walls of the well as drilled and the casing or between a permanent casing and the borehole.

(5) **"ASL"** means above sea level.

B. Definitions beginning with the letter "B".

(1) **"Blowout"** means an uncontrolled escape of liquids or gases, or both, from a geothermal well.

(2) **"Blowout prevention equipment"** means equipment that is designed to be attached to the casing in a geothermal well to prevent a blowout.

(3) **"BOPE"** means blowout prevention equipment.

C. Definitions beginning with the letter "C".

(1) **"Casing"** means the conduit required to prevent waste and contamination of the ground water, the geothermal resource or both, and to hold the formation open during the well's construction or use.

(2) **"Closed-loop system"** as used in 19.11.4 NMAC means a system that uses above ground tanks for the management of drilling fluids.

(3) **"Contaminant"** means any physical, chemical, biological or radiological substance or matter in water.

D. Definitions beginning with the letter "D".

(1) **"Department"** means the energy, minerals and natural resources department.

(2) **"Director"** means the director of the energy conservation and management division of the department.

(3) **"Drilling operations"** means the actual drilling, re-drilling, completion or recompletion of a well for exploration, observation, production or injection including the running and cementing of casing, the performance of such operations as logging and perforating and the installation of pumps and well-head equipment.

E. Definitions beginning with the letter "E".

(1) **"EPA"** means the United States environmental protection agency.

(2) **"Exploratory well"** means a well drilled for the discovery or evaluation of geothermal resources either in an identified geothermal reservoir or in unexplored areas.

F. Definitions beginning with the letter "F". "Fresh water" means the water in lakes and playas (regardless of quality, unless the water exceeds 10,000 mg/l TDS and it can be shown that degradation of the water body will not adversely affect hydrologically connected ground water), the surface waters of streams regardless of the water quality within a given reach and ground water that has an existing concentration of 10,000 mg/l or less.

G. Definitions beginning with the letter "G". "GRCA" means the Geothermal Resources Conservation Act, Section 71-5-1 et seq. NMSA 1978.

H. Definitions beginning with the letter "H". [RESERVED]

I. Definitions beginning with the letter "I". "Injection well" means any well employed for injecting material into a geothermal area or adjacent area to maintain pressures in a geothermal reservoir, pool or other source, or to provide new material to serve as a material medium therein, or for reinjecting any material medium (including fluids) or the residue thereof, or any by-product of geothermal resource exploration or development into the earth.

J. Definitions beginning with the letter "J". [RESERVED]

K. Definitions beginning with the letter "K". [RESERVED]

L. Definitions beginning with the letter "L". "LLDPE" means linear low-density polyethylene.

M. Definitions beginning with the letter "M".

(1) **"Material medium"** means any substance including, but not limited to, naturally heated fluids, brines, associated gases and steam in whatever form, found at any depth and in any position below the surface of the earth, which contains or transmits the natural heat energy of the earth, but excluding petroleum, oil, hydrocarbon gas or other hydrocarbon substances.

(2) **"Mg/l"** means milligrams per liter.

(3) **"Mg/kg"** means milligrams per kilogram.

(4) **"MIT"** means mechanical integrity test.

(5) "Monitoring well" means, for purposes of 19.11.4 NMAC, any well used to observe the level of the water and its temperature, pressure and chemistry in a shallow protected water aquifer above or near a potential geothermal resource.

N. Definitions beginning with the letter "N". "Notice" means, for purposes of 19.11.4 NMAC, a written statement to the division that the permittee intends to do work.

O. Definitions beginning with the letter "O". "Observation well" means any well used to observe the level of the water and its temperature, pressure and chemistry in an area of potential geothermal resource. This includes a thermal gradient well.

P. Definitions beginning with the letter "P".

(1) "Permittee" means the person issued a permit by the director, or a person required to have a permit pursuant to 19.11.2 NMAC including a person who is required to have a permit but has not applied for or obtained a permit. The permittee shall be the owner of the geothermal lease or geothermal interest and any well(s) or facility located upon the geothermal lease or interest or the operator of the geothermal facility if it is someone other than the owner of the geothermal lease or interest.

(2) "Pit" means a drilling, workover or blow-down pit, which is constructed with the intent that the pit will hold liquids and mineral solids. Pits may be used for one or more wells and must be located at one of the associated permitted well drilling locations or surface facilities. Any containment structure such as a pond or other impoundment that holds only fresh water that has not been treated for drilling, workover or blow-down purposes is not a pit.

(3) "Production well" means a well which is used to transmit fluids derived from a geothermal resource to the surface where the fluids are available for industrial, commercial or domestic purposes.

Q. Definitions beginning with the letter "Q". [RESERVED]

R. Definitions beginning with the letter "R". "Responsible official" means a corporate officer (president, secretary, treasurer or vice president), general partner or proprietor or public principal executive officer or elected official who is authorized to execute documents on behalf of the corporation, entity or office.

S. Definitions beginning with the letter "S".

(1) "Sump" means a subgrade impermeable vessel that is partially buried in the ground, is in contact with the ground surface or is a collection device incorporated within a secondary containment system, which remains predominantly empty, serves as a drain or receptacle for de minimis releases on an intermittent basis and is not used to store, treat, dispose of or evaporate products or geothermal wastes. Buckets, pails, drip pans or similar vessels that are not in contact with the ground surface are not sumps.

(2) **"Suspension of operations"** means the cessation of drilling, re-drilling or alteration of casing before the well is officially abandoned or completed.

T. Definitions beginning with the letter "T". "TDS" means total dissolved solids.

U. Definitions beginning with the letter "U".

(1) **"UIC"** means Underground Injection Control.

(2) **"UTM"** means Universal Transverse Mercator.

V. Definitions beginning with the letter "V". [RESERVED]

W. Definitions beginning with the letter "W".

(1) **"Waste"** means any physical waste including, but not limited to:

(a) underground waste resulting from inefficient, excessive or improper use, or dissipation of geothermal energy, or of any geothermal resource pool, reservoir or other source; or the locating, spacing, constructing, equipping, operating or producing of any well in a manner that results, or tends to result, in reducing the quantity of geothermal energy to be recovered from any geothermal area; or

(b) the inefficient above-ground transporting and storage of geothermal energy; and the locating, spacing, equipping, operating or producing of any well or injection well in a manner causing or tending to cause unnecessary or excessive surface loss or destruction of geothermal energy; the escape into the open air from a well of steam or hot water that exceeds what is reasonably necessary in the efficient development or production of a well.

(2) **"Well"** means, (a) a bored, drilled or driven shaft; (b) a dug hole whose depth is greater than the largest surface dimension; (c) an improved sinkhole; or (d) a subsurface fluid distribution system.

[19.11.1.7 NMAC - N, 2/27/2018]

19.11.1.8 CONFIDENTIAL INFORMATION PROTECTION:

A. Applicants or permittees who submit information to the division may claim such information as confidential. Applicants or permittees must assert any claim of confidentiality at the time of submittal.

B. To claim confidentiality of information in a submittal, the applicant or permittee must clearly mark each page in the document on which the applicant or permittee claims there is confidential information, and submit to the division a written description of the basis for the claim of confidentiality and why the information meets the

requirements for a claim of confidentiality at the time it submits the document to the division. The division shall review the claim of confidentiality based on the written submittal and determine whether the information may be maintained as confidential pursuant to the Inspection of Public Records Act, Section 14-2-1 et seq. NMSA 1978 (1993, as amended). The division shall determine whether the information may be maintained as confidential prior to reviewing an application or request for approval. If the division determines that information in a submittal is confidential, the division may require submission of redacted copies of the submittal for the public record.

C. If no claim of confidentiality is made at the time of submission, any such claims are deemed waived and the division may make the information available to the public without further notice.

D. The division will deny claims of confidentiality for the name and address of any applicant or permittee or any information that deals with the existence, absence or level of contaminants in drinking water or the document is otherwise publicly available.

E. Information the division determines is confidential may be disclosed to officers, employees or authorized representatives of the division, or may be used in any proceedings conducted pursuant to the Act when such information is essential to such proceeding. The division may close that part of a proceeding where confidential information covered by Section 71-2-8 NMSA 1978 is discussed by the division.

[19.11.1.8 NMAC - N, 2/27/2018]

19.11.1.9 OTHER REQUIREMENTS:

A permittee shall allow any division employee upon notice and presentation of proper credentials to:

- A.** enter the property where wells are located or the facility at reasonable times;
- B.** inspect and copy records required by an abatement plan;
- C.** inspect any treatment works, monitoring and analytical equipment;
- D.** sample any wastes, ground water, surface water, stream sediment, plants, animals or vadose-zone material including vadose-zone vapor, geothermal resources or material medium;
- E.** use monitoring systems and wells under the permittee's control to collect samples of any media listed in Subsection D of 19.11.1.9 NMAC; and
- F.** gain access to off-site property the permittee does not own or control, but is accessible to the permittee through a third-party access agreement, provided the agreement allows it.

[19.11.1.9 NMAC - N, 2/27/2018]

19.11.1.10 TRANSITIONAL PROVISIONS:

Pursuant to the Act, Section 71-9-11 NMSA 1978, all permits, orders and determinations issued pursuant to the Geothermal Resources Conservation Act shall be administered by the division and shall remain in effect as provided in 19.11.1.10 NMAC.

A. The permittee under any permit, order or determination issued pursuant to the GRCA which authorizes the drilling and operation of a geothermal well may apply at any time, pursuant to the Act and 19.11.1 through 19.11.4 NMAC, for the issuance of a geothermal well permit covering such well or the inclusion of the geothermal well in a geothermal facility permit. Upon issuance of the permit or inclusion of the well in the geothermal facility permit, the permit, order or determination issued pursuant to the GRCA shall expire.

B. A permittee under a permit, order or determination issued pursuant to the GRCA may seek a minor permit modification, as defined in 19.11.2.10 NMAC, and shall follow the procedures in 19.11.2 NMAC. Any modification other than a minor permit modification shall be considered an application for a new geothermal well permit pursuant to Subsection A of 19.11.1.10 NMAC. Any hearings initiated concerning a permit, order or determination issued pursuant to the GRCA shall be conducted in accordance with 19.11.3 NMAC.

C. All permits, orders or determinations issued pursuant to the GRCA shall expire five years from the effective date of 19.11.1 through 19.11.4 NMAC unless there is a pending application submitted pursuant to Subsection A of 19.11.1.10 NMAC.

[19.11.1.10 NMAC - N, 2/27/2018]

PART 2: PERMITS

19.11.2.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Energy Conservation and Management Division.

[19.11.2.1 NMAC - N, 2/27/2018]

19.11.2.2 SCOPE:

All persons who engage in the exploration, development or production of a geothermal resource.

[19.11.2.2 NMAC - N, 2/27/2018]

19.11.2.3 STATUTORY AUTHORITY:

Geothermal Resources Development Act, Section 71-9-1 et seq. NMSA 1978 (2016).

[19.11.2.3 NMAC - N, 2/27/2018]

19.11.2.4 DURATION:

Permanent.

[19.11.2.4 NMAC - N, 2/27/2018]

19.11.2.5 EFFECTIVE DATE:

February 27, 2018, except where a later date is cited at the end of a section.

[19.11.2.5 NMAC - N, 2/27/2018]

19.11.2.6 OBJECTIVE:

The objective of 19.11.2 NMAC is to require persons to obtain a permit prior to commencing exploration, development and production of geothermal resources and to establish procedures for application for and approval or denial of permits.

[19.11.2.6 NMAC - N, 2/27/2018]

19.11.2.7 DEFINITIONS:

[RESERVED]

[See 19.11.1.7 NMAC for definitions.]

[19.11.2.7 NMAC – N, 2/27/2018]

19.11.2.8 INFORMATION TO STATE ENGINEER:

A. The division shall notify the office of state engineer when it receives an application for a geothermal well permit or geothermal facility permit.

B. When the applicant proposes to reinject all ground water as soon as practicable into the same ground water source from which it was diverted, resulting in no new depletion to the source, the division shall also provide the state engineer all information available to the division regarding the proposed diversion and reinjection and shall request the opinion of the state engineer as to whether existing ground water rights sharing the same ground water source may be impaired.

C. If the state engineer determines that the information provided is sufficient to render an opinion and it is the opinion of the state engineer that any existing ground water rights may be impaired, the division, upon receipt of the opinion of the state engineer, shall notify the applicant or permittee who shall submit to the division by the date specified in the notification a plan of replacement for any existing ground water rights that are likely to be impaired.

[19.11.2.8 NMAC - N, 2/27/2018]

19.11.2.9 PERMIT REQUIRED:

Except as provided in 19.11.1.10 NMAC, no person shall explore, develop or produce a geothermal resource including drilling or operating an injection well except pursuant to and in accordance with the terms and conditions of a permit issued by the division under the Act. The applicant for a permit or permit modification, renewal or transfer shall be the person who has the right to produce the geothermal resource either through ownership, lease, permit or other right. The permittee is responsible for the actions of its officers, employees, consultants, contractors and subcontractors as they relate to the exploration, development or production of the geothermal resource. Any person who is involved in the exploration, development or production of a geothermal resource shall comply with the Act, 19.11.1 through 19.11.4 NMAC and the permit.

[19.11.2.9 NMAC - N, 2/27/2018]

19.11.2.10 APPLICATION TO DRILL, MODIFY OR OPERATE WELLS OR FACILITIES IN A GEOTHERMAL RESOURCE:

A. Application for a permit to drill an exploratory well or to drill or operate a production or observation well. Any person who proposes to drill or operate an exploratory, production or observation well shall first apply for a permit by filing a written application with the division. The applicant shall submit two paper copies and one electronic copy of the application. The applicant shall submit the information listed below in the application:

(1) name and contact information of the owner or operator of the well and the drilling contractor and whether the owner or operator is a corporation, partnership, single proprietorship, association or other business entity and the names of the applicant's officers and directors;

(2) name and contact information of the applicant's registered agent;

(3) location of the proposed or existing well (UTM coordinates or latitude-longitude) and a map showing location and distances to property lines;

(4) estimated or actual (if existing) top of well-elevation;

- (5) name and contact information of the surface land owner;
- (6) signature of a responsible official or designated agent of the applicant;
- (7) name and contact information of the geothermal resource owner and documentation such as deeds, leases, permits or other documentation showing applicant has the authority or right to produce the geothermal resource;
- (8) for production wells, actual (when available) or estimated data regarding the physical characteristics of the geothermal resource including volume, temperature, permeability, thermal capacity and water quality of both the geothermal resource waters and any fresh water resources in the proposed drilling area;
- (9) whether the applicant proposes to reinject all ground water as soon as practicable into the same ground water source from which it was diverted, resulting in no new depletion to the source and information regarding the proposed diversion and reinjection;
- (10) a map and accompanying list showing the names, addresses and locations of adjacent landowners within one-half mile of the proposed geothermal well or facility; the location of water wells within one mile of the proposed geothermal well or facility; the names, addresses and locations of any geothermal resource owners or lessees currently owning or leasing a geothermal resource within five miles of the proposed geothermal well or facility; and the names, addresses and locations of any local, state, federal or tribal government property within five miles of the proposed geothermal well or facility;
- (11) a statement of the purpose and estimated or actual (if existing) depth of the well;
- (12) for production wells, the proposed production rate of geothermal resource waters;
- (13) a description of the geothermal well construction, BOPE and the drilling rig;
- (14) a description of the logging, coring and testing program;
- (15) plans for providing financial assurance prior to permit issuance pursuant to 19.11.2.18 NMAC;
- (16) pit information pursuant to 19.11.4.17 NMAC;
- (17) methods for disposal of geothermal resources, residue of geothermal resources or nondomestic waste from the exploration, development or production of geothermal resources pursuant to 19.11.4.20 NMAC;

(18) a geothermal well plugging and abandonment plan, including a responsible third-party contractor's cost estimate, sufficient to plug and abandon the wells in a manner that will protect life, health, property, natural resources, the environment and the public welfare, and comply with the requirements contained in 19.11.4.16 NMAC;

(19) a statement of whether the applicant or any subsidiary, affiliate or person controlled by or under common control with the applicant

(a) has had a federal or state UIC or geothermal drilling or operating permit suspended or revoked in the five years preceding the date of the application's submission; or

(b) has forfeited a performance bond or similar security deposited in lieu of bond; and

(c) a brief explanation of the facts involved if any such suspension, revocation or forfeiture referred to in Subparagraphs (a) and (b) of Paragraph (19) of Subsection A of 19.11.2.10 NMAC has occurred, including:

(i) the permit's identification number and issuance date, and the date and amount of bond or similar security involved;

(ii) identification of the authority that suspended or revoked the permit or forfeited the bond or similar security and the stated reasons for the action;

(iii) the status of the permit, bond or other security involved;

(iv) the date, location and type of any administrative or judicial proceedings initiated concerning the suspension, revocation or forfeiture; and

(v) the proceeding's status; and

(20) a listing of all violation notices the applicant has received relating to any UIC or geothermal drilling or operation during the three-year period before the application date; for each violation notice reported include the following information as applicable:

(a) any identifying number for the operation including the federal or state permit number, the violation notice's issuance date, the name of the person or entity to whom the violation notice was issued and the name of the issuing regulatory authority, department or agency;

(b) a brief description of the violation alleged in the notice;

(c) the date, location and type of any administrative or judicial proceedings initiated concerning the violation, including proceedings initiated by any person or entity to obtain administrative or judicial review of the violation;

(d) the status of the proceedings and of the violation notice; and

(e) the actions, if any, taken by any person identified in Paragraph (20) of Subsection A of 19.11.2.10 NMAC to abate the violation.

B. Application for permit to drill or operate an injection well. Any person who proposes to drill or operate an injection well shall first apply for a permit by filing a written application with the division. The applicant shall submit two paper copies and one electronic copy of the application. The items listed below along with the items listed in Subsection A of 19.11.2.10 NMAC are required:

(1) a description of the well construction, or proposed well construction, and the proposed method for testing the well before the well is used for injection;

(2) the estimated maximum injection pressure, mass flowrate and temperature;

(3) an analysis of the proposed injection fluid; and

(4) a description of the proposed pipelines, metering equipment and safety devices that will be used to prevent accidental pollution.

C. Application for a geothermal facility with multiple geothermal wells. Any person who proposes to drill or operate multiple geothermal wells and operate a geothermal facility on an applicant's geothermal lease shall apply for a multi-well geothermal facility permit. The applicant shall submit two paper copies and one electronic copy of the application. The items listed below along with the items listed in Subsections A and B of 19.11.2.10 NMAC are required:

(1) a description of surface equipment and site plan, with proposed topography, of the power generating facility and associated well field with proposed and existing wells identified; and

(2) a facility closure plan, including a responsible third-party contractor's cost estimate, sufficient to close the facility in a manner that will protect life, health, property, natural resources, the environment and the public welfare, and comply with the closure requirements contained in 19.11.4 NMAC.

D. Application to modify or renew a permit. Any permittee who proposes to modify an individual geothermal well permit or a geothermal facility permit or renew an existing permit (individual or facility) shall first apply for a permit modification or permit renewal by filing a written application with the division. The permittee shall file an

application to renew a permit one year prior to the expiration date of the current permit. All applications to modify or renew a permit shall follow the applicable requirements listed in Subsections A, B or C of 19.11.2.10 NMAC unless the modification is a minor permit modification or is approved under the permittee's notification requirements and requests for approval to division conditions listed in 19.11.4.9 NMAC. A minor permit modification includes:

- (1) change in owner of the geothermal lease or geothermal interest;
- (2) change in well name;
- (3) change in previously proposed location of a well that is within the approved area of a geothermal well or facility permit;
- (4) change in status of an injection well to another type of well;
- (5) changing the construction of an injection well, including placing a plug in the hole or well and recovering or altering the casing;
- (6) adding wells to a geothermal facility permit that have been approved previously per Subsections A or B of 19.11.2.10 NMAC;
- (7) creation of a geothermal facility permit that includes only wells and equipment permitted previously under 19.11.2 NMAC;
- (8) permitting of equipment that has been permitted or approved prior to the promulgation of 19.11.2 NMAC; the permittee may, upon promulgation of 19.11.2 NMAC, apply to permit all currently operating and previously approved geothermal wells and facilities under 19.11.1 through 19.11.4 NMAC pursuant to the minor permit modification procedures in Subsection E of 19.11.2.10 NMAC; and
- (9) for an injection well permit or for that portion of a geothermal facility permit that pertains to injection wells, a modification listed under 40 CFR 144.41.

E. Notification of application for minor permit modification or activity taken pursuant to 19.11.4.9 NMAC. When requesting approval of a minor permit modification or prior to taking an action listed in Paragraph (3) of Subsection A or Paragraphs (3), (6), (8) or (10) of Subsection B of 19.11.4.9 NMAC, the permittee shall provide written notification to the adjacent surface owners within one-half mile, water rights owners with a well that is within one mile and any geothermal resource owners or lessees within five miles of the geothermal well or facility.

F. Application for a minor permit modification. Any permittee who proposes a minor permit modification shall submit a written request, to the division, that fully explains the proposed modification and all information required to implement the

requested change. The permittee may apply for approval of the activity listed in Paragraph (3) of Subsection D of 19.11.2.10 NMAC up to 30 days after the action.

G. Pre-application meeting. Any person who proposes to submit a permit application to the division may request a pre-application meeting with division staff.

H. Transfer of a permit.

(1) The permittee shall not transfer a permit without the division's prior written approval. If the transferee wants to change the conditions of the original permit, it shall apply for a new permit pursuant to 19.11.2.10 NMAC. Unless the division otherwise orders, public notice or hearing are not required for the division to approve a transfer request. If the division denies the transfer request, it shall notify the permittee and the proposed transferee of the denial by certified mail, return receipt requested and either the permittee or the proposed transferee may request a hearing within 10 days after receipt of the notice. Until the division approves the transfer and the required financial assurance is in place, the division shall not release the transferor's financial assurance.

(2) If the transferee will conduct operations in full compliance with the terms and conditions of the original permit, the transferee shall provide the division with the following information:

(a) name and contact information of the owner or operator of the well or facility and a statement as to whether the applicant is a corporation, partnership, single proprietorship, association or other business entity and the names of the transferee's officers and directors;

(b) name and contact information of the transferee's registered agent;

(c) the signature of a responsible official or designated agent of the transferee on the transfer request;

(d) proof that the transfer complies with the terms of any deed, lease or permit;

(e) a statement that the transferee will continue to conduct the operations involved in full compliance with the terms and conditions of the original permit, unless the transferee applies for a new permit; and

(f) plans for providing sufficient financial assurance to cover the original permit in its entirety from inception to completion of plugging and abandonment prior to the transfer.

(3) Nothing in 19.11.2 NMAC shall be construed to relieve any person of responsibility or liability for any act or omission that occurred while that person owned, controlled or was in possession of the well or facility.

[19.11.2.10 NMAC - N, 2/27/2018]

19.11.2.11 CHANGING, SUPPLEMENTING OR CORRECTING APPLICATIONS:

A. Prior to the division's final decision on an application, the applicant shall have a duty to promptly supplement and correct information submitted in the application. The duty to supplement shall include relevant information thereafter acquired or otherwise determined to be relevant.

B. The process provided in 19.11.2.10 NMAC is not intended to limit informal informational exchanges during the application review period or prior to submission of an application. The process also does not prohibit an applicant from withdrawing an application and submitting a new application.

[19.11.2.11 NMAC - N, 2/27/2018]

19.11.2.12 PERMIT DECISIONS AND APPEALS:

A. The division shall, in a timely manner after its receipt of an application for a permit, or modification or renewal of a permit, evaluate such application and determine whether it is acceptable for review. An application that is acceptable for review is one that includes the information 19.11.2.10 NMAC requires. If the division deems the application:

(1) acceptable for review, the division shall send a letter by e-mail and physical mail to the applicant notifying that applicant that the division will review the application;

(2) not acceptable for review, the division shall send a letter by e-mail and physical mail to the applicant stating what additional information or points of clarification are necessary to deem the application acceptable for review; upon receipt of the additional information or clarification, the division shall promptly review such information and determine whether the application is acceptable for review;

(3) acceptable for review but no permit is required, the division shall send a letter by e-mail and physical mail to the applicant informing the applicant of the determination.

B. Upon completion of the division's review of the application, the division shall either issue a draft permit or notice of intent to deny the application. A notice of intent to deny the application is a type of draft permit and follows the same procedure as a draft permit under 19.11.2 NMAC.

C. For draft permits for injection wells or facilities that include injection wells, the division shall prepare a fact sheet that includes a brief description of the type of facility or activity that is the subject of the draft permit; the type and quantity of wastes, fluids or

pollutants that are proposed to be or are being treated, stored, disposed of, injected, emitted or discharged; a brief summary of the basis for the draft permit conditions including references to the administrative records; reasons why any requested variances or alternatives to required standards do or do not appear justified; a description of the procedures for reaching a final decision on the draft permit including the beginning and ending dates of the comment period and the address where comments will be received, procedures for requesting a hearing and the nature of that hearing and any other procedures by which the public may participate in the final decisions; the name and telephone number of a person to contact for additional information; and justification for waiver of any application requirements.

D. If after the applicant provides public notice as required in 19.11.2.13 NMAC, no requests for hearing are filed with the division within the 30 day public notice period as provided by 19.11.3.8 NMAC, or any such requests for hearing are filed by persons the division determines are not affected persons and the division does not otherwise schedule a hearing pursuant to 19.11.3.8 NMAC, the division's draft permit shall become final and the division, after receipt of acceptable financial assurance submitted by the applicant pursuant to 19.11.2.18 NMAC, shall issue the permit.

E. The division shall grant the permit or deny the permit based on information contained in the division's administrative record. The administrative record shall consist of the application, any other evidence the applicant submitted, any technical evidence or substantive written comments any person other than the division submitted, any other evidence considered by the division, a statement of matters officially noticed and, if a hearing is held, the evidence submitted at the hearing. The applicant has the burden of demonstrating that a permit or permit modification should be approved. If the division issues a permit, it shall issue a response to comments. The response to comments shall specify which provisions, if any, of the draft permit have been changed in the final permit decision, and the reasons for the change, and briefly describe and respond to all significant comments on the draft permit raised during the public comment period or during any hearing. The response to comments shall be available to the public.

F. A person subject to a final decision of the division may appeal to the district court pursuant to the provisions of Section 39-3-1.1 NMSA 1978.

[19.11.2.12 NMAC - N, 2/27/2018]

19.11.2.13 PUBLIC NOTICE FOR PERMIT ACTIONS INVOLVING A GEOTHERMAL WELL OR FACILITY:

Except for Paragraphs (1) and (2) of Subsection A of 19.11.2.13 NMAC, 19.11.2.13 NMAC does not apply to permit actions pursuant to Subsection E of 19.11.2.10 NMAC or other approvals pursuant to 19.11.4.9 NMAC.

A. The division shall:

(1) make available for public inspection a list of all pending applications for permits or permit modifications or renewals;

(2) make available for public inspection the permit application and the division's draft permit and supporting analysis documentation; this material shall be available at the division's office; except those portions of which may be determined as confidential in accordance with 19.11.1.8 NMAC or the Inspection of Public Records Act, Section 14-2-1 et seq. NMSA 1978 (1993, as amended);

(3) subsequent to the division's production of a draft permit and supporting documentation, publish a public notice, on the division's website, which shall include: the division's name and address; the applicant's name and address, the location and brief description of the well or facility, a scope of the proposed operation and the division's preliminary intent to issue the permit at the end of the public notice period barring any substantive comments or new information or a permit hearing; the public notice shall identify the location of the permit application and division's draft permit and supporting analysis documentation for public review and describe the manner in which comments or evidence may be submitted to the division, including that persons must provide written comments or evidence to the division before the end of the 30 day public notice period; and a statement of the procedures for requesting a hearing on the application pursuant to 19.11.3.8 NMAC;

(4) provide the public notice under Paragraph (3) of Subsection A of 19.11.2.13 NMAC by mail, which may include e-mail, to the applicant;

(5) deliver written notice by ordinary first class United States mail to federal and state agencies with jurisdiction over fish and wildlife resources and state and tribal historic preservation officers;

(6) deliver written notice by ordinary first class United States mail to the EPA and any agency which the division knows has issued or is required to issue a Resource Conservation and Recovery Act permit, an air quality permit, a national pollutant discharge elimination system permit, 404 permit or sludge management permit for the same facility or activity;

(7) deliver written notice by ordinary first class United States mail to any unit of local government having jurisdiction over the area where the well or facility is to be located and to any state agency have authority with respect to the construction or operation of the well or facility;

(8) deliver written notice by ordinary first class United States mail or e-mail to each person who has requested in writing to be notified of such permit applications, modifications or renewals;

(9) deliver written notice by ordinary first class United States mail or e-mail to persons on a mailing list developed by the division including those who request in

writing to be on the list, soliciting persons for "area lists" from participants in past permit proceedings in that area and notifying the public of the opportunity to be put on the mailing list through periodic publications in the public press, etc.; and

(10) publishing notice in a newspaper of general circulation in the county where the geothermal well or facility is located or is proposed to be located or in a newspaper of general circulation in the state.

B. The applicant shall:

(1) upon receipt of the division's public notice, provide written notice, by certified mail, return receipt requested, of the division's public notice to the adjacent surface owners within one-half mile, water rights owners with a well that is within one mile and any geothermal resource owners or lessees within five miles of the geothermal well or facility;

(2) mail notice by ordinary first class United States mail or e-mail to all local, state, federal or tribal governmental agencies that own property within five miles of the geothermal well or facility; and

(3) provide the division with proof that the applicant has met the public notice requirements of Paragraphs (1) and (2) of Subsection B of 19.11.2.13 NMAC prior to the division scheduling a hearing, if any, pursuant to 19.11.3.8 NMAC or issuing the permit.

[19.11.2.13 NMAC - N, 2/27/2018]

19.11.2.14 BASIS FOR DENIAL OF PERMIT:

The division shall deny an application for a permit or permit modification or renewal if the construction or operation of the geothermal well or facility will not or does not comply with the Act or the rules promulgated pursuant to the Act.

[19.11.2.14 NMAC - N, 2/27/2018]

19.11.2.15 PERMIT CONDITIONS:

A. The contents of the application specifically identified by the division shall become terms and conditions of the permit or permit modification.

B. The division shall, as appropriate, specify conditions upon a permit, including:

(1) placement of geothermal wells in accordance with the location limitations in 19.11.4.8 NMAC;

(2) financial assurance requirements in accordance with 19.11.2.18 NMAC;

- (3) well-construction in accordance with 19.11.4.10 NMAC;
- (4) blowout prevention requirements in accordance with 19.11.4.11 NMAC;
- (5) operating limitations in accordance with 19.11.4.12 NMAC;
- (6) testing and monitoring requirements in accordance with 19.11.4.13 NMAC;
- (7) recordkeeping and reporting requirements in accordance with 19.11.4.14 NMAC;
- (8) surface facility requirements in accordance with 19.11.4.15 NMAC;
- (9) abandonment requirements in accordance with 19.11.4.16 NMAC;
- (10) pit design, construction and operating plan and closure remediation plan requirements in accordance with 19.11.4.17 NMAC;
- (11) disposal requirements in accordance with 19.11.4.20 NMAC; and
- (12) other operational requirements, including additional testing, monitoring, recordkeeping and reporting or construction requirements deemed necessary to protect life, health, correlative rights, property, natural resources, the environment or the public welfare.

C. Any term or condition imposed by the division on a permit or permit modification is enforceable to the same extent as a rule.

D. The permit term for all permits shall not exceed 10 years.

[19.11.2.15 NMAC - N, 2/27/2018]

19.11.2.16 PERMIT CANCELLATION, TERMINATION AND MODIFICATION:

A. The division shall automatically cancel any permit for any well that has been plugged and abandoned or any facility that has been closed in accordance with the requirements of 19.11.4 NMAC and the permit.

B. The division may terminate or modify a permit during its term, or deny a permit renewal application, by following the procedures in 19.11.2.12 NMAC, for the following causes:

- (1) the permittee's noncompliance with any condition of the permit or 19.11.4 NMAC;

(2) the permittee's failure in the application or during the permit issuance process to disclose fully all relevant facts or the permittee's misrepresentation of any relevant facts at any time;

(3) a determination that the permitted activity has a reasonable likelihood to endanger life, health, property, natural resources (including geothermal and fresh water resources), the environment or the public welfare and can only be regulated to acceptable levels by permit modification or termination;

(4) a determination that the permitted activity is not protective of correlative rights of other geothermal resource leaseholders or owners;

(5) a determination that hazardous waste as defined in 40 CFR 261.3 is being injected into an injection well either because the definition has been revised, or because a previous determination has been changed.

C. The division may modify a permit for the following causes:

(1) there are material and substantial alterations or additions to the permitted well, facility or activity that occurred after permit issuance that justify the application of permit conditions that are different or absent in the existing permit;

(2) the director has received information that was not available at the time of permit issuance (other than revised regulations or rules, guidance or test methods) and would have justified the application of different permit conditions at the time of issuance, including, for geothermal facility permits, any information indicating that cumulative effects on the environment are unacceptable;

(3) the standards or regulations or rules on which the permit was based have been changed by promulgation of new or amended standards or regulations or rules or by judicial decision after the permit was issued;

(4) the director determines good cause exists for modification of a compliance schedule such as an act of God, strike, flood or materials shortage or other events over which the permittee has little or no control and for which there is no reasonably available remedy.

D. Interested persons may request that a permit be modified or terminated. However, the director may only modify or terminate permits for the reasons specified in Subsection B of 19.11.2.16 NMAC. If the director decides the request is not justified, he or she shall send the requestor a brief written response giving a reason for the decision. Denials of requests for modification or termination are not subject to public notice, comment or hearings.

E. If the director decides to modify a permit, the director shall issue a draft permit and publish notice pursuant to 19.11.2.12 NMAC and 19.11.2.13 NMAC.

[19.11.2.16 NMAC - N, 2/27/2018]

19.11.2.17 CORRECTIVE ACTION:

A. Applicants for injection well permits or for geothermal facility permits that include injection wells shall identify the location of all known wells (applicant's wells or wells of other parties), within a two-mile radius of the injection well, that penetrates the injection zone. For wells that are improperly sealed, completed or abandoned, the applicant shall also submit a plan consisting of such steps or modifications as are necessary to prevent movement of fluid into underground sources of fresh water ("corrective action"). Where the plan is adequate, the division shall incorporate it into the permit as a condition. Where the division's review of an application indicates that the applicant's plan is inadequate, the division shall require the applicant to revise the plan, prescribe a plan for corrective action as a condition of the permit or deny the application. An applicant may request a hearing, pursuant to 19.11.3.8 NMAC, regarding the corrective action plan or the denial of the corrective action plan.

B. No permittee of a new injection well or for a geothermal facility permit that includes a new injection well may begin injection until the permittee has taken all required corrective action. Any permit issued for or that includes an existing injection well requiring corrective action shall include a compliance schedule requiring the permittee to complete any corrective action accepted or prescribed under Subsection A of 19.11.2.17 NMAC as soon as possible.

C. A permittee shall take all reasonable steps to minimize or correct any adverse impact on the environment resulting from non-compliance with the permit.

[19.11.2.17 NMAC - N, 2/27/2018]

19.11.2.18 FINANCIAL ASSURANCE FOR GEOTHERMAL WELLS AND FACILITIES:

Upon notification by the division that it has approved a new geothermal well or facility permit, a geothermal well or facility permit modification or a geothermal well or facility renewal permit but prior to issuing the permit, an applicant shall submit acceptable financial assurance for the geothermal well or facility affected by the permit action.

A. The applicant shall submit acceptable financial assurance in the amount of the plugging and abandonment cost for each geothermal well being permitted or, if permitting a geothermal facility, the estimated closure cost of the entire facility, including the plugging and abandonment costs for all geothermal wells and pits. The geothermal well's estimated plugging and abandonment cost or the geothermal facility's estimated closure cost shall be the amount provided in the plugging and abandonment or closure plan the applicant submitted with its application unless the division determines that such estimate does not reflect a reasonable and probable well plugging and abandonment or facility closure cost, in which event, the division shall determine the estimated well

plugging and abandonment or facility closure cost and shall include such determination in its draft permit. If the applicant disagrees with the division's determination of estimated well plugging and abandonment or facility closure cost, the applicant may request a hearing as provided in 19.11.3.8 NMAC. If the applicant so requests, and no other person files a request for a hearing regarding the application, the hearing shall be limited to determination of well plugging and abandonment or facility estimated closure cost.

B. Terms of financial assurance. The financial assurance shall be on division-prescribed forms, payable to the state of New Mexico and conditioned upon the geothermal well's or facility's proper operation, and proper well plugging and abandonment or facility closure in compliance with state of New Mexico statutes, division rules and the geothermal well or facility permit terms. The permittee shall notify the division of a material change affecting the financial assurance within 30 days of discovery of such change.

C. Forfeiture of financial assurance. The division shall give the permittee and any surety 20 days' notice and an opportunity for a hearing prior to forfeiting financial assurance.

D. Forms of financial assurance. The division may accept the following forms of financial assurance.

(1) Surety bonds. A surety bond shall be executed by the applicant and by a corporate surety licensed to do business in the state, and shall be non-cancelable.

(2) Letters of credit. A letter of credit shall be issued by a bank organized or authorized to do commercial banking business in the United States, shall be irrevocable for a term of not less than 10 years and shall provide for automatic renewal for successive, like terms upon expiration, unless the issuer has notified the division in writing of non-renewal at least 90 days before its expiration date. The letter of credit shall be payable to the state of New Mexico in part or in full upon receipt from the director or the director's authorized representative of demand for payment accompanied by a notice of forfeiture.

(3) Cash accounts. An applicant may provide financial assurance in the form of a federally insured or equivalently protected cash account or accounts in a financial institution, provided the operator and the financial institution shall execute as to each such account a collateral assignment of the account to the division, which shall provide that only the division may authorize withdrawals from the account. In the event of forfeiture pursuant to Subsection C of 19.11.2.18 NMAC, the division may, at any time and from time to time, direct payment of all or part of the balance of such account (excluding interest accrued on the account) to itself or its designee for the well's plugging and abandonment or facility's closure.

E. Replacement of financial assurance.

(1) The division may allow a permittee to replace existing forms of financial assurance with other forms of financial assurance that provide equivalent coverage.

(2) The division shall not release existing financial assurance until the permittee has submitted, and the division has approved, an acceptable replacement.

[19.11.2.18 NMAC - N, 2/27/2018]

PART 3: HEARINGS

19.11.3.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Energy Conservation and Management Division.

[19.11.3.1 NMAC - N, 2/27/2018]

19.11.3.2 SCOPE:

All persons who engage in the exploration, development or production of a geothermal resource.

[19.11.3.2 NMAC - N, 2/27/2018]

19.11.3.3 STATUTORY AUTHORITY:

Geothermal Resources Development Act, Section 71-9-1 et seq. NMSA 1978 (2016).

[19.11.3.3 NMAC - N, 2/27/2018]

19.11.3.4 DURATION:

Permanent.

[19.11.3.4 NMAC - N, 2/27/2018]

19.11.3.5 EFFECTIVE DATE:

February 27, 2018, except where a later date is cited at the end of a section.

[19.11.3.5 NMAC - N, 2/27/2018]

19.11.3.6 OBJECTIVE:

The objective of 19.11.3 NMAC is to establish procedures for hearings before the energy conservation and management division pursuant to the Geothermal Resources Development Act, Section 71-9-1 et seq. NMSA 1978 (2016).

[19.11.3.6 NMAC - N, 2/27/2018]

19.11.3.7 DEFINITIONS:

[RESERVED]

[See 19.11.1.7 NMAC for definitions.]

[19.11.3.7 NMAC – N, 2/27/2018]

19.11.3.8 PERMIT HEARING:

The applicant or permittee, affected persons or interested persons may file a request with the division for a permit hearing. The person requesting a permit hearing or an attorney representing that person shall sign the hearing request. The director shall generally grant a permit hearing if the applicant or an affected person requests a hearing. However, the director has discretion to deny a hearing request if the issues are not substantial or have previously been heard and decided before the Oil Conservation Division, the Oil Conservation Commission or the division and the parties to the hearing, other than the division, would be the same as the parties to the original hearing. If the applicant or an affected person does not request a hearing, the director may grant a hearing if there is significant public interest in the application; or if the director determines, in his or her discretion, that a hearing may clarify one or more substantial issues involved in the permit. Permit hearings shall be held in Santa Fe. The hearing request shall be submitted in writing to the division and be postmarked or e-mailed by the close of the public comment period in Paragraph (3) of Subsection A of 19.11.2.13 NMAC. The hearing request shall include:

- A.** the requestor's name;
- B.** the requestor's address, or the address of the requestor's attorney, including an e-mail address and phone number if available;
- C.** the division's action that is disputed or a copy of the public notice referencing the division's action;
- D.** the name or general description of the property interest that the division's action affects, if any;
- E.** briefly, the general nature of the dispute with the division's action or proposed action; and

F. any other matter division rules or a division order requires.

[19.11.3.8 NMAC - N, 2/27/2018]

19.11.3.9 PERMIT HEARING NOTICE:

A. The division shall publish notice of a permit hearing in the name of the "State of New Mexico", signed by the director stating:

- (1) the time and place for the hearing;
- (2) the hearing requestor's name and address, or address of the requestor's attorney, including an e-mail address, if available;
- (3) a case name and number;
- (4) brief description of the purpose of the hearing; and
- (5) a reasonable description of the subject matter of the hearing that alerts persons who may be affected if the division approves or enacts the proposed action.

B. The division shall publish notice of each hearing at least 30 days before the hearing by:

- (1) posting notice on the division's website;
- (2) delivering written notice to the hearing requestor, by certified mail, return receipt requested and the applicant or permittee if not the hearing requestor;
- (3) delivering written notice by ordinary first class United States mail to federal and state agencies with jurisdiction over fish and wildlife resources and state and tribal historic preservation officers;
- (4) delivering written notice by ordinary first class United States mail to the EPA and any other agency which the division knows has issued or is required to issue a Resource Conservation and Recovery Act permit, an air quality permit, a national pollutant discharge elimination system permit, 404 permit or sludge management permit for the same facility or activity;
- (5) delivering written notice by ordinary first class United States mail to any unit of local government having jurisdiction over the area where the well or facility is to be located and to any state agency having authority with respect to the construction or operation of the well or facility;

(6) delivering written notice by ordinary first class United States mail or e-mail to each person who has requested in writing to be notified of such hearings or of the hearing for a specific application;

(7) delivering written notice by ordinary first class United States mail or e-mail to persons on a mailing list developed by the division including those who request in writing to be on the list, soliciting persons for "area lists" from participants in past permit proceedings in that area and notifying the public of the opportunity to be put on the mailing list through periodic publications in the public press, etc.; and

(8) publishing notice in a newspaper of general circulation in the county where the well or facility is located or is proposed to be located or in a newspaper of general circulation in the state.

[19.11.3.9 NMAC - N, 2/27/2018]

19.11.3.10 PARTIES TO PERMIT HEARINGS:

The parties to a permit hearing shall include:

- A. the division;
- B. the applicant or permittee of the geothermal well or facility; and
- C. an affected person who has requested a hearing or to intervene in the hearing.

[19.11.3.10 NMAC - N, 2/27/2018]

19.11.3.11 CONDUCT OF HEARINGS:

A. Testimony. Hearings shall be conducted without rigid formality. The division shall take or have someone take a transcript or recording of the testimony and preserve it as part of the division's records. A person testifying shall do so under oath. The hearing examiner shall designate whether an interested person's unsworn comments and observations are relevant and, if relevant, include the comments and observations in the record.

B. Pre-filed testimony. The director or hearing examiner may order the parties to file prepared written testimony in advance of the hearing. The witness shall be present at the hearing and shall adopt, under oath, the prepared written testimony, subject to cross-examination and motion to strike the unless the witness' presence at hearing is waived upon notice to other parties and without their objection. The parties shall number pages of prepared written testimony, which shall contain line numbers on the left-hand side.

C. Appearances pro se or through attorney. Parties may appear and participate in hearings either pro se (on their own behalf) or through an attorney. Corporations, partnerships, governmental entities, political subdivisions, unincorporated associations and other collective entities may appear only through an attorney or duly authorized officer or member. Participation in hearings shall be limited to parties as defined in 19.11.3.10 NMAC, except that a representative of a federal, state or tribal governmental agency or political subdivision may make a statement on the agency's or political subdivision's behalf. The hearing examiner shall have the discretion to allow other persons at the hearing to make a relevant statement, but not to present evidence or cross examine witnesses. A person making a statement shall be subject to cross-examination by the parties or their attorneys.

D. Presentation of evidence. The hearing examiner shall afford full opportunity to the parties at a hearing to present evidence and to cross-examine witnesses. The rules of evidence applicable in a trial before a court without a jury shall not control, but hearing examiners may use such rules as guidance in conducting hearings. The hearing examiner may admit relevant evidence, unless it is immaterial, repetitious or otherwise unreliable. The hearing examiner may take administrative notice of the authenticity of documents copied from the division's files.

E. Parties introducing exhibits at hearings shall provide a complete set for the court reporter, if applicable, the hearing examiner and other parties.

[19.11.3.11 NMAC - N, 2/27/2018]

19.11.3.12 HEARING EXAMINER'S POWER AND AUTHORITY:

The hearing examiner to whom the director refers a matter shall have full authority to hold a hearing on the matter, subject only to such limitations as the director may order in a case. The hearing examiner shall have the power to perform all acts and take all measures necessary and proper for the hearing's efficient and orderly conduct, including administering oaths to witnesses, receiving testimony and exhibits offered in evidence and ruling upon such objections as may be interposed. The hearing examiner shall cause a complete record of the proceedings to be made and transcribed or recorded and shall certify the record of the proceedings to the director.

A. The hearing examiner may hold a pre-hearing conference prior to the hearing on the merits on cases pending before the division upon a party's request or upon the hearing examiner giving notice. The pre-hearing conference's purpose shall be to narrow issues, eliminate or resolve other preliminary matters and encourage settlement. The director or hearing examiner shall either provide or ensure that written or oral notice of a pre-hearing conference is given to the parties.

B. The director or hearing examiner may rule on motions that are necessary or appropriate for disposition prior to the hearing on the merits. Prior to ruling on a motion, the director or hearing examiner shall give written or oral notice to each party who has

filed an appearance in the case and who may have an interest in the motion's disposition (except a party who has indicated that it does not oppose the motion), and shall allow parties a reasonable opportunity to respond to the motion. The director or hearing examiner may conduct a hearing on the motion, following written or oral notice to the parties.

[19.11.3.12 NMAC - N, 2/27/2018]

19.11.3.13 REPORT AND RECOMMENDATIONS FROM HEARING EXAMINER:

Upon conclusion of a hearing, the hearing examiner shall promptly consider the proceedings in such hearing, and based upon the hearing's record prepare a written report with recommendations for the division's disposition of the matter or proceeding. The hearing examiner shall draft a proposed order and submit it to the director with the certified record of the hearing.

[19.11.3.13 NMAC - N, 2/27/2018]

19.11.3.14 DISPOSITION OF CASES HEARD BY A HEARING EXAMINER:

After receipt of the hearing examiner's report, the director shall enter the division's order, which the director may have modified from the hearing examiner's proposed order disposing of the matter.

[19.11.3.14 NMAC - N, 2/27/2018]

19.11.3.15 CIVIL PENALTIES AND HEARINGS:

A. If a person violates the provisions of the Act or the rules promulgated pursuant to the Act or an order or permit issued pursuant to the Act, the division may assess the person a civil penalty of \$2,500 for each violation. In the case of a continuing violation, each day of violation shall constitute a separate violation.

B. To begin an action for a civil penalty, the division will issue a notice of violation. The notice of violation shall:

- (1) identify the person against whom the order is sought;
- (2) identify the provision of the Act or the provision of the rule, permit or order issued pursuant to the Act allegedly violated;
- (3) provide a general description of the facts supporting the allegations;
- (4) state the sanction or sanctions sought; and
- (5) provide the date, time and place of the public hearing.

C. The division shall provide notice by posting notice on the division's website and by delivering the notice of violation to the person against whom the order is sought by certified mail, return receipt requested to the person's last known address, and delivering notice by first class United States mail or e-mail to each person who has requested in writing to be notified of such hearings, and publishing notice in a newspaper of general circulation in the county where the violation occurred or in a newspaper of general circulation in the state.

D. The parties to the public hearing shall include the division and the person against whom the order is sought.

E. In determining the amount of the civil penalty, the division shall consider the person's history of previous violations of the Act or the Geothermal Resources Act, Section 19-13-1 NMSA 1978 (1967, as amended) or the rules, permits or orders issued pursuant to those acts, the seriousness of the violation, any hazard to the health or safety of the public or the environment and the demonstrated good faith of the person.

F. The division may assess a civil penalty only after a public hearing is held or the person has entered an agreed compliance order that waives the person's opportunity for a public hearing.

G. A public hearing to assess a civil penalty shall be held pursuant to 19.11.3.11 through 19.11.3.14 NMAC.

H. The director may enter an agreed compliance order with the permittee against whom a civil penalty is sought to resolve alleged violations of any provision of the Act or any provision of any rule, permit or order issued pursuant to the Act. The director may enter an agreed compliance order prior to or after the filing of a notice of violation. An agreed compliance order shall have the same force and effect as an order issued after a public hearing.

I. After the public hearing is held, or the person has failed to participate in the public hearing, the division shall issue an order requiring that the person pay any civil penalty imposed.

J. If the person fails to pay the civil penalty as ordered by the division, the division may file a civil suit to collect the penalty in the district court of the county in which the defendant resides or in which any defendant resides if there is more than one defendant or in the district court of any county in which the violation occurred.

[19.11.3.15 NMAC - N, 2/27/2018]

PART 4: CONSTRUCTION AND OPERATION

19.11.4.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Energy Conservation and Management Division.

[19.11.4.1 NMAC - N, 2/27/2018]

19.11.4.2 SCOPE:

All persons who engage in the exploration, development or production of a geothermal resource.

[19.11.4.2 NMAC - N, 2/27/2018]

19.11.4.3 STATUTORY AUTHORITY:

Geothermal Resources Development Act, Section 71-9-1 et seq. NMSA 1978 (2016).

[19.11.4.3 NMAC - N, 2/27/2018]

19.11.4.4 DURATION:

Permanent.

[19.11.4.4 NMAC - N, / /2018]

19.11.4.5 EFFECTIVE DATE:

February 27, 2018, except where a later date is cited at the end of a section.

[19.11.4.5 NMAC - N, 2/27/2018]

19.11.4.6 OBJECTIVE:

The objective of 19.11.4 NMAC is to establish rules to ensure the exploration, development and production of geothermal resources is conducted in a manner that safeguards life, health, property, natural resources, the environment and the public welfare, and to encourage maximum economic recovery.

[19.11.4.6 NMAC - N, 2/27/2018]

19.11.4.7 DEFINITIONS:

[RESERVED]

[See 19.11.1.7 NMAC for definitions.]

[19.11.4.7 NMAC – N, 2/27/2018]

19.11.4.8 GEOTHERMAL WELL LOCATION LIMITATIONS:

Any well drilled for the exploration, development or production of geothermal resources or as an injection well shall be located 100 feet or more from and within the outer boundary of the parcel of land on which the well is situated, or 100 feet or more from a public road, street or highway dedicated prior to the commencement of drilling. The division may modify or waive this requirement upon written request if the applicant can demonstrate that public safety is preserved and that the integrity of the geothermal source is not jeopardized.

[19.11.4.8 NMAC - N, 2/27/2018]

19.11.4.9 PERMITTEE'S NOTIFICATION REQUIREMENTS AND REQUESTS FOR APPROVAL TO DIVISION:

A permittee shall notify the division with:

A. a written notice of intent to engage in any one of the following activities:

(1) make a minor change in the operation of the well (minor changes include changing capillary tubing, pulling or replacing a pump or any other change the division considers a minor change);

(2) conduct a spinner, pressure or temperature survey test or another test that does not modify the well structure;

(3) conduct a flow test on a production well;

(4) perform routine maintenance on a well;

(5) removal of fluids from on-site pits or closed-loop systems per Paragraph (3) of Subsection D of 19.11.4.17 NMAC; or

(6) change in location of a well that is within the approved area of a geothermal well or facility permit (this will require the permittee to apply for a minor permit modification pursuant to Subparagraph F of 19.11.2.10 NMAC so that the permit will reflect the new location).

B. a written notice of intent and request for approval for any one of the following activities:

(1) activities not specifically approved or exempted under an existing permit;

(2) activities that do not require a permit application per 19.11.2.10 NMAC;

(3) tracer tests;

- (4) mechanical integrity tests;
- (5) increasing depth of a well;
- (6) conduct a flow test on an injection well;
- (7) entering or opening a plugged well;
- (8) shooting, acidizing or fracturing a well;
- (9) abandoning and plugging a well;
- (10) directional drilling (drilling in a direction not intended to be vertical);
- (11) changing the construction of a hole or well, except for injection wells, including placing a plug in the hole or well and recovering or altering the casing;
- (12) conducting a major workover or cleaning of a well; or
- (13) any other activity for which the division conducts a field inspection or evaluates information or documentation regarding the construction of a hole or well.

C. The director may determine, based on the notices submitted under Subsections A or B of 19.11.4.9 NMAC, that the permittee is required to apply for a permit modification in accordance with 19.11.2.10 NMAC.

[19.11.4.9 NMAC - N, 2/27/2018]

19.11.4.10 WELL CONSTRUCTION AND CASING REQUIREMENTS:

Permittees shall construct and case all geothermal wells in a manner to protect or minimize damage to life, health, property, ground water and surface waters, geothermal resources, other natural resources, the environment and the public welfare. No permittee shall construct, operate, maintain, convert, plug, abandon or conduct any other injection activity in a manner that allows the movement of fluid containing any contaminant into underground sources of drinking water, if the contaminant may cause a violation of drinking water regulations or rules or may otherwise adversely affect the health of persons. The permittee has the burden of showing that it meets these requirements. The permittee shall attach the permanent well head completion equipment to the production casing or to the intermediate casing if production casing does not reach the surface. The permittee shall install an annular blowout preventer on wells when the division deems it necessary. All surface, intermediate and production casing strings reaching the surface shall provide adequate anchorage for BOPE, pressure control and protection for all natural resources. The casing design criteria listed below represent minimum requirements.

A. Conductor casing. The permittee shall install a minimum of 40 feet of conductor casing. The permittee shall cement the annular space solid to the surface. The permittee shall allow a 24-hour cure period for the grout prior to drilling out the shoe unless the permittee uses additives, approved by the division, to obtain early strength.

B. Surface casing. A surface casing shall provide for control of formation fluids, for protection of shallow usable ground water and for adequate anchorage for BOPE. The permittee shall cement all surface casing solid to the surface. The permittee shall allow a 24-hour cure period prior to drilling out the shoe of the surface casing unless the permittee uses additives, approved by the division, to obtain early strength. The permittee shall set sufficient casing to reach a depth below all known or reasonably estimated levels of fresh water and water of present or future value for domestic, commercial or agricultural use and to protect those aquifers and to prevent blowout or uncontrolled flows.

C. Intermediate casing. Intermediate casing is required for protection against unusual pressure zones, cave-ins, wash-outs, abnormal temperature zones, uncontrollable lost circulation zones or other drilling hazards. The permittee shall cement intermediate casing strings solid to the surface or to the top of the liner hanger whenever the permittee runs intermediate casing string as a liner. The permittee shall pressure test the liner lap, of any unslotted liner, prior to resumption of drilling.

D. Production casing. The permittee shall set production casing above or through the producing or injection zone and cement it above the injection zones. The permittee shall use sufficient cement to exclude overlying formation fluids from the geothermal zone, to segregate zones and to prevent movement of fluids behind the casing into zones that contain fresh ground water. The permittee shall either cement production casing solid to the surface or lap it into intermediate casing, if run. If the permittee laps production casing into an intermediate casing, the casing overlap shall be at least 100 feet, cemented solid and pressure tested to ensure its integrity.

E. All casing materials shall be suitable for the proposed operating design stresses and temperatures.

[19.11.4.10 NMAC - N, 2/27/2018]

19.11.4.11 BLOWOUT PREVENTION:

The permittee shall take all necessary precautions to always keep wells under operational control and mechanical integrity. The permittee shall install BOPE, capable of shutting in the well during any operation, on the surface casing and always maintained ready for use. If necessary, the permittee shall equip the BOPE to be remotely activated. The equipment shall be rated for operating at pressures and temperatures exceeding the maximum pressure and temperature anticipated for the well.

[19.11.4.11 NMAC - N, 2/27/2018]

19.11.4.12 OPERATING LIMITATIONS:

The division shall establish operating limitations, for all production or injection wells, deemed necessary to protect life, health, correlative rights, property, natural resources, the environment or the public welfare. The permittee shall operate all wells within the operating parameter limits established in the permit. The permittee shall not operate a new injection well before receiving authorization to inject from the division.

[19.11.4.12 NMAC - N, 2/27/2018]

19.11.4.13 TESTING AND MONITORING:

A. Well construction testing and monitoring.

(1) The permittee shall log all injection or production wells with an induction electrical log, or equivalent, or by gamma-neutron log after running casing. The permittee shall log the well from the bottom of the hole to the bottom of the production casing. This requirement may vary from area to area, depending upon the amount of pre-existing subsurface geological data available. If sufficient subsurface geologic data is available, the division may not require the permittee to log the well. However, the permittee shall obtain the division's written permission to omit this requirement prior to running surface casing.

(2) The permittee shall take cuttings a minimum of every 10 feet for all geothermal wells. The cuttings must be cleaned, dried, marked for location and depth and placed in appropriate containers and maintained with the well or facility records per Subsection A of 19.11.4.14 NMAC.

(3) The permittee shall regularly monitor the temperature of the return mud during the drilling of the surface casing hole, below the conductor casing. The permittee shall either install and maintain in working condition a continuous temperature monitoring device, or read the temperature manually. In either case, the permittee shall log the return mud temperature after each joint of pipe has been drilled down 30 feet.

(4) After installation and prior to drilling out the guide shoe from the production or injection casing, the permittee shall test the well casing and BOPE under pressure. The test pressure shall be 1.5 times the saturated steam pressure (psia) of water at the predicted bottom hole mud return temperature. An acceptable test shall maintain pressure in the well between the guide shoe and BOPE, with no more than a ten percent drop from the initial test pressure, for 30 minutes.

(5) Prior to operation of an injection well, the permittee shall test the well construction to demonstrate that the casing cement has acceptably bonded to the casing. The permittee shall conduct the cement bond log test by a method approved by

the division and submit the test results to the division for approval before placing the well into operation.

(6) Prior to operation, the permittee shall test all injection wells to demonstrate that the casing has complete integrity. The permittee shall conduct the MIT by a method approved by the division and submit the test results to the division for approval before placing the well into operation.

(7) For fresh water aquifers the division determines may be affected by the operation of an injection well, prior to operation, the permittee shall sample and analyze water quality from the fresh water aquifer through a monitoring or observation well, located down gradient (static water level of fresh water aquifer) and within 500 feet of each injection well. During sampling, the permittee shall also measure the static water level and water temperature. The division shall establish the scope of the water quality analysis based on the potential contaminants from the geothermal resource and geothermal ground operations.

B. Well operation testing and monitoring.

(1) To verify the integrity of the annular cement above the shoe of the casing of any injection well, the permittee shall make sufficient surveys within 30 days after the permittee begins injection into a well to prove that all the injected fluid is confined to the intended zone of injection. Thereafter, the permittee shall make surveys at least every five years or more often if necessary. If the permittee can substantiate by existing data that these tests are not necessary, then, after review of the data, the division may grant a waiver exempting the permittee from the tests.

(2) The permittee of a geothermal production well shall daily monitor the rate of flow of water or steam or both, and the surface pressure and temperature of the fluids from each production well.

(3) The permittee of an injection well shall daily monitor the rate of flow of injected geothermal fluid or wastewater, and the surface pressure and temperature of the fluids injected into each injection well.

(4) The permittee of a geothermal facility shall continuously monitor the rate of flow, pressure and temperature of geothermal resource water or steam or both at the inlet and outlet of the facility.

(5) Based on site conditions and the potential for geothermal resource intrusion into an underground source of usable water, the division may require the permittee to install one or more monitoring wells and to submit a water quality monitoring and analysis plan for division approval.

(6) The permittee shall perform all pit testing and monitoring in accordance with Subsection D of 19.11.4.17 NMAC.

[19.11.4.13 NMAC - N, 2/27/2018]

19.11.4.14 RECORDKEEPING AND REPORTING:

The permittee shall maintain all records, notifications and reports, according to the following timelines, at the well location, if the well is associated with an operating surface facility, or at the permittee's business office located within the state of New Mexico.

A. Recordkeeping of well-construction testing and monitoring. The permittee shall maintain records and reports associated with well-construction testing and monitoring in Subsection A of 19.11.4.13 NMAC, generated and collected during construction of all injection or production wells for the life of the well up to the time the well is plugged and abandoned.

B. Recordkeeping of well-operation testing and monitoring. The permittee shall maintain records and reports associated with well-operation testing and monitoring in Subsection B of 19.11.4.13 NMAC, generated and collected during operation of all injection or production wells for a period of five years from the date the record or report was created.

C. The permittee shall submit reports of well-construction testing and monitoring associated with Paragraphs (1) through (3) of Subsection A of 19.11.4.13 NMAC to the division no later than 60 days after completion of drilling activities. The permittee shall submit records of well-construction testing and monitoring associated with Paragraphs (4) through (5) of Subsection A of 19.11.4.13 NMAC to the division no later than 30 days prior to placing the well into operation. The responsible official shall sign reports.

D. The permittee shall submit reports of well-operation testing and monitoring associated with Paragraph (1) of Subsection B of 19.11.4.13 NMAC to the division no later than 60 days after injection is started. The permittee shall submit records of well-operation testing and monitoring associated with Paragraphs (2) through (5) of Subsection B of 19.11.4.13 NMAC to the division semi-annually in a format specified by permit. The responsible official shall sign reports.

E. The permittee shall perform all pit recordkeeping and reporting in accordance with Paragraphs (4) through (5) of Subsection D of 19.11.4.17 NMAC.

[19.11.4.14 NMAC - N, 2/27/2018]

19.11.4.15 GEOTHERMAL SURFACE FACILITIES:

A. General. The permittee shall maintain all well heads, separators, pumps, mufflers, manifolds, valves, pipelines and other equipment of geothermal resources in good condition to prevent loss of or damage to life, health, property, natural resources, the environment or the public welfare.

B. Corrosion. The permittee shall quarterly inspect all surface well-head equipment and pipelines and subgrade appurtenances and master valves for signs of corrosion to safeguard life, health, property, natural resources, the environment and the public welfare.

C. Tests. The division may require such tests or remedial work as in its judgment are necessary to prevent damage to life, health, property, natural resources, the environment and the public welfare and to protect geothermal reservoirs from damage or to prevent the infiltration of detrimental substances into underground or surface water suitable for irrigation or other beneficial uses to the best interest of the neighboring property owners and the public. Such tests may include casing tests, cementing tests and equipment tests.

D. Reclamation. Where the permittee is not the surface owner, the permittee shall maintain a post-geothermal resource production land use plan that details how the surface area disturbed by the geothermal surface facilities will be reclaimed to achieve the proposed use and written approval of the surface owner for the proposed use.

[19.11.4.15 NMAC - N, 2/27/2018]

19.11.4.16 PLUGGING AND ABANDONMENT:

A. Prior to plugging and abandoning a geothermal well, the permittee shall file with the division an application for permission to abandon and plug a geothermal well. The application shall be accompanied by a detailed statement of the proposed activity. This condition applies only to wells that have not received plugging and abandoning approvals in a well or facility permit.

B. The following provisions apply to the abandonment of an exploration or observation well.

(1) If the well was drilled with air and no water was encountered, the permittee shall backfill the hole with cuttings and place a cement plug of 50 linear feet at the top of the well.

(2) If the well was drilled with mud or drilled with air and water was encountered, the permittee shall fill the bore with mud and place a cement plug 50 linear feet at the top of the well.

(3) The permittee shall restore the surface to near original condition including the restoration of native vegetation.

C. The following provisions apply to the abandonment of a geothermal production or injection well.

(1) Except for cement used for surface plugging, the permittee shall plug the well by pumping cement in the hole through the drill pipe or tubing. The cement shall consist of a mix that resists high temperatures.

(2) The permittee shall place cement plugs in the uncased portion of wells to protect all subsurface resources. These plugs shall extend a minimum of 100 lineal feet above the producing zones and 100 lineal feet below the producing zones or to the total depth drilled, whichever is less. The permittee shall place cement plugs to isolate formations and to protect the fluids in those formations from interzonal migration.

(3) Where there is an open hole, the permittee shall place a cement plug in the deepest casing string by:

(a) placing a cement plug across the guide shoe extending a minimum of 100 lineal feet above and below the guide shoe, or to the total depth drilled, whichever is less; or

(b) setting a cement retainer with effective control of back pressure approximately 100 lineal feet above the guide shoe, with at least 200 lineal feet of cement below, or to the total depth drilled, whichever is less, and 100 lineal feet of cement above the retainer.

(4) If there is a loss of drilling fluids into the formation or such a loss is anticipated or if the well has been drilled with air or another gaseous substance, a permanent bridge plug shall be set at the casing shoe and capped with a minimum of 200 lineal feet of cement.

(5) The permittee shall place a cement plug across perforations, extending 100 lineal feet below, or to the total depth drilled, whichever is less, and 100 lineal feet above the perforations. When the permittee uses a cement retainer to squeeze cement into or across the perforations, the permittee shall set the retainer a minimum of 100 lineal feet above the perforations. Where the casing contains perforations at or below debris or collapsed casing, which prevents cleaning, the permittee shall set a cement retainer at least 100 lineal feet above that point and squeeze cement in the interval below the retainer.

(6) The permittee shall obtain the division's approval before casing is cut and recovered. The permittee shall place a cement plug in such a manner as to isolate all uncased intervals and guide shoes that are not protected by an inner string of casing. The plug shall extend a minimum of 50 feet above and below any such interval or guide shoe.

(7) In the case of a well not constructed with cement in the annulus running the full length of each casing, the permittee shall plug all annular spaces extending to the surface with cement.

(8) The permittee shall cement the innermost string of casing that reaches ground level to a minimum depth of 50 feet below the top of the casing.

(9) The permittee shall verify the hardness and location of cement plugs placed across perforated intervals and at the top of uncased or open holes by setting down with tubing or drill pipe a minimum weight of 15,000 pounds on the plug or, if less than 15,000 pounds, the maximum weight of the available tubing or drill pipe string. If the permittee uses a cement retainer or bridge plug to set the bottom plug, a test is not required for that interval.

(10) The permittee shall fill any interval that is not filled with cement with good quality, heavy drilling fluids.

(11) All casing strings shall be cut off below ground level and capped by welding a steel plate on the casing stub. The steel plate shall include a corrosion resistant marking that identifies the well name or number. The permittee shall remove all structures and other facilities.

(12) The permittee shall restore the surface to near original condition including the restoration of native vegetation.

[19.11.4.16 NMAC - N, 2/27/2018]

19.11.4.17 PIT AND CLOSED LOOP DESIGN, CONSTRUCTION AND OPERATING PLAN AND CLOSURE-REMEDIAL PLAN REQUIREMENTS:

All geothermal resources permit applications shall include details regarding the design, construction and operation of a system designed to temporarily store and dispose of drilling wastes and other process fluids during periods of well or facility maintenance. The division will approve two methods, pit or closed-loop system, for the handling of drilling fluids or other process fluids released during well or facility maintenance activities. The plan for design and construction of a pit shall follow the applicable liner manufacturer's requirements. The operating details shall include operating and maintenance procedures, a closure plan and hydrogeologic data that provides sufficient information and detail on the site's topography, soils, geology, surface hydrology and ground water hydrology to enable the division to evaluate compliance with acceptable siting criteria. In the absence of site-specific ground water data, the permittee may provide a reasonable determination of probable ground water depth using data generated by models, cathodic well lithology, published information or other tools as approved by the division.

A. Siting.

(1) A permittee may locate a pit containing fluids containing 10,000 mg/l or less of TDS and 1 mg/l or less of H₂S:

(a) where ground water is more than four feet below the bottom of the pit;

(b) 100 feet or more from any continuously flowing watercourse or any other significant watercourse;

(c) 100 feet or more from any lakebed, sinkhole or playa lake (measured from the ordinary high-water mark);

(d) 200 feet or more from an occupied permanent residence, school, hospital, institution or church in existence at the time of initial application;

(e) 200 feet or more from a spring or a private, domestic fresh water well used by less than five households for domestic or stock watering purposes; or 200 feet or more from any other fresh water well or spring, in existence at the time of the initial application;

(f) outside incorporated municipal boundaries or outside a defined municipal fresh water wellfield covered under a municipal ordinance adopted pursuant to Section 3-27-3 NMSA 1978, as amended, unless the municipality specifically approves;

(g) 100 or more feet from a wetland;

(h) outside the area overlying a subsurface mine, unless the division grants a variance that approves the proposed location based upon the permittee's demonstration that the pit's construction and use will not compromise the subsurface integrity;

(i) outside an unstable area, unless the division grants a variance upon a demonstration that the permittee has incorporated engineering measures into the design to ensure that the pit's integrity is not compromised; and

(j) outside a 100-year floodplain unless the division grants a variance for temporary use.

(2) A permittee shall not locate a pit containing fluids containing more than 10,000 mg/l of TDS and more than one mg/l of H₂S:

(a) where ground water is less than 50 feet below the bottom of the pit;

(b) within 300 feet of any continuously flowing watercourse or any other significant watercourse;

(c) within 200 feet of any lakebed, sinkhole or playa lake (measured from the ordinary high-water mark);

(d) within 300 feet from an occupied permanent residence, school, hospital, institution or church in existence at the time of initial application;

(e) within:

(i) 500 feet of a spring or a private, domestic fresh water well used by less than five households for domestic or stock watering purposes; or

(ii) 1,000 feet of any other fresh water well or spring, in existence at the time of the initial application;

(f) within incorporated municipal boundaries or within a defined municipal fresh water wellfield covered under a municipal ordinance adopted pursuant to Section 3-27-3 NMSA 1978, as amended, unless the municipality specifically approves;

(g) within 300 feet of a wetland;

(h) within the area overlying a subsurface mine, unless the division grants a variance that approves the proposed location based upon the permittee's demonstration that the pit's construction and use will not compromise the subsurface integrity;

(i) within an unstable area, unless the division grants a variance upon a demonstration that the permittee has incorporated engineering measures into the design to ensure that the pit's integrity is not compromised; or

(j) within a 100-year floodplain.

B. Design and construction. A permittee shall design and construct a pit or closed-loop system to contain liquids and solids; prevent contamination of fresh water; and protect life, health, property, natural resources, the environment and the public welfare.

(1) The pit or closed-loop system shall ensure the confinement of liquids to prevent releases.

(2) A pit shall have a properly constructed foundation and interior slopes consisting of a firm, unyielding base, smooth and free of rocks, debris, sharp edges or irregularities to prevent the liner's rupture or tear. The permittee shall construct a pit so that the slopes are no steeper than two horizontal feet to one vertical foot (2H:1V).

(3) The permittee shall design and construct a pit with a geomembrane liner. The geomembrane liner shall consist of 20-mil string reinforced LLDPE or equivalent liner material that the division approves. The geomembrane liner shall be composed of an impervious, synthetic material that is resistant to petroleum hydrocarbons, salts and acidic and alkaline solutions. The liner material shall be resistant to ultraviolet light. Liner compatibility shall comply with EPA SW-846 Method 9090A.

(4) The permittee shall minimize liner seams and orient them up and down, not across, a slope. The permittee shall use factory welded seams where possible. Prior

to field seaming, the permittee shall overlap liners four to six inches. The permittee shall minimize the number of field seams in corners and irregularly shaped areas. Qualified personnel shall field weld and test liner seams.

(5) Construction shall avoid excessive stress-strain on the liner.

(6) Geotextile is required under the liner where needed to reduce localized stress-strain or protuberances that may otherwise compromise the liner's integrity.

(7) The permittee shall anchor the edges of all liners in the bottom of a compacted earth-filled trench. The anchor trench shall be at least 18 inches deep, unless anchoring to encountered bedrock provides equivalent anchoring.

(8) The permittee shall ensure that the liner is protected from any fluid force or mechanical damage at any point of discharge into or suction from the lined pit.

(9) The permittee shall design and construct a pit to prevent run-on of surface water. A berm, ditch, proper sloping or other diversion shall surround a pit to prevent run-on of surface water. During drilling operations, the edge of the pit adjacent to the drilling or workover rig is not required to have run-on protection if the permittee is using the pit to collect liquids escaping from the drilling or workover rig and run-on will not result in a breach of the pit.

(10) The volume of a pit shall not exceed 10 acre feet, including freeboard.

(11) **Stockpiling of topsoil.** Prior to constructing a pit, the permittee shall strip and stockpile the topsoil for use as the final cover or fill at the time of closure.

(12) **Signs.** The permittee shall post an upright sign not less than 12 inches by 24 inches with lettering not less than two inches in height in a conspicuous place on the fence surrounding the pit. The permittee shall post the sign in a manner and location such that a person can easily read the legend. The sign shall provide the following information: the permittee's name; the location of the site by quarter-quarter or unit letter, section, township and range; and emergency telephone numbers.

(13) A permittee who is using a closed-loop system with drying pads shall design and construct the drying pads to include the following:

(a) appropriate liners that prevent the contamination of fresh water and protect life, health, property, natural resources, the environment and the public welfare;

(b) sumps to facilitate the collection of liquids derived from drill cuttings; and

(c) berms that prevent run-on of surface water or fluids.

C. Fencing. The permittee shall fence or enclose a pit in a manner that deters unauthorized access and shall maintain the fences in good repair. Fences are not required if there is an adequate surrounding perimeter fence that prevents unauthorized access to the well site or facility, including the pit. During drilling or workover operations, the permittee is not required to fence the edge of the pit adjacent to the drilling or workover rig.

D. Operation. A permittee shall maintain and operate a pit or closed-loop system in accordance with the following requirements.

(1) The permittee shall operate and maintain a pit or closed-loop system, to contain liquids and solids and maintain the integrity of the liner, liner system or secondary containment system, prevent contamination of fresh water and protect life, health, property, natural resources, the environment and the public welfare.

(2) The permittee may only discharge fluids or mineral solids generated or used during the well drilling, completion or workover or facility maintenance operations process into a pit or closed-loop system. The permittee shall maintain a pit free of miscellaneous solid waste or debris.

(3) If the permittee elects to remove any stored fluids from a pit or a closed-loop system, the permittee shall dispose of the fluids pursuant to 19.11.4.20 NMAC.

(4) The permittee shall maintain at least two feet of freeboard in a pit. For temporary extenuating circumstances, a permittee may maintain a freeboard of less than two feet and shall maintain a log describing such circumstances and make the log available to the division upon request.

(5) The permittee shall inspect a pit or closed-loop system containing drilling fluids at least daily while the drilling or workover rig is on location. Thereafter, the permittee shall inspect the pit weekly so long as liquids remain in the pit. The permittee shall maintain a log of such inspections and make the log available for the division's review upon request.

(6) The permittee shall not discharge into or store any hazardous waste in a pit or drying pad associated with a closed-loop system.

(7) If a pit liner's integrity is compromised above the liquid's surface then the permittee shall repair the damage or initiate replacement of the liner within 48 hours of discovery.

(8) If a pit or closed loop system develops a leak, or if any penetration of the pit liner occurs below the liquid's surface, then the permittee shall remove all liquid above the damage or leak within 48 hours of discovery, notify the division and repair the damage or replace the pit liner or closed loop hardware.

(9) The permittee shall inject or withdraw liquids from a pit through a header, diverter or other hardware that prevents damage to the liner by erosion, fluid jets or impact from installation and removal of hoses or pipes.

(10) The permittee shall operate and install a pit to prevent the collection of surface water run-on.

(11) The permittee shall install, or maintain on site, a water absorbent boom or other device to contain an unanticipated release.

E. Closure and remediation. A closure plan shall describe the proposed closure method and the proposed procedures and protocols to implement and complete the closure.

(1) The permittee shall not commence closure without first obtaining division approval of the closure plan submitted with the permit application.

(2) Prior to closure the permittee shall remove all free liquids reasonably achievable from the pit or drying pad and tank associated with a closed-loop system and dispose of such liquids at a division-approved facility.

(3) When closing a pit, the permittee shall stabilize or solidify the remaining pit contents to a capacity sufficient to support the final cover of the pit. When transferring the geothermal waste contents from a drying pad and tank associated with a closed-loop system into a pit, the permittee shall stabilize or solidify the geothermal waste contents to a capacity sufficient to support the final cover of the pit. The permittee shall not mix the contents with soil or other material at a mixing ratio of greater than 3:1, soil or other material to contents. The geothermal waste mixture must pass the paint filter liquids test (EPA SW-846 Method 9095B or other test methods approved by the division).

(4) The permittee shall collect, at a minimum, a five-point composite of the contents of the pit to demonstrate that, after the geothermal waste is solidified or stabilized with soil or other non-geothermal waste material at a ratio of no more than 3:1 soil or other non-geothermal waste material to geothermal waste, the concentration of any contaminant in the stabilized geothermal waste is not higher than the parameters listed in Table 2 (19.11.4.19 NMAC).

(5) If, after appropriate stabilization, the concentrations of all contaminants in the contents from a pit are less than or equal to the parameters of listed in Table 2 (19.11.4.19 NMAC), the permittee may proceed with closure and remediation of the pit.

(6) If the concentration of any contaminant in the contents, after mixing with soil or non-geothermal waste material to a maximum ratio of 3:1, from a pit or drying pad associated with a closed-loop system is higher than constituent concentrations shown in Table 2 (19.11.4.19 NMAC), then the permittee shall close the pit or drying

pad by first removing all contents and, if applicable, synthetic liners and transferring those materials to a division-approved facility.

(7) Upon achieving all applicable geothermal waste stabilization in the pit or transfer of stabilized geothermal wastes to the pit, the permittee shall:

(a) fold the outer edges of the pit liner to overlap the geothermal waste material in the pit prior to installing the geomembrane cover;

(b) install a geomembrane cover over the geothermal waste material in the pit; the permittee shall install the geomembrane cover in a manner that prevents the collection of infiltration water in the pit and on the geomembrane cover after the soil cover is in place; the geomembrane cover shall consist of a 20-mil string reinforced LLDPE liner or equivalent cover that the division approves; the geomembrane cover shall be composed of an impervious, synthetic material that is resistant to petroleum hydrocarbons, salts and acidic and alkaline solutions; cover compatibility shall comply with EPA SW-846 Method 9090A; and

(c) cover the pit with non-geothermal waste containing uncontaminated, earthen materials and construct a soil cover prescribed by the division.

(8) If the permittee has removed the geothermal wastes and the liner from a drying pad associated with a closed-loop system to a pit, the permittee shall test the soils beneath the drying pad as follows.

(a) At a minimum, the permittee shall take a five-point composite sample to include any obvious stained or wet soils, or other evidence of contamination under the liner and have that sample analyzed for the constituents listed in Table 1 (19.11.4.18 NMAC).

(b) If any contaminant concentration is higher than the parameters listed in Table 1 (19.11.4.18 NMAC) the division may require additional delineation upon review of the results and the permittee must receive division approval before proceeding with closure.

(c) If all contaminant concentrations are less than or equal to the parameters listed in Table 1 (19.11.4.18 NMAC), the permittee can proceed to backfill the pad or excavation with non-geothermal waste containing, uncontaminated, earthen material.

(9) A permittee shall notify the division at least 60 days prior to cessation of operations and provide a proposed schedule for closure. If there is no closure plan on file with the division applicable to the pit, the permittee shall provide a closure plan with this notice. Upon receipt of the notice and proposed schedule, the division shall review the current closure plan for adequacy and inspect the site. When onsite burial occurs on private land, the permittee shall file a deed notice identifying the exact location of the onsite burial with the county clerk in the county where the onsite burial occurs.

(10) Within 60 days of closure completion, the permittee shall submit a closure report that documents all closure activities including sampling results; other information the division requires and details on back-filling, capping and covering, where applicable. In the closure report, the permittee shall certify that all information in the report and attachments is correct and that the permittee has complied with all applicable closure requirements and conditions specified in the approved closure plan. If the permittee elects to conduct onsite burial in an onsite pit, the permittee shall also provide a plat of the pit location. The permittee shall place a steel marker at the center of an onsite burial. The steel marker shall be not less than four inches in diameter and shall be cemented in a three-foot deep hole at a minimum. The steel marker shall extend at least four feet above mean ground level and at least three feet below ground level. The permittee name, lease name, well number and location, including unit letter, section, township and range, and that the marker designates an onsite burial location shall be welded, stamped or otherwise permanently engraved into the metal of the steel marker. A person shall not build permanent structures over an onsite burial without the division's written approval. A person shall not remove an onsite burial marker without the division's written permission.

(11) A permittee shall close a drying pad associated with a closed-loop system or a pit within one year from the date that the permittee releases the drilling or workover rig. The permittee shall note the date of the drilling or workover rig's release, upon the well's or workover's completion. The division may grant an extension not to exceed one year.

(12) Reclamation of pit and drying pad locations.

(a) A permittee shall reclaim the pit or drying pad location and all areas associated with the closed-loop system or pit including associated access roads to a safe and stable condition that blends with the surrounding undisturbed area.

(b) The permittee may propose an alternative to the re-vegetation or re-contouring requirement if the permittee demonstrates to the division that the proposed alternative provides equal or better prevention of erosion and protection from contamination of fresh water, and protection of life, health, property, natural resources, the environment and the public welfare.

(c) The permittee shall compact, cover, pave or otherwise stabilize and maintain areas reasonably needed for production operations or for subsequent drilling operations in such a way as to minimize dust and erosion to the extent practicable.

(d) The soil cover for closures after site contouring, where the permittee has removed the drying pad contents and liner, and if necessary remediated the soil beneath the drying pad liner to chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, shall consist of the background thickness of topsoil or one foot of suitable material, whichever is greater.

(e) The soil cover for burial in-place pits shall consist of a minimum of four feet of non-geothermal waste containing uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0. The soil cover shall include either the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater.

(f) The permittee shall construct the soil cover to the site's existing grade and prevent ponding of water and erosion of the cover material.

(g) The permittee shall reclaim all areas disturbed by the closure of pits, except areas reasonably needed for production operations or for subsequent drilling operations, as early and as nearly as practicable to their original condition or their final land use and maintain them to control dust and minimize erosion to the extent practicable. The permittee shall replace top soils and subsoils to their original relative positions and contour them to achieve erosion control, long-term stability and preservation of surface water flow patterns. The permittee shall reseed disturbed area in the first favorable growing season following closure of a pit or drying pad associated with a closed-loop system. Reclamation of all disturbed areas no longer in use shall be considered complete when all ground surface disturbing activities at the site have been completed, and a uniform vegetative cover has been established that reflects a life-form ratio of plus or minus fifty percent of pre-disturbance levels and a total percent plant cover of at least seventy percent of pre-disturbance levels, excluding noxious weeds.

(h) The permittee shall notify the division when reclamation and re-vegetation are complete.

[19.11.4.17 NMAC - N, 2/27/2018]

19.11.4.18 TABLE 1 – CLOSURE CRITERIA FOR SOILS BENEATH DRYING PADS ASSOCIATED WITH CLOSED-LOOP SYSTEMS:

Depth below bottom of pit to ground water less than 10,000 mg/l TDS	Constituent	Method*	Limit**
≤50 feet	Chloride	EPA 300.0	600 mg/kg
51-100 feet	Chloride	EPA 300.0	10,000 mg/kg
>100 feet	Chloride	EPA 300.0	20,000 mg/kg

*Or other test methods approved by the division

**Numerical limits or natural background level, whichever is greater

[19.11.4.18 NMAC - N, 2/27/2018]

19.11.4.19 TABLE 2 – CLOSURE CRITERIA FOR GEOTHERMAL WASTE LEFT IN PLACE IN PITS:

Depth below bottom of pit to ground water less than 10,000 mg/l TDS	Constituent	Method*	Limit**
25-50 feet	Chloride	EPA 300.0	20,000 mg/kg
51-100 feet	Chloride	EPA 300.0	40,000 mg/kg
>100 feet	Chloride	EPA 300.0	80,000 mg/kg

*Or other test methods approved by the division

**Numerical limits or natural background level, whichever is greater

[19.11.4.19 NMAC - N, 2/27/2018]

19.11.4.20 DISPOSAL OF GEOTHERMAL RESOURCES, RESIDUE OF GEOTHERMAL RESOURCES OR NONDOMESTIC WASTE FROM THE EXPLORATION, DEVELOPMENT OR PRODUCTION OF GEOTHERMAL RESOURCES:

Persons disposing of geothermal resources, residue of geothermal resources or nondomestic waste from the exploration, development or production of geothermal resources shall do so in a manner that does not constitute a hazard to life, health, property, natural resources, the environment or the public welfare. The permittee shall dispose of geothermal resources, residue of geothermal resources or nondomestic waste from the exploration, development or production of geothermal resources as provided in 19.11.4.17 or 19.11.4.20 NMAC, or at a facility permitted to accept the products.

A. The permittee may discharge geothermal resources, residue of geothermal resources or nondomestic waste from the exploration, development or production of geothermal resources to an above ground surface impoundment that meets the requirements of Subsection B of 19.11.4.20 NMAC, provided the other requirements of 19.11.4 NMAC are met and the permittee submits, and the division approves, a discharge plan that conforms to the following requirements:

(1) the effluent shall not contain any detectable toxic pollutant as defined in 20.6.2 NMAC;

(2) the amount of effluent that enters the subsurface from a surface impoundment shall not exceed 0.5 acre-feet per acre per year, calculated as a monthly rolling 12-month total;

(3) the effluent is in conformance with the New Mexico Water Quality Standards in 20.6.2.3103 NMAC or the total weight of each water contaminant, that is not in conformance with the New Mexico Water Quality Standards in 20.6.2.3103 NMAC, that enters the subsurface from a surface impoundment shall not exceed 200 pounds per acre per year, calculated as a monthly rolling 12-month total;

(4) the discharge plan shall include adequate provisions for sampling of effluent and adequate flow monitoring so that the amount being discharged onto or below the surface of the ground can be determined; and

(5) the discharge plan shall include a minimum annual reporting frequency of monitoring data to the division.

B. For discharges approved per Subsection A of 19.11.4.20 NMAC, the permittee shall construct and operate a surface impoundment in accordance with the following:

(1) the permittee shall design and construct a surface impoundment to prevent run-on of surface water and out flow of effluent; a berm, ditch, proper sloping or other diversion shall surround a surface impoundment to prevent run-on of surface water and out flow of effluent;

(2) the permittee shall site the surface impoundment according the requirements in Paragraph (1) of Subsection A of 19.11.4.17 NMAC;

(3) the permittee shall inject or withdraw liquids from a surface impoundment through a header, diverter or other hardware that prevents damage to the berm, ditch, sloping or other diversion system by erosion, fluid jets or impact from installation and removal of hoses or pipes; and

(4) the permittee shall maintain a surface impoundment to prevent the collection of surface water run-on and surface ground flow of effluent out from the surface impoundment.

[19.11.4.20 NMAC - N, 2/27/2018]

CHAPTER 12-13: [RESERVED]

CHAPTER 14: GEOTHERMAL POWER

PART 1: GENERAL PROVISIONS - DEFINITIONS

19.14.1.1 ISSUING AGENCY:

Energy and Minerals Department, Oil Conservation Division, P.O. Box 2088, Santa Fe, New Mexico.

[Recompiled 12/31/01]

19.14.1.2 SCOPE:

[RESERVED]

[Recompiled 12/31/01]

19.14.1.3 STATUTORY AUTHORITY:

[RESERVED]

[Recompiled 12/31/01]

19.14.1.4 DURATION:

[RESERVED]

[Recompiled 12/31/01]

19.14.1.5 EFFECTIVE DATE:

November 15, 1983.

[Recompiled 12/31/01]

19.14.1.6 OBJECTIVE:

A. The following geothermal rules and regulations are of statewide application and have been adopted by the oil conservation division of the New Mexico energy and minerals department to conserve the natural geothermal resources of the state of New Mexico, to prevent waste, and to protect the correlative rights of all owners of geothermal resources. Special rules, regulations, and order may be adopted from time to time when required for a particular geothermal resources area, and shall prevail over the geothermal rules and regulations if in conflict therewith. However, when these geothermal rules and regulations do not conflict with special rules hereafter adopted, these geothermal rules and regulations will apply.

B. The Division may grant exceptions to these rules and regulations after notice and hearing, when the granting of such exceptions will not result in waste but will protect correlative rights or prevent waste.

[Rule G-1; Recompiled 12/31/01]

19.14.1.7 DEFINITIONS:

A. "Commission" shall mean the oil conservation commission.

B. "Condensate" shall mean the liquid recovered from the condensation of gases or steam produced from a geothermal reservoir.

C. "Correlative rights" shall mean the opportunity afforded, insofar as is practicable to do so, the owner of each property in a geothermal reservoir to produce his just and equitable share of the geothermal resources within such reservoir, being an amount, so far as can be practicably determined, and so far as can be practicably obtained without waste, substantially in the proportion that the quantity of recoverable geothermal resources under such property bears to the total recoverable geothermal resources in the reservoir, and for such purpose to use his just and equitable share of the natural heat or energy in the reservoir.

D. "Designated agent" shall mean that person designated by the owner or operator of any geothermal resources well to be his agent in all matters concerning the keeping of records within the state.

E. "Development well" shall mean a well drilled within the established limits of a designated geothermal field or within one mile thereof, for the commercial production of geothermal resources.

F. "Disposal well" shall mean a well drilled or converted for the purpose of disposing of fluids into a formation other than a geothermal reservoir.

G. "Division" shall mean the oil conservation division of the New Mexico energy and minerals department.

H. "Drilling operations" shall mean the actual drilling, redrilling, completion or recompletion of a well for geothermal production or injection, including the running and cementing of casing, the performance of such operations as logging and perforating, and the installation of wellhead equipment.

I. "Exploratory well" shall mean a well drilled for the discovery or evaluation of geothermal resources one mile or more beyond the established limits of a designated geothermal field.

J. "Geothermal section" shall mean that section of the oil conservation division charged with the authority and duty of regulating the drilling, development and production of geothermal resources, and with conserving and preventing waste of geothermal resources within this state pursuant to the provisions of the Geothermal Resources Conservation Act.

K. "Geothermal field" shall mean an area defined by the division which contains a well, or wells, capable of commercial geothermal production. "Geothermal field" includes "low-temperature thermal field."

L. "Geothermal gradient well" (see thermal gradient well)

M. "Geothermal observation well" shall mean any well which is to be utilized for the express purpose of evaluating or monitoring a geothermal reservoir by pressure observation or limited production.

N. "Geothermal reservoir" shall mean any common source of geothermal resources, whether the fluids produced from the reservoir are native to the reservoir, or flow into or are injected into said reservoir.

O. "Geothermal resources" shall mean the natural heat of the earth or the energy, in whatever form, below the surface of the earth present in, resulting from, created by, or which may be extracted from, this natural heat, and all minerals in solution or other products obtained from naturally heated fluids, brines, associated gases and steam, in whatever form, found below the surface of the earth, but excluding oil, hydrocarbon gas and other hydrocarbon substances.

P. "Geothermal resources area" shall mean the same general surface area which is underlain, or appears to be underlain, by one or more formations containing geothermal resources.

Q. "Geothermal resources well" (see well)

R. "Geothermal waters" shall mean the water or brine produced from a geothermal reservoir.

S. "Injection" shall mean the placing of fluids in an underground stratum through a wellbore, whether by pressure at the surface or by gravity flow, and whether for disposal or other purpose.

T. "Injection well" shall mean a well drilled or converted for the purpose of injecting fluids into a geothermal reservoir.

U. "Log or well log" shall mean a systematic detailed and correct recorded description of the lithologic sequence encountered while drilling a geothermal well.

V. "Low-temperature thermal field" shall mean an area defined by the commission which contains a well, or wells, capable of production of low-temperature thermal waters.

W. "Low-temperature thermal water" shall mean naturally heated water the temperature of which is less than boiling at the altitude of occurrence, which has value by virtue of the heat contained therein and is found below the surface of the earth, or in warm springs on the surface.

X. "Low-temperature thermal well" shall mean a well drilled to produce low-temperature thermal water for the purpose of extracting heat for agricultural, commercial, industrial, municipal or domestic uses.

Y. "Multiple completion" shall mean the completion of a well in such a manner as to produce from more than one geothermal reservoir.

Z. "Operator" shall mean any person drilling, maintaining, operating, producing or in control of any well, and shall include "owner" when any well is operated or has been operated or is about to be operated by or under the direction of the owner.

AA. "Owner" shall mean the person who has the right to drill into and to produce from any geothermal resources area, and to appropriate the geothermal resources thereof for himself or for himself and another.

BB. "Person" shall mean any individual, firm, association or corporation or any other group or combination acting as a unit.

CC. "Potential" shall mean the properly determined ability of a well to produce geothermal resources under conditions prescribed by the division.

DD. "Temporary abandonment" shall mean a state or period of suspended operations during which essentially continuous drilling, production, injection, storage or work-over procedures have not taken place. Such period shall be 60 days for drilling wells and six months for all other classes of wells.

EE. "Thermal gradient well" shall mean a well drilled or used solely for temperature observation purposes, and which shall not be completed as a geothermal producing well or as an injection or disposal well.

FF. "Unorthodox well location" shall mean a location which does not conform to the well location requirements established by the geothermal rules and regulations of the division.

GG. "Waste" shall mean any physical waste including, but not limited to, underground waste resulting from the inefficient, excessive or improper use or dissipation of reservoir heat or energy or resulting from the location, spacing, drilling, equipping, operation or production of a geothermal resources well in such a manner as to reduce or tend to reduce the ultimate economic recovery of the geothermal resources within a reservoir and surface waste resulting from the inefficient production, gathering, transportation, storage or utilization of geothermal resources and the handling of geothermal resources in such a manner that causes or tends to cause the unnecessary or excessive loss or destruction of geothermal resources obtained or released from a geothermal reservoir.

HH. "Well" shall mean any exploratory well, development well, injection well, disposal well, thermal gradient well, geothermal observation well, or low-temperature thermal well, as defined herein.

[Rule G-01; Recompiled 12/31/01]

19.14.1.8 ENFORCEMENT OF LAWS, RULES, AND REGULATIONS DEALING WITH CONSERVATION OF GEOTHERMAL RESOURCES:

The division, its agents, representatives, and employees are charged with the duty and obligation of enforcing all statutes, rules and regulations of the state of New Mexico relating to the conservation of geothermal resources. However, it shall be the responsibility of all geothermal resource owners or operators to obtain information pertaining to the regulation of geothermal resources before operations have begun. Minor deviations from the requirements of these rules as to field practices may be permitted by the division or its duly authorized representatives where such can be safely done without waste and burdensome delay or expense to the operator avoided.

[Rule G-2; Recompiled 12/31/01]

19.14.1.9 WASTE PROHIBITED:

A. The production or handling of geothermal resources of any type or in any form, or the handling of products thereof, in such a manner or under such conditions or in such an amount as to constitute or result in waste is hereby prohibited.

B. All owners, operators, contractors, drillers, transporters, service companies, pipe pulling and salvage contractors and other persons shall at all times conduct their operations in the drilling, equipping, operating, producing, and plugging and abandoning of geothermal resource wells in a manner that will prevent waste of geothermal resources, and shall not wastefully utilize geothermal resources or allow leakage of such resources from a geothermal reservoir, or from wells, tanks, containers, or pipe, or other storage, conduit or operating equipment.

[Rule G-3; Recompiled 12/31/01]

19.14.1.10 PROTECTION OF LIFE, HEALTH AND THE ENVIRONMENT:

All geothermal operations, exploratory, drilling and producing, shall be conducted in a manner that will afford maximum reasonable protection to human life and health and to the environment.

[Rule G-4; Recompiled 12/31/01]

19.14.1.11 OTHER DEPARTMENTS AND AGENCIES:

Nothing in these rules shall be construed to supersede the authority which any state department or agency has with respect to the management, protection and utilization of the state lands and resources under its jurisdiction.

[Rule G-5; Recompiled 12/31/01]

19.14.1.12 UNITED STATES GOVERNMENT LEASES:

It is recognized by the division that all persons conducting geothermal operations on United States government land shall comply with the United States government regulations. Such persons shall also comply with all applicable state rules and regulations which are not in conflict therewith.

[Rule G-6; Recompiled 12/31/01]

19.14.1.13 UNITIZED AREAS:

After notice and hearing, the division may grant approval for the combining of two or more contiguous leases into a unitized area for purposes of exploration for and production of geothermal resources.

[Rule G-7; Recompiled 12/31/01]

19.14.1.14 CLASSIFYING AND DEFINING POOLS:

The division will determine whether a particular well or field is a high-temperature geothermal well or field or a low-temperature thermal well or field, as the case may be, and will, from time to time, classify and reclassify wells and name pools accordingly, and will determine the limits of any field so designated and from time to time redetermine such limits.

[Rule G-8; Recompiled 12/31/01]

19.14.1.15 FORMS UPON REQUEST:

Forms for written notices, requests and reports required by the division will be furnished upon request.

[Rule G-9; Recompiled 12/31/01]

19.14.1.16 AUTHORITY TO COOPERATE WITH OTHER AGENCIES:

The division may from time to time enter into arrangements with state and federal governmental agencies, industrial committees and other persons, with respect to special projects, services and studies relating to conservation of geothermal resources.

[Rule G-10; Recompiled 12/31/01]

19.14.1.17 DESIGNATION OF AGENT:

Any person who had drilled or is drilling or proposes to drill any geothermal well shall file a "designation of agent" (on a form approved by the division) with the division. The designated agent shall be a resident of this state and shall be the repository for all well records of wells drilled by the owner or operator for whom he is agent (Rule G-200 B) [now 19.14.51.9 NMAC]. All changes of address of the agent shall be immediately reported to the division in writing. Upon termination of any agent's authority, a new designation of agent shall be filed with the division within ten days.

[Rule G-100; Recompiled 12/31/01]

PART 2-19: [RESERVED]

PART 20: PLUGGING BOND

19.14.20.1 ISSUING AGENCY:

Energy and Minerals Department, Oil Conservation Division, P.O. Box 2088, Santa Fe, New Mexico.

[Recompiled 12/31/01]

19.14.20.6 OBJECTIVE:

[RESERVED]

[Recompiled 12/31/01]

19.14.20.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.20.8 PLUGGING BOND:

A. Any person who has drilled or is drilling or proposes to drill any geothermal resources well shall post with the division, and obtain approval thereof, a bond, in a form approved by the division, conditioned to plug such well, if non-productive or when abandoned, in such a way as to confine all fluids in their native strata. Each such bond shall be executed by a responsible surety company authorized to transact business in the state of New Mexico and shall describe, or by subsequent rider describe, the name and exact location of the well, or wells, covered by the bond. Bonds may be either one-well bonds or multi-well bonds, in the amounts stated below in accordance with type of bond and depth of well(s):

(1) One-well bonds:

Projected depth of proposed well or

Actual depth of existing well	Amount of bond
Less than 500 feet deep ("shallow")	\$2,000
500 feet to 2,000 feet deep ("intermediate")	\$3,000
More than 2,000 feet deep ("deep")	\$5,000.

Revised plans for an actively drilling shallow or intermediate well being drilled under a one-well bond may be approved by the division for drilling as much as 15 percent deeper than the maximum depth on the well's bond, provided, however, any well drilled more than 15 percent deeper than the maximum allowed depth on the bond must be covered by a new bond in the amount prescribed for the deeper depth bracket, in which case the old bond will be released.

(2) Multi-well bonds:

Projected depth of proposed wells or

Actual depth of existing wells	Amount of bond
Less than 500 feet deep ("shallow")	\$10,000
500 feet to 2,000 feet deep ("intermediate")	\$10,000
More than 2,000 feet deep ("deep")	\$10,000

(a) Not more than ten shallow wells may be drilled under a \$10,000 multi-well bond. A \$2,000 one-well bond shall be posed for each additional shallow well drilled or an additional \$10,000 multi-well bond must be posted for each additional ten (or portion thereof) shallow wells drilled.

(b) Not more than six intermediate wells may be drilled under a \$10,000 multi-well bond. A \$3,000 one-well bond shall be posted for each additional intermediate well drilled or an additional \$10,000 multi-well bond must be posted for each additional six (or portion thereof) intermediate wells drilled.

(c) Not more than four deep wells may be drilled under a \$10,000 multi-well bond. A \$5,000 one-well bond shall be posted for each additional deep well drilled or an additional \$10,000 multi-well bond must be posted for each additional four (or portion thereof) deep wells drilled.

(d) The \$10,000 multi-well bond may be used to cover the drilling of a combination of wells, i.e., shallow and intermediate, shallow and deep, intermediate and deep, or shallow, intermediate and deep, provided however, that the \$10,000 capacity of the bond shall be charged in an amount equal to the one-well bond requirement for each such combination well according to its depth.

(e) Revised plans for an actively drilling shallow or intermediate well being drilled under a multi-well bond may be approved for drilling as much as 15 percent deeper than the well's maximum depth bracket without affecting the bond. Any well drilled more than 15 percent deeper than its depth bracket, however, shall be placed in the next deeper depth bracket, and the \$10,000 capacity of the multi-well bond charged accordingly. Additional bonding will be required in the event the capacity of the bond to cover the well in its new depth bracket is inadequate.

B. For the purposes of the division, the bond required is a plugging bond, not a drilling bond, and shall endure until the well has been plugged and abandoned, and such plugging and abandonment approved by the division. Transfer of the well or property does not release the bond. In case of transfer and the principal desires to be released from the bond, he shall proceed as follows:

(1) The principal on the bond shall notify the division in writing that the well, or wells, covered by the bond are being or have been transferred to a certain transferee. The notice shall name the wells and shall give their exact location.

(2) On the same instrument the transferee shall recite that he accepts such transfer and accepts the responsibility for such well, or wells, under his bond which shall be tendered therewith.

(3) When the division has approved the transfer, the transferor is immediately released of the plugging responsibility of the well, or wells, constitute all of the wells covered by the bond, such bond will be released by written notice from the division to the principal and to the surety company.

C. The division director is vested with power to act for the division in all matters relating to this rule.

[Recompiled 12/31/01]

19.14.22.8 SIGN ON WELLS:

Each well, other than a thermal gradient well, shall be identified by a sign, posted on the drilling rig or not more than 20 feet from the well. Such sign shall be of durable construction and the lettering thereon kept in legible condition. Lettering shall be such that under normal conditions it shall be legible at a distance of 50 feet. Each sign shall show the name of the owner or operator of the well, the name of the lease, the number of the well, and the location of the well by quarter-quarter section, township and range. Each lease shall have a different and distinctive name, and the wells thereon shall be numbered in non-repetitive, logical sequence.

[Recompiled 12/31/01]

19.14.23.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.23.8 CLASSIFICATION OF WELLS:

A. Any well, other than a thermal gradient well, a geothermal observation well or a low-temperature thermal well, which is drilled a distance of one mile or more outside the boundary of any defined geothermal field and a distance of one mile or more beyond

any well which is within one mile of such field, shall be classified as an exploratory well, and as such shall be spaced, drilled, operated and produced in accordance with these Geothermal Rules and Regulations.

B. Any well, other than a thermal gradient well, a geothermal observation well or a low-temperature thermal well, which is not an exploratory well as defined above shall be classified as a development well, unless such well is being drilled for injection or disposal purposes, in which case it will be appropriately classified.

C. Any well classified as a development well or injection or disposal well within a given geothermal field shall be drilled, operated and produced in accordance with these Geothermal Rules and Regulations unless special rules in conflict therewith have been promulgated for such field, said special rules then being applicable.

[Recompiled 12/31/01]

19.14.23.9 ACREAGE AND WELL LOCATION REQUIREMENTS:

A. Exploration wells. A well classified as an exploratory well shall be located on a designated drilling tract comprising at least 40 surface acres (being a quarter-quarter section of the U. S. public land surveys, or a projection thereof if on unsurveyed land) , and shall be located at least 330 feet from the outer boundary of the quarter-quarter section, at least 660 feet from the nearest such other well drilling to or capable of producing from or injection into the same formation to which it is projected, and at least 100 feet from any public road, street or highway dedicated prior to commencement of drilling.

B. Development wells. A well classified as a development well shall be located on a designated drilling tract comprising at least 10 surface acres (being a quarter-quarter-quarter section of the U.S. public land surveys or a projection thereof if on unsurveyed land), and shall be located at least 165 feet from the outer boundary of the quarter-quarter-quarter section, at least 330 feet from the nearest well drilling to or capable of production from or injection into the same geothermal reservoir to which it is projected, and at least 100 feet from any public road, street or highway dedicated prior to commencement of drilling.

C. Injection wells. Injection wells drilled for the purpose of injecting into a geothermal reservoir shall be located at least 330 feet from the outer boundary of the lease or drilling parcel and at least 100 feet from any public road, street or highway dedicated prior to commencement of drilling.

D. Disposal wells. There shall be no restriction as to the placement of geothermal disposal wells.

E. Thermal gradient wells and low-temperature thermal wells. There shall be no restriction as to the placement of thermal gradient wells or low-temperature thermal wells.

[Recompiled 12/31/01]

19.14.23.10 NON-STANDARD LOCATIONS:

A. The division director shall have the authority to grant an exception to the well location requirements of Rules B (1) , (2) , and (3) [now Subsections A, B and C of 19.14.23.9 NMAC] above without notice and hearing when such application is based upon topographical or geologic or engineering considerations.

B. Applications for such administrative approval shall be filed in duplicate and shall be accompanied by a plat showing the ownership of surrounding lands (within a 990-foot radius of the proposed location if application is for exception to Rule G-104 B (1) [now Subsection A of 19.14.23.9 NMAC] exploration wells; within a 495-foot radius of the proposed location if application is for exception to Rule G-104 B (2) [now Subsection B of 19.14.23.9 NMAC] development wells; within a 990-foot radius of the proposed location if application is for exception to Rule G-104 B (3) [now Subsection C of 19.14.23.9 NMAC] injection wells; and all drilling or completed wells thereon. If the proposed non-standard location is based upon topography, the plat shall also show the existent topographical conditions. If it is based upon geologic or engineering considerations, the application shall be accompanied by a geologic or engineering analysis, explaining the necessity for the non-standard location.

C. A copy of the application and accompanying plats and documents shall also be sent to the other owners, if any there be, within the above prescribed radii of the proposed non-standard location and the application shall state that such required copies have been so furnished. The division director may approve the non-standard location upon receipt of waivers from the above other owners or if no such other owner has entered an objection to the non-standard location within 20 days after receipt of the application by the division. If such objection is received, the matter will be set for hearing if the applicant so desires. If the director is not convinced of the necessity or desirability of such exception, he may require supplemental information to justify the exception, or set the matter for hearing if the applicant so desires.

[Recompiled 12/31/01]

19.14.23.11 OFFSETTING ACTION:

Whenever an exception to the well location requirements is granted, the division after hearing may take such action as may be necessary to offset any advantage the person securing the exception may gain over other owners within the same geothermal reservoir.

[Recompiled 12/31/01]

19.14.23.12 SPECIAL ACREAGE AND WELL LOCATION REQUIREMENTS:

In order to prevent waste and protect correlative rights, the division may, after notice and hearing, adopt different well location requirements and greater or lesser acreage dedication requirements than those contained in Rules G-104 B (1), (2), and (3) [now Subsections A, B and C of 19.14.23.9 NMAC] above for a particular geothermal reservoir and may adopt special well location and acreage dedication requirements for a particular low-temperature thermal field.

19.14.25.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.25.8 DRILLING MUD AND MUD PITS:

A. In order to assure an adequate supply of drilling fluid to confine all natural fluids to their respective native strata and to prevent blowouts, each operator shall, prior to commencing drilling operations, provide a pit of adequate size to hold such drilling fluid and to receive drill cuttings, and such pit shall be so constructed and maintained to prevent contaminants from overflowing on the surface of the ground and/or entering any water course.

B. The temperature of the return mud shall be monitored continuously during the drilling of the surface casing hole, and in the case of a thermal gradient well, shall be monitored to total depth. Either a continuous temperature recording device shall be installed and maintained in good working condition, or the temperature shall be measured manually and recorded at least one time each hour.

[Recompiled 12/31/01]

PART 26: SEALING OFF STRATA

19.14.26.1 ISSUING AGENCY:

19.14.26.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.26.8 SEALING OFF STRATA:

A. During the drilling of any well, all fresh water strata and salt water strata overlying the geothermal resources strata shall be sealed or separated to prevent the migration of fluids from one stratum to the other.

B. All waters of present or probable future value for domestic, commercial, agricultural or stock purposes shall be confined to their respective strata and shall be adequately protected by methods approved by the division. Special precautions by methods satisfactory to the division shall be taken to guard against loss of artesian

water from the strata in which it occurs, and to prevent the contamination of such artesian water strata by any objectional geothermal fluids. Sealing off of strata, and migration prevention shall ordinarily be accomplished by cementing casing.

[Recompiled 12/31/01]

PART 27: CASING AND CEMENTING REQUIREMENTS

19.14.27.1 ISSUING AGENCY:

Energy and Minerals Department, Oil Conservation Division, P.O. Box 2088, Santa Fe, New Mexico.

19.14.27.6 OBJECTIVE:

[RESERVED]

[Recompiled 12/31/01]

19.14.27.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.27.8 CASING AND CEMENTING REQUIREMENTS:

A. All wells drilled for the production of geothermal resources, including low-temperature thermal wells, and all specialty wells, including injection and disposal wells, shall be cased and cemented in such manner as to protect surface waters, if any, useable ground waters, geothermal resources, and life, health and property. Thermal gradient wells shall be drilled, completed and plugged in such a manner as to protect surface waters, in any, and useable ground waters. The division may require casing and cementing as is deemed necessary for such wells.

B. All casing strings reaching the surface shall provide adequate anchorage for blowout prevention equipment, hole pressure control, and protection for all natural resources. Although specifications for casing programs shall be determined on a well-to-well basis, the following general casing requirements should be used as guidelines in submitting form G-101, application for permit to drill, deepen, or plug back-geothermal resources well.

(1) Conductor Pipe: A minimum of 90 feet and a maximum of 200 feet. In special cases the division may allow conductor pipe to be run and cemented at deeper depths. Annular space is to be cemented solid to the surface. An annular blowout-preventer or equivalent approved by the division shall be installed on conductor pipe on exploratory wells and on development wells when deemed necessary by the division. Note: For thermal gradient wells and low-temperature thermal wells the conductor pipe requirement may be reduced or waived by the division. The above conductor pipe requirements are not meant to be applicable to the single or double joint of large diameter pipe often run to keep mud out of the cellar.

(2) Surface Casing: Except in the case of thermal gradient wells and low-temperature thermal wells, the surface casing hole shall be logged with an electrical or radioactivity log, or equivalent, before running casing. Note: This requirement may vary from area to area, depending upon the amount of subsurface data available, and may be waived under certain conditions. Requests for exceptions to the logging requirement should be noted on form G-101 when applying for a drilling permit. Surface casing shall provide for control of formation fluids, for protection of useable ground water and for adequate anchorage for blowout-prevention equipment. All surface casing shall be, if possible, cemented solid to the surface.

(a) Length of Surface Casing:

(i) In areas where subsurface geological conditions are variable or unknown, surface casing in general shall be set at a depth equalling or exceeding 10

percent of the proposed total depth of the well. A minimum of 200 feet and a maximum of 1,500 feet of surface casing shall be set.

(ii) In areas of known high formation pressure, surface casing shall be set at a depth determined by the division after a careful study of geological conditions. The division will make such a determination within 30 days. Drilling shall not commence until such determination has been made.

(iii) Within the confines of designated geothermal fields, the depth at which surface casing shall be set shall be determined by the division on the basis of known field conditions. Requirements (a)(1) and (a)(2) [now (i) and (ii) of Subparagraph (a) and (b) of Paragraph (2) of Subsection B of 19.14.27.8 NMAC] above may be waived for low-temperature thermal wells.

(b) Cementing Point for Surface Casing:

(i) In areas where subsurface geological conditions are variable or unknown, surface casing shall be set in accordance with (a) (1) [now (i) Subparagraph (a) of Paragraph (2) of Subsection B of 19.14.27.8 NMAC] above and through a sufficient series of low permeability, competent lithologic units (such as claystone or siltstone) to ensure a solid anchor for blowout-prevention equipment and to protect useable ground water and surface water from contamination. A second string of surface casing may be required if the first string has not been cemented through a sufficient series of low permeability, competent lithologic units and either a rapidly increasing thermal gradient or rapidly increasing formation pressures are encountered.

(ii) In areas of known high formation pressure, surface casing shall be set in accordance with (a) (2) [now (ii) Subparagraph (a) of Paragraph (2) of Subsection B of 19.14.27.8 NMAC] above and through a sufficient series of low permeability, competent lithologic units (such as claystone, siltstone or basalt) to ensure a solid anchor for blowout-prevention equipment and to protect useable ground water and surface water from contamination. A second string of surface casing may be required, before drilling into the known high pressure zone is permitted, if the first string of surface casing has not been cemented through a sufficient series of low-permeability, competent lithologic units.

(iii) Within the confines of designated geothermal fields, cementing point shall be determined by the division on the basis of known field conditions. Requirements (b)(1) and (b)(2) [now (i) and (ii) of Subparagraph (b) of Paragraph (2) of Subsection B of 19.14.27.8 NMAC] above may be waived for low-temperature thermal wells.

(c) Return mud temperatures: Return mud temperatures shall be entered into the log book after each joint of pipe has been drilled down. See Rule G-106(b) [now Subsection B of 19.14.25.8 NMAC].

(d) Blowout-prevention equipment (BOPE): BOPE capable of shutting in the well during any operation shall be installed on the surface casing and maintained ready for use at all time (see Section H) [see compiler's note].

(3) Intermediate casing: Intermediate casing shall be required for protection against anomalous pressure zones, caveins, washouts, abnormal temperature zones, uncontrollable lost circulation zones or other drilling hazards. Intermediate casing strings shall be, if possible, cemented solid to the surface. This requirement (to circulate cement) may be waived if the production casing will be cemented to the surface.

(4) Production casing: Production casing may be set above or through the producing or injection zone and cemented above the objective zones. Sufficient cement shall be used to exclude overlying formation fluids from the zone, to segregate zones and to prevent movement of fluids behind the casing into zones that contain useable ground water. Production casing shall either be cemented solid to the surface or lapped into intermediate casing, if run. If the production casing is lapped into an intermediate string, the casing overlap shall be at least 50 feet, the lap shall be cemented solid, and it shall be pressure tested to ensure its integrity. In order to reduce casing corrosion, production casing used to produce corrosive brine reservoirs shall be of the same nominal inside diameter from the shoe of the casing to the ground surface.

(5) Casing and Cement Tests: All casing strings shall be tested after cementing and before commencing any other operations on the well. Form G-103 shall be filed for each casing string reporting the grade and weight of pipe used. In the case of combination strings utilizing pipe of varied grades or weights, the footage of each grade and weight used shall be reported. The results of the casing test, including actual pressure held on the pipe and the pressure drop observed, shall also be reported on the form G-103. See Rule G-203C(2) [now Paragraph (2) of Subsection C of 19.14.54.8 NMAC].

(a) Casing strings in wells drilled with rotary tools shall be pressure-tested. Minimum casing test pressure shall be approximately one-third of the manufacturer's rated internal yield pressure except that the test pressure shall not be less than 600 pounds per square inch and need not be greater than 1,500 pounds per square inch. In cases where combination strings are involved, the above test pressures shall apply to the lowest pressure-rated casing used. Test pressures shall be applied for a period of 30 minutes. If a drop of more than ten percent of the test pressure should occur, the casing or cement job shall be considered defective and corrective measures shall be taken before commencing any further operations on the well.

(b) Casing strings in wells drilled with cable tools may be tested as outlined in Rule 5(a) [now Subparagraph (a) of Paragraph (5) of Subsection B of 19.14.27.8 NMAC] above, or by bailing the well dry, in which case the well must remain satisfactorily dry for a period of at least one hour before commencing any further operations on the well.

(6) Defective casing or cementing: If the cementing of any casing appears to be defective, or if the casing in any well appears to be defective or corroded or parted, or if there appears to be any underground leakage for whatever other reason, which may cause or permit underground waste, the operator shall proceed with diligence to use the appropriate method or methods to eliminate such hazard. If such hazard of waste cannot be eliminated, the well shall be plugged and abandoned in accordance with a division approved plugging program.

(7) Logging: All wells, except thermal gradient wells and low-temperature thermal wells, shall be logged with an electrical or radioactivity log, or equivalent, from total depth to the surface casing shoe. This requirement may be waived by the division depending upon geological or engineering conditions.

[RESERVED]

[Recompiled 12/31/01]

19.14.28.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.28.8 DEVIATION TESTS AND DIRECTIONAL DRILLING:

A. Any well which is deepened or drilled with rotary tools shall be tested at reasonably frequent intervals to determine the deviation from the vertical. Such tests shall be made at least each 500 feet or at the first bit change succeeding 500 feet. A tabulation of all deviation tests, sworn to and notarized, shall be filed with form G-105, geothermal resources well log. When the deviation averages more than five degrees in any 500-foot interval, the division director may require that a directional survey be run to establish the location of the producing interval(s).

B. The division director, at the request of an offset operator, may require any operator to make a directional survey of any well. Said directional survey and all associated costs shall be at the expense of the requesting party and shall be secured in advance by a \$5,000.00 indemnity bond posted with and approved by the division. The requesting party may designate the well survey company, and said survey shall be witnessed by a representative of the division.

C. No well shall be intentionally deviated except toward the vertical without prior permission from the division. Permission to deviate a well other than toward the vertical shall be obtained on division form G-103 with copies of said form G-103 being furnished to all other operators owning leases offsetting the drilling tract, if any there be. Upon request of the division director any well which was intentionally deviated shall be directionally surveyed. The division may at its option witness such survey and the Santa Fe office shall be notified of the date and hour all directional surveys are to be conducted. All directional surveys run on any well which was intentionally deviated in any manner for any reason must be filed with the division upon completion of the well. Form G-104, certificate of compliance and authorization to produce geothermal resources, will not be approved until the operator has submitted an affidavit that all such directional surveys have been filed.

[RESERVED]

[Recompiled 12/31/01]

19.14.36.8 NOTIFICATION OF FIRE, BREAKS, LEAKS, SPILLS AND BLOWOUTS:

A. The division shall be notified of any fire, break, leak, spill or blowout occurring at any geothermal drilling, producing, transporting, treating, disposal or utilization facility in the state of New Mexico by the person operating or controlling such facility.

B. "Facility", for the purpose of this rule, shall include any geothermal drilling, producing, injection or disposal well; any pipeline through which geothermal resources or the waste products thereof are gathered or transported; any tank or other storage unit into which geothermal products, waters or wastes are produced, received or stored; any treating plant in which geothermal resources are treated or processed; any electrical generating plant in which geothermal resources are utilized; and any drilling pit, slush pit or storage pit or pond associated with geothermal drilling, producing, treating or utilization processes in which hydrocarbons or hydrocarbon waste or residue, salt water, strong caustics or acids, or other deleterious chemicals or harmful substances are present.

C. Notification to the division of such fire, break, leak, spill or blowout shall be in accordance with the provisions set forth below:

(1) Well Blowouts. Notification of well blowouts and/or fires shall be "immediate notification" described below.

(2) "Major" breaks, spills or leaks. Notification of breaks, spills, or leaks of wellheads, pipelines, or tanks, or drilling pits, slush pits or storage pits or ponds, the result of which 50 barrels or more of liquids containing hydrocarbons or hydrocarbon wastes, salt water, strong caustics or strong acids or other deleterious substances reach a water course or enter a stream or lake, or in which noxious gases escape or any quantity of fluids are lost which may with reasonable probability endanger human

health or result in substantial damage to property, shall be "immediate notification" described below.

(3) "Minor" breaks, spills or leaks. Notification of breaks, spills or leaks of wellheads, pipelines, or tanks, or drilling pits, slush pits or storage pits or ponds, the result of which 25 barrels or more but less than 50 barrels of liquids containing hydrocarbons or hydrocarbon wastes, salt water, strong caustics or strong acids or other deleterious substances are lost or in which noxious gases escape, but in which there is no danger of human health nor of substantial damage to property shall be "subsequent notice" described below.

(4) Fires. Notification of fires at geothermal installations in which there is reasonable probability of danger to human health or substantial damage to adjoining properties or substantial loss of geothermal resources shall be "immediate notice" described below. Notification of fires of lesser magnitude but of \$500.00 or more of property damage or \$500.00 or more geothermal resources loss shall be "subsequent notice" described below.

[Recompiled 12/31/01]

19.14.36.9 IMMEDIATE NOTIFICATION:

"Immediate Notification" shall be as soon as possible after discovery and shall be in person or by telephone to the Santa Fe office of the nearest district office of the division if the incident occurs during business hours. If the incident occurs after business hours, notification shall be in accordance with the latest division memorandum on the subject. A complete written report of the incident shall be submitted to the Santa Fe office of the division within ten days after discovery of the incident.

[Recompiled 12/31/01]

19.14.36.10 SUBSEQUENT NOTIFICATION:

"Subsequent notification" shall be a complete written report of the incident and shall be submitted to the Santa Fe office of the division within ten days after discovery of the incident.

[Recompiled 12/31/01]

19.14.36.11 CONTENT OF NOTIFICATION:

All reports of fires, breaks, spills, leaks or blowouts, whether verbal or written, shall identify the location of the incident by quarter-quarter, section, township and range, and by distance and direction from the nearest town or prominent landmark so that the exact site of the incident can be readily located on the ground. The report shall specify the nature and quantity of the loss and also the general condition prevailing in the area,

including precipitation, temperature and soil conditions. The report shall also detail the measures that have been taken and are being taken to remedy the situation reported.

[Recompiled 12/31/01]

19.14.36.12 WATERCOURSE:

For the purpose of this Rule, is defined as any lake-bed or gully, draw, streambed, wash, arroyo or natural or man-made channel through which water flows or has flowed.

19.14.51.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.51.8 BOOKS AND RECORDS:

All producers, transporters, purchasers or utilizers of geothermal resources within the state of New Mexico shall make and keep appropriate books and records for a period of not less than five years, covering their operations in this state, from which they may be able to substantiate the reports required by these rules.

[Recompiled 12/31/01]

19.14.51.9 WELL RECORDS:

The owner or operator of any geothermal resources well shall keep, or cause to be kept, a careful and accurate well log and history of the drilling of any such well, including the lithologic characteristics and depth of formations encountered, and the depths, pressures and temperatures of water-bearing and steam-bearing strata. These data, as well as such other tests, surveys and logs which may be taken on the well including the temperatures, chemical compositions and physical characteristics of fluids encountered in the well, deviation, directional and temperature surveys, logs, including electrical logs, physical logs and core logs, and tests, including potential tests, shall be placed in the custody of the designated agent (see Rule G-100) [now 19.14.12.17 NMAC] of the

owner or operator of the well and shall remain in such custody within the state of New Mexico until all required forms and attachments pertaining to the well have been filed with the division. These data shall be subject to inspection, during normal business hours, by the division or its representatives, and by the state engineer or his representatives.

[Recompiled 12/31/01]

19.14.51.10 WHERE TO FILE REPORTS:

All forms and reports required by these rules shall be filed with the New Mexico oil conservation division, geothermal section, Post Office Box 2088, Santa Fe, New Mexico 87501.

[Recompiled 12/31/01]

19.14.51.11 ADDITIONAL DATA:

These rules shall not be construed to limit or restrict the authority of the division to require the furnishing of such additional reports, data or other information relative to the production, transportation or utilization of geothermal resources in the state of New Mexico as may appear to be necessary or desirable, either generally or specifically, for the prevention of waste and the conservation of natural resources of the state of New Mexico.

[Recompiled 12/31/01]

19.14.52.8 APPLICATION FOR PERMIT TO DRILL, DEEPEN OR PLUG BACK-GEOTHERMAL RESOURCES WELL (FORM G-101):

Before commencement of drilling or deepening operations of any geothermal resources well, or before plugging a well back to another zone, the operator of the well shall obtain a permit to do so. To obtain such a permit the operator shall submit to the division four copies of form G-101, application for permit to drill, deepen or plug back-geothermal resources well, completely filled in. If the operator has an approved bond in accordance with Rule G-101 [now 19.14.20 NMAC] and has filed satisfactory "designation of agent" (Rule G-100) [now 19.14.1.17 NMAC], and the proposed well meets the spacing and well location requirements (Rule G-104) [now 19.14.23 NMAC], one copy of the drilling permit will be returned to him on which will be noted the division's approval, with any modification deemed advisable. If the proposal cannot be approved for any reason, the forms G-101 will be returned with the cause for rejection stated thereon.

A. Each copy of form G-101 must be accompanied by one copy of form G-102, geothermal resources well location and acreage dedication plat. (See Rule G-202) [now 19.14.53 NMAC].

B. If the well is to be drilled on state land, five copies of forms G-101 and G-102 shall be submitted, the extra copy being for the state land office.

[Recompiled 12/31/01]

19.14.53.8 GEOTHERMAL RESOURCES WELL LOCATION AND ACREAGE DEDICATION PLAT. (FORM G-102):

A. Form G-102 is a dual purpose form used to show the exact location of the well and the acreage dedicated thereto. The form is also used to show the ownership and status of each lease contained within the dedicated acreage. When there is more than one working interest or royalty owner on a given lease, designation of the majority owner et al. will be sufficient.

B. All information required on form G-102 shall be filled in and certified by the operator of the well except the well location on the plat. This is to be plotted from the outer boundaries of the section and certified by a registered professional engineer and/or land surveyor, registered in the state of New Mexico, or a surveyor approved by the Division. The surveyed location of thermal gradient wells is not required. Instead, an estimated location in a given quarter-quarter section will suffice.

C. Form G-102 shall be submitted in quadruplicate or quintuplicate as provided in Rule G-201 [now 19.14.52 NMAC].

D. Amended form G-102 (in quadruplicate or quintuplicate) shall be filed in the event there is a change in any of the information previously submitted. The well location need not be certified when filing amended form G-102.

[Recompiled 12/31/01]

19.14.54.8 SUNDRY NOTICES AND REPORTS ON GEOTHERMAL RESOURCES WELL (FORM G-103):

Form G-103 is a dual purpose form to be filed with the Santa Fe office of the division to obtain approval prior to commencing certain operations and also to report various completed operations.

A. Form G-103 as a notice of intention: form G-103 shall be filed in duplicate by the operator and approval obtained from the division prior to:

(1) Effecting a change of plans from those previously approved on form G-101 or form G-103.

(2) Altering a drilling wells casing program or pulling casing or otherwise altering an existing well's casing installation.

(3) Temporarily abandoning a well. (See Rule G-303 B) [now 19.14.73.9 NMAC].

(4) Plugging and abandoning a well. (See Rules G-302 and G-303 A) [now 19.14.72 NMAC and 19.14.73.8 NMAC].

(5) Performing remedial work on a well which, when completed, will affect the original status of the well. (This shall include making new perforations in existing wells or squeezing old perforations in existing wells, but is not applicable to new wells in the process of being completed not to old wells being deepened or plugged back to another zone when such recompletion has been authorized by an approved form G-101, application for permit to drill, deepen, or plug back, nor to acidizing, fracturing or cleaning out previously completed wells.).

(6) In the case of well plugging operations, the notice of intention shall include a detailed statement of the proposed work, including plans for shooting and pulling casing, plans for mudding, including weight of mud, plans for cementing, including number of sacks of cement and depths of plugs and the time and date of the proposed plugging operations. (See Rules G-302 and G-303 A) [now 19.14.72 NMAC and 19.14.73.8 NMAC].

B. Form G-103 as a Subsequent Report. Form G-103 as a subsequent report of operations shall be filed in accordance with the section of this Rule applicable to the particular operation being reported. Form G-103 is to be used in reporting such completed operations as:

- (1) Commencement of drilling operations
- (2) Casing and cement test
- (3) Altering a well's casing installation
- (4) Temporary abandonment
- (5) Plugging and Abandonment
- (6) Plugging back or deepening
- (7) Remedial work
- (8) Change in ownership of a drilling well

(9) Such other operations which affect the original status of the well but which are not specifically covered herein.

C. Filing Form G-103 as a Subsequent Report. Information to be entered on form G-103, subsequent report, for a particular operation is as follows:

(1) Report of Commencement of Drilling Operations. Within ten days following the commencement of drilling operations, the operator of the well shall file a report thereof on form G-103 in duplicate. Such report shall indicate the hour and the date the well was spudded.

(2) Report of Results of Test of Casing and Cement Job; Report of Casing Alteration. A report of casing and cement test shall be filed by the operator of the well within ten days following the setting of each string of casing or liner. Said report shall be filed in duplicate on form G-103 and shall present a detailed description of the test method employed and the results obtained by such test, and any other pertinent information required by Rule G-108 B(5) [now Paragraph (5) of Subsection B of 19.14.27.8 NMAC]. The report shall also indicate the top of the cement and the means by which such top was determined. It shall also indicate any changes from the casing program previously authorized for the well.

(3) Report of Temporary Abandonment. A report of temporary abandonment of a well shall be filed by the operator of the well within ten days following completion of the work. The report shall be filed in duplicate and shall present a detailed account of the work done on the well, including location and type of plugs used, if any, type and status of surface and downhole equipment, and other pertinent information relative to the overall status of the well.

(4) Report on Plugging of Well.

(a) A report of plugging operations shall be filed by the operator of the well within 30 days following completion of plugging operations on any well. Said report shall be filed in triplicate on form G-103 and shall include the date the plugging operations were begun and the date the work was completed, a detailed account of the manner in which the work was performed including the depths and lengths of the various plugs set, the nature and quantities of materials employed in the plugging operations including the weight of the mud used, the size and depth of all casing left in the hole and any other pertinent information. (See Rules G-301 - G-303) [now 19.14.71 NMAC - 19.14.73 NMAC] regarding plugging operations.

(b) No plugging report will be approved by the division until all forms and reports on the well have been filed and the pits have been filled and the location levelled and cleared of junk. It shall be the responsibility of the operator to contact the Santa Fe office of the division when the location has been so restored in order to arrange for an inspection of the plugged well and the location by a division representative.

(5) Report of Remedial Work. A report of remedial work performed on a producing well or former producing well shall be filed by the operator of the well within 30 days following completion of such work. Said report shall be filed in duplicate on form G-103 and shall present a detailed account of the work done and the manner in which such work was performed; the daily production from the well both prior to and after the remedial operation; the size and depth of shots; the quantity of sand, acid, chemical or

other materials employed in the operation and any other pertinent information. Among the types of remedial work to be reported on form G-103 are the following:

- (a) Report on shooting, fluid fracturing or chemical treatment of a previously completed well
- (b) Report on squeeze job
- (c) Report on setting of liner or packer
- (d) Report of any other remedial operations which are not specifically covered herein
- (e) Report on deepening or plugging back

(6) Report of Change in Ownership of a Drilling Well. A report of change of ownership shall be filed by the new owner of any drilling well within ten days following actual transfer of ownership. Said report shall be filed in triplicate on form G-103 and shall include the name and address of both the new owner and the previous owner, the effective date of the change of ownership and any other pertinent information. No change in the ownership of a drilling well will be approved by the division unless the new owner has an approved bond in accordance with Rule G-101 [now 19.14.20 NMAC] and has filed satisfactory "Designation of Agent (Rule G-100) [now 19.14.1.17 NMAC]. The former owner of the well, to obtain release of his bond, shall follow the procedures set forth in Rule G-101(b) [now Subsection B of 19.14.20.8 NMAC]. (Form G-104 [now 19.14.23 NMAC] shall be used to report transfer of ownership of a completed well; see Rule G-204) [now 19.14.55 NMAC].

(7) Other Reports on Wells. Reports on any other operations which affect the original status of the well which are not specifically covered herein shall be submitted to the division on form G-103, in triplicate, by the operator of the well within ten days following the completion of such operation.

[Recompiled 12/31/01]

19.14.55.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

**19.14.55.8 CERTIFICATE OF COMPLIANCE AND AUTHORIZATION TO
PRODUCE GEOTHERMAL RESOURCES (FORM G-104):**

A. Prior to placing any geothermal resources well on production, injection or disposal, the owner or operator of said well shall file (in quintuplicate) with the division and receive approval thereof form G-104, certificate of compliance and authorization to produce geothermal resources, outlining thereon the information required and certifying that all division rules and regulations pertaining to the well have been complied with. Production of or injection into any well in violation of this rule shall result in the well being shut in by the division subject to the penalties provided by law for violation of the division's rules, orders and regulations. (In addition to form G-104 being approved, additional approval for injection or disposal must be obtained pursuant to Rules G-501-

G-505) [now 19.14.91 NMAC - 19.14.95 NMAC]. Form G-104 must be accompanied by three copies of form G-105, geothermal resources well log outlining the data required and with the attachments required by Rule G-205 A [now 19.14.56.8 NMAC], three copies of form G-106, geothermal resources well summary report (See Rule G-206) [now 19.14.57 NMAC] completely filled in and three copies of form G-107, geothermal resources well history (See Rule G-207) [now 19.14.58 NMAC] completely filled in.

B. Form G-104 shall also be filed in quintuplicate when there is a change in purchaser from a well or when there is a change of ownership of a producing well, injection well or disposal well. No change of ownership will be approved by the division unless the new owner has an approved bond in accordance with Rule G-101 [now 19.14.20 NMAC] and has filed satisfactory "Designation of Agent" (Rule G-100) [now 19.14.1.17 NMAC]. The former owner of the well, to obtain release of his bond, shall follow the procedures set forth in Rule G-101(b) [now Subsection B or 19.14.20.8 NMAC] (Form G-103 shall be used to report change of ownership of a drilling well; see Rule G-203 C(6).) [now Paragraph (6) of Subsection C of 19.14.54.8 NMAC].

C. After approval of form G-104, distribution of forms G-104, G-105, G-106 and G-107 shall be made by the division as follows:

- (1) one approved copy of form G-104 shall be returned to the operator;
- (2) one approved copy of form G-104 shall be forwarded to the purchaser from the well (except, of course, in the case of a disposal or injection well);
- (3) one approved copy of form G-104 and one copy of each of Forms G-105, G-106 and G-107 shall be forwarded to the New Mexico bureau of mines;
- (4) one approved copy of form G-104 and one copy each of forms G-105, G-106 and G-107 shall be forwarded to the United States geological survey; and
- (5) one approved copy of form G-104 and one copy each of form G-105, G-106 and G-107 shall be retained by the division.

[Recompiled 12/31/01]

PART 56: GEOTHERMAL RESOURCES WELL LOG

[RESERVED]

[Recompiled 12/31/01]

19.14.56.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.56.8 FOR PRODUCING, INJECTION, OR DISPOSAL WELLS:

Form G-105, geothermal resources well log, shall be filed in triplicate with the form G-104 when it is desired to put any geothermal resources well on production or injection or disposal. It shall be accompanied by copies of such logs, surveys, and tests which may have been conducted on the well, including electric logs, deviation and directional surveys, physical or chemical logs, water analyses, tests, including potential tests and temperature surveys. Failure to include these data and materials with the form G-105 will result in withholding approval of the form G-104, certificate of compliance and authorization to produce geothermal resources. Distribution of form G-105 for producing, injection or disposal wells shall be one copy to the New Mexico bureau of

mines, one copy to the United States geological survey, and one copy retained by the division.

[Recompiled 12/31/01]

19.14.56.9 FOR INACTIVE OR TEMPORARILY ABANDONED WELLS:

Form G-105, geothermal resources well log, with the attachments described in Rule G-205 A [now 19.14.56.8 NMAC], shall be filed in triplicate for every geothermal resources well, except thermal gradient wells, not on active producing or injection or disposal status within six months after cessation of active drilling operations on the well unless a permit for temporary abandonment shall have been approved for the well in accordance with Rule G-303 B [now 19.14.73.9 NMAC]. In no event, even in the case of prolonged temporary abandonment approved by the division, shall the filing of form G-105 with required attachments be delayed for more than five years after cessation of active drilling operations. Distribution of form G-105 for inactive or temporarily abandoned wells shall be one copy to the New Mexico bureau of mines, one copy to the United States geological survey, and one copy retained by the division.

[Recompiled 12/31/01]

19.14.56.10 FOR PLUGGED AND ABANDONED WELLS:

Form G-105, geothermal resources well log, together with all the attachments required by Rule G-205 A [now 19.14.56.8 NMAC] above, shall be filed in triplicate for all plugged and abandoned wells, except thermal gradient wells, within six months after abandonment. Distribution of form G-105 for abandoned wells shall be one copy to the New Mexico bureau of mines, one copy to the United States geological survey, and one copy retained by the division.

[Recompiled 12/31/01]

PART 57: GEOTHERMAL RESOURCES WELL SUMMARY REPORT

19.14.57.1 ISSUING AGENCY:

Energy and Minerals Department, Oil Conservation Division, P.O. Box 2088, Santa Fe, New Mexico.

[Recompiled 12/31/01]

19.14.57.2 SCOPE:

[RESERVED]

[Recompiled 12/31/01]

19.14.57.3 STATUTORY AUTHORITY:

[RESERVED]

[Recompiled 12/31/01]

19.14.57.4 DURATION:

[RESERVED]

[Recompiled 12/31/01]

19.14.57.5 EFFECTIVE DATE:

November 15, 1983.

[Recompiled 12/31/01]

19.14.57.6 OBJECTIVE:

[RESERVED]

[Recompiled 12/31/01]

19.14.57.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.57.8 FOR PRODUCING, INJECTION, OR DISPOSAL WELLS:

Form G-106, geothermal resources well summary report, completely filled in, shall be filed in triplicate with the form G-104 when it is desired to put any geothermal resources well on production or injection or disposal. Failure to file a completed form G-106 will result in withholding approval of the form G-104, certificate of compliance and authorization to produce geothermal resources. Distribution of form G-106 for producing, injection, or disposal wells shall be one copy to the New Mexico bureau of mines, one copy to the United States geological survey and one copy retained by the division.

[Recompiled 12/31/01]

19.14.57.9 FOR INACTIVE OR TEMPORARILY ABANDONED WELLS:

Form G-106, geothermal resources well summary report, shall be filed in triplicate for every geothermal resources well, except thermal gradient wells, not on active producing or injection or disposal status within 90 days after cessation of active drilling operations. The owner or operator of the well shall state on the form the general results of the well's condition, i.e., whether the well is capable of production of geothermal resources and will be retained for such purpose, whether the well will be used for injection or disposal purposes, whether the well has been or will be plugged and abandoned or what other disposition of the well is to be made. A summary of the well's casing and cementing program shall be shown on the form, and in case the well is to be retained for production, injection or disposal purposes, the total mass flow in pounds per hour, flowing temperature in degrees fahrenheit, and flowing pressure in pounds per square inch gauge. Distribution of form G-106 for inactive or temporarily abandoned wells shall be one copy to the New Mexico bureau of mines, one copy to the United States geological survey and one copy retained by the division. If form G-106 is filed for an inactive or temporarily abandoned well, and the well later goes on active production or injection, refiling of form G-106 completely filled in accordance with Rule G-206-A [now 19.14.57.8 NMAC] above is required.

[Recompiled 12/31/01]

19.14.57.10 FOR PLUGGING AND ABANDONED WELLS:

Form G-106, geothermal resources well summary report, completely filled in, shall be filed in triplicate for plugged and abandoned wells, except thermal gradient wells, within six months after abandonment. Distribution of form G-106 for abandoned wells shall be one copy to the New Mexico bureau of mines, one copy to the United States geological survey, and one copy retained by the division.

[Recompiled 12/31/01]

PART 58: GEOTHERMAL RESOURCES WELL HISTORY

19.14.58.1 ISSUING AGENCY:

Energy and Minerals Department, Oil Conservation Division, P.O. Box 2088, Santa Fe, New Mexico.

[Recompiled 12/31/01]

19.14.58.2 SCOPE:

[RESERVED]

[Recompiled 12/31/01]

19.14.58.3 STATUTORY AUTHORITY:

November 15, 1983.

[Recompiled 12/31/01]

19.14.58.6 OBJECTIVE:

[RESERVED]

[Recompiled 12/31/01]

19.14.58.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.58.8 FOR PRODUCING, INJECTION, OR DISPOSAL WELLS:

Form G-107, geothermal resources well history, is a chronological history of the entire operation of drilling and completing the well and shall be filed in triplicate with the form G-104 when it is desirable to put any geothermal resources well on production or injection or disposal. Failure to file a completed form G-107 will result in withholding approval of form G-104, certificate of compliance and authorization to produce geothermal resources. Distribution of form G-107 for producing, injection or disposal wells shall be one copy to the New Mexico bureau of mines, one copy to the United States geological survey and one copy retained by the division.

[Recompiled 12/31/01]

**19.14.58.9 FOR NON-PRODUCING OR TEMPORARILY ABANDONED WELLS
OTHER THAN THERMAL GRADIENT WELLS:**

Form G-107, geothermal resources well history, shall be filed in triplicate for every geothermal resources well not on active producing or injection or disposal status within

six months after cessation of active drilling operations on the well unless a permit for temporary abandonment shall have been approved for the well in accordance with Rule G-303 B [now 19.14.73.9 NMAC]. In no event, even in the case of prolonged temporary abandonment approved by the division, shall the filing of form G-107 be delayed for more than five years after cessation of active drilling operations. Distribution of form G-107 for inactive or temporarily abandoned wells shall be one copy to the New Mexico bureau of mines, one copy to the United States geological survey and one copy retained by the division.

[Recompiled 12/31/01]

19.14.58.10 FOR PLUGGED AND ABANDONED WELLS OTHER THAN THERMAL GRADIENT WELLS:

Form G-107, geothermal resources well history, shall be filed in triplicate for plugged and abandoned wells within six months after abandonment. Distribution of form G-107 for abandoned wells shall be one copy to the New Mexico bureau of mines, one copy to the United States geological survey and one copy retained by the division.

[Recompiled 12/31/01]

19.14.72.8 NOTICE:

Prior to commencement of plugging operations, notice of intention to plug shall be filed with the division, and approval thereof obtained by the owner or operator of the well. This shall be accomplished by filing form G-103, sundry notices and reports on geothermal wells, which notice shall outline the casing and cementing program of the well, the casing which is to be pulled, the size of proposed cement plugs and their depth and such other information as may be pertinent. In the case of newly drilled wells which are to be plugged, verbal authority and instructions may be given by the division to plug the well provided written notice to plug shall be subsequently filed within 30 days and approval thereof obtained. Written approval or verbal approval of a plugging program shall be subsequently filed within 30 days and approval thereof obtained. Written approval or verbal approval of a plugging program shall be contingent upon evidence being furnished that the plugging program for the well is such as to prevent damage to any producing zone, migration of fluids from one zone to another, the waste or contamination of useable underground waters or other natural resources and the

leakage of any substance at the surface, all as substantiated by the filing of form G-105, geothermal resources well log, and form G-106, geothermal well summary report, with the request for approval of the plugging program. Filing of these forms may be delayed as provided in Rule G-205 C [now 19.14.56.10 NMAC] and Rule G-206 C [now 19.14.57.10 NMAC] if a division representative has had access to and has inspected the data and materials described in Rule G-200 B [now 19.14.51.9 NMAC]. Also see Rule G-203 A [now Subsection A of 19.14.54.8 NMAC], Rule G-203 c (4) [now Paragraph (4) of Subsection C of 19.14.54.8 NMAC] and Rule G-303 A [now of 19.14.73.8 NMAC].

November 15, 1983.

[Recompiled 12/31/01]

19.14.73.6 OBJECTIVE:

[RESERVED]

[Recompiled 12/31/01]

19.14.73.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.73.8 PLUGGING:

Before any well is abandoned, it shall be plugged in a manner that will permanently confine all fluids in the separate strata originally containing them. This operation shall be accomplished by the use of mud-laden fluid, cement and plugs, used singly or in combination, as may be approved by the division. In addition, an adequate cement plug at the surface shall be installed to permanently prevent intrusion of any substance into the well. The exact location of abandoned wells shall be shown by a steel marker at least four inches in diameter set in concrete and extending at least four feet above mean ground level. The name and number of the well and its location (quarter-quarter, section, township and range) shall be welded, stamped, or otherwise permanently engraved into the metal of the marker. seismic, core, thermal gradient or other wells less than 500 feet deep and low-temperature thermal wells less than 500 feet deep shall be plugged in accordance with the applicable provisions recited above but permanent markers shall not be required on such wells.

[Recompiled 12/31/01]

19.14.73.9 TEMPORARY ABANDONMENT:

No well shall be temporarily abandoned for a period in excess of six months unless a permit for such temporary abandonment has been approved by the division. Such permit shall be for a period not to exceed six months and shall be requested from the Santa Fe office of the division by filing form G-103 in duplicate. No such permit shall be approved unless evidence is furnished that the condition of the well is such as to prevent damage to any producing zone, migration of fluids from one zone to another, the waste or contamination of useable underground waters or other natural resources and the leakage of any substance at the surface, all as substantiated by the filing of form G-105, geothermal resources well log, and form G-106, geothermal resources well summary report, with the request for a temporary abandonment permit. Filing of these forms may be delayed as provided in Rule G-205 B [now 19.14.56.9 NMAC] and Rule G-206 B [now 19.14.57.9 NMAC] if a division representative has had access to and has inspected the data and materials described in Rule G-200 B [now 19.14.51.9 NMAC] .

Also see Rule G-203 A [now subsection A of 19.14.54.8 NMAC] and Rule G-203 C(3) [now Paragraph (3) of Subsection C of 19.14.54.8 NMAC].

A. The Santa Fe office of the division shall have authority to grant one extension to the permit for temporary abandonment. Such extension shall not exceed one year and shall be requested in the same manner as the original permit for temporary abandonment. No extension shall be approved unless good cause therefor is shown, and evidence is furnished that the continued condition of the well is as described above.

B. Upon expiration of the permit for temporary abandonment and any extension thereto, the well shall be put to beneficial use or shall be permanently plugged and abandoned, unless it can be shown to the division after notice and hearing that good cause exists why the well should not be plugged and abandoned, and a permit for further temporary abandonment should be issued. No such permit for further temporary abandonment shall be approved by the division unless a one-well plugging bond for the well, in an amount satisfactory to the division, but not to exceed \$10,000.00, is on file with the division to ensure future plugging of the well.

C. The requirements of the paragraph immediately above may be waived and additional extensions granted for thermal gradient wells and in those cases where it can be shown that a contract exists for the construction of electric power plants and such plants are being designated, on order, or under construction, where facilities are being designed or are under construction for direct use of geothermal energy, or in the case where a geothermal reservoir has been discovered and there is an ongoing exploration program of the reservoir to determine its commercial feasibility.

[Recompiled 12/31/01]

19.14.73.10 DRILLING WELLS:

When drilling operations on a well have been suspended for 60 days, the well shall be plugged and abandoned unless a permit for temporary abandonment has been obtained for the well in accordance with Section B [now 19.14.73.9 NMAC] above.

[Recompiled 12/31/01]

19.14.82.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.82.8 RATABLE TAKE:

A. Any person now or hereafter engaged in purchasing geothermal resources from one or more producers within a single geothermal reservoir shall be a common purchaser within that geothermal reservoir, and shall purchase geothermal resources of like quality, quantity and pressure lawfully produced from that geothermal reservoir and tendered to such common purchaser at a reasonable point. Such purchase shall be made without reasonable discrimination in favor of one producer against another in the price paid, quantities taken, the bases of measurement or the facilities offered.

B. In the event such purchaser is also a producer, he is prohibited to the same extent from discriminating in favor of himself with respect to geothermal resource wells in which he has an interest, direct or indirect, as against other geothermal resource wells in the same geothermal reservoir.

C. For the purposes of this rule, reasonable differences in prices paid or facilities afforded, or both, shall not constitute unreasonable discrimination if such differences bear a fair relationship to difference in quality, quantity, or pressure of the geothermal resource available or to the relative lengths of time during which such geothermal resources will be available to the purchaser.

D. Any common purchaser taking geothermal resources produced from wells within a geothermal reservoir shall take ratably under such rules, regulations and orders, concerning quantity, as may be promulgated by the division after due notice and public hearing. The division, in promulgating such rules, regulations and orders may consider the quality and the quantity of the geothermal resources available, the pressure and temperature of the product at the point of delivery, acreage attributable to the well, market requirements and other pertinent factors.

E. Nothing in this Rule shall be construed or applied to require, directly or indirectly, any person to purchase geothermal resources of a quality or under a pressure or under any other condition by reason of which such geothermal resource cannot be economically and satisfactorily used by such purchaser by means of his geothermal utilization facilities then in service.

[Recompiled 12/31/01]

19.14.93.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.93.8 METHOD OF MAKING APPLICATION:

A. Application for authority to inject fluids into a geothermal reservoir or to dispose of geothermal waters into a zone or formation not classified as a geothermal reservoir shall be made in duplicate on division form G-112, application to place well on injection-geothermal resources area, and shall be accompanied by one copy of each of the following:

(1) A plat showing the location of the proposed injection/disposal well and the location of all other wells within a radius of one mile from said well, and indicating the perforated or open-hole interval in each of said wells. The plat shall also indicate the ownership of all geothermal leases within said one-mile radius;

(2) The log of the proposed injection well, if available;

(3) A diagrammatic sketch of the proposed injection well showing casing strings, including diameters and setting depths, quantities used and tops of cement, perforated or open-hole interval, tubing strings, including diameters and setting depths, and the type and location of packers, if any.

B. Copies of the form G-112 (without the above attachments) shall be sent to all other geothermal lease owners, if any there be, within a one-half mile radius of the proposed injection/disposal well.

C. If no objection is received within 20 days from the date of receipt of the application, and the division director is satisfied that all of the above requirements have been complied with, that the proposal is in the interest of conservation and will prevent waste and protect correlative rights, and that the well is cased, cemented, and equipped in such a manner that there will be no danger to any natural resource, including geothermal resources, useable underground water supplies, and surface resources, form G-112 will be approved. In the event the form is not approved because of objection from an affected geothermal lease owner or for other reason, the application will be set for public hearing, if the applicant so requests.

D. The division director may dispense with the 20-day waiting period if waivers of objection are received from all geothermal lease owners within a one-half mile radius of the proposed injection/disposal well.

19.14.95.6 OBJECTIVE:

[RESERVED]

[Recompiled 12/31/01]

19.14.95.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.95.8 SURVEILLANCE:

A. Surveillance of waste water disposal or injection projects is necessary on a continuing basis in order to establish to the satisfaction of the division that all water is confined to the intended zone of injection.

B. When an operator proposes to drill an injection well, convert a producing or inactive well to an injection well or rework an injection well and return it to injection service, he shall be required to demonstrate to the division by means of such tests as the division may deem necessary the integrity of the well's casing.

C. To establish the integrity of the annular cement above the shoe of the casing, the operator shall make sufficient surveys, within 30 days after injection is started into a well, to demonstrate that all the injected fluid is confined to the intended zone of injection. Thereafter, such surveys shall be made at least every two years, or more often if ordered by the division. All such surveys may be witnessed by a representative of the division.

D. After the well has been placed on injection, a division representative shall visit the wellsite periodically. At these times, surface conditions shall be noted and if any unsatisfactory conditions exist, the operator shall be notified of needed remedial work. If this required work is not performed within 90 days, the approval issued by the division

may be rescinded. If it is determined that damage is occurring at a rapid rate, the division may order that the repair work be done immediately. Injection pressures shall be recorded by the division representative and compared with the pressure reported on the appropriate forms. Any discrepancies shall be rectified immediately by the operator. A graph of daily injection rates and pressures versus time shall be maintained by the operator. Reasons for anomalies shall be promptly ascertained. If these reasons are such that it appears damage is being done, approval by the division may be rescinded, and injection shall cease.

E. When an injection well has been left idle for six months, the operator shall be informed by letter that approval for use of the well for injection purposes has been rescinded, and that he should proceed in accordance with the provisions of Rule G-302 [now 19.14.72 NMAC] and Rule G-303 A [now 19.14.73.8 NMAC] or Rule G-303 B [now 19.14.73.9 NMAC]. In the event the operator intends to again use the well for injection purposes, he shall be required to demonstrate by means of surveys that the injected water will be confined to the intended zone of injection.

[Recompiled 12/31/01]

19.14.102.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.14.102.8 BLOWOUT PREVENTION EQUIPMENT (BOPE):

The following standards are not given as final blowout prevention equipment requirements for the drilling of any geothermal resources well but are given as guidelines for the preparation of a minimum blowout prevention program for certain categories of wells.

- A. Using Mud as the Drilling Fluid.

(1) API Class 2M-A or 2M-RR. For wells in geothermal resources areas known to contain geothermal fluids at a temperature greater than 212 degrees F. at depths less than 2,000 feet, and geothermal exploratory wells in areas where subsurface temperatures and pressures are unknown and the proposed depth of the well is less than 2,000 feet.

(a) An annular BOPE and a spool, fitted with a low-pressure safety pop-off and blow-down line, installed on the conductor pipe may be required for wells in the above categories to ensure against possible gas blowouts during the drilling of the surface casing hole.

(b) Annular BOPE or pipe-ram/blind-ram BOPE with minimum working-pressure ratings of 2,000 psi shall be installed on the surface casing so that the well can be shut in at any time.

(c) Hydraulic actuating system.

(d) Kelly cock.

(e) A fill-up line installed above the BOPE.

(f) A kill line installed below the BOPE, leading directly to the mud pumps and fitted with a valve through which cement could be pumped if necessary.

(g) A blow-down line fitted with two valves installed below the BOPE. The blow-down line shall be directed in such a manner so as to permit containment of produced fluids and to minimize any safety hazard to personnel.

(h) All lines and fittings shall be steel and have a minimum working-pressure rating of 1,000 psi.

(i) Return mud temperatures shall be entered into the log book after each joint of pipe is drilled down. See Rule G-106(b) [now Subsection B of 19.14.25.8 NMAC].

(2) API Class 2M-RSRA or Equivalent. For wells in geothermal resources areas known to contain geothermal fluids at temperatures greater than 212 degrees F. at depths more than 2,000 feet, and geothermal exploratory wells in areas where subsurface temperatures and pressures are unknown and the proposed depth of the well is more than 2,000 feet.

(a) An annular BOPE and a spool, fitted with a low-pressure safety pop-off and blow-down line, installed on the conductor pipe may be required to ensure against possible gas blowouts during the drilling of the surface casing hole.

(b) Annular BOPE and pipe-ram/blind-ram BOPE with a minimum working-pressure rating of 2,000 psi shall be installed so that the well can be shut in at any time. The double-ram preventer shall have a mechanical locking device.

(c) A hydraulic actuating system utilizing an accumulator of sufficient capacity and a high pressure auxiliary backup system. This total system shall be equipped with dual controls; one at the driller's station and one at least 50 feet away from the wellhead.

(d) Kelly cock and standpipe valve.

(e) A fill-up line installed above the BOPE.

(f) A kill line installed below the BOPE, leading directly to the mud pumps and fitted with a valve through which cement could be pumped if necessary.

(g) A blow-down line fitted with two valves installed below the BOPE. The blow-down line shall be directed in such a manner so as to permit containment of produced fluids and to minimize any safety hazard to personnel.

(h) All lines and fittings shall be steel and have a minimum working-pressure rating of at least that of the BOPE.

(i) Return mud temperatures shall be entered into the log book after each joint of pipe is drilled down. (See Rule G-106(b).) [now Subsection B of 19.14.25.8 NMAC].

B. Using Air as the Drilling Fluid. API Class 2M RSRdG (with Banjo Box). For wells in geothermal resources areas where it is known that dry steam exists at depth and/or formation pressures are known to be less than hydrostatic:

(1) A rotating head installed at the top of the BOPE stack.

(2) A pipe-ram/blind-ram BOPE, with a minimum working-pressure rating of 2,000 psi installed below the rotating head so that the well can be shut in at any time.

(3) A banjo box steam diversion unit installed below the double-ram BOPE fitted with an approved muffler in good working condition.

(4) A blind-ram BOPE, with a minimum working-pressure rating of 2,000 psi installed below the banjo box so that the well can be shut in while removing the rotating head during bit changes.

(5) A gate valve, with a suitable minimum working-pressure rating installed below the blind ram so that the well can be shut in after the well has been completed, prior to removal of the BOPE stack.

(6) All ram-type BOPE shall have a hydraulic actuating system utilizing an accumulator of sufficient capacity and a high-pressure backup system.

(7) Dual control stations for hydraulic backup system: one at the driller's station and the other at least 50 feet away from the wellhead.

(8) Float and standpipe valves.

(9) A kill line installed below the BOPE, leading directly to the mud pumps and fitted with a valve through which cement could be pumped if necessary.

(10) All lines and fittings must be steel and have a minimum working-pressure rating of 1,000 psi. Note: If any portion of a well is drilled using mud, Class 2M BOPE shall be installed on the surface casing so that the well can be shut-in at any time.

[Recompiled 12/31/01]

19.14.104.8 TESTING OF BLOWOUT PREVENTION EQUIPMENT:

A. Upon installation, ram-type blowout preventers, bag-type blowout preventers, valves and manifolds shall be tested to a minimum of 750 psi pressure. Tests may be witnessed by a division representative on all wells prior to drilling out the shoe of the surface casing, and the division shall be notified of the date and hour any such test is to be conducted sufficiently in advance of the test to allow a division representative to travel to the well to witness the test.

B. Ram-type preventers shall be operated at least once each 24 hours and bag-type preventers closed on the drill pipe at least once each week, provided however, that an exception to this provision may be granted by the division's geothermal section to prevent undue wear and tear on the preventer rubbers when drilling drysteam wells.

CHAPTER 15: OIL AND GAS

PART 1: GENERAL PROVISIONS AND DEFINITIONS [REPEALED]

[This part was repealed effective 12/1/2008 because of a restructuring effort involving many of the rules in Title 19, Chapter 15. Material previously found in this part is now available at 19.15.2 NMAC, General Provisions for Oil and Gas Operations.]

PART 2: GENERAL PROVISIONS FOR OIL AND GAS OPERATIONS

19.15.2.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.2.1 NMAC - Rp, 19.15.1.1 NMAC, 12/1/2008; A, 6/26/2018]

19.15.2.2 SCOPE:

19.15.2 NMAC applies to persons or entities engaged in oil and gas development and production within New Mexico and to 19.15.2 NMAC through 19.15.39 NMAC.

[19.15.2.2 NMAC - Rp, 19.15.1.2 NMAC, 12/1/2008]

19.15.2.3 STATUTORY AUTHORITY:

19.15.2 NMAC is adopted pursuant to the Oil and Gas Act, Sections 70-2-1 through 70-2-38 NMSA 1978, which grants the oil conservation division jurisdiction and authority over all matters relating to the conservation of oil and gas, the prevention of waste of oil and gas and of potash because of oil and gas operations, the protection of correlative rights and the disposition of wastes resulting from oil and gas operations.

[19.15.2.3 NMAC - Rp, 19.15.1.3 NMAC, 12/1/2008; A, 6/26/2018]

19.15.2.4 DURATION:

Permanent.

[19.15.2.4 NMAC - Rp, 19.15.1.4 NMAC, 12/1/2008]

19.15.2.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.2.5 NMAC - Rp, 19.15.1.5 NMAC, 12/1/2008]

19.15.2.6 OBJECTIVE:

To set forth general provisions and definitions pertaining to the authority of the oil conservation division and the oil conservation commission pursuant to the Oil and Gas Act, Sections 70-2-1 through 70-2-38 NMSA 1978.

[19.15.2.6 NMAC - Rp, 19.15.1.6 NMAC, 12/1/2008; A, 6/26/2018]

19.15.2.7 DEFINITIONS:

These definitions apply to 19.15.2 NMAC through 19.15.39 NMAC.

A. Definitions beginning with the letter "A".

- (1) "Abate"** means to investigate, contain, remove or mitigate water pollution.
- (2) "Abatement"** means the investigation, containment, removal or other mitigation of water pollution.
- (3) "Abatement plan"** means a description of operational, monitoring, contingency and closure requirements and conditions for water pollution's prevention, investigation and abatement.

(4) **"Act" or "Oil and Gas Act"** means Chapter 70, Article 2 NMSA 1978, as it may be modified or amended.

(5) **"Adjoining spacing units"** mean those existing or prospective spacing units in the same pool that are touching at a point or line on the subject spacing unit.

(6) **"Adjusted allowable"** means the allowable production a well or proration unit receives after all adjustments are made.

(7) **"AFE"** means authorization for expenditure.

(8) **"Affected persons"** means the following persons owning interests in a spacing unit or other identified tract:

(a) the operator, as shown in division records, of a well on the tract, or, if the tract is included in a division-approved or federal unit, the designated unit operator;

(b) in the absence of an operator, or with respect to an application wherein the operator of the spacing unit or identified tract is the applicant, each working interest owner whose interest is evidenced by a written conveyance document either of record or known to the applicant as of the date the applicant files the application;

(c) as to any tract or interest therein that is not subject to an existing oil and gas lease, each mineral interest owner whose interest is evidenced by a written conveyance document either of record or known to the applicant as of the date the applicant filed the application; and

(d) if the United States or state of New Mexico owns the mineral estate in the spacing unit or identified tract or any part thereof, the BLM or state land office, as applicable; or

(e) if the mineral estate in the spacing unit or identified tract or any part thereof is tribal land, the BLM, the United States department of the interior, bureau of Indian affairs, and the relevant tribe.

(9) **"Allocated pool"** means a pool in which the total oil or gas production is restricted and is allocated to various wells in the pool in accordance with proration schedules.

(10) **"Allowable production"** means that number of barrels of oil or cubic feet of gas the division authorizes to be produced from an allocated pool.

(11) **"APD"** means application for permit to drill.

(12) **"API"** means the American petroleum institute.

(13) **"Approved temporary abandonment"** means the status of a well that is inactive, has been approved in accordance with 19.15.25.13 NMAC and complies with 19.15.25.12 NMAC through 19.15.25.14 NMAC.

(14) **"Aquifer"** means a geological formation, group of formations or a part of a formation that can yield a significant amount of water to a well or spring.

(15) **"ASTM"** means ASTM International - an international standards developing organization that develops and publishes voluntary technical standards for a wide range of materials, products, systems and services.

B. Definitions beginning with the letter "B".

(1) **"Back allowable"** means the authorization for production of an underproduction resulting from pipeline proration.

(2) **"Background"** means, for purposes of ground water abatement plans only, the amount of ground water contaminants naturally occurring from undisturbed geologic sources or water contaminants occurring from a source other than the responsible person's facility. This definition does not prevent the director from requiring abatement of commingled plumes of pollution, does not prevent responsible persons from seeking contribution or other legal or equitable relief from other persons and does not preclude the director from exercising enforcement authority under any applicable statute, rule or common law.

(3) **"Barrel"** means 42 United States gallons measured at 60 degrees fahrenheit and atmospheric pressure at the sea level.

(4) **"Barrel of oil"** means 42 United States gallons of oil, after deductions for the full amount of basic sediment, water and other impurities present, ascertained by centrifugal or other recognized and customary test.

(5) **"Below-grade tank"** means a vessel, excluding sumps and pressurized pipeline drip traps, where a portion of the tank's sidewalls is below the surrounding ground surface's elevation. Below-grade tank does not include an above ground storage tank that is located above or at the surrounding ground surface's elevation and is surrounded by berms.

(6) **"Berm"** means an embankment or ridge constructed to prevent the movement of liquids, sludge, solids or other materials.

(7) **"Biopile"**, also known as biocell, bioheap, biomound or compost pile, means a pile of contaminated soils used to reduce concentrations of petroleum constituents in excavated soils through biodegradation. This technology involves heaping contaminated soils into piles or "cells" and stimulating aerobic microbial activity within the soils through the aeration or addition of minerals, nutrients and moisture.

(8) **"BLM"** means the United States department of the interior, bureau of land management.

(9) **"Bottom hole pressure"** means the gauge pressure in psi under conditions existing at or near the producing horizon.

(10) **"Bradenhead gas well"** means a well producing gas through wellhead connections from a gas reservoir that has been successfully cased off from an underlying oil or gas reservoir.

(11) **"BS&W"** means basic sediments and water.

(12) **"BTEX"** means benzene, toluene, ethylbenzene and xylene.

C. Definitions beginning with the letter "C".

(1) **"Carbon dioxide gas"** means noncombustible gas composed chiefly of carbon dioxide occurring naturally in underground rocks.

(2) **"Casinghead gas"** means a gas or vapor or both gas and vapor indigenous to and produced from a pool the division classifies as an oil pool. This also includes gas-cap gas produced from such an oil pool.

(3) **"Certified mail" or "certified mail, return receipt requested"** means United States Postal Service Certified Mail or equivalent service that provides tracking and signature receipt, including Federal Express, United Parcel Service, or similar courier services.

(4) **"Cm/sec"** means centimeters per second.

(5) **"CPD"** means central point delivery.

(6) **"Combination multiple completion"** means a multiple completion in which two or more common sources of supply are produced through a combination of two or more conventional diameter casing strings cemented in a common well bore, or a combination of small diameter and conventional diameter casing strings cemented in a common well bore, the conventional diameter strings of which might or might not be a conventional multiple completion.

(7) **"Commission"** means the oil conservation commission.

(8) **"Commission clerk"** means the division employee the director designates to provide staff support to the commission and accept filings in rulemaking or adjudicatory cases before the commission.

(9) **"Common purchaser for gas"** means a person now or hereafter engaged in purchasing from one or more producers gas produced from gas wells within each common source of supply from which it purchases.

(10) **"Common purchaser for oil"** means every person now engaged or hereafter engaging in the business of purchasing oil to be transported through pipelines.

(11) **"Common source of supply"**. See pool.

(12) **"Condensate"** means the liquid recovered at the surface that results from condensation due to reduced pressure or temperature of petroleum hydrocarbons existing in a gaseous phase in the reservoir.

(13) **"Contiguous"** means acreage joined by more than one common point, that is, the common boundary is at least one side of a governmental quarter-quarter section.

(14) **"Conventional completion"** means a well completion in which the production string of casing has an outside diameter exceeding 2.875 inches.

(15) **"Conventional multiple completion"** means a completion in which two or more common sources of supply are produced through one or more strings of tubing installed within a single casing string, with the production from each common source of supply completely segregated by means of packers.

(16) **"Correlative rights"** means the opportunity afforded, as far as it is practicable to do so, to the owner of each property in a pool to produce without waste the owner's just and equitable share of the oil or gas in the pool, being an amount, so far as can be practically determined, and so far as can be practicably obtained without waste, substantially in the proportion that the quantity of recoverable oil or gas under the property bears to the total recoverable oil or gas in the pool, and for the purpose to use the owner's just and equitable share of the reservoir energy.

(17) **"Cubic feet of gas or cubic foot of gas"** means that volume of gas contained in one cubic foot of space and computed at a base pressure of 10 ounces per square inch above the average barometric pressure of 14.4 psi (15.025 psi absolute), at a standard base temperature of 60 degrees fahrenheit.

D. Definitions beginning with the letter "D".

(1) **"Deep pool"** means a common source of supply that is situated 5000 feet or more below the surface.

(2) **"Depth bracket allowable"** means the basic oil allowable the division assigns a pool and based on its depth, unit size or special pool orders, which, when

multiplied by the market demand percentage factor in effect, determines the pool's top proration unit allowable.

(3) **"Director"** means the director of the New Mexico energy, minerals and natural resources department, oil conservation division.

(4) **"Division"** means the New Mexico energy, minerals and natural resources department, oil conservation division.

(5) **"Division clerk"** means the division employee the director designates to accept filings in adjudicatory cases before the division.

(6) **"Downstream facility"** means a facility associated with the transportation (including gathering) or processing of gas or oil (including a refinery, gas plant, compressor station or crude oil pump station); brine production; or the oil field service industry.

(7) **"DRO"** means diesel range organics.

E. Definitions beginning with the letter "E".

(1) **"EC"** means electrical conductivity.

(2) **"Enhanced oil recovery project"** means the use or the expanded use of a process for the displacement of oil from an oil well or division-designated pool other than a primary recovery process, including but not limited to the use of a pressure maintenance process; a water flooding process; an immiscible, miscible, chemical, thermal or biological process; or any other related process.

(3) **"EOR project"** means an enhanced oil recovery project.

(4) **"EPA"** means the United States environmental protection agency.

(5) **"Exempted aquifer"** means an aquifer that does not currently serve as a source of drinking water, and that cannot now and will not in the foreseeable future serve as a source of drinking water because:

(a) it is hydrocarbon producing;

(b) it is situated at a depth or location that makes the recovery of water for drinking water purposes economically or technologically impractical; or

(c) it is so contaminated that it would be economically or technologically impractical to render that water fit for human consumption.

(6) **"Exempt waste"** means oil field waste exempted from regulation as hazardous waste pursuant to Subtitle C of RCRA and applicable regulations.

(7) **"Existing spacing unit"** means a spacing unit containing a producing well.

F. Definitions beginning with the letter "F".

(1) **"Facility"** means a structure, installation, operation, storage tank, transmission line, access road, motor vehicle, rolling stock or activity of any kind, whether stationary or mobile.

(2) **"Field"** means the general area that at least one pool underlies or appears to underlie; and also includes the underground reservoir or reservoirs containing oil or gas. The words field and pool mean the same thing when only one underground reservoir is involved; however, field unlike pool may relate to two or more pools.

(3) **"Fresh water"** to be protected includes the water in lakes and playas (regardless of quality, unless the water exceeds 10,000 mg/l TDS and it can be shown that degradation of the particular water body will not adversely affect hydrologically connected fresh ground water), the surface waters of streams regardless of the water quality within a given reach, and underground waters containing 10,000 mg/l or less of TDS except for which, after notice and hearing, it is found there is no present or reasonably foreseeable beneficial use that contamination of such waters would impair.

G. Definitions beginning with the letter "G".

(1) **"Gas"**, also known as natural gas, means a combustible vapor composed chiefly of hydrocarbons occurring naturally in a pool the division has classified as a gas pool.

(2) **"Gas lift"** means a method of lifting liquid to the surface by injecting gas into a well from which oil production is obtained.

(3) **"Gas-oil ratio"** means the ratio of the casinghead gas produced in standard cubic feet to the number of barrels of oil concurrently produced during any stated period.

(4) **"Gas-oil ratio adjustment"** means the reduction in allowable of a high gas oil ratio unit to conform with the production permitted by the limiting gas-oil ratio for the particular pool during a particular proration period.

(5) **"Gas transportation facility"** means a pipeline in operation serving gas wells for the transportation of gas, or some other device or equipment in like operation

where the gas produced from gas wells connected with the pipeline or other device or equipment can be transported or used for consumption.

(6) **"Gas well"** means a well producing gas from a gas pool, or a well with a gas-oil ratio exceeding 100,000 cubic feet of gas per barrel of oil producing from an oil pool.

(7) **"Geomembrane"** means an impermeable polymeric sheet material that is impervious to liquid and gas if it maintains its integrity and is used as an integral part of an engineered structure designed to limit the movement of liquid or gas in a system.

(8) **"Geotextile"** means a sheet material that is less impervious to liquid than a geomembrane but more resistant to penetration damage, and is used as part of an engineered structure or system to serve as a filter to prevent the movement of soil fines into a drainage system, to provide planar flow for drainage, to serve as a cushion to protect geomembranes or to provide structural support.

(9) **"GRO"** means gasoline range organics.

(10) **"Ground water"** means interstitial water that occurs in saturated earth material and can enter a well in sufficient amounts to be used as a water supply.

(11) **"Ground water sensitive area"** means an area the division specifically designates after evaluation of technical evidence where ground water exists that would likely exceed WQCC standards if contaminants were introduced into the environment.

H. Definitions beginning with the letter "H".

(1) **"Hardship gas well"** means a gas well where underground waste occurs if the well is shut-in or curtailed below its minimum sustainable flow rate.

(2) **"Hazard to public health"** exists when water that is used or is reasonably expected to be used in the future as a human drinking water supply exceeds at the time and place of the use, one or more of the numerical standards of Subsection A of 20.6.2.3103 NMAC, or the naturally occurring concentrations, whichever is higher, or if a toxic pollutant as defined at Subsection WW of 20.6.2.7 NMAC affecting human health is present in the water. In determining whether a release would cause a hazard to public health to exist, the director investigates and considers the purification and dilution reasonably expected to occur from the time and place of release to the time and place of withdrawal for use as human drinking water.

(3) **"Hazardous waste"** means non-exempt waste that exceeds the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined in 40 CFR, part 261, subpart D, as amended.

(4) **"HDPE"** means high-density polyethylene.

(5) **"High gas-oil ratio proration unit"** means a unit with at least one producing oil well with a gas-oil ratio exceeding the limiting gas-oil ratio for the pool in which the unit is located.

(6) **"H₂S"** means hydrogen sulfide.

I. Definitions beginning with the letter "I".

(1) **"Illegal gas"** means gas produced from a gas well exceeding the division-determined allowable.

(2) **"Illegal oil"** means oil produced exceeding the allowable the division fixes.

(3) **"Illegal product"** means a product of illegal gas or illegal oil.

(4) **"Inactive well"** means a well that is not being used for beneficial purposes such as production, injection or monitoring and that is not being drilled, completed, repaired or worked over.

(5) **"Injection well"** means a well used for the injection of air, gas, water or other fluids into an underground stratum.

J. Definitions beginning with the letter "J". [RESERVED]

K. Definitions beginning with the letter "K". "Knowingly and willfully", for assessing civil penalties, means the voluntary or conscious performance of an act that is prohibited or the voluntary or conscious failure to perform an act or duty that is required. It does not include performances or failures to perform that are honest mistakes or merely inadvertent. It includes, but does not require, performances or failures to perform that result from a criminal or evil intent or from a specific intent to violate the law. The conduct's knowing and willful nature may be established by plain indifference to or reckless disregard of the requirements of statutes, rules, orders or permits. A consistent pattern or performance or failure to perform also may be sufficient to establish the conduct's knowing and willful nature, where such consistent pattern is neither the result of honest mistakes nor mere inadvertency. Conduct that is otherwise regarded as being knowing and willful is rendered neither accidental nor mitigated in character by the belief that the conduct is reasonable or legal.

L. Definitions beginning with the letter "L".

(1) **"Limiting gas-oil ratio"** means the gas-oil ratio the division assigns to a particular oil pool to limit the volumes of casinghead gas that may be produced from the various oil producing units within that particular pool.

(2) **"Liner"** means a continuous, low-permeability layer constructed of natural or human-made materials that restricts the migration of liquid oil field wastes, gases or leachate.

(3) **"LLDPE"** means linear low-density polyethylene.

(4) **"Load oil"** means oil or liquid hydrocarbon that has been used in remedial operation in an oil or gas well.

(5) **"Log"** means a systematic detailed and correct record of formations encountered in drilling a well.

M. Definitions beginning with the letter "M".

(1) **"Marginal unit"** means a proration unit that is incapable of producing top proration unit allowable for the pool in which it is located.

(2) **"Market demand percentage factor"** means that percentage factor of one hundred percent or less as the division determines at an oil allowable hearing, which, when multiplied by the depth bracket allowable applicable to each pool, determines that pool's top proration unit allowable.

(3) **"MCF"** means 1000 cubic feet.

(4) **"MCFD"** means 1000 cubic feet per day.

(5) **"MCFGPD"** means 1000 cubic feet of gas per day.

(6) **"Measured depth"** means the total length of the well bore.

(7) **"Mg/l"** means milligrams per liter.

(8) **"Mg/kg"** means milligrams per kilogram.

(9) **"Mineral estate"** is the most complete ownership of oil and gas recognized in law and includes the mineral interests and the royalty interests.

(10) **"Mineral interest owner"** means a working interest owner, or an owner of a right to explore for and develop oil and gas that is not subject to an existing oil and gas lease.

(11) **"Minimum allowable"** means the minimum amount of production from an oil or gas well that may be advisable from time to time to the end that production will repay reasonable lifting cost and thus prevent premature abandonment and resulting waste.

(12) "Miscellaneous hydrocarbons" means tank bottoms occurring at pipeline stations; oil storage terminals or refineries; pipeline break oil; catchings collected in traps, drips or scrubbers by gasoline plant operators in the plants or in the gathering lines serving the plants; the catchings collected in private, community or commercial salt water disposal systems; or other liquid hydrocarbon that is not lease crude or condensate.

N. Definitions beginning with the letter "N".

(1) "Non-aqueous phase liquid" means an interstitial body of liquid oil, petroleum product, petrochemical or organic solvent, including an emulsion containing such material.

(2) "Non-exempt waste" means oil field waste not exempted from regulation as hazardous waste pursuant to Subtitle C of RCRA and applicable regulations.

(3) "Non-hazardous waste" means non-exempt oil field waste that is not hazardous waste.

(4) "Non-marginal unit" means a proration unit that can produce the top proration unit allowable for the pool in which it is located, and to which the division assigns a top proration unit allowable.

(5) "NORM" means the naturally occurring radioactive materials regulated by 20.3.14 NMAC.

O. Definitions beginning with the letter "O".

(1) "Official gas-oil ratio test" means the periodic gas-oil ratio test the operator performs pursuant to division order by the method and in the manner the division prescribes.

(2) "Oil" means petroleum hydrocarbon produced from a well in the liquid phase and that existed in a liquid phase in the reservoir. This definition includes crude oil or crude petroleum oil.

(3) "Oil field waste" means non-domestic waste resulting from the exploration, development, production or storage of oil or gas pursuant to Paragraph (21) of Subsection B of Section 70-2-12 NMSA 1978 and the oil field service industry, the transportation of crude oil or natural gas, the treatment of natural gas or the refinement of crude oil pursuant to Paragraph (22) of Subsection B of Section 70-2-12 NMSA 1978, including waste generated from oil field remediation or abatement activity regardless of the date of release. Oil field waste does not include waste not generally associated with oil and gas industry operations such as tires, appliances or ordinary garbage or refuse unless generated at a division-regulated facility, and does not include sewage, regardless of the source.

(4) **"Oil well"** means a well capable of producing oil and that is not a gas well as defined in Paragraph (6) of Subsection G of 19.15.2.7 NMAC.

(5) **"Operator"** means a person who, duly authorized, manages a lease's development or a producing property's operation, or who manages a facility's operation.

(6) **"Overproduction"** means the amount of oil or gas produced during a proration period exceeding the amount authorized on the proration schedule.

(7) **"Owner"** means the person who has the right to drill into and to produce from a pool, and to appropriate the production either for the person or for the person and another.

P. Definitions beginning with the letter "P".

(1) **"Penalized unit"** means a proration unit to which, because of an excessive gas-oil ratio, the division assigns an allowable that is less than top proration unit allowable for the pool in which it is located and also less than the ability of the well or wells on the unit to produce.

(2) **"Person"** means an individual or entity including partnerships, corporations, associations, responsible business or association agents or officers, the state or a political subdivision of the state or an agency, department or instrumentality of the United States and of its officers, agents or employees.

(3) **"Pit"** means a surface or sub-surface impoundment, man-made or natural depression or diked area on the surface. Excluded from this definition are berms constructed around tanks or other facilities solely for safety, secondary containment and storm water or run-on control.

(4) **"Playa lake"** means a level or nearly level area that occupies the lowest part of a completely closed basin and that is covered with water at irregular intervals, forming a temporary lake.

(5) **"Pool"** means an underground reservoir containing a common accumulation of oil or gas. Each zone of a general structure, which zone is completely separated from other zones in the structure, is covered by the word pool as used in 19.15.2 NMAC through 19.15.39 NMAC. "Pool" is synonymous with "common source of supply" and with "common reservoir".

(6) **"Potential"** means a well's properly determined capacity to produce oil or gas under division-prescribed conditions.

(7) **"Ppm"** means parts per million by volume.

(8) **"PQL"** means practical quantitation limit.

(9) **"Pressure maintenance"** means the injection of gas or other fluid into a reservoir, either to maintain the reservoir's existing pressure or to retard the reservoir pressure's natural decline.

(10) **"Produced water"** means a fluid that is an incidental byproduct from drilling for or the production of oil and gas.

(11) **"Producer"** means the owner of a well or wells capable of producing oil or gas or both in paying quantities.

(12) **"Product"** means a commodity or thing made or manufactured from oil or gas, and derivatives of oil or gas, including refined crude oil, crude tops, topped crude, processed crude petroleum, residue from crude petroleum, cracking stock, uncracked fuel oil, treated crude oil, fuel oil, residuum, gas oil, naphtha, distillate, gasoline, kerosene, benzene, wash oil, lubricating oil and blends or mixtures of oil or gas or a derivative thereof.

(13) **"Proration day"** consists of 24 consecutive hours that begin at 7:00 a.m. and end at 7:00 a.m. on the following day.

(14) **"Proration month"** means the calendar month that begins at 7:00 a.m. on the first day of the month and ends at 7:00 a.m. on the first day of the next succeeding month.

(15) **"Proration period"** means for oil the proration month and for gas the 12-month period that begins at 7:00 a.m. on January 1 of each year and ends at 7:00 a.m. on January 1 of the succeeding year or other period designated by general or special order of the division.

(16) **"Proration schedule"** means the division orders authorizing the production, purchase and transportation of oil, casinghead gas and gas from the various units of oil or of gas in allocated pools.

(17) **"Proration unit"** means the area in a pool that can be effectively and efficiently drained by one well as determined by the division or commission (see Subsection B of Section 70-2-17 NMSA 1978) as well as the area assigned to an individual well for the purposes of allocating allowable production pursuant to a prorationing order for the pool.

(18) **"Prospective spacing unit"** means a hypothetical spacing unit that does not yet have a producing well.

(19) **"PVC"** means poly vinyl chloride.

(20) **"Psi"** means pounds per square inch.

Q. Definitions beginning with the letter "Q". [RESERVED]

R. Definitions beginning with the letter "R".

- (1) **"RCRA"** means the federal Resource Recovery and Conservation Act.
- (2) **"Recomplete"** means the subsequent completion of a well in a different pool from the pool in which it was originally completed.
- (3) **"Regulated NORM"** means NORM contained in oil-field soils, equipment, sludges or other materials related to oil-field operations or processes exceeding the radiation levels specified in 20.3.14.1403 NMAC.
- (4) **"Release"** means breaks, leaks, spills, releases, fires or blowouts involving oil, produced water, condensate, drilling fluids, completion fluids or other chemical or contaminant or mixture thereof, including oil field wastes and gases to the environment.
- (5) **"Remediation plan"** means a written description of a program to address unauthorized releases. The plan may include appropriate information, including assessment data, health risk demonstrations and corrective action or actions. The plan may also include an alternative proposing no action beyond the spill report's submittal.
- (6) **"Responsible person"** means the owner or operator who shall complete a division-approved corrective action for pollution from releases.
- (7) **"Rules"** means the rules enacted pursuant to the Oil and Gas Act, 19.15.2 to 19.15.39 NMAC, as they may be modified or amended.
- (8) **"Royalty interest owner"** means the owner of an interest in oil and gas that does not presently entitle the owner to explore, drill or otherwise develop those minerals, including lessors, royalty interest owners and overriding royalty interest owners. Royalty interests are non-cost bearing.
- (9) **"Run-on"** means rainwater, leachate or other liquid that drains from other land onto any part of a division-approved facility.

S. Definitions beginning with the letter "S".

- (1) **"SAR"** means the sodium adsorption ratio.
- (2) **"Secondary recovery"** means a method of recovering quantities of oil or gas from a reservoir which quantities would not be recoverable by ordinary primary depletion methods.

(3) **"Sediment oil"** means tank bottoms and other accumulations of liquid hydrocarbons on an oil and gas lease, which hydrocarbons are not merchantable through normal channels.

(4) **"Shallow pool"** means a pool that has a depth range from zero to 5000 feet.

(5) **"Shut-in"** means the status of a production well or an injection well that is temporarily closed, whether by closing a valve or disconnection or other physical means.

(6) **"Shut-in pressure"** means the gauge pressure noted at the wellhead when the well is completely shut-in, not to be confused with bottom hole pressure.

(7) **"Significant modification of an abatement plan"** means a change in the abatement technology used excluding design and operational parameters, or relocation of twenty-five percent or more of the compliance sampling stations, for a single medium, as designated pursuant to Subparagraph (d) of Paragraph (2) of Subsection D of 19.15.30.13 NMAC.

(8) **"Soil"** means earth, sediments or other unconsolidated accumulations of solid particles produced by the physical and chemical disintegration of rocks, and that may or may not contain organic matter.

(9) **"Spacing unit"** means the area allocated to a well under a well spacing order or rule. Under the Oil and Gas Act, Paragraph (10) of Subsection B of Section 70-2-12 NMSA 1978, the commission may fix spacing units without first creating proration units. See *Rutter & Wilbanks corp. v. oil conservation comm'n*, 87 NM 286 (1975). This is the area designated on form C-102.

(10) **"Subsurface water"** means ground water and water in the vadose zone that may become ground water or surface water in the reasonably foreseeable future or that vegetation may use.

(11) **"Surface waste management facility"** means a facility that receives oil field waste for collection, disposal, evaporation, remediation, reclamation, treatment or storage except:

(a) a facility that utilizes underground injection wells subject to division regulation pursuant to the federal Safe Drinking Water Act, and does not manage oil field wastes on the ground in pits, ponds, below-grade tanks or land application units;

(b) a facility permitted pursuant to the New Mexico environmental improvement board rules or WQCC rules;

(c) a temporary pit as defined in 19.15.17 NMAC;

(d) a below-grade tank or pit that receives oil field waste from a single well, permitted pursuant to 19.15.37 NMAC, regardless of the capacity or volume of oil field waste received;

(e) a facility located at an oil and gas production facility and used for temporary storage of oil field waste generated on-site from normal operations, if the facility does not pose a threat to fresh water, public health, safety or the environment;

(f) a remediation conducted in accordance with a division-approved abatement plan pursuant to 19.15.30 NMAC, a corrective action pursuant to 19.15.29 NMAC or a corrective action of a non-reportable release;

(g) a facility operating pursuant to a division emergency order;

(h) a site or facility where the operator is conducting emergency response operations to abate an immediate threat to fresh water, public health, safety or the environment or as the division has specifically directed or approved; or

(i) a facility that receives only exempt oil field waste, receives less than 50 barrels of liquid water per day (averaged over a 30-day period), has a capacity to hold 500 barrels of liquids or less and is permitted pursuant to 19.15.17 NMAC.

T. Definitions beginning with the letter "T".

(1) **"Tank bottoms"** means that accumulation of hydrocarbon material and other substances that settles naturally below oil in tanks and receptacles that are used in oil's handling and storing, and which accumulation contains more than two percent of BS&W; provided, however, that with respect to lease production and for lease storage tanks, a tank bottom shall be limited to that volume of the tank in which it is contained that lies below the bottom of the pipeline outlet to the tank.

(2) **"TDS"** means total dissolved solids.

(3) **"Temporary abandonment" or "temporarily abandoned status"** means the status of a well that is inactive.

(4) **"Top proration unit allowable for gas"** means the maximum number of cubic feet of gas, for the proration period, the division allocates to a gas producing unit in an allocated gas pool.

(5) **"Top proration unit allowable for oil"** means the maximum number of barrels for oil daily for each calendar month the division allocates on a proration unit basis in a pool to non-marginal units. The division shall determine the top proration unit allowable for a pool by multiplying the applicable depth bracket allowable by the market demand percentage factor in effect.

(6) **"TPH"** means total petroleum hydrocarbons.

(7) **"Treating plant"** means a plant constructed for wholly or partially or being used wholly or partially for reclaiming, treating, processing or in any manner making tank bottoms or other waste oil marketable.

(8) **"Tribal lands"** means those lands for which the United States government has a trust responsibility to a native American tribe or a member of a native American tribe. This includes reservations, pueblo land grants, tribal trust lands and individual trust allotments.

(9) **"Tribal leases"** means those leases of minerals or interests in or rights to minerals for which the United States government has a trust responsibility to a native American tribe or a member of a native American tribe.

(10) **"Tribal minerals"** means those minerals for which the United States government has a trust responsibility to a native American tribe or a member of a native American tribe.

(11) **"True vertical depth"** means the difference in elevation between the ground level at the surface location of the well and the deepest point in the well bore.

(12) **"Tubingless completion"** means a well completion in which the production string of casing has an outside diameter of 2.875 inches or less.

(13) **"Tubingless multiple completion"** means completion in which two or more common sources of supply are produced through an equal number of casing strings cemented in a common well bore, each such string of casing having an outside diameter of 2.875 inches or less, with the production from each common source of supply completely segregated by cement.

U. Definitions beginning with the letter "U".

(1) **"Underground source of drinking water"** means an aquifer that supplies water for human consumption or that contains ground water having a TDS concentration of 10,000 mg/l or less and that is not an exempted aquifer.

(2) **"Underproduction"** means the amount of oil or the amount of gas during a proration period by which a given proration unit failed to produce an amount equal to that the division authorizes in the proration schedule.

(3) **"Unit of proration for gas"** consists of such multiples of 40 acres as may be prescribed by division-issued special pool orders.

(4) **"Unit of proration for oil"** consists of one 40-acre tract or such multiples of 40-acre tracts as may be prescribed by division-issued special pool orders.

(5) **"Unorthodox well location"** means a location that does not conform to the spacing requirements division rules establish.

(6) **"Unstable area"** means a location that is susceptible to natural or human-induced events or forces capable of impairing the integrity of some or all a division-approved facility's structural components. Examples of unstable areas are areas of poor foundation conditions, areas susceptible to mass earth movements and karst terrain areas where karst topography is developed because of dissolution of limestone, dolomite or other soluble rock. Characteristic physiographic features of karst terrain include sinkholes, sinking streams, caves, large springs and blind valleys.

(7) **"Upstream facility"** means a facility or operation associated with the exploration, development, production or storage of oil or gas that is not a downstream facility.

V. Definitions beginning with the letter "V". **"Vadose zone"** means unsaturated earth material below the land surface and above ground water, or in between bodies of ground water.

W. Definitions beginning with the letter "W".

(1) **"Waste"**, in addition to its ordinary meaning, includes:

(a) underground waste as those words are generally understood in the oil and gas business, and to embrace the inefficient, excessive or improper use or dissipation of the reservoir energy, including gas energy and water drive, of a pool, and the locating, spacing, drilling, equipping, operating or producing of a well or wells in a manner to reduce or tend to reduce the total quantity of oil or gas ultimately recovered from a pool, and the use of inefficient underground storage of gas;

(b) surface waste as those words are generally understood in the oil and gas business, and to embrace the unnecessary or excessive surface loss or destruction without beneficial use, however caused, of gas of any type or in any form, or oil, or a product thereof, but including the loss or destruction, without beneficial use, resulting from evaporation, seepage, leakage or fire, especially such loss or destruction incident to or resulting from the manner of spacing, equipping, operating or producing a well or wells, or incident to or resulting from the use of inefficient storage or from the production of oil or gas, in excess of the reasonable market demand;

(c) oil production in this state in excess of the reasonable market demand for the oil; the excess production causes or results in waste that the Oil and Gas Act prohibits; reasonable market demand as used herein with respect to oil means the demand for the oil, for reasonable current requirements for current consumption and use within or outside of the state, together with the demand of amounts as are reasonably necessary for building up or maintaining reasonable storage reserves of oil or the products thereof, or both the oil and products;

(d) the non-ratable purchase or taking of oil in this state; the non-ratable taking and purchasing causes or results in waste, as defined in Subparagraphs (a), (b) and (c) of Paragraph (1) of Subsection W of 19.15.2.7 NMAC and causes waste by violating the Oil and Gas Act, Section 70-2-16 NMSA 1978;

(e) the production in this state of gas from a gas well or wells, or from a gas pool, in excess of the reasonable market demand from such source for gas of the type produced or in excess of the capacity of gas transportation facilities for such type of gas; the words "reasonable market demand", as used herein with respect to gas, shall be construed to mean the demand for gas for reasonable current requirements, for current consumption and for use within or outside the state, together with the demand for such amounts as are necessary for building up or maintaining reasonable storage reserves of gas or products thereof, or both the gas and products.

(2) **"Water"** means all water including water situated wholly or partly within or bordering upon the state, whether surface or subsurface, public or private, except private waters that do not combine with other surface or subsurface water.

(3) **"Water contaminant"** means a substance that could alter if released or spilled water's physical, chemical, biological or radiological qualities. Water contaminant does not mean source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954.

(4) **"Watercourse"** means a river, creek, arroyo, canyon, draw or wash or other channel having definite banks and bed with visible evidence of the occasional flow of water.

(5) **"Water pollution"** means introducing or permitting the introduction into water, either directly or indirectly, of one or more water contaminants in such quantity and of such duration as may with reasonable probability injure human health, animal or plant life or property, or to unreasonably interfere with the public welfare or property use.

(6) **"Well blowout"** means a loss of control over and subsequent eruption of a drilling or workover well or the rupture of the casing, casinghead or wellhead of an oil or gas well or injection or disposal well, whether active or inactive, accompanied by the sudden emission of fluids, gaseous or liquid, from the well.

(7) **"Well bore"** means the interior surface of a cased or open hole through which drilling, production or injection operations are conducted.

(8) **"Wellhead protection area"** means the area within 200 horizontal feet of a private, domestic fresh water well or spring used by less than five households for domestic or stock watering purposes or within 1000 horizontal feet of any other fresh water well or spring. Wellhead protection areas does not include areas around water

wells drilled after an existing oil or gas waste storage, treatment or disposal site was established.

(9) "Wetlands" means those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions in New Mexico. This definition does not include constructed wetlands used for wastewater treatment purposes.

(10) "Working interest owner" means the owner of an operating interest under an oil and gas lease who has the exclusive right to exploit the oil and gas minerals. Working interests are cost bearing.

(11) "WQCC" means the New Mexico water quality control commission.

[19.15.2.7 NMAC - Rp, 19.15.1.7 NMAC, 12/1/2008; A, 3/31/2015; A, 6/30/2016; A, 6/26/2018; A, 1/15/2019; A, 10/13/2020; A, 8/23/2022]

19.15.2.8 GENERAL OPERATIONS/WASTE PROHIBITED:

A. The production or handling of oil or gas of any type or in any form or the handling of oil or gas products in a manner, under conditions or in an amount as to constitute or result in waste is prohibited.

B. Operators, contractors, drillers, carriers, gas distributors, service companies, pipe pulling and salvaging contractors, treating plant operators or other persons shall conduct their operations in or related to the drilling, equipping, operating, producing, plugging and abandonment of oil, gas, injection, disposal and storage wells or other facilities in a manner that prevents waste of oil and gas, the contamination of fresh waters and shall not wastefully utilize oil or gas or allow either to leak or escape from a natural reservoir or from wells, tanks, containers, pipe or other storage, conduit or operating equipment.

[19.15.2.8 NMAC - Rp, 19.15.1.13 NMAC, 12/1/2008]

19.15.2.9 ORDERS:

The division or commission may issue orders, including division or commission special pool orders when required and the orders shall prevail against rules if in conflict with them.

[19.15.2.9 NMAC - Rp, 19.15.1.11 NMAC, 12/1/2008]

19.15.2.10 ONLINE APPLICATION AND SUBMITTALS:

A. The division shall establish online application and submittal procedures on the division's website for the electronic filing of all forms, applications and other written documents and information with the division.

B. All applications that require the payment of a fee, as provided in Section 70-2-39 NMSA 1978, shall include the fee payment with the application.

C. A person whose filing is made untimely due to a technical failure of the division's web-based online application process may request an extension of time. Technical failures not originating with the division's process, such as problems with the filer's equipment, software, or telecommunications facility will not constitute a basis for relief.

[19.15.2.10 NMAC - N, 8/23/2022]

19.15.2.11 EMERGENCY ORDERS AND RULES:

A. Notwithstanding other provisions of 19.15.2 NMAC through 19.15.39 NMAC, in the event the division or commission finds an emergency exists that requires an order's or rule's issuance without a hearing, the emergency rule or order shall have the same validity as if the division or commission held a hearing before the division or commission after due notice. The emergency rule or order shall remain in force no longer than 15 days from its effective date.

B. Notwithstanding other provisions of 19.15.2 NMAC through 19.15.39 NMAC, if the division or commission finds an emergency exists, the division or commission may conduct a hearing on an application within less than 30 days after party files an application and the director may set the notice period at the director's discretion.

[19.15.2.11 NMAC - Rp, 19.15.14.1225 NMAC, 12/1/2008]

19.15.2.12 FILING AND NOTIFICATION:

All requirements in the rules:

A. to file a form or application with the division or commission, including documents required to be filed with district offices or the Santa Fe office, shall be accomplished by using the applicable online process on the division's website,

B. to otherwise notify, advise, contact, or report to the division, including to any unit of the division (such as a bureau or office) or any division official (such as the director or a bureau chief), may be accomplished by electronic mail or as otherwise provided on the division's website; the division shall provide contact instructions on the division's website, and

C. to file an original financial assurance instrument with the division as provided in 19.15.8 NMAC shall require delivery to the Santa Fe office unless otherwise directed by the division.

[19.15.2.12 NMAC - Rp, 19.15.15.1304 NMAC, 12/1/2008; 19.15.2.12 NMAC - Rp, 19.15.2.12 NMAC, 8/23/2022]

19.15.2.13 COMPUTATION OF TIME:

In computing a period of time prescribed by the Oil and Gas Act, the rules or an order, the division and commission shall comply with the Uniform Statute and Rule Construction Act, Section 12-2A-7 NMSA 1978.

[19.15.2.13 NMAC - Rp, 19.15.14.1226 NMAC, 12/1/2008; A, 8/23/2022]

19.15.2.14 MEETINGS BY TELECONFERENCE:

Pursuant to Section 10-15-1 NMSA 1978, commission members may participate in commission meetings and hearings by conference telephone or other similar communications equipment when it is otherwise difficult or impossible for members to attend the meeting or hearing in person. Each member participating by conference telephone or other similar communications equipment shall be identified when speaking. Participants shall be able to hear each other at the same time. Members of the public hearing attending the meetings or hearing shall be able to hear commission members who speak during the meeting or hearing.

[19.15.2.14 NMAC - Rp, 19.15.1.20 NMAC, 12/1/2008]

19.15.2.15 AUTHORITY TO COOPERATE WITH OTHER AGENCIES:

The division may from time to time enter into arrangements with state and federal governmental agencies, industry committees and individuals with respect to special projects, services and studies relating to oil and gas conservation and the associated protection of fresh waters.

[19.15.2.15 NMAC - Rp, 19.15.1.17 NMAC, 12/1/2008]

19.15.2.16 DUTIES AND AUTHORITY OF DIVISION PERSONNEL:

Division personnel have the authority and duty to enforce division rules. Upon a showing by an operator that changes are necessary to avoid waste or protect public health or the environment, division personnel may allow minor deviations from approved field operational plans such as drilling and plugging plans. The operator shall file a Form C-103 as a notice of intention showing the change of plans within two business days of the approval.

[19.15.2.16 NMAC - Rp, 19.15.15.1303, 12/1/2008; A, 8/23/2022]

19.15.2.17 ORGANIZATIONAL UNITS:

When necessary to assist in the administration of the Oil and Gas Act, the director may divide the state into districts or other organizational units as appropriate. Upon establishment of, or revisions to, such units, the director shall provide or amend a map on the division's website with the boundaries of the units. Contact information for the units, including any assigned personnel, shall be maintained on the division's website.

[19.15.2.17 NMAC - Rp, 19.15.15.1301 NMAC, 12/1/2008; 19.15.2.17 NMAC - Rp, 19.15.2.17 NMAC, 8/23/2022]

19.15.2.18 RENUMBERING OR REORGANIZATION OF RULES:

When the commission approves reorganization or renumbering of division rules, either through amendment or repeal and replacement, persons with permits, orders or agreements that reference rules that have been reorganized or renumbered shall comply with the rules as reorganized or renumbered.

[19.15.2.18 NMAC - N, 12/1/2008]

PART 3: RULEMAKING

19.15.3.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.3.1 NMAC - Rp, 19.15.14.1 NMAC, 12/1/2008; A, 11/14/2017]

19.15.3.2 SCOPE:

19.15.3 NMAC applies to persons or entities engaged in rulemaking proceedings before the commission.

[19.15.3.2 NMAC - Rp, 19.15.14.2 NMAC, 12/1/2008]

19.15.3.3 STATUTORY AUTHORITY:

19.15.3 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-6 NMSA 1978, which grants the oil conservation division and the oil conservation commission jurisdiction and authority over all matters relating to the conservation of oil and gas, the prevention of waste of oil and gas and of potash as a result of oil and gas operations, the protection of correlative rights and the disposition of wastes resulting from oil and gas operations, and Section 70-2-7 NMSA 1978, which provides that the division shall prescribe by rule its hearing procedures. The 2017 amendments are authorized by

Section 70-2-12.2 NMSA 1978 (2016), which provides for the appeal of commission rules and Laws 2017, Chapter 137, which provides for uniform rulemaking procedures.

[19.15.3.3 NMAC - Rp, 19.15.14.3 NMAC, 12/1/2008; A, 11/14/2017]

19.15.3.4 DURATION:

Permanent.

[19.15.3.4 NMAC - Rp, 19.15.14.4 NMAC, 12/1/2008]

19.15.3.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.3.5 NMAC - Rp, 19.15.14.5 NMAC, 12/1/2008]

19.15.3.6 OBJECTIVE:

To establish procedures for commission rulemaking proceedings.

[19.15.3.6 NMAC - Rp, 19.15.14.6 NMAC, 12/1/2008]

19.15.3.7 DEFINITIONS

See Section 14-4-2 NMSA 1978 (2017) for the definitions of "**proceeding**", "**proposed rule**" and "**rule**". As used in 19.15.3 NMAC:

A. "Party" means the applicant or any person filing a pre-hearing statement.

B. "Technical testimony" means scientific, engineering, economic or other specialized testimony, but does not include legal argument, general comments or statements of policy or position concerning matters at issue in the hearing.

[19.15.3.7 NMAC - N, 12/1/2008; A, 11/14/2017]

19.15.3.8 RULEMAKING INITIATION:

A. Any person may file an application with the commission to adopt, amend or repeal any rule within the commission's jurisdiction. The application shall be in writing and specifically identify the rule the applicant proposes to adopt, amend or repeal. The application shall include the following:

- (1)** a brief summary of the proposed rule's intended effect;
- (2)** a draft of the proposed rule;

- (3) the applicant's name;
- (4) the applicant's address, or the address of its attorney, including an e-mail address if available; and
- (5) a proposed legal notice for publication, which meets the requirements of Subsection B of 19.15.3.9 NMAC.

B. An applicant shall file the application for rulemaking with the commission clerk. The applicant shall file the application by delivering the application to the commission clerk in person or by mail and shall also send an electronic copy of the application to the commission clerk.

C. Upon receiving an application for rule change the commission clerk shall file the application, and shall deliver a copy to all commissioners within 10 business days of the application's receipt. The commission shall determine, at a public meeting at least 15 days and no later than within 60 days of the application's filing, whether to hold a public hearing on the proposed rule. If the commission decides to hold a public hearing on the proposed rule, the commission may set the date for the hearing and may issue orders specifying procedures for the conduct of the hearing in addition to the procedures in 19.15.3 NMAC, including naming a hearing officer, providing additional public notice and providing for a pre-hearing conference. Prior to the hearing, the chair or other hearing officer appointed by the commission shall have the authority to schedule or continue a hearing, hold a pre-hearing conference and rule on any non-dispositive motions.

D. 19.15.3.8 NMAC shall not apply to special pool orders, which the commission or the division may adopt, amend or rescind in adjudicatory proceedings subject to 19.15.4.9 NMAC and 19.15.4.12 NMAC's notice provisions.

[19.15.3.8 NMAC - Rp, 19.15.14.1201 NMAC, 12/1/2008; A, 11/14/2017]

19.15.3.9 RULEMAKING NOTICE:

A. The commission shall distribute a notice of a proposed rulemaking no later than 30 days before the hearing on the rule change by:

- (1) posting the notice on the division website;
- (2) posting the notice on the sunshine portal;
- (3) making the notice available in the division's district offices;
- (4) sending the notice by mail or electronic mail to persons who have made a written request for notice from the commission of announcements addressing the

subject of the rulemaking proceeding and who have provided a mail or an electronic mail address to the commission;

(5) providing the notice to the New Mexico legislative council for distribution to appropriate interim and standing legislative committees; and

(6) publishing the notice in the New Mexico register and in a newspaper of general circulation in the state.

B. Content. The notice shall include:

(1) a summary of the full text of the proposed rule;

(2) a short explanation of the purpose of the proposed rule;

(3) a citation to the specific legal authority authorizing the proposed rule and the adoption of the rule;

(4) information on how a copy of the full text of the proposed rule may be obtained, including an internet link to the full text;

(5) information on how a person may comment on the proposed rule, where comments will be received and when comments are due;

(6) information on where and when a public rule hearing will be held and how a person may participate in the hearing; and

(7) a citation to technical information, if any, that served as a basis for the proposed rule, and information on how the full text of the technical information may be obtained.

[19.15.3.9 NMAC - Rp, 19.15.14.1202, 12/1/2008; A, 11/14/2017]

19.15.3.10 COMMENTS ON RULEMAKING:

A person may submit written or electronic comments on a proposed rule change, and those comments shall be made part of the hearing record. A person shall provide written comments on the proposed rule change to the commission clerk not later than the date of the scheduled hearing, unless the commission chairman or the commission extends the time for filing comments. The commission chairman or the commission may extend the time for filing written or electronic comments by making an announcement at the hearing, or by posting notice on the division's website. A person may review written or electronic comments on a proposed rule change at the division's Santa Fe office. The division shall post copies of written or electronic comments that persons have filed with the commission clerk on the division's website as soon as practicable after they are filed.

[19.15.3.10 NMAC - Rp, 19.15.14.1203 NMAC, 12/1/2008; A, 11/14/2017]

19.15.3.11 RULEMAKING HEARING PARTICIPATION:

A. Non-technical testimony.

(1) A person may testify or make an un-sworn statement at the rulemaking hearing. A person does not need to file prior notification with the commission clerk to present non-technical testimony at the hearing.

(2) A person may also offer exhibits with the testimony, so long as the exhibits are relevant to the proposed rule change and do not unduly repeat the testimony. A person offering exhibits shall file exhibits prior to the scheduled hearing date or submit them at the hearing.

(3) Members of the public who wish to present non-technical testimony should indicate their intent on a sign-in sheet at the hearing.

B. Technical testimony.

(1) A person, including the division, who intends to present technical testimony or cross-examine witnesses at the hearing or to submit modifications to a proposed rule shall, no later than 10 business days before the scheduled hearing date, file six sets of a pre-hearing statement with the commission clerk. Corporations, partnerships, governmental agencies, political subdivisions, unincorporated associations and other collective entities shall appear only through an attorney or through a duly authorized officer or member.

(2) The pre-hearing statement shall include the person or entity's name and its attorney's name; the names of all witnesses the person or entity will call to testify at the hearing; a concise statement of each witnesses' testimony; all technical witnesses' qualifications including a description of the witnesses' education and experience; and the approximate time the person or entity will need to present its testimony; and any proposed modifications to the proposed rule change with reasons for adopting the modifications. The person or entity shall attach to the pre-hearing statement any exhibits it plans to offer as evidence at the hearing. A corporation or other entity not represented by an attorney shall identify in its pre-hearing statement the person who will conduct its presentation and shall attach a sworn and notarized statement from the corporation's or entity's governing body or chief executive officer attesting that it authorizes that person to represent the corporation or entity.

(3) The commission may exclude any expert witnesses or technical exhibits not identified in or attached to the pre-hearing statement unless the testimony or exhibit is offered solely for rebuttal or the person or entity offering the testimony or exhibits demonstrates good cause for omitting the witness or exhibit from its pre-hearing statement.

(4) The division shall post copies of pre-hearing statements filed with the commission clerk on the division's website as soon as practicable after they are filed. A person may review pre-hearing statements filed with the commission clerk at the division's Santa Fe office.

[19.15.3.11 NMAC - Rp, 19.15.14.1204 NMAC, 12/1/2008; A, 11/14/2017]

19.15.3.12 RULEMAKING HEARINGS:

A. Conduct of hearings.

(1) The rules of civil procedure and the rules of evidence shall not apply.

(2) The commission shall conduct the hearing to provide a reasonable opportunity for all persons to be heard without making the hearing unreasonably lengthy or cumbersome and without unnecessary repetition. The hearing shall proceed as follows:

(a) the hearing shall begin with a statement from the commission chairman identifying the hearing's nature and subject matter and explaining the procedures to be followed;

(b) the commission may allow parties to make a brief opening statement;

(c) unless otherwise ordered, the applicant, or in the case of commission initiated rulemaking, commission or division staff, shall present its case first;

(d) the commission chairman shall establish an order for other participants' testimony based upon pre-hearing statements, sign-in sheets, the availability of witnesses who cannot be present for the entire hearing and any other appropriate factor;

(e) the commission may allow parties to make a brief closing statement;

(f) if the hearing continues for more than one day, the commission shall provide an opportunity each day for public comment;

(g) at the close of the hearing, the commission shall determine whether to keep the record open for written submittals including arguments and proposed statements of reasons supporting the proposed commission decision; in considering whether the record will remain open, the commission shall consider the reasons why the material was not presented during the hearing, the significance of material to be submitted and the necessity for a prompt decision; if the commission keeps the record open, the commission chairman shall announce at the hearing's conclusion the subjects on which the commission will allow submittals and the deadline for filing the submittals; and

(h) if the hearing is not completed on the day that it commences, the commission may, by announcement, continue the hearing as necessary without further notice.

B. Testimony and cross-examination.

(1) The commission shall take all testimony under oath or affirmation, which may be accomplished en masse or individually. However, a person may make an unsworn position statement.

(2) The commission shall admit relevant evidence, unless the commission determines that the evidence is incompetent or unduly repetitious.

(3) A person who testifies at the hearing is subject to cross-examination by the commissioners, commission counsel or a party on the subject matter of the person's direct testimony. A person who presents technical testimony may also be cross-examined on matters related to the person's background and qualifications. The commission may limit cross-examination to avoid harassment, intimidation, needless expenditure of time or undue repetition.

C. Exhibits.

(1) A person offering an exhibit shall provide six sets of the exhibit for the commission, copies for each party and five additional copies for others who may attend the hearing.

(2) Exhibits offered at the hearing shall be marked with a designation identifying the person offering the exhibit and shall be numbered sequentially.

[19.15.3.12 NMAC - Rp, 19.15.14.1205 NMAC, 12/1/2008, A, 11/14/2017]

19.15.3.13 COMMISSION DELIBERATION AND ACTION:

A. Deliberation. If a quorum of the commission attended the hearing, and if the hearing agenda indicates that a decision might be made at the hearing's conclusion, the commission may immediately deliberate and decide in open session on the proposed rule change. The commission may otherwise deliberate and act in open session at any commission meeting where such deliberation and possible action is listed on the meeting agenda.

B. If, during deliberations, the commission determines that additional testimony or documentary evidence is necessary for a proper decision on the proposed rule change, the commission may reopen the hearing for additional evidence after notice pursuant to 19.15.3.9 NMAC.

C. Order. The commission shall issue a written order adopting or refusing to adopt the proposed rule change, or adopting the proposed rule change in part, and shall include in the order the reasons for the action taken. The commission's order shall serve as the "concise explanatory statement" required by Section 14-4-5.5 NMSA 1978 (2017).

D. Termination. The commission may terminate a rulemaking at any time by a motion approved at a commission meeting. The commission shall publish a notice of termination in the New Mexico register and provide notice of the termination in the manner provided in 19.15.3.9 NMAC. If the commission does not act within two years after publication of a proposed rule change in the New Mexico register, the rulemaking is automatically terminated unless the commission approves a motion to extend the rulemaking and files a statement of good cause in the record. The commission shall also provide for additional public notice, comment and public hearing.

[19.15.3.13 NMAC - N, 11/14/2017]

19.15.3.14 RECORD:

A. The commission shall maintain a record for each rulemaking proceeding. The record shall be available for public inspection at the commission's Santa Fe office and a copy shall be provided to the sunshine portal.

B. The record shall contain:

(1) a copy of all publications in the New Mexico register relating to the proposed rule;

(2) a copy of any technical information that was relied upon in formulating the final rule;

(3) any official transcript of the public hearing or, if not transcribed, any audio recording or verbatim transcript of the hearing;

(4) a copy of all comments and other material received by the commission during the public comment period and at the public hearing;

(5) a copy of the full text of the initial proposed rule and the full text of the final adopted rule and the order adopted by the commission; and

(6) any corrections made by the state records administrator pursuant to Section 14-4-3 NMSA 1978.

[19.15.3.14 NMAC - N, 11/14/2017]

19.15.3.15 FILING AND APPEAL:

A. Filing. Any rule adopted under 19.15.3 NMAC, along with the commission order, shall be filed in accordance with the State Rules Act. No rule shall be filed until the latter of 20 days after the commission has entered an order or has refused a rehearing application pursuant to Section 70-2-25 NMSA 1978. The end of the 20-day rehearing period, if no rehearing is requested, or the action of the commission on a rehearing application shall constitute the "adoption of the rule" for the purposes of Subsection D of Section 14-4-5 NMSA 1978 (2017). The rule shall be filed with the state records administrator within 15 days after the adoption of the rule.

B. Notice. Upon filing of the rule, the commission shall provide notice of the adoption of the rule to the public. The notice, which shall include the final rule and order or information on how to obtain a copy of the final rule and order, shall be:

- (1) posted on the division's website;
- (2) posted on the sunshine portal;
- (3) made available in the division's district offices;
- (4) sent by mail or electronic mail to persons who have made a written request for notice from the commission of announcements addressing the subject of the rulemaking proceeding and who have provided a mail or electronic mail address to the commission;
- (5) sent by mail or electronic mail to persons who have participated in the rulemaking and who have provided a mail or electronic mail address to the commission; and
- (6) delivered to the New Mexico legislative council for distribution to appropriate interim and standing legislative committees.

C. Corrections. If the state records administrator provides the commission with a record of corrections to the filed rule, as provided in Section 14-4-3 NMSA 1978 (2017), the commission shall within 30 days provide notice of the correction in the same manner as the notice in Subsection A of 19.15.3.9 NMAC.

D. Appeal. Pursuant to Section 70-2-12.2 NMSA 1978, any party of record to the proceeding before the commission or any person adversely affected by a rule adopted under the Oil and Gas Act may appeal to the court of appeals within 30 days after filing of the rule under the State Rules Act.

[19.15.3.15 NMAC - N, 11/14/2017]

PART 4: ADJUDICATION

19.15.4.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.4.1 NMAC - Rp, 19.15.14.1 NMAC, 12/1/2008; A, 6/26/2018]

19.15.4.2 SCOPE:

19.15.4 NMAC applies to persons engaged in adjudicatory proceedings before the division or the commission.

[19.15.4.2 NMAC -Rp, 19.15.14.2 NMAC, 12/1/2008]

19.15.4.3 STATUTORY AUTHORITY:

19.15.4 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-6 NMSA 1978, which grants the oil conservation division and the oil conservation commission jurisdiction and authority over all matters relating to the conservation of oil and gas, the prevention of waste of oil and gas and of potash as a result of oil and gas operations, the protection of correlative rights and the disposition of wastes resulting from oil and gas operations, and Section 70-2-7 NMSA 1978, which provides that the division shall prescribe by rule its hearing procedures.

[19.15.4.3 NMAC - Rp, 19.15.14.3 NMAC, 12/1/2008; A, 6/26/2018]

19.15.4.4 DURATION:

Permanent.

[19.15.4.4 NMAC - Rp, 19.15.14.4 NMAC, 12/1/2008]

19.15.4.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.4.5 NMAC - Rp, 19.15.14.5 NMAC, 12/1/2008]

19.15.4.6 OBJECTIVE:

To establish procedures for adjudicatory hearings before the division or commission.

[19.15.4.6 NMAC - Rp, 19.15.14.6 NMAC, 12/1/2008]

19.15.4.7 DEFINITIONS

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

19.15.4.8 INITIATING AN ADJUDICATORY HEARING:

A. The division, attorney general, an operator or producer or other person with standing may file an application with the division for an adjudicatory hearing. The director, upon receiving a division examiner's recommendation, may dismiss an application for an adjudicatory proceeding upon a showing that the applicant does not have standing. The person applying for the hearing or an attorney representing that person shall sign the application requesting an adjudicatory hearing. The application shall include:

- (1) the applicant's name;
- (2) the applicant's address, or the address of the applicant's attorney, including an e-mail address and fax number if available;
- (3) the name or general description of the common source or sources of supply or the area the order sought affects;
- (4) briefly, the general nature of the order sought;
- (5) a proposed legal notice for publication; and
- (6) any other matter division rules or a division order requires.

B. Applicants for adjudicatory hearings shall file written applications with the division clerk at least 30 days before the application's scheduled hearing date.

[19.15.4.8 NMAC - Rp, 19.15.14.1206 NMAC, 12/1/2008]

19.15.4.9 ADJUDICATORY HEARING NOTICE:

A. The division shall publish notice of an adjudicatory hearing in the name of the "State of New Mexico", signed by the director and bearing the commission's seal, stating:

- (1) the adjudicatory hearing's time and place;
- (2) whether the case is set for hearing before the commission or a division examiner;
- (3) the applicant's name and address, or address of the applicant's attorney, including an e-mail address and fax number if available;
- (4) a case name and number;
- (5) a brief description of the hearing's purpose;

(6) a reasonable identification of the adjudication's subject matter that alerts persons who may be affected if the division grants the application;

(7) if the application seeks to adopt, revoke or amend special pool orders; establish or alter a non-standard unit; permit an unorthodox location or establish or affect a well's or proration unit's allowable, the notice shall specify each pool or common source of supply that the division or commission's granting the application may affect; and

(8) if the application seeks compulsory pooling or statutory unitization, the notice shall contain a legal description of the spacing unit or geographical area the applicant seeks to pool or unitize.

B. The division shall publish notice of each adjudicatory hearing before the commission or a division examiner at least 20 days before the hearing by:

(1) posting notice on the division's website;

(2) delivering notice by ordinary first class United States mail or electronic mail to each person who has requested in writing to be notified of such hearings; and

(3) if before the commission, publishing notice in a newspaper of general circulation in the counties the application affects, or if the application's effect will be statewide, in a newspaper of general circulation in the state.

[19.15.4.9 NMAC - Rp, 19.15.14.1207 NMAC, 12/1/2008]

19.15.4.10 PARTIES TO ADJUDICATORY PROCEEDINGS:

A. The parties to an adjudicatory proceeding shall include:

(1) the applicant;

(2) a person to whom statute, rule or order requires notice (not including those persons to whom 19.15.4.9 NMAC requires distribution of hearing notices, who are not otherwise entitled to notice of the particular application), who has entered an appearance in the case; and

(3) a person who properly intervenes in the case.

B. A person entitled to notice may enter an appearance at any time by filing a written notice of appearance with the division or the commission clerk, as applicable, or, subject to the provisions in Subsection C of 19.15.4.10 NMAC, by oral appearance on the record at the hearing.

C. A party who has not entered an appearance at least one business day prior to the pre-hearing statement filing date provided in Paragraph (1) of Subsection B of 19.15.4.13 NMAC shall not be allowed to present technical evidence at the hearing unless the commission chairman or the division examiner, for good cause, otherwise directs.

D. A party shall be entitled to a continuance of any hearing if it did not receive notice of the hearing at least three business days prior to the date for filing a timely appearance as 19.15.4 NMAC provides.

[19.15.4.10 NMAC - Rp, 19.15.14.1208 NMAC, 12/1/2008]

19.15.4.11 ADJUDICATORY PROCEEDING INTERVENTION:

A. A person with standing with respect to the case's subject matter may intervene by filing a written notice of intervention with the division or commission clerk, as applicable, at least one business day before the date for filing a pre-hearing statement. Notice of intervention shall include:

- (1)** the intervenor's name;
- (2)** the intervenor's address, or the address of the intervenor's attorney, including an e-mail address and fax number if available;
- (3)** the nature of intervenor's interest in the application; and
- (4)** the extent to which the intervenor opposes issuance of the order applicant seeks.

B. The division examiner or commission chairman may, at their discretion, allow late intervenors to participate if the intervenor files a written notice on or after the date provided in Subsection A of 19.15.4.8 NMAC, or by oral appearance on the record at the hearing.

C. The division examiner or the commission chairman may strike a notice of intervention on a party's motion if the intervenor fails to show that the intervenor has standing, unless the intervenor shows that intervenor's participation will contribute substantially to the prevention of waste, protection of correlative rights or protection of public health or the environment.

[19.15.4.11 NMAC - Rp, 19.15.14.1209 NMAC, 12/1/2008]

19.15.4.12 NOTICE REQUIREMENTS FOR SPECIFIC ADJUDICATIONS:

A. Applications for the following adjudicatory hearings before the division or commission, in addition to that 19.15.14.9 NMAC requires, as follows:

(1) Compulsory pooling and statutory unitization.

(a) The applicant shall give notice to each owner of an interest in the mineral estate of any portion of the lands the applicant proposes to be pooled or unitized whose interest is evidenced by a written conveyance document either of record or known to the applicant at the time the applicant filed the application and whose interest has not been voluntarily committed to the area proposed to be pooled or unitized (other than a royalty interest subject to a pooling or unitization clause). An applicant seeking compulsory pooling of a standard horizontal spacing unit need not give notice to affected persons in adjoining spacing units or tracts unless the division so directs.

(b) When the applicant has given notice as required in Subsection A of 19.15.4.9 NMAC, of a compulsory pooling application, and those owners the applicant has located do not oppose the application, the applicant may file under the following alternative procedure. The application shall include the following:

(i) a statement that the applicant expects no opposition including the reasons why;

(ii) a map outlining the spacing unit to be pooled, showing the ownership of each separate tract in the proposed unit and the proposed well's location;

(iii) the names and last known addresses of the interest owners to be pooled and the nature and percent of their interests and an attestation that the applicant has conducted a diligent search of all public records in the county where the well is located and of phone directories, including computer searches;

(iv) the names of the formations and pools to be pooled;

(v) a statement as to whether the pooled unit is for gas or oil production or both;

(vi) written evidence of attempts the applicant made to gain voluntary agreement including but not limited to copies of relevant correspondence;

(vii) proposed overhead charges (combined fixed rates) to be applied during drilling and production operations along with the basis for such charges;

(viii) the location and proposed depth of the well to be drilled on the pooled units; and

(ix) a copy of the AFE the applicant, if appointed operator, will submit to the well's interest owners.

(c) Applicants shall provide with all submittals sworn and notarized statements by those persons who prepared submittals, attesting that the information is correct and complete to the best of their knowledge and belief.

(d) The division shall set unopposed pooling applications for hearing. If the division finds the application complete, the information submitted with the application shall constitute the record in the case, and the division shall issue an order based on the record.

(e) At an interested person's request or upon the division's own initiative, the division shall set a pooling application for full hearing with oral testimony by the applicant.

(2) Unorthodox well locations.

(a) If the proposed well location is unorthodox by being located closer to the spacing unit's outer boundary than 19.15.15 NMAC, 19.15.16 NMAC or applicable special pool orders permit, the applicant shall notify the affected persons in each adjoining spacing unit in the same pool or formation located closer to the unorthodox well location than the minimum distance prescribed by the applicable rule or order. If an adjoining tract is not included in a spacing unit in the same pool or formation in which the well may be completed, then for such tract the applicant shall notify affected persons in the same pool or formation in any adjoining quarter-quarter section (if the proposed well will be completed in a pool where the standard spacing unit is 40 acres), or any adjoining quarter section (if the proposed well will be completed in a pool where the standard spacing unit is greater than 40 acres), that is located closer to the unorthodox well location than the minimum setback distance prescribed by the applicable rule or order.

(b) If the proposed well location is unorthodox by being in a different quarter-quarter section or quarter section than Subsection B of 19.15.15.10 NMAC or special pool orders provide, the applicant shall notify affected persons in all spacing units or tracts in the same pool or formation that adjoin the proposed well's spacing unit.

(3) **Non-standard proration unit.** The applicant shall notify all owners of interests in the mineral estate, including mineral interest owners and royalty owners, to be excluded from the proration unit in the quarter-quarter section for 40-acre pools or formations, the one-half quarter section for 80-acre pools or formations, the quarter section for 160-acre pools or formations, the half section for 320-acre pools or formations or section for 640-acre pools or formations in which the non-standard unit is located and to such other persons as the division requires. This requirement shall not apply to applications for non-standard horizontal spacing units pursuant to Paragraph (5) of Subsection B of 19.15.16.15 NMAC.

(4) Special pool orders regulating or affecting a specific pool.

(a) Except for non-standard proration unit applications, if the application involves changing the amount of acreage to be dedicated to a well, the applicant shall notify:

- (i)** division-designated operators in the pool; and
- (ii)** owners of interests in the mineral estate in existing spacing units with producing wells.

(b) If the application involves other matters, the applicant shall notify:

- (i)** division-designated operators in the pool; and
- (ii)** division-designated operators of wells within the same formation as the pool and within one mile of the pool's outer boundary that have not been assigned to another pool.

(5) Special orders regarding any division-designated potash area. The applicant shall notify potash lessees, oil and gas operators, oil and gas lessees and unleased mineral interest owners within the designated potash area.

(6) Downhole commingling. The applicant shall notify owners of interests in the mineral estate in the spacing unit if ownership is not common for commingled zones within the spacing unit.

(7) Surface disposal of produced water or other fluids. The applicant shall notify surface owners within one-half mile of the site.

(8) Surface commingling. The applicant shall give notice as Subsection C of 19.15.12.10 NMAC prescribes.

(9) Adjudications not listed above. The applicant shall give notice as the division requires.

B. Type and content of notice. The applicant shall send a notice 19.15.4.9 NMAC requires by certified mail, return receipt requested, to the last known address of the person to whom notice is to be given at least 20 days prior to the application's scheduled hearing date and shall include a copy of the application; the hearing's date, time and place; and how protests may be made. When an applicant has been unable to locate persons entitled to notice after exercising reasonable diligence, the applicant shall provide notice by publication, and submit proof of publication at the hearing. Such proof shall consist of a copy of a legal advertisement that was published at least 10 business days before the hearing in a newspaper of general circulation in the county or counties in which the property is located, or if the application's effect is statewide, in a newspaper of general circulation in this state, together with the newspaper's affidavit of publication.

C. At the hearing, the applicant shall make a record, either by testimony or affidavit, that the applicant or its authorized representative has signed, that the applicant has:

- (1) complied with notice provisions of 19.15.4.9 NMAC;
- (2) conducted a good-faith diligent effort to find the correct addresses of persons entitled to notice; and
- (3) given notice at that correct address as 19.15.4.9 NMAC requires; in addition, the record shall contain the name and address of each person to whom notice was sent and, where proof of receipt is available, a copy of the proof.

D. Evidence of failure to provide notice as 19.15.4.9 NMAC requires may, upon proper showing, be considered cause for reopening the case.

E. In the case of an administrative application where the required notice was sent and a timely filed protest was made, the division shall notify the applicant and the protesting party in writing that the case has been set for hearing and the hearing's date, time and place. No further notice is required.

[19.15.4.12 NMAC - Rp, 19.15.14.1210 NMAC, 12/1/2008; A, 6/26/2018]

19.15.4.13 PLEADINGS, COPIES, PRE-HEARING STATEMENTS, EXHIBITS AND MOTIONS FOR CONTINUANCE:

A. Pleadings. Applicants shall file two sets of pleadings and correspondence in cases pending before a division examiner with the division clerk and six sets of pleadings and correspondence in cases pending before the commission with the commission clerk. For cases pending before the commission, the commission clerk shall disseminate copies of pleadings and correspondence to the commission members. The party filing the pleading or correspondence shall at the same time serve a copy of the pleading or correspondence upon each party who has entered an appearance in the case on or prior to the business day immediately preceding the date when the party files the pleading or correspondence with the division or the commission clerk, as applicable. Parties shall accomplish service by hand delivery or transmission by facsimile or electronic mail to a party who has entered an appearance or, if the party is represented, the party's attorney of record. Service upon a party who has not filed a pleading containing a facsimile number or e-mail address may be made by ordinary first class mail. Parties shall be deemed to have made an appearance when they have either sent a letter regarding the case to the division or commission clerk or made an in person appearance at a hearing before the commission or before a division examiner. A written appearance, however, shall not be complete until the appearing party has provided notice to other parties of record. An initial pleading or written entry of appearance a party other than the applicant files shall include the party's address or the address of the party's attorney and an e-mail and facsimile number if available.

B. Pre-hearing statements.

(1) A party to an adjudicatory proceeding who intends to present evidence at the hearing shall file a pre-hearing statement, and serve copies on other parties or, for parties that are represented, their attorneys in the manner Subsection A of 19.15.4.13 NMAC provides, at least four business days in advance of a scheduled hearing before the division or the commission, but in no event later than 5:00 p.m. mountain time, on the Thursday preceding the scheduled hearing date. The statement shall include:

(a) the names of the party and the party's attorney;

(b) a concise statement of the case;

(c) the names of witnesses the party will call to testify at the hearing, and in the case of expert witnesses, their fields of expertise;

(d) the approximate time the party will need to present its case; and

(e) identification of any procedural matters that are to be resolved prior to the hearing.

(2) A party other than the applicant shall include in its pre-hearing statement a statement of the extent to which the party supports or opposes the issuance of the order the applicant seeks and the reasons for such support or opposition. In cases to be heard by the commission, each party shall include copies of exhibits that it proposes to offer in evidence at the hearing with the pre-hearing statement. The commission may exclude witnesses the party did not identify in the pre-hearing statement, or exhibits the party did not file and serve with the pre-hearing statement, unless the party offers such evidence solely for rebuttal or makes a satisfactory showing of good cause for failure to disclose the witness or exhibit.

(3) A pre-hearing statement filed by a corporation or other entity not represented by an attorney shall identify the person who will conduct the party's presentation at the hearing and include a sworn and notarized statement attesting that the corporation's or entity's governing body or chief executive officer authorizes the person to present the corporation or entity in the matter.

(4) For cases pending before the commission, the commission clerk shall disseminate copies of pre-hearing statements and exhibits to the commission members.

C. Motions for continuance. Parties shall file and serve motions for continuance no later than 48 hours prior to time the hearing is set to begin, unless the reasons for requesting a continuance arise after the deadline, in which case the party shall file the motion as expeditiously as possible after becoming aware of the need for a continuance.

[19.15.4.13 NMAC - Rp, 19.15.14.1211 NMAC, 12/1/2008]

19.15.4.14 CONDUCT OF ADJUDICATORY HEARINGS:

A. Testimony. Hearings before the commission or a division examiner shall be conducted without rigid formality. The division or commission shall take or have someone take a transcript of testimony and preserve the transcript as a part of the division's permanent records. A person testifying shall do so under oath. The division examiner or commission shall designate whether or not an interested party's un-sworn comments and observations are relevant and, if relevant, include the comments and observations in the record.

B. Pre-filed testimony. The director may order the parties to file prepared written testimony in advance of the hearing for cases pending before the commission. The witness shall be present at the hearing and shall adopt, under oath, the prepared written testimony, subject to cross-examination and motions to strike unless the witness' presence at hearing is waived upon notice to other parties and without their objection. The parties shall number pages of the prepared written testimony, which shall contain line numbers on the left-hand side.

C. Appearances pro se or through an attorney. Parties may appear and participate in hearings either pro se (on their own behalf) or through an attorney. Corporations, partnerships, governmental entities, political subdivisions, unincorporated associations and other collective entities may appear only through an attorney or through a duly authorized officer or member. Participation in adjudicatory hearings shall be limited to parties, as defined in 19.15.4.10 NMAC, except that a representative of a federal, state or tribal governmental agency or political subdivision may make a statement on the agency's or political subdivision's behalf. The commission or division examiner shall have the discretion to allow other persons present at the hearing to make a relevant statement, but not to present evidence or cross-examine witnesses. A person making a statement at an adjudicatory hearing shall be subject to cross-examination by the parties or their attorneys.

[19.15.4.14 NMAC - Rp, 19.15.14.1212 NMAC, 12/1/2008]

19.15.4.15 CONTINUANCE OF AN ADJUDICATORY HEARING:

A division examiner or the commission chair may continue an adjudicatory hearing before a division examiner or the commission held after due notice to a specified time and place without the necessity of notice of the same being served or published.

[19.15.4.15 NMAC - Rp, 19.15.14.1213 NMAC, 12/1/2008]

19.15.4.16 POWER TO REQUIRE ATTENDANCE OF WITNESSES AND PRODUCTION OF EVIDENCE; PRE-HEARING PROCEDURE FOR ADJUDICATORY HEARINGS:

A. Subpoenas. The commission or its members and the director or the director's authorized representative have statutory power to subpoena witnesses and to require the production of books, papers, records, other tangible things or electronic data in a proceeding before the commission or division. The director or the director's authorized representative shall issue a subpoena for attendance at a hearing upon a party's written request. The director or the director's authorized representative shall, upon a party's request, issue a subpoena for production of books, papers, records, other tangible things or electronic data in advance of the hearing. The director or the division examiner assigned to hear the case may consider pre-hearing motions, such as motions for protection or quashing of subpoenas, prior to the hearing pursuant to Subsection C of 19.15.4.16 NMAC or to reserve such matters for consideration at a hearing on the merits. The commission and director or the director's authorized representative shall issue subpoenas for witness depositions in advance of the hearing only in extraordinary circumstances for good cause shown.

B. Pre-hearing conferences. The division examiner or the director may hold a pre-hearing conference prior to the hearing on the merits in cases pending before the division or the commission, respectively, either upon a party's request or upon the director or a division examiner giving notice. The pre-hearing conference's purpose shall be to narrow issues, eliminate or resolve other preliminary matters and encourage settlement. The director or examiner may issue a pre-hearing order following the pre-hearing conference. The director or division examiner shall either provide or ensure that written or oral notice of a pre-hearing conference is given to the applicant and to other parties who, at the time such conference is scheduled, have filed appearances in the case.

C. Hearings on motions. The director or a division examiner may rule on motions that are necessary or appropriate for disposition prior to a hearing on the merits. If the case is pending before the commission, the director shall rule on a motion; provided that the director may refer a motion for hearing by a division examiner specifically designated for the purpose, who, if the case is a de novo application, shall not have participated in the case prior to the filing of the application for de novo hearing. Prior to ruling on a motion, the director or division examiner shall give written or oral notice to each party who has filed an appearance in the case and who may have an interest in the motion's disposition (except a party who has indicated that it does not oppose the motion), and shall allow interested parties an opportunity, reasonable under the circumstances, to respond to the motion. The director or division examiner may conduct a hearing on a motion, following written or oral notice to interested parties, either at a pre-hearing conference or otherwise. If the commission or division receives oral testimony at a hearing, the commission or division examiner shall ensure that a record is made of the testimony as at other hearings.

[19.15.4.16 NMAC - Rp, 19.15.14.1214 NMAC, 12/1/2008]

19.15.4.17 RULES OF EVIDENCE AND EXHIBITS FOR ADJUDICATORY HEARINGS:

A. Presentation of evidence. Subject to other provisions of 19.15.4.16 NMAC, the commission or division examiner shall afford full opportunity to the parties at an adjudicatory hearing before the commission or division examiner to present evidence and to cross-examine witnesses. The rules of evidence applicable in a trial before a court without a jury shall not control, but division examiners and the commission may use such rules as guidance in conducting adjudicatory hearings. The commission or division examiner may admit relevant evidence, unless it is immaterial, repetitious or otherwise unreliable. The commission or division examiner may take administrative notice of the authenticity of documents copied from the division's files.

B. Parties introducing exhibits at hearings before the commission or a division examiner shall provide a complete set of exhibits for the court reporter, each commissioner or division examiner and other parties of record.

C. A party requesting incorporation of records from a previous hearing at a commission hearing shall include copies of the record for each commissioner.

[19.15.4.17 NMAC - Rp, 19.15.14.1215 NMAC, 12/1/2008]

19.15.4.18 DIVISION EXAMINER'S QUALIFICATIONS, APPOINTMENT AND REFERRAL OF CASES:

The director shall appoint as division examiners division staff who are licensed attorneys, or who have experience in hydrogeology, hydrology, geology, petroleum engineering, environmental engineering or a related field and a college degree in geology, engineering, hydrology or related field. Nothing in 19.15.4.18 NMAC shall prevent a commission member from serving as a division examiner. The director may refer a matter or proceeding to a division examiner for hearing in accordance with 19.15.4 NMAC.

[19.15.4.18 NMAC - Rp, 19.15.14.1216 NMAC, 12/1/2008]

19.15.4.19 DIVISION EXAMINER'S POWER AND AUTHORITY:

The division examiner to whom the director refers a matter under 19.15.4 NMAC shall have full authority to hold hearings on such matter in accordance with 19.15.4 NMAC, subject only to such limitations as the director may order in a particular case. The division examiner shall have the power to perform all acts and take all measures necessary and proper for the hearing's efficient and orderly conduct, including administering oaths to witnesses, receiving testimony and exhibits offered in evidence and ruling upon such objections as may be interposed. The division examiner shall cause a complete record of the proceedings to be made and transcribed and shall certify the record of the proceedings to the director as provided in 19.15.4.21 NMAC.

[19.15.4.19 NMAC - Rp, 19.15.14.1217 NMAC, 12/1/2008]

19.15.4.20 ADJUDICATORY HEARINGS THAT SHALL BE HELD BEFORE THE COMMISSION:

Notwithstanding other provisions of 19.15.4 NMAC, the hearing on a matter shall be held before the commission if:

- A.** it is a hearing pursuant to Section 70-2-13 NMSA 1978; or
- B.** the director directs the commission to hear the matter.

[19.15.4.20 NMAC - Rp, 19.15.14.1218 NMAC, 12/1/2008]

19.15.4.21 REPORT AND RECOMMENDATIONS FROM DIVISION EXAMINER'S HEARING:

Upon conclusion of a hearing before a division examiner, the division examiner shall promptly consider the proceedings in such hearing, and based upon the hearing's record prepare a written report with recommendations for the division's disposition of the matter or proceeding. The division examiner shall draft a proposed order and submit it to the director with the certified record of the hearing.

[19.15.14.1219 NMAC - Rp, 19.15.14.1219 NMAC, 12/1/2008]

19.15.4.22 DISPOSITION OF CASES HEARD BY DIVISION EXAMINER:

After receipt of the division examiner's report, the director shall enter the division's order, which the director may have modified from the division examiner's proposed order, disposing of the matter.

[19.15.4.22 NMAC - Rp, 19.15.14.1220 NMAC, 12/1/2008]

19.15.4.23 HEARING BEFORE COMMISSION AND STAYS OF DIVISION ORDERS:

A. De novo applications. When the division enters an order pursuant to a hearing that a division examiner held, a party of record whom the order adversely affects has the right to have the matter heard de novo before the commission, provided that within 30 days from the date the division issues the order the party files a written application for de novo hearing with the commission clerk. If a party files an application for a de novo hearing, the commission chairman shall set the matter or proceeding for hearing before the commission.

B. Stays of division or commission orders. A party requesting a stay of a division or commission order shall file a motion with the commission clerk and serve copies of the motion upon the other parties who appeared in the case, as Subsection A of 19.15.4.10 NMAC provides. The party shall attach a proposed stay order to the motion.

The director may grant a stay pursuant to a motion for stay or upon the director's own initiative, after according parties who have appeared in the case notice and an opportunity to respond, if the stay is necessary to prevent waste, protect correlative rights, protect public health or the environment or prevent gross negative consequences to an affected party. A director's order staying a commission order shall be effective only until the commission acts on the motion for stay.

[19.15.4.23 NMAC - Rp, 19.15.14.1221 NMAC, 12/1/2008]

19.15.4.24 COPIES OF COMMISSION AND DIVISION ORDERS:

Within 10 business days after the division or commission issues an order in an adjudicatory case, including an order granting or refusing rehearing or order following rehearing, the division or commission clerk shall mail a copy of such order to each party or its attorney of record. For purposes of 19.15.4.24 NMAC only, the parties to a case are the applicant and each person who has entered an appearance in the case, in person or by attorney, either by filing a protest, pleading or notice of appearance with the division or commission clerk or by entering an appearance on the record at a hearing.

[19.15.4.24 NMAC - Rp, 19.15.14.1222 NMAC, 12/1/2008]

19.15.4.25 REHEARINGS:

Within 20 days after entry of a commission order a party of record whom the order adversely affects may file with the commission clerk an application for rehearing on a matter the order determined, setting forth the respect in which the party believes the order is erroneous. The commission shall grant or refuse the application in whole or in part within 10 business days after the party files it, and the commission's failure to act on the application within such period shall be deemed a refusal and a final disposition of such application. In the event the commission grants the rehearing, the commission may enter a new order after rehearing as the circumstances may require.

[19.15.14.25 NMAC - Rp, 19.15.14.1223 NMAC, 12/1/2008]

19.15.4.26 EX PARTE COMMUNICATIONS:

A. In an adjudicatory proceeding, except for filed pleadings, at no time after a party files an application for hearing shall a party, interested participant or participant's representative advocate a position with respect to the issues the application involves to a commissioner or the division examiner appointed to hear the case unless the other parties of record to the proceedings have an opportunity to be present.

B. The prohibition in Subsection A of 19.15.4.26 NMAC, above, does not apply to those applications that the applicant believes are unopposed. However, in the event that

a party files an objection in a case previously believed to be unopposed, the prohibition in Subsection A of 19.15.4.26 NMAC, above, is immediately applicable.

C. This provision does not prohibit communications between the division's attorney or other division staff and the director that are essential to a case's management.

[19.15.4.26 NMAC - Rp, 19.15.14.1224 NMAC, 12/1/2008]

PART 5: ENFORCEMENT AND COMPLIANCE

19.15.5.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.5.1 NMAC - N, 12/1/2008]

19.15.5.2 SCOPE:

19.15.5 NMAC applies to persons engaged in oil and gas development and production within New Mexico.

[19.15.5.2 NMAC - N, 12/1/2008]

19.15.5.3 STATUTORY AUTHORITY:

19.15.5 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-6, Section 70-2-11, Section 70-2-12, Section 70-2-31 and Section 70-2-31.1 NMSA 1978.

[19.15.5.3 NMAC – N, 12/1/2008, A, 2/25/2020]

19.15.5.4 DURATION:

Permanent.

[19.15.5.4 NMAC - N, 12/1/2008]

19.15.5.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.5.5 NMAC - N, 12/1/2008]

19.15.5.6 OBJECTIVE:

To establish a process to ensure compliance with the Oil and Gas Act, division rules and division and commission orders.

[19.15.5.6 NMAC - N, 12/1/2008]

19.15.5.7 DEFINITIONS

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

19.15.5.8 ENFORCEMENT OF STATUTES AND RULES:

The division is charged with the duty and obligation of enforcing the state's rules and statutes relating to the conservation of oil and gas, including the prevention of waste and the protection of correlative rights, and the protection of public health and the environment. An owner or operator shall obtain information pertaining to the regulation of oil and gas before beginning operations.

[19.15.5.8 NMAC - Rp, 19.15.1.12 NMAC, 12/1/2008, A, 2/25/2020]

19.15.5.9 COMPLIANCE:

A. An operator is in compliance with Subsection A of 19.15.5.9 NMAC if the operator:

- (1)** currently meets the financial assurance requirements of 19.15.8 NMAC;
- (2)** is not subject to a division or commission order, issued after notice and hearing, finding the operator to be in violation of an order requiring corrective action;
- (3)** does not have a penalty assessment that is unpaid more than 30 days after issuance of the order assessing the penalty; and
- (4)** has no more than the following number of wells out of compliance with 19.15.25.8 NMAC that are not subject to an agreed compliance or final order setting a schedule for bringing the wells into compliance with 19.15.25.8 NMAC and imposing sanctions if the schedule is not met:
 - (a)** two wells or fifty percent of the wells the operator operates, whichever is less, if the operator operates 100 wells or less;
 - (b)** five wells if the operator operates between 101 and 500 wells;
 - (c)** seven wells if the operator operates between 501 and 1000 wells; and
 - (d)** 10 wells if the operator operates more than 1000 wells.

B. Inactive wells.

(1) The division shall make available on its website, and update daily, an "inactive well list" listing each well, by operator, that according to division records:

(a) shows no production or injection for past 15 months;

(b) does not have its well bore plugged in accordance with 19.15.25.9 NMAC through 19.15.25.11 NMAC;

(c) is not in approved temporary abandonment in accordance with 19.15.25.12 NMAC through 19.15.25.14 NMAC; and

(d) is not subject to an agreed compliance or final order setting a schedule for bringing the well into compliance with 19.15.25.8 NMAC.

(2) A well inactive for more than 15 months creates a rebuttable presumption that the well is out of compliance with 19.15.25.8 NMAC.

C. Financial assurance. The division shall make available on its website and update weekly the status of operators' financial assurance that 19.15.8 NMAC requires, according to division records.

[19.15.5.9 NMAC - Rp, 19.15.1.40 NMAC, 12/1/2008; A, 11/30/2016, A, 2/25/2020]

19.15.5.10 ENFORCEMENT:

A. General. Whenever the division determines that a person violated or is violating the Oil and Gas Act or a provision of any rule, order, permit or authorization issued pursuant to the Oil and Gas Act, the division may seek a sanction by:

(1) issuing a temporary cessation order if it determines that the alleged violation is causing or will cause an imminent danger to public health or safety or a significant imminent environmental harm. The temporary cessation order shall remain in place until the earlier of when the division determines that the alleged violation is abated or 30 days, unless a hearing is held before the division and a new order is issued;

(2) issuing a notice of violation; or

(3) commencing a civil action in district court.

B. Sanctions. The division may seek one or more of the following sanctions:

(1) a civil penalty;

(2) modification, suspension, cancellation or termination of a permit or authorization;

- (3) plugging and abandonment of a well;
- (4) remediation and restoration of a well location and associated facilities, including the removal of surface and subsurface equipment and other materials;
- (5) remediation and restoration of a location affected by a spill or release;
- (6) forfeiture of financial assurance;
- (7) shutting in a well or wells; and
- (8) any other remedy authorized by law.

C. Notice of violation.

(1) A notice of violation issued by the division shall state with reasonable specificity:

- (a) the identity of the alleged violator;
- (b) the nature and factual and legal basis of the alleged violation, including the provision of the Oil and Gas Act or rule, order, permit or authorization allegedly violated;
- (c) whether compliance is required immediately or within a specified time period;
- (d) the sanction(s) available for the alleged violation, the sanction(s) proposed by the division, and a statement that the division will take into consideration the violators good faith efforts to comply with the applicable requirements;
- (e) the availability of a process for informal review and resolution of the alleged violation, and the procedure to initiate the informal review process, including the contact information of the appropriate division employee;
- (f) a statement that if the notice of violation is not informally resolved within 30 days of service, the division will hold a hearing, but that the hearing shall not prohibit the parties from negotiating and settling the notice of violation at any time; and
- (g) the date of the hearing, which shall be no later than 90 days after the date of the notice of violation.

(2) The division shall serve the notice of violation on the alleged violator by certified mail, and may provide the notice of violation by electronic mail if possible.

(3) If during the informal review the division and the alleged violator agree to resolve the alleged violation, they shall incorporate their agreement into a stipulated final order signed by both parties. The stipulated final order shall state that the alleged violator admits the division's jurisdiction to file the notice of violation, consents to the specified relief, including the civil penalty, if any, and waives the alleged violator's right of review by the commission.

(4) If the division and the alleged violator fail to enter a stipulated final order within 30 days of service, the division shall hold a hearing at the division's principal office.

D. Civil penalties. A civil penalty assessed by the division shall account for the seriousness of the violation, good faith efforts to comply with the applicable requirement, history of noncompliance under the Oil and Gas Act and other relevant factors. The civil penalty assessed by the division shall not exceed \$2,500 per day of noncompliance for each alleged violation, unless the alleged violation presents a risk either to the health or safety of the public or of causing significant environmental harm, or unless the noncompliance continues beyond the time specified in the notice of violation or stipulated final order, whereupon the civil penalty may not exceed \$10,000 per day of noncompliance for each alleged violation, provided that the civil penalty assessed by the division for an alleged violation shall not exceed \$200,000.

E. Adjudicatory procedures. These adjudicatory procedures shall apply to hearings on temporary cessation orders and notices of violation before the division, and the provisions of 19.15.4 NMAC shall not apply.

(1) General provisions.

(a) Designation of parties. The parties shall be the division and the person served with a notice of violation or order, referred to herein as "respondent".

(b) Representation. Respondent may appear and participate in a hearing either pro se or through counsel, provided that a collective entity, including a corporation, partnership, unincorporated association, political subdivision or governmental agency shall appear only through counsel or a duly authorized officer or member.

(c) Rule applicability. In the absence of a specific provision in this section, the hearing examiner may apply the New Mexico rules of civil procedure and evidence.

(d) Computation of time. In computing any period of time under 19.15.5.10 NMAC the day of the event from which the designated period begins to run shall not be included, and the last day of the computed period shall be included, unless it is a Saturday, Sunday or legal state holiday, in which case the time is extended until the next day which is not a Saturday, Sunday or legal state holiday. Whenever a party must

act within a prescribed period after service, and service is by first class mail only, three days is added to the prescribed period.

(e) Extensions of time. The hearing examiner may grant an extension of time to file a document or continue a hearing upon timely motion upon consent of the parties, or for good cause shown after consideration of prejudice to the other party and undue delay to the hearing.

(f) Filing of documents. A party shall file the original of each document and serve a copy on the other party, accompanied by a certificate of service identifying the method and address used to complete service.

(g) Service of documents. A party shall serve each document on the other party or its counsel, as applicable, by personal service or first class mail, or by electronic mail if the parties agree.

(h) Form of documents. Unless otherwise ordered, all documents, except exhibits, shall be on 8 1/2 x 11-inch white paper, shall contain the caption of the notice of violation or temporary cessation order on the first page and shall be signed by the party or its counsel, as applicable.

(2) Pre-hearing procedures.

(a) Docketing. At the expiration of the 30 day period for informal resolution of a notice of violation, when a party appeals a final order under Subsection E of 19.15.5.10 NMAC, or when the division gives notice that it intends to extend a temporary cessation order, the division shall docket the notice of violation or order for hearing, identify the factual basis for the alleged violation and proposed sanction(s), and serve a notice of docketing on respondent.

(b) Answer. No later than 10 days after service of the notice of docketing, respondent shall file an answer stating its objection, if any, and the factual and legal basis for such objection, to each alleged violation and proposed sanction in the notice of violation or order.

(c) Hearing examiner. The hearing examiner shall have the authority to take all measures necessary to conduct a fair, impartial and efficient adjudication of issues, and to maintain order and avoid undue delay, including the authority to conduct pre-hearing conferences and hearings, rule on procedural and evidentiary motions, govern the examination of witnesses and the admission of evidence, issue orders and prepare a recommended decision. After the division issues the notice of violation, the hearing examiner shall not discuss ex parte the merits of the proceeding with the division or the respondent.

(d) Pre-hearing conference. The hearing examiner may hold a pre-hearing conference to narrow the issues, eliminate or resolve preliminary matters and

encourage settlement, and may issue a pre-hearing order on procedural and evidentiary matters, including a schedule for the filing of motions and testimony, stipulations regarding alleged violations and requested relief, including proposed civil penalties or elements thereof, and any other matter necessary for the efficient conduct of the hearing.

(e) Pre-hearing statements. No later than seven calendar days before the hearing, a party who intends to present evidence at the hearing shall file and serve a statement that contains the following information:

(i) the name, address, employment and qualifications, including education and work history, of each witness;

(ii) a statement identifying the opinions and factual assertions supporting each witness' testimony;

(iii) the exhibits and other evidence to be presented by each witness;
and

(iv) procedural matters that are to be resolved prior to the hearing.

(f) Enforcement. The hearing examiner may enforce the requirements of 19.15.5.10 NMAC by any appropriate means, including the exclusion of testimony, exhibits and other evidence.

(g) Motions.

(i) **General.** All motions, except motions made orally during the hearing, shall be in writing, specify the grounds for the motion, state the relief sought, indicate whether the motion is opposed or unopposed and be served on the other party.

(ii) **Unopposed motions.** An unopposed motion shall state that concurrence of the other party was obtained and shall be accompanied by a proposed order approved by the parties.

(iii) **Opposed motions.** An opposed motion shall state either that concurrence was sought and not obtained, or the reason that concurrence was not sought.

(iv) **Response.** No later than 10 days after service of an opposed motion, the opposing party may file a response. Failure to file a response shall be deemed a waiver of any objection to the granting of the motion.

(v) **Reply.** No later than 10 days after service of a response to an opposed motion, the moving party may file a reply.

(vi) Decision. The hearing examiner shall decide all motions without a hearing, unless otherwise ordered by the hearing examiner sua sponte or upon written request of a party.

(h) Shortening Deadlines. On the written request of the alleged violator showing good cause, the hearing examiner may shorten the deadlines specified in Paragraph (2) of Subsection E of 19.15.10 NMAC to conduct the hearing on the division's application for a temporary cessation order as expeditiously as possible. If the division opposes the request to shorten deadlines, the procedures for opposed motions set forth in Subparagraph (g) of Paragraph (2) of Subsection G of 19.15.5.10 NMAC shall not apply and the hearing examiner shall decide the request, with or without hearing, as quickly as practicable.

(3) Hearing procedures.

(a) General. The hearing examiner shall admit all evidence, unless he or she determines that the evidence is irrelevant, immaterial, unduly repetitious or otherwise unreliable or of little probative value. Evidence relating to settlement that would be excluded by the New Mexico rules of evidence is not admissible.

(b) Witness examination. Witnesses shall be examined orally and under oath or affirmation, provided that the parties may stipulate to the admission of the testimony of a witness, or part thereof. Parties shall have the right to cross-examine a witness, provided that the hearing examiner may limit cross-examination that is unduly repetitious, harassing or beyond the scope of the direct testimony.

(c) Exhibits. A party shall label each exhibit used during the hearing or offered into evidence with a designation identifying the party, the witness using or offering the exhibit and a serial number.

(d) Burden of persuasion. The division has the burden of going forward with the evidence and of proving by a preponderance of the evidence the facts relied upon to show the alleged violation occurred and that the proposed civil penalty is appropriate. Following the establishment of a prima facie case, respondent shall have the burden of going forward with any adverse evidence or defense to the allegations.

(4) Post-hearing procedures.

(a) Transcript. The hearing shall be transcribed verbatim. Respondent may order a copy of the transcript from the reporter at its own expense.

(b) Recommended decision. The hearing examiner shall prepare a recommended decision for review by the director.

(c) Final order. The director shall file a final order addressing the material issues of fact and law and may assess a sanction for each alleged violation, which shall be served on the division and the respondent.

F. Commission review. No later than 30 days after the director serves the final order, a party may file a notice of appeal with the commission and shall serve the notice of appeal on the other party. The commission shall schedule a hearing on the appeal and notify the parties of the date and time of the hearing. The commission shall conduct a de novo review, provided however, that the parties may stipulate to the issues to be heard and to the admission of all or part of the record before the division. The commission shall conduct the hearing in accordance with the adjudicatory procedures in Paragraph (1), Subparagraphs (c) through (g) of Paragraph (2), Paragraph (3) and Subparagraph (a) of Paragraph (4) of Subsection E of 19.15.5.10 NMAC.

G. Rehearings. A party may file an application for rehearing with the commission pursuant to Section 70-2-25 NMSA 1978.

H. Payment of civil penalty. Respondent shall pay the full amount of the civil penalty assessed in the final order (i) no later than 30 days after the director serves the final order, or (ii) if respondent files a notice of appeal to the commission or the district court pursuant to Section 70-2-25 NMSA 1978, no later than 30 days after the commission or the district court files a final order or the appeal is withdrawn.

I. Resolution after commencement of hearing. If the parties agree to resolve a notice of violation at any time after the commencement of a hearing, they shall file a stipulated final order signed by both parties. The stipulated final order shall state that respondent admits the division's jurisdiction to file the notice of violation, consents to the specified relief, including the civil penalty, if any, and waives respondent's right of review by the commission or the court, as applicable.

J. Publication. On or about October 1 of each year, the division shall publish a list identifying the temporary cessation orders and notices of violation issued during the preceding year, along with the civil penalty paid, if any.

K. Reservation. Nothing in 19.15.5.10 NMAC precludes the division from bringing any other action and seeking any relief allowed by the Oil and Gas Act.

[19.15.5.10 NMAC – Rp, 19.15.5.10 NMAC, 2/25/2020]

19.15.5.11 ENFORCEABILITY OF PERMITS AND ADMINISTRATIVE ORDERS:

A person who conducts an activity pursuant to a permit, administrative order or other written authorization or approval from the division shall comply with every term, condition and provision of the permit, administrative order, authorization or approval.

[19.15.5.11 NMAC - Rp, 19.15.1.41 NMAC, 12/1/2008]

PART 6: TAX INCENTIVES

19.15.6.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.6.1 NMAC - N, 12/1/08]

19.15.6.2 SCOPE:

19.15.6 NMAC applies to persons or entities engaged in oil and gas development and production within New Mexico.

[19.15.6.2 NMAC - N, 12/1/08]

19.15.6.3 STATUTORY AUTHORITY:

19.15.6 NMAC is adopted pursuant to NMSA 1978, Section 7-29A-1 *et seq.* and Section 7-29B-1 *et seq.*

[19.15.6.3 NMAC - N, 12/1/08]

19.15.6.4 DURATION:

Permanent.

[19.15.6.4 NMAC - N, 12/1/08]

19.15.6.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.6.5 NMAC - N, 12/1/08]

19.15.6.6 OBJECTIVE:

To establish procedures for the certification of eligibility for the enhanced oil recovery project tax incentive, the production restoration project tax incentive, the well workover project tax incentive and the stripper well tax incentive.

[19.15.6.6 NMAC - N, 12/1/08]

19.15.6.7 DEFINITIONS

A. "Average daily production" means the number derived by dividing the total volume of oil or gas production from the stripper well property reported to the division

during a calendar year by the sum of the number of days each eligible well within the property produced or injected during that calendar year.

B. "Eligible well" means an oil or gas well that produces or an injection well that injects and is integral to production, for any period of time during the preceding calendar year.

C. "Expansion or expanded use" means a significant change or modification as the division determines in:

(1) the technology or process used for the displacement of oil from an oil well or division-designated pool; or

(2) the expansion, extension or increase in size of the geologic area or adjacent geologic area that could reasonably be determined to represent a new or unique area of activity.

D. "Operator":

(1) for purposes of 19.15.6.8 NMAC, means the person responsible for an EOR project's actual physical operation; and

(2) for purposes of 19.15.6.9 NMAC, means the person responsible for an oil or gas well's actual physical operation.

E. "Positive production response" means that the rate of oil production from the wells or pools an EOR project affects is greater than the rate that would have occurred without the project.

F. "Project area" means a pool or a portion of a pool that EOR operations directly affect.

G. "Primary recovery" means the displacement of oil from an oil well or division-designated pool into the well bore by means of the natural pressure of the oil well or pool, including artificial lift.

H. "Production restoration incentive tax exemption" means the severance tax exemption for natural gas or oil produced from an approved production restoration project found in NMSA 1978, Section 7-29-4.

I. "Production restoration project" means returning to production a gas or oil well, including an injection well that has previously produced, which had no more than 30 days of production in a period of 24 consecutive months beginning on or after January 1, 1993 the division has approved and certified.

J. "Recovered oil tax rate" means the tax rate set forth in NMSA 1978, Section 7-29-4, on oil produced from an EOR project.

K. "Routine maintenance" means repair or like-for-like replacement of downhole equipment or other procedure an operator performs to maintain the well's current production.

L. "Secondary recovery project" means an EOR project that:

(1) occurs subsequent to the completion of primary recovery and is not a tertiary recovery project;

(2) involves the application, in accordance with sound engineering principles of carbon dioxide miscible fluid displacement, pressure maintenance, water flooding or other division accepted and approved secondary recovery method that can reasonably be expected to result in an increase, determined in light of the facts and circumstances, in the amount of oil that may ultimately be recovered; and

(3) encompasses a pool or portion of a pool the boundaries of which can be adequately defined and controlled.

M. "Stripper well property" means an oil or gas producing property that the taxation and revenue department assigns a single production unit number (PUN) and:

(1) if an oil producing property, produced a daily average of less than 10 barrels of oil per eligible well per day for the preceding calendar year;

(2) if a gas producing property, produced a daily average of less than 60,000 cubic feet of gas per eligible well per day during the preceding calendar year; or

(3) if a property with wells that produce both oil and gas, produced a daily average of less than 10 barrels of oil per eligible well per day for the preceding calendar year, as determined by converting the volume of gas the well produced to barrels of oil by using a ratio of 6000 cubic feet to one barrel of oil.

N. "Stripper well incentive tax rates" means the tax rates set for stripper well properties by NMSA 1978, Sections 7-29-4 and 7-31-4.

O. "Termination" means the operator's discontinuance of an EOR project.

P. "Tertiary recovery project" means an EOR project that:

(1) occurs subsequent to a secondary recovery project's completion;

(2) involves the application, in accordance with sound engineering principles, of carbon dioxide miscible fluid displacement, pressure maintenance, water flooding or

other division accepted and approved tertiary recovery method that can reasonably be expected to result in an increase, determined in light of the facts and circumstances, in the amount of oil that may ultimately be recovered; and

(3) encompasses a pool or portion of a pool the boundaries of which can be adequately defined and controlled.

Q. "Well" means a well bore with single or multiple completions, including all horizons and producing formations from the surface to total depth.

R. "Well workover incentive tax rate" means the tax rate NMSA 1978, Section 7-29-4 imposes on gas or oil produced from a well workover project.

S. "Well workover project" means a procedure the operator of a gas or oil well undertakes that is intended to increase production from the well and that the division has approved and certified.

T. "Workover" means a procedure the operator undertakes that is intended to increase production but is not routine maintenance and includes:

(1) re-entry into the well to drill deeper, to sidetrack to a different location, to recompleat for production or to restore production from a zone that has been temporarily abandoned;

(2) recompleat by re-perforation of a zone from which gas or oil has been produced or by perforation of a different zone;

(3) repair or replacement of faulty or damaged casing or related downhole equipment;

(4) fracturing, acidizing or installing compression equipment; or

(5) squeezing, cementing or installing equipment necessary for removal of excessive water, brine or condensate from the well bore in order to establish, continue or increase production from the well.

[19.15.6.7 NMAC - Rp, 19.15.1.30 NMAC, 19.15.1.31 NMAC; 19.15.1.32 NMAC, and 19.15.1.33 NMAC, 12/1/08]

19.15.6.8 ENHANCED OIL RECOVERY PROJECT TAX INCENTIVE:

A. The division shall accept applications for qualification of EOR projects or expansions of EOR projects for the recovered oil tax rate pursuant to the New Mexico Enhanced Oil Recovery Act, NMSA 1978, Sections 7-29A-1 through 7-29A-5.

B. 19.15.6.8 NMAC applies to:

- (1)** EOR projects;
- (2)** expansions of existing EOR projects;
- (3)** the expanded use of enhanced oil recovery technology in existing EOR projects; and
- (4)** the change from a secondary recovery project to a tertiary recovery project.

C. To be eligible for the tax rate the operator shall apply for and receive division approval. No project or expansion the division approved prior to March 6, 1992 qualifies.

D. Application.

(1) The operator shall file applications with the division's Santa Fe office. The operator shall also file one copy of the application and attachments with the appropriate division district office.

(2) The operator or its authorized representative having knowledge of the facts in the application shall execute and certify an application, which shall contain:

- (a)** the operator's name and address;
- (b)** the project area's description including:
 - (i)** a plat outlining the project area;
 - (ii)** a description of the project area by section, township and range; total acres; and
 - (iii)** the name of the subject pool and formation;
- (c)** the status of operations in the project area:
 - (i)** if unitized, the unit name and the date and number of the division order approving the unit plan of operation;
 - (ii)** if an application for approval of a unit plan has been made, the date the application was filed with the division; and
 - (iii)** if not unitized, identification of each lease in the project area by lessor, lessee and legal description;
- (d)** the method of recovery to be used:

- (i) identification of the fluids to be injected;
- (ii) if the division has approved the project, the date and number of the division order; and
- (iii) if the division has not approved the project, the date the application for approval was filed with the division on form C-108;

(e) the project description:

- (i) a list of producing wells;
- (ii) a list of injection wells;
- (iii) the capital costs of additional facilities;
- (iv) the total project cost;
- (v) the estimated total value of the additional production that will be recovered as a result of the project;
- (vi) the anticipated date for commencement of injection;
- (vii) the type of fluid to be injected and the anticipated volumes; and if the application is made for an expansion of an existing project, an explanation of what changes in technology the operator will use or what additional geographic area the operator will add to the project area; and

(f) production data including graphs, charts and other supporting data showing the production history and production forecast of oil, gas, casinghead gas and water from the project area.

E. Approval and certification.

(1) Project approval. The division shall approve an EOR project and designate the project area for the recovered oil tax rate when the operator proves that:

(a) the application of the proposed enhanced recovery techniques to the reservoir should result in an increase in the amount of oil that may be ultimately recovered;

(b) the project area has been so depleted that it is prudent to apply enhanced recovery techniques to maximize the ultimate recovery of oil; and

(c) the application is economically and technically reasonable and has not been prematurely filed.

(2) Positive production response certification.

(a) For the recovered oil tax rate to apply to oil produced from an approved qualified EOR project, the operator shall demonstrate a positive production response to the division and file an application for certification of a positive production response with the division's Santa Fe office, which shall include:

- (i)** a copy of the division's approval of the EOR project or expansion;
- (ii)** a plat of the affected area showing all injection and producing wells with completion dates; and
- (iii)** production graphs and supporting data demonstrating a positive production response and showing the volumes of water or other substances that have been injected on the lease or unit since initiation of the EOR project.

(b) The director may administratively approve an application and certify a positive production response or, at the director's discretion or at the applicant's request, may set the application for hearing.

(c) The division shall certify that a positive production response occurred and notify the secretary of taxation and revenue; this certification and notice shall set forth the date the certification was made and the date the positive production response occurred provided however:

(i) for a secondary recovery project, the application for certification of a positive production response shall occur not later than five years from the date the division issued the certification of approval for the EOR project or expansion; and

(ii) for a tertiary recovery project, the application for certification of a positive production response must occur not later than seven years from the date the division issues the certification of approval for the EOR project or expansion.

F. Reporting requirements.

(1) The operator of an approved EOR project shall report annually on the project's status and confirm that the project is still a viable EOR project as approved. The operator shall file the report for the year ending May 31 with the division's Santa Fe office. The report shall contain:

- (a)** the date and number of the division's certification order for the project;
- (b)** production graphs showing oil, gas and water production;
- (c)** a graph showing the volumes of fluid injected and the average injection pressures; and

(d) additional data the director deems necessary for continued approval.

(2) The director may set for hearing the continued approval of an EOR project.

G. Termination. When the operator terminates active operation of an EOR project or expansion, the operator shall notify the division and the secretary of taxation and revenue in writing not later than the 30th day after the EOR project's termination or expansion.

[19.15.6.8 NMAC - Rp, 19.15.1.30 NMAC, 12/1/08]

19.15.6.9 PRODUCTION RESTORATION PROJECT TAX INCENTIVE:

A. The division shall accept applications for qualification of production restoration projects for the production restoration incentive tax exemption pursuant to the Natural Gas and Crude Oil Production Incentive Act, NMSA 1978, Sections 7-29B-1 through 7-29B-6.

B. 19.15.6.9 NMAC applies to gas or oil wells division records show had 30 days or less production in a period of 24 consecutive months beginning on or after January 1, 1993 upon which the operator commenced operations to restore production after June 16, 1995.

C. To be eligible for the exemption, the operator shall apply for and receive division approval. No production restoration project commenced prior to June 16, 1995 qualifies.

D. Applications.

(1) An operator shall file an application with the division within 12 months of the production restoration.

(2) The operator shall file the application on behalf of the project's interest owners.

(3) The operator shall file the application on form C-139 using the division's web-based online application.

E. Approval, certification, notification and hearing.

(1) Project approval and certification.

(a) The division shall approve a project and issue a certification to the operator designating the gas or oil well as a production restoration project when the operator proves that:

(i) after June 16, 1995, the operator has commenced a process to return the well to production; and

(ii) division records show the well had 30 days or less of production in any period of 24 consecutive months beginning on or after January 1, 1993.

(b) The exemption shall apply beginning the first day of the month following the date the operator returned the well to production as certified by the division.

(2) Notification to the secretary of taxation and revenue. The division shall notify the secretary of taxation and revenue of the approval. This notice shall identify the gas or oil well as a production restoration project and certify the date production was restored.

(3) Hearing. The division shall consider applications without a hearing. If the appropriate division district office denies an application, the division upon the applicant's request shall set the application for hearing. An application the appropriate division district office has not acted upon within 30 days from the date it is filed shall be deemed denied.

[19.15.6.9 NMAC - Rp, 19.15.1.31 NMAC, 12/1/08]

19.15.6.10 WELL WORKOVER PROJECT TAX INCENTIVE:

A. The division shall accept applications for qualification of well workover projects for the well workover incentive tax rate pursuant to the Natural Gas and Crude Oil Production Incentive Act, NMSA 1978, Sections 7-29B-1 through 7-29B-6.

B. 19.15.6.10 NMAC applies to a gas or oil well upon which the operator has commenced a workover after June 16, 1995 that is intended to increase the well's production.

C. To be eligible for the incentive tax rate, the operator shall apply for and receive division approval. No well workover project the operator commences prior to June 16, 1995 qualifies.

D. Application.

(1) The operator shall file the application with the division within 12 months of the workover's completion.

(2) The operator shall file on behalf of the project's interest owners.

(3) The operator shall retain the data used in the application in its files during the period of time the well qualifies for and receives the well workover incentive tax rate.

(4) The operator shall file the application on form C-140 using the division's web-based online application.

E. Approval, certification, notification and hearing.

(1) Project approval and certification.

(a) The division shall approve a workover and issue a certification of approval to the operator designating the gas or oil well as a well workover project when the operator proves that:

(i) the operator has undertaken approved workover procedures on the well that are intended to increase production; and

(ii) the production curve or data tabulation from production data reflects a positive production increase from the workover.

(b) The incentive tax rate shall apply beginning the first day of the month following the date the operator completed the workover as certified by the division.

(2) Notification to the secretary of taxation and revenue. The division shall notify the secretary of taxation and revenue of the approval by identifying the gas or oil well as a well workover project and certifying the date the operator completed the project.

(3) Hearings and requests for additional information.

(a) The division shall consider applications without a hearing. If the appropriate division district office denies an application, the division upon the applicant's request shall set the application for hearing. An application the division district office does not act on within 30 days from the date it is filed is deemed denied.

(b) The division may request additional information from the operator to support an application. When the division requests additional information, the 30-day approval period shall begin to run on the date the operator provides the requested data.

F. Certifications prior to July 1, 1999. Well workover projects the division certified prior to July 1, 1999 shall be deemed to be approved and certified in accordance with the provisions of the Natural Gas and Crude Oil Production Incentive Act and gas or oil produced from those projects shall be eligible for the well workover incentive tax rate effective July 1, 1999.

[19.15.6.10 NMAC - Rp, 19.15.1.32 NMAC, 12/1/08]

19.15.6.11 STRIPPER WELL TAX INCENTIVE:

A. Qualification of stripper well properties for the stripper well incentive tax rates in NMSA 1978, Sections 7-29-4 and 7-31-4, requires division certification. The division shall certify stripper well properties for calendar year 1998 no later than June 30, 1999 and no later than June 1 of each succeeding year for the preceding calendar year.

B. 19.15.6.11 NMAC applies to a property that the division certifies as a stripper well property after June 30, 1999.

C. Certification, notification and hearing.

(1) The division shall determine which wells qualify as stripper well properties.

(2) Upon certification of properties as stripper well properties, the division shall notify the operator and the secretary of taxation and revenue of that certification.

(3) The operator shall notify the interest owners of the certification of the property as a stripper well property.

(4) An operator may make a written request that the division reevaluate a property for stripper well status.

(5) If the division denies stripper well certification to a property, the division upon the operator's request shall set the matter for hearing.

PART 7: FORMS AND REPORTS

19.15.7.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.7.1 NMAC - Rp, 19.15.13.1 NMAC, 12/1/2008; A, 05/25/2021]

19.15.7.2 SCOPE:

19.15.7 NMAC applies to persons or entities engaged in oil and gas development and production within New Mexico.

[19.15.7.2 NMAC - Rp, 19.15.13.2 NMAC, 12/1/2008]

19.15.7.3 STATUTORY AUTHORITY:

19.15.7 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-6, Section 70-2-11 and Section 70-2-12 NMSA 1978.

[19.15.7.3 NMAC - Rp, 19.15.13.3 NMAC, 12/1/2008]

19.15.7.4 DURATION:

Permanent.

[19.15.7.4 NMAC - Rp, 19.15.13.4 NMAC, 12/1/2008]

19.15.7.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.7.5 NMAC - Rp, 19.15.13.5 NMAC, 12/1/2008]

19.15.7.6 OBJECTIVE:

To provide for the filing of reports to enable the division to carry out its statutory mandates under the Oil and Gas Act.

[19.15.7.6 NMAC - Rp, 19.15.13.6 NMAC, 12/1/2008]

19.15.7.7 DEFINITIONS:

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

19.15.7.8 GENERAL:

A. Development of forms and applications. The division shall develop standard forms and applications for the purposes required by the commission in any rule. The division may also develop online forms, applications and other submittal processes to provide standard mechanisms for any other required notices, requests, applications, or reports. All submittal processes for forms and applications shall be available on the division's website.

B. Additional data. 19.15.7 NMAC does not limit or restrict the division's authority to require the furnishing of additional reports, data or other information relative to the production, transportation, storing, refining, processing or handling of oil, gas or products in the state as may appear to the division to be necessary or desirable, either generally or specifically, for compliance with or implementation of the Oil and Gas Act.

C. Books and records. A person subject to the Oil and Gas Act shall make and keep appropriate books and records for a period of not less than five years, covering operations in New Mexico, in order to make and substantiate the reports the division requires.

D. Written notices, requests, permits and reports. A person required to file notices, requests, permits or reports shall use the division's website in accordance with the instructions provided on the website or required on a form or in any rule covering a form's use or special order pertaining to its use. The following list of forms is intended for informational purposes and does not limit the division's authority to establish new forms or revise existing forms:

- (1) form C-101 - application for permit to drill, deepen or plug back;
- (2) form C-102 - well location and acreage dedication plat;
- (3) form C-103 - sundry notices and reports on wells;
- (4) form C-104 - request for allowable and authorization to transport oil and gas;
- (5) form C-105 - well completion or recompletion report and log;
- (6) form C-106 - notice of intention to utilize automatic custody transfer equipment;
- (7) form C-107 - application for multiple completion;
- (8) form C-107-A - application for downhole commingling;
- (9) form C-107-B - application for surface commingling (diverse ownership);
- (10) form C-108 - application to dispose of produced water by injection into a porous formation;
- (11) form C-109 - application for discovery allowable and creation of a new pool;
- (12) form C-111 - gas transporter's monthly report (sheet 1 and sheet 2);
- (13) form C-112 - transporter's and storer's monthly report;
- (14) form C-112-A - receipts continuation sheet;
- (15) form C-112-B - deliveries continuation sheet;
- (16) form C-113 - refiner's monthly report (sheet 1 and sheet 2);
- (17) form C-115 - operator's monthly report;
- (18) form C-115B - volume of vented and flared natural gas;

- (19) form C-115-EDP - operator's monthly report (electronic data processing);
- (20) form C-116 - gas-oil ratio tests;
- (21) form C-117-A - tank cleaning, sediment oil removal, transportation of miscellaneous hydrocarbons and disposal permit;
- (22) form C-117-B - monthly sediment oil disposal statement;
- (23) form C-118 - treating plant operator's monthly report (sheet 1 and sheet 2);
- (24) form C-120-A - monthly water disposal report;
- (25) form C-121 - oil purchaser's nomination;
- (26) form C-121-A - purchaser's gas nomination;
- (27) form C-122 - multi-point and one point back pressure test for gas wells;
- (28) form C-122-A - gas well test data sheet-San Juan basin (initial deliverability test, blue paper; annual deliverability test, white);
- (29) form C-122-B - initial potential test data sheet;
- (30) form C-122-C - deliverability test report;
- (31) form C-122-D - worksheet for calculation of static column wellhead pressure (P_w);
- (32) form C-122-E - worksheet for stepwise calculation of (surface) (subsurface) pressure (P_c and P_w);
- (33) form C-122-F - worksheet for calculation of wellhead pressures (P_c or P_w) from known bottom hole pressure (P_f or P_s);
- (34) form C-122-G - worksheet for calculation of static column pressure at gas liquid interface;
- (35) form C-123 - request for the creation of a new pool;
- (36) form C-124 - reservoir pressure report;
- (37) form C-125 - gas well shut-in pressure report;
- (38) form C-126 - permit to transport recovered load oil;

- (39) form C-127 - request for allowable change;
- (40) form C-129 - report of vented or flared natural gas;
- (41) form C-130 - notice of disconnection;
- (42) form C-131-A - monthly gas storage report;
- (43) form C-131-B - annual LPG storage report;
- (44) form C-133 - authorization to move produced water exhibit "A";
- (45) form C-134 - application for exception to division order R-8952, 19.15.18.18 NMAC or 19.15.36 NMAC;
- (46) form C-135 - gas well connection, reconnection or disconnection notice;
- (47) form C-136 - application for approval to use an alternate gas measurement method;
- (48) form C-137 - application for waste management facility;
- (49) form C-137-EZ - registration/final closure report for small landfarm;
- (50) form C-138 - request for approval to accept solid waste;
- (51) form C-139 - application for qualification of production restoration project and certification of approval;
- (52) form C-140 - application for qualification of well workover project and certification of approval;
- (53) form C-141 - release notification and corrective action;
- (54) form C-144 - pit, closed-loop system, below-grade tank or proposed alternative method permit or closure plan application;
- (55) form C-145 - change of operator;
- (56) form C-146 - change of operator name;
- (57) form C-147 - permit or registration for recycling and re-use of produced water, drilling fluids and liquid oil field waste; and
- (58) form C-148 - reporting for recycling and re-use of produced water, drilling fluids and liquid oil field waste.

[19.15.7.8 NMAC - Rp, 19.15.13.1100 NMAC, 12/1/2008; A, 5/25/2021; A, 8/23/2022]

19.15.7.9 FORM REQUIREMENTS ON FEDERAL OR TRIBAL LANDS OR MINERALS:

A. For wells on federal lands, accessing federal minerals or lands or minerals owned by a Native American nation, tribe, pueblo, or individual allottee in New Mexico, an operator shall file the applicable federal forms with the BLM (as may be updated from time to time by the BLM) in lieu of filing the following forms with the division:

- (1) applications for permit to drill, deepen or plug back (C-101),
- (2) sundry notices and reports on wells (C-103), and
- (3) well completion or recompletion reports and logs (C-105).

B. For geophysical logs, electrical logs or other testing results obtained from a well on federal lands or minerals and required for the Form C-105, the operator shall submit an electronic copy of the results to the division using the online submittal process.

C. All such forms filed with the BLM involving federal lands or minerals are subject to division approval in the same manner and to the same extent as the corresponding division forms. All forms approved or processed to completion by the BLM for wells on federal lands or accessing federal minerals shall be filed with division for approval using the online application process on the division's website no later than the time period in the rules for the equivalent division form or five business days after the BLM approves or processes to completion if no deadline is provided, except:

(1) for subsequent reports of work performed that are first reported to the BLM on a C-103 or a C-105 equivalent, if within 30 days of submittal, the BLM has not approved or processed to completion such submittal, the operator shall within 10 days file the state equivalent form with the division; and

(2) once the BLM processes to completion or approves the federal submittal, the operator shall file within ten business days the submittal processed to completion or approved by the BLM.

D. All such forms filed exclusively for lands or minerals owned by a Native American nation, tribe, pueblo or individual allottee shall be filed with the division using the online application process on the division's website as soon as is practicable after federal approval or processing to completion. Such forms involving exclusively lands or minerals that a Native American nation, tribe, pueblo or individually allottee owns are not subject to division review or approval unless such review or approval is authorized by a written agreement between the Native American nation, tribe, pueblo and the division.

E. For other reports on wells on federal land or minerals, the operators shall file the applicable state forms with the division, including forms C-104 and C-115.

[19.15.7.9 NMAC - Rp, 19.15.1.16 NMAC, 12/1/2008; 19.15.7.9 NMAC - Rp, 19.15.7.9 NMAC, 8/23/2022]

19.15.7.10 [RESERVED]:

[19.15.7.10 NMAC - Rp, 19.15.15.1302 NMAC, 12/1/2008; Repealed, 8/23/2022]

19.15.7.11 [RESERVED]:

[19.15.7.11 NMAC - Rp, 19.15.1.14 NMAC, 12/1/2008; Repealed, 8/23/2022]

19.15.7.12 APPLICATION FOR PERMIT TO DRILL, DEEPEN OR PLUG BACK (FORM C-101):

Form C-101 is the form an operator uses to apply for a permit to drill, deepen, re-enter or plug a well back to a different pool or complete or re-complete a well in an additional pool.

[19.15.13.12 NMAC - Rp, 19.15.13.1101 NMAC, 12/1/2008]

19.15.7.13 WELL LOCATION AND ACREAGE DEDICATION PLAT (FORM C-102):

A. Form C-102 is a dual purpose form the operator uses to show the well's exact location and the acreage dedicated to the well. The form is also used to show the ownership and status of each lease contained within the dedicated acreage. When there is more than one working interest or royalty owner on a given lease, designation of the majority owner et al. is sufficient.

B. An operator shall fill out and certify the information required on form C-102 except the well location on the plat. A professional surveyor, registered in the state of New Mexico, or surveyor approved by the division, shall plot and certify the well location on the plat from the section's outer boundaries.

C. An operator shall file amended form C-102 in the event there is a change in the information the operator previously submitted. The operator does not need to provide certification of the well location when filing amended form C-102.

[19.15.13.13 NMAC - Rp, 19.15.13.1102 NMAC, 12/1/2008]

19.15.7.14 SUNDRY NOTICES AND REPORTS ON WELLS (FORM C-103):

Form C-103 is a dual purpose form the operator files with the appropriate division district office to obtain division approval prior to commencing certain operations and to report various completed operations.

A. Form C-103 as a notice of intention.

(1) An operator shall file form C-103 and obtain the division's approval prior to:

(a) effecting a change of plans from those the division previously approved on form C-101 or form C-103;

(b) altering a drilling well's casing program or pulling casing or otherwise altering an existing well's casing installation;

(c) making multiple completions in a well;

(d) placing a well in approved temporary abandonment;

(e) plugging and abandoning a well;

(f) performing remedial work on a well that, when completed, will affect the well's original status (this includes making new perforations in existing wells or squeezing old perforations in existing wells, but does not apply to new wells in the process of being completed nor to old wells being deepened or plugged back to another zone when the division has authorized the recompletion by an approved form C-101, application for permit to drill, re-enter, deepen plug back or add a zone, nor to acidizing, fracturing or cleaning out previously completed wells, nor to installing artificial lift equipment); or

(g) downhole commingling in well bores, within pools or areas that the division has established as pre-approved pools or areas.

(2) In the case of well plugging operations, the notice of intention shall include a detailed statement of the proposed work including plans for shooting and pulling casing; plans for mudding, including the mud's weight; plans for cementing, including number of sacks of cement and depths of plugs; restoration and remediation of the location; and the time and date of the proposed plugging operations. The operator shall file a complete log of the well on form C-105 with the notice of intention to plug the well, if the operator has not previously filed the log (see 19.15.7.16 NMAC); the division shall not release the financial assurance until the operator complies with this requirement.

B. Form C-103 as a subsequent report.

(1) The operator shall file form C-103 as a subsequent report of operations in accordance with 19.15.7.14 NMAC as applicable to the particular operation being reported.

(2) The operator shall use form C-103 in reporting such completed operations as:

(a) commencement of drilling operations;

(b) casing and cement test;

(c) altering a well's casing installation;

(d) work to secure approved temporary abandonment;

(e) plugging and abandonment;

(f) plugging back or deepening within the same pool;

(g) remedial work;

(h) installation of artificial lifting equipment; or

(i) other operations that affect the well's original status but that are not specifically covered in 19.15.7.14 NMAC.

C. Report of commencement of drilling operations. Within 10 days following the commencement of drilling operations, the operator shall file a report of commencement on form C-103. The report shall indicate the hour and the date the operator spudded the well.

D. Report of results of test of casing and cement job; report of casing alteration. The operator shall file a report of casing and cement test within 10 days following the setting of each string of casing or liner. The operator shall file the report on form C-103 and include a detailed description of the test method employed and the results obtained by the test and any other pertinent information 19.15.16.10 NMAC requires. The report shall also indicate the top of the cement and the means by which the operator determined the top. It shall also indicate any changes from the casing program previously authorized for the well.

E. Report of temporary abandonment. The operator shall file a notice of work to secure approved temporary abandonment within 30 days following the work's completion. The report shall present a detailed account of the work done on the well, including location and type of plugs used, if any, and status of surface and downhole equipment and any other pertinent information relative to the well's overall status.

F. Report on plugging of well.

(1) The operator shall file a report of plugging operations within 30 days following completion of plugging operations on a well. The operator shall file the report on form C-103, which shall include the date the operator began plugging operations and the date the operator completed the work, a detailed account of the manner in which the operator performed the work including the depths and lengths of the various plugs set, the nature and quantities of materials employed in the plugging operations including the weight of the mud used, the size and depth of all casing left in the hole and any other pertinent information. (See 19.15.25 NMAC regarding plugging operations.)

(2) The division shall not approve a plugging report until the operator demonstrates compliance with Subsection B of 19.15.25.10 NMAC. The operator shall contact the appropriate division district office when the operator has restored the location in order to arrange for a division representative's inspection of the plugged well and the location.

G. Report of remedial work. The operator shall file a report of remedial work performed on a well within 30 days following the work's completion. The operator shall file the report on form C-103 and present a detailed account of the work done and the manner in which the operator performed the work; the daily production of oil, gas and water both prior to and after the remedial operation; the size and depth of shots; the quantity and type of crude, chemical or other materials the operator employed in the operation; and any other pertinent information. Among the remedial work an operator shall report on form C-103 are the following:

(1) report on shooting, fluid fracturing or chemical treatment of a previously completed well;

(2) report of squeeze job;

(3) report on setting of liner or packer;

(4) report of installation of pumping equipment or gas lift facilities; or

(5) report of any other remedial operations that are not specifically covered herein.

H. Report on deepening or plugging back within the same pool. An operator shall file a report of deepening or plugging back within 30 days following completion of the operations on a well. The operator shall file the report on form C-103 and present a detailed account of work done and the manner in which the operator performed the work. If the operator recompletes the well in the same pool, the operator shall also report the daily production of oil, gas and water both prior to and after recompletion. If the well is recompleted in another pool, the operator shall file forms C-101, C-102, C-

104 and C-105 in accordance with 19.15.7.12 NMAC, 19.15.7.13 NMAC, 19.15.7.15 NMAC and 19.15.7.16 NMAC.

I. Other reports on wells. The operator shall submit reports on other operations that affect the well's original status but that are not specifically covered in 19.15.7.14 NMAC to the division on form C-103 10 days following the operation's completion.

[19.15.7.14 NMAC - Rp, 19.15.13.1103 NMAC, 12/1/2008]

19.15.7.15 REQUEST FOR ALLOWABLE AND AUTHORIZATION TO TRANSPORT OIL AND GAS (FORM C-104):

An operator shall file with the division a complete form C-104 to request the division assign an allowable to a newly completed or re-completed well or a well completed in an additional pool or issue an operator authorization to transport oil or gas from the well.

[19.15.7.15 NMAC - Rp, 19.15.13.1104 NMAC, 12/1/2008]

19.15.7.16 WELL COMPLETION OR RECOMPLETION REPORT AND LOG (FORM C-105):

A. Within 45 days following the completion or recompletion of a well, the operator shall file form C-105 with the division accompanied by a summary of special tests conducted on the well, including drill stem tests. In addition, the operator shall file a copy of electrical and radio-activity logs run on the well with form C-105. If the division does not receive form C-105 with attached logs and summaries within the specified 45-day period, the division shall withhold the allowable for the well or suspend injection authority, as appropriate, until the operator has complied with 19.15.7.16 NMAC.

B. In the case of a dry hole, a complete record of the well on form C-105 with the attachments listed in Subsection A of 19.15.7.16 NMAC shall accompany the notice of intention to plug the well, unless previously filed. The division shall not approve the plugging report or release the bond the operator has complied with 19.15.7.16 NMAC.

C. The division shall not keep form C-105 and accompanying attachments confidential unless the well's owner requests in writing that the division keep it confidential. Upon such request, the division shall keep these data confidential for 90 days from the date of the well's completion, provided, however, that the report, logs and other attached data may, when pertinent, be introduced in a public hearing before division examiners, the commission or in a court of law, regardless of the request that they be kept confidential.

[19.15.7.16 NMAC - Rp, 19.15.13.1105 NMAC, 12/1/2008; A, 9/26/2017; A, 8/23/2022]

19.15.7.17 NOTICE OF INTENTION TO UTILIZE AUTOMATIC CUSTODY TRANSFER EQUIPMENT (FORM C-106):

An operator intending to use an ACT system shall file form C-106, when applicable, in accordance with Subsection A of 19.15.18.15 NMAC.

[19.15.7.17 NMAC - Rp, 19.15.13.1106 NMAC, 12/1/2008]

19.15.7.18 APPLICATION FOR MULTIPLE COMPLETION (FORM C-107):

An operator shall file form C-107, when applicable, in accordance with Subsection A of 19.15.16.15 NMAC.

[19.15.7.18 NMAC - Rp, 19.15.13.1107 NMAC, 12/1/2008]

19.15.7.19 APPLICATION FOR AUTHORIZATION TO INJECT (FORM C-108):

An operator shall file form C-108 in accordance with Subsection B of 19.15.26.8 NMAC.

[19.15.7.19 NMAC - Rp, 19.15.13.1108 NMAC, 12/1/2008]

19.15.7.20 APPLICATION FOR DISCOVERY ALLOWABLE AND CREATION OF A NEW POOL (FORM C-109):

An operator shall file form C-109, when applicable, in accordance with 19.15.20.16 NMAC.

[19.15.7.20 NMAC - Rp, 19.15.13.1109 NMAC, 12/1/2008]

19.15.7.21 GAS TRANSPORTER'S MONTHLY REPORT (FORM C-111):

A. An operator shall complete and maintain for the division's inspection, form C-111 monthly in accordance with Subsections B, C and D of 19.15.7.21 NMAC. The transporter shall itemize information on sheet no. 2 of form C-111 by pool, by operator and by lease, in alphabetical order.

B. An operator of a gas gathering system, gas transportation system, recycling system, fuel system, gas lift system, gas drilling operation, etc. shall complete and maintain for division inspection form C-111 each month. The form shall cover gas, casinghead gas and carbon dioxide gas taken into a system during the preceding month and shall show the gas' source and its disposition.

C. An operator of a gasoline plant, cycling plant or other plant at which gasoline, butane, propane, kerosene, oil or other products are extracted from gas within the state shall complete and maintain for the division's inspection form C-111 each month. The form shall cover gas, casinghead gas and carbon dioxide gas the plant has taken during the preceding month and shall show the gas' source and its disposition. If an operator owns more than one plant in a given division district, the operator shall file sheet no. 1 of form C-111 for each plant. In preparing sheet no. 2, the operator shall consolidate

requisitions for plants in the district, itemized in the order described in the Subsection A of 19.15.7.21 NMAC.

D. Where a producer takes gas and uses it for any of the above uses, the producer shall complete and maintain for division inspection form C-111 itemizing such gas. The producer shall also include this gas on form C-115. The producer shall also include gas used on the lease from which it was produced for consumption in lease houses, treaters, compressors, combustion engines and other similar equipment, or gas that is flared, on the form C-115 but shall not include it on form C-111.

[19.15.7.21 NMAC - Rp, 19.15.13.1111 NMAC, 12/1/2008]

19.15.7.22 TRANSPORTER'S AND STORER'S MONTHLY REPORT (FORM C-112):

A transporter or storer of oil and liquid hydrocarbons within the state shall complete and maintain for division inspection for each calendar month a form C-112 containing complete information and data indicated by the form respecting stocks of oil and liquid hydrocarbons on hand and receipts and deliveries of oil and liquid hydrocarbons by pipeline and trucks within the state, and receipts and deliveries from leases to storers or refiners; between transporters within the state; between storers and refiners within the state.

[19.15.7.22 NMAC - Rp, 19.15.13.1112 NMAC, 12/1/2008]

19.15.7.23 REFINER'S MONTHLY REPORT (FORM C-113):

A refiner of oil within the state shall file for each calendar month form C-113 containing the information and data indicated by the form respecting oil and products involved in the refiner's operation during each month. The refiner shall file the completed form C-113 for each month and postmark it on or before the 15th day of the next succeeding month.

[19.15.7.23 NMAC - Rp, 19.15.13.1113 NMAC, 12/1/2008]

19.15.7.24 OPERATOR'S MONTHLY REPORT (FORM C-115):

A. An operator shall file a form C-115 for each non-plugged well completion for which the division has approved a form C-104 and for each secondary or other enhanced recovery project or pressure maintenance project injection well or other injection well within the state, setting forth complete information and data indicated on the forms in the order, format and style the director prescribes. The operator shall estimate oil production from wells producing into common storage as accurately as possible on the basis of periodic tests.

B. An operator shall file form C-115 using the division's web-based online application on or before the 15th day of the second month following the month of production. An operator may apply to the division for exemption from the electronic filing requirement based upon a demonstration that such requirement would be an economic or other hardship.

C. If an operator fails to file a form C-115 that the division accepts, the division shall, within 30 days of the appropriate filing date, notify the operator by electronic mail or letter of its intent to cancel the operator's authorization to transport or inject if the operator does not file an acceptable and complete form C-115. The notice shall inform the operator of the right to request a hearing pursuant to 19.15.4.8 NMAC. If the operator does not either file an acceptable and complete form C-115 or request a hearing on the proposed cancellation within 60 days of the original due date of the form C-115, the division may cancel the operator's authority to transport from or inject into all wells it operates.

[19.15.7.24 NMAC - Rp, 19.15.13.1115 NMAC, 12/1/2008; A, 11/14/2017; A, 05/25/2021]

19.15.7.25 VENTED AND FLARED NATURAL GAS (FORM C-115B):

A. An operator shall file form C-115B in accordance with 19.15.27 NMAC and 19.15.28 NMAC.

B. An operator shall file form C-115B using the division's web-based online application on or before the 15th day of the second month following the month in which venting or flaring occurred. An operator may apply to the division for exemption from the electronic filing requirement based upon a demonstration that such requirement would be an economic or other hardship.

[19.15.7.25 NMAC – N, 05/25/2021]

19.15.7.26 GAS-OIL RATIO TESTS (FORM C-116):

An operator shall make and report gas-oil ratio tests on form C-116 as prescribed in 19.15.18.8 NMAC and applicable special pool orders. The operator shall file the form C-116.

[19.15.7.26 NMAC – Rn, 19.15.7.25 NMAC, 05/25/2021]

19.15.7.27 TANK CLEANING, SEDIMENT OIL REMOVAL, TRANSPORTATION OF MISCELLANEOUS HYDROCARBONS AND DISPOSAL PERMIT (FORM C-117-A) AND MONTHLY SEDIMENT OIL DISPOSAL STATEMENT (FORM C-117-B):

A. An operator shall file form C-117-A with the appropriate division district office in accordance with Subsections B, C and H of 19.15.18.17 NMAC.

B. An operator shall file form C-117-B with the division's Santa Fe office and the appropriate division district office in accordance with Subsection D of 19.15.18.17 NMAC.

[19.15.7.27 NMAC – Rn, 19.15.7.26 NMAC, 05/25/2021]

19.15.7.28 TREATING PLANT OPERATOR'S MONTHLY REPORT (FORM C-118):

A treating plant operator shall file on a monthly basis form C-118 with the appropriate division district office. The form C-118 shall contain all the information the form requires. Column 1 of sheet 1-A of form C-118 entitled permit number, references form C-117-A, for each lot of oil the operator picked up for processing.

[19.15.7.28 NMAC – Rn, 19.15.7.27 NMAC, 05/25/2021]

19.15.7.29 MONTHLY WATER DISPOSAL REPORT (Form C-120-A):

An operator of a produced water disposal system shall report its operations on form C-120-A. The operator shall file form C-120-A in duplicate, with one copy to the division's Santa Fe office and one copy to the appropriate division district office, and shall postmark the form no later than the 15th day of the second succeeding month.

[19.15.7.29 NMAC – Rn & A, 19.15.7.28 NMAC, 05/25/2021]

19.15.7.30 PURCHASER'S NOMINATION FORMS (FORM C-121 and FORM C-121-A):

A. Unless the director requests otherwise, a person expecting to purchase oil from producing wells in New Mexico during the second and third succeeding two months shall file form C-121 with the division's Santa Fe office not later than the 20th day of each odd-numbered month. As an example, nominations submitted by the 20th day of July shall indicate the amount of oil the purchaser desires to purchase daily during September and October.

B. The person shall file form C-121-A with the division's Santa Fe office by the first day of the month during which the division will consider at the gas allowable hearing the nominations for the purchase of gas from producing wells in New Mexico during the succeeding month. As an example, purchaser's nominations to take gas from a pool during the month of August would be considered by the division at a hearing during July, and should be submitted to the Santa Fe office of the division by July 1.

C. In addition to the monthly gas nominations, the purchaser shall file 12-month nominations in accordance with the appropriate special pool orders.

[19.15.7.30 NMAC – Rn, 19.15.7.31 NMAC, 05/25/2021]

19.15.7.31 MULTIPOINT AND ONE POINT BACK PRESSURE TEST FOR GAS WELL (FORM C-122):

- A. Gas well test data sheet - San Juan basin (form C-122-A)
- B. Initial potential test data sheet (form C-122-B)
- C. Deliverability test report (form C-122-C)
- D. Worksheet for calculation of static column wellhead pressure (P_w) (form C- 122-D)
- E. Worksheet for stepwise calculation of (surface) (subsurface) pressure (P_c & P_w) (P_f & P_s) (form C-122-E)
- F. Worksheet for calculation of wellhead pressures (P_c or P_w) from known bottom hole pressure (P_f or P_s) (form C-122-F)
- G. Worksheet for calculation of status column pressure at gas liquid interface (form C-122-G). The operator shall file the forms listed in Subsections A through F of 19.15.7.30 NMAC with the appropriate division district office in accordance with the provisions of the *manual for back-pressure testing of natural gas wells or gas well testing manual for northwest New Mexico*, 19.15.19.8 NMAC and applicable special pool orders and proration orders.

[19.15.7.31 NMAC – Rn, 19.15.7.30 NMAC, 05/25/2021]

19.15.7.32 REQUEST FOR THE CREATION OF A NEW POOL (FORM C-123):

The appropriate division district office shall provide the operator of a well that requires the creation of a pool written instructions regarding the filing of form C-123.

[19.15.7.32 NMAC – Rn, 19.15.7.31 NMAC, 05/25/2021]

19.15.7.33 RESERVOIR PRESSURE REPORT (FORM C-124):

- A. An operator shall file form C-124 to report bottom hole pressures as required under the provisions of 19.15.18.9 NMAC and applicable special pool orders.
- B. An operator shall state the name of the pool; the pool datum, if established; the name of the operator and lease; the well number; the wellhead elevation above sea level; the date of the test; the total time the well was shut in prior to the test, the subsurface temperature in degrees fahrenheit at the test depth; the depth in feet at which the operator made the subsurface pressure test; the observed pressure in psi gauge corrected for calibration and temperature; the corrected pressure computed from

applying to the observed pressure the appropriate correction for difference in test depth and reservoir datum plane; and any other information required on form C-124.

[19.15.7.33 NMAC – Rn, 19.15.7.32 NMAC, 05/25/2021]

19.15.7.34 GAS WELL SHUT-IN PRESSURE TESTS (FORM C-125):

An operator shall file form C-125 to report shut-in pressure tests on gas wells as required under the provisions of special pool orders.

[19.15.7.34 NMAC – Rn, 19.15.7.33 NMAC, 05/25/2021]

19.15.7.35 PERMIT TO TRANSPORT RECOVERED LOAD OIL (FORM C-126):

An applicant to transport recovered load oil shall file form C-126 with the appropriate division district office in conformance with 19.15.20.15 NMAC.

[19.15.7.35 NMAC – Rn, 19.15.7.34 NMAC, 05/25/2021]

19.15.7.36 REQUEST FOR ALLOWABLE CHANGE (FORM C-127):

An oil producer shall file form C-127 with the appropriate division district office not later than the 10th day of the month preceding the month for which an oil producer is requesting oil well allowable changes.

[19.15.7.36 NMAC – Rn, 19.15.7.35 NMAC, 05/25/2021]

19.15.7.37 [RESERVED]:

[19.15.7.37 NMAC – Rn, 19.15.7.36 NMAC, 5/25/2021; Repealed, 8/23/2022]

19.15.7.38 REPORT OF VENTED OR FLARED NATURAL GAS (FORM C-129):

An operator shall file form C-129 when applicable, in accordance with 19.15.27 NMAC and 19.15.28 NMAC.

[19.15.7.38 NMAC – Rn & A, 19.15.7.37 NMAC, 05/25/2021]

19.15.7.39 NOTICE OF DISCONNECTION (FORM C-130):

A. An operator shall file form C-130 with the division as provided in 19.15.19.13 NMAC.

B. An operator shall state to the best of its knowledge the reasons for disconnecting a gas well from gas transportation facilities.

C. The division shall furnish the New Mexico public regulation commission with a form C-130 indicating that a disconnected gas well may or will be reconnected to a gas transportation facility for ultimate distribution to consumers outside of the state.

[19.15.7.39 NMAC – Rn, 19.15.7.38 NMAC, 05/25/2021]

19.15.7.40 MONTHLY GAS STORAGE REPORT (FORM C-131-A); ANNUAL LPG STORAGE REPORT (FORM C-131-B):

A. An operator of an underground gas storage project shall report its operation monthly on form C-131-A. The operator shall file form C-131-A with the division's Santa Fe office with a copy to the appropriate division district office and shall postmark it not later than the 24th day of the next succeeding month.

B. An operator of underground liquefied petroleum gas storage projects approved by the division shall report its operations annually on form C-131-B.

[19.15.7.40 NMAC – Rn, 19.15.7.39 NMAC, 05/25/2021]

19.15.7.41 AUTHORIZATION TO MOVE PRODUCED WATER:

A. A transporter of produced water shall obtain the division's approval of form C-133 in accordance with 19.15.34 NMAC prior to transportation.

B. Approval of a single form C-133 is valid for leases the transporter serves.

[19.15.7.41 NMAC – Rn, 19.15.7.40 NMAC, 05/25/2021]

19.15.7.42 GAS WELL CONNECTION, RECONNECTION OR DISCONNECTION NOTICE:

A gas transporter accepting gas for delivery from a wellhead or central point of delivery shall notify the division within 30 days of a new connection or reconnection to or disconnection from the gathering or transportation system by filing form C-135 with the appropriate division district office.

[19.15.7.42 NMAC – Rn, 19.15.7.41 NMAC, 05/25/2021]

19.15.7.43 APPLICATION FOR APPROVAL TO USE AN ALTERNATE GAS MEASUREMENT METHOD (FORM C-136):

A. An operator shall use form C-136 to request and obtain division approval for use of an alternate procedure for measuring gas production from a well that is not capable of producing more than 15 MCFD (Paragraph (1) of Subsection B of 19.15.19.9 NMAC) or for a well that has a producing capacity of 100 MCFD or less and is on a multi-well lease (Paragraph (2) of Subsection B of 19.15.19.9 NMAC).

B. An operator shall fill out the applicable information required on form C-136 with the required supplemental information attached, and file it with the appropriate division district office.

[19.15.7.43 NMAC – Rn, 19.15.7.42 NMAC, 05/25/2021]

19.15.7.44 APPLICATION FOR PRODUCTION RESTORATION PROJECT (C-139):

A. An operator shall use the division's web-based online application to apply for the production restoration tax incentive.

B. An operator shall enter a user identification number and password that it has obtained from the division and select the well for which the operator is requesting the production restoration tax incentive. The operator shall then enter the date it began the production restoration, the date the well returned to production and the process the operator used to return the well to production. The operator shall certify that the information is complete and correct.

[19.15.7.44 NMAC – Rn, 19.15.7.43 NMAC, 05/25/2021]

19.15.7.45 APPLICATION FOR WELL WORKOVER PROJECT (C-140):

A. An operator shall use the division's web-based online application to apply for the well workover tax incentive.

B. An operator shall enter a user identification number and password that it has obtained from the division and select the well for which the operator is requesting the well workover tax incentive. The operator shall enter the date that it commenced the well workover and the date it completed the well workover. The operator shall attach a description of the workover procedure it performed to increase production and a production curve or data tabulation showing at least 12 months of production prior to the well workover and at least three months of production following the well workover to reflect a positive production increase.

[19.15.7.45 NMAC – Rn, 19.15.7.44 NMAC, 05/25/2021]

PART 8: FINANCIAL ASSURANCE

19.15.8.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.8.1 NMAC - N, 12/1/2008; A, 1/15/2019]

19.15.8.2 SCOPE:

19.15.8 NMAC applies to persons engaged in oil and gas development and production within New Mexico.

[19.15.8.2 NMAC - N, 12/1/2008]

19.15.8.3 STATUTORY AUTHORITY:

19.15.8 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-6, Section 70-2-11, Section 70-2-12 and Section 70-2-14 NMSA 1978.

[19.15.8.3 NMAC - N, 12/1/2008; A, 1/15/2019]

19.15.8.4 DURATION:

Permanent.

[19.15.8.4 NMAC - N, 12/1/2008]

19.15.8.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.8.5 NMAC - N, 12/1/2008]

19.15.8.6 OBJECTIVE:

To establish financial assurance requirements for persons, firms, corporations or associations who have drilled or acquired, are drilling or propose to drill or acquire an oil, gas or injection or other service well to furnish financial assurance acceptable to the division.

[19.15.8.6 NMAC - N, 12/1/2008]

19.15.8.7 DEFINITIONS

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

19.15.8.8 GENERAL REQUIREMENTS FOR FINANCIAL ASSURANCE:

A. The operator shall file financial assurance documents with the division's Santa Fe office and obtain approvals and releases of financial assurance from that office.

B. Financial assurance documents shall be on forms prescribed by or otherwise acceptable to the division.

C. The division may require proof that the individual signing for an entity on a financial assurance document or an amendment to a financial assurance document has the authority to obligate that entity.

D. Any time an operator changes the corporate surety, financial institution or amount of financial assurance, the operator shall file updated financial assurance documents on forms prescribed by the division. Notwithstanding the foregoing, if an operator makes other changes to its financial assurance documents, the division may require the operator to file updated financial assurance documents on forms prescribed by the division.

[19.15.8.8 NMAC - Rp, 19.15.3.101 NMAC, 12/1/2008; A, 6/30/2015]

19.15.8.9 CATEGORIES AND AMOUNTS OF FINANCIAL ASSURANCE FOR WELL PLUGGING:

A. Applicability. An operator who has drilled or acquired, is drilling or proposes to drill or acquire an oil, gas or injection or other service well within this state shall furnish a financial assurance acceptable to the division in accordance with 19.15.8.9 NMAC and in the form of an irrevocable letter of credit, plugging insurance policy or cash or surety bond running to the state of New Mexico conditioned that the well be plugged and abandoned and the location restored and remediated in compliance with commission rules, unless the well is covered by federally required financial assurance.

B. A financial assurance shall be conditioned for well plugging and abandonment and location restoration and remediation only, and not to secure payment for damages to livestock, range, crops or tangible improvements or any other purpose.

C. Active wells. An operator shall provide financial assurance for wells that are covered by Subsection A of 19.15.8.9 NMAC and are not subject to Subsection D of 19.15.8.9 NMAC in one of the following categories:

(1) a one well financial assurance in the amount of \$25,000 plus \$2 per foot of the projected depth of a proposed well or the depth of an existing well; the depth of a well is the true vertical depth for vertical and horizontal wells and the measured depth for deviated and directional wells; or

(2) a blanket plugging financial assurance in the following amounts covering all the wells of the operator subject to Subsection C of 19.15.8.9 NMAC:

(a) \$50,000 for one to 10 wells;

(b) \$75,000 for 11 to 50 wells;

(c) \$125,000 for 51 to 100 wells; and

(d) \$250,000 for more than 100 wells.

D. Inactive wells. An operator shall provide financial assurance for wells that are covered by Subsection A of 19.15.8.9 NMAC that have been in temporarily abandoned status for more than two years or for which the operator is seeking approved temporary abandonment pursuant to 19.15.25.13 NMAC in one of the following categories:

(1) a one well financial assurance in the amount of \$25,000 plus \$2 per foot of the projected depth of a proposed well or the depth of an existing well; the depth of a well is the true vertical depth for vertical and horizontal wells and the measured depth for deviated and directional wells; or

(2) a blanket plugging financial assurance covering all wells of the operator subject to Subsection D of 19.15.8.9 NMAC:

(a) \$150,000 for one to five wells;

(b) \$300,000 for six to 10 wells;

(c) \$500,000 for 11 to 25 wells; and

(d) \$1,000,000 for more than 25 wells.

E. Operators who have on file with the division a blanket financial assurance that does not cover additional wells shall file additional single well bond financial assurance for any wells not covered by the existing blanket bond or, in the alternative, may file a replacement blanket bond.

[19.15.8.9 NMAC - Rp, 19.15.3.101 NMAC, 12/1/2008; A, 6/30/2015; A, 1/15/2019]

19.15.8.10 ADDITIONAL REQUIREMENTS FOR CASH AND SURETY BONDS:

A. Surety bonds shall be issued by a reputable corporate surety authorized by the office of the superintendent of insurance to do business in the state.

B. The operator shall deposit cash representing the full amount of the bond in an account in a federally-insured financial institution located within the state, such account to be held in trust for the division. Authorized representatives of the operator and the depository institution shall execute a document evidencing the cash bond's terms and conditions. The operator shall file the document with the division prior to the bond's effective date. If the operator's financial status or reliability is unknown to the director, the director may require the filing of a financial statement or such other information as may be necessary to evaluate the operator's ability to fulfill the bond's conditions. From time to time, any accrued interest over and above the bond's face amount may be paid to the operator.

[19.15.8.10 NMAC - Rp, 19.15.3.101 NMAC, 12/1/2008; A, 6/30/2015]

19.15.8.11 ADDITIONAL REQUIREMENTS FOR LETTERS OF CREDIT:

A. The division may accept irrevocable letters of credit issued by national or state-chartered banking associations.

B. Letters of credit shall be irrevocable for a term of not less than five years, unless the applicant shows good cause for a shorter time period.

C. Letters of credit shall provide for automatic renewal for successive, like terms upon expiration, unless the issuer has notified the division in writing of non-renewal at least 30 days prior to expiration.

D. The division may forfeit and collect a letter of credit if not replaced by an approved financial assurance at least 30 days before the expiration date.

E. Authorized representatives of the operator and the depository institution shall execute a document evidencing the letter of credit's terms and conditions.

[19.15.8.11 NMAC - Rp, 19.15.3.101 NMAC, 12/1/2008; A, 6/30/2015]

19.15.8.12 RELEASE OF FINANCIAL ASSURANCE:

A. The division shall release a financial assurance document upon the operator's or surety's written request if all wells drilled or acquired under that financial assurance have been plugged and abandoned and the location restored and remediated and released pursuant to 19.15.25.9 NMAC through 19.15.25.11 NMAC, or have been covered by another financial assurance the division has approved.

B. Transfer of a property or a change of operator does not of itself release a financial assurance. The division shall not approve a request for change of operator for a well until the new operator has the required financial assurance in place.

[19.15.8.12 NMAC - Rp, 19.15.3.101 NMAC, 12/1/2008]

19.15.8.13 FORFEITURE OF FINANCIAL ASSURANCE:

A. Upon the operator's failure to properly plug and abandon and restore and remediate the location of a well or wells a financial assurance covers, the division shall give notice to the operator and surety, if applicable, and hold a hearing as to whether the well or wells should be plugged and abandoned and the location restored and remediated in accordance with a division-approved plugging program. If it is determined at the hearing that the operator has failed to plug and abandon the well and restore and remediate the location as provided for in the financial assurance or division rules, the director shall issue an order directing the well to be plugged or abandoned and the

location restored and remediated in a time certain. Such an order may also direct the forfeiture of the financial assurance upon the failure or refusal of the operator, surety or other responsible party to properly plug and abandon the well and restore and remediate the location.

B. If the financial assurance's proceeds exceed the costs the division incurred plugging and abandoning the well and restoring and remediating the location the financial assurance covers, the division shall return the excess to the surety or the operator, as appropriate.

C. If the financial assurance's proceeds are not sufficient to cover all the costs the division incurred in plugging and abandoning the well and restoring and remediating the location, the division may seek indemnification from the operator as provided in Subsection E of Section 70-2-14 NMSA 1978.

D. The division shall deposit forfeitures and funds collected pursuant to a judgment in a suit for indemnification in the oil and gas reclamation fund.

[19.15.9.13 NMAC - Rp, 19.15.3.101 NMAC, 12/1/2008]

19.15.8.14 EFFECTIVE DATES:

A. 19.15.8 NMAC applies to wells drilled or acquired after December 15, 2005.

B. As to all other wells, 19.15.8 NMAC is effective January 1, 2008.

C. The 2018 amendments to 19.15.8.9 NMAC apply to applications for permits to drill, deepen or plug back and applications for approved temporary abandonment filed on or after January 15, 2019, and for all other wells on April 15, 2019.

[19.15.8.14 NMAC - Rp, 19.15.3.101 NMAC, 12/1/2008; A, 1/15/2019]

19.15.8.15 ADDITIONAL REQUIREMENTS FOR PLUGGING INSURANCE POLICIES:

A. The plugging insurance policy must be issued by a company authorized by the office of the superintendent of insurance to do business in New Mexico.

B. The policy shall name a specific well and name the state of New Mexico as the owner of the policy and contingent beneficiary.

C. The policy shall name a primary beneficiary who agrees to plug the specified wellbore.

D. The policy shall be fully prepaid and cannot be canceled or surrendered.

E. The policy shall continue in effect until the specified wellbore has been plugged.

F. The policy shall provide that benefits will be paid when, but not before, the specified wellbore has been plugged in accordance with division rules in effect at the time of plugging.

G. The policy shall provide benefits that are not less than an amount equal to the one-well financial assurance required by division rules. If, subsequent to an operator obtaining an insurance policy, the one-well financial assurance requirement applicable to the operator's well covered by said policy increases, either because the well is deepened or the division's rules are amended, the operator will meet the additional financial assurance requirement by complying with one of the requirements below.

(1) The operator's existing policy benefit equals or exceeds the revised requirement.

(2) The operator obtains and files with the division within 30 days an amendment increasing the policy benefit by the amount of the increase in the applicable financial assurance requirement.

(3) The operator obtains financial assurance equal to the amount, if any, by which the revised requirement exceeds the policy benefit and files said financial assurance with the division within 30 days.

[19.15.8.15 NMAC - N, 6/30/2015]

19.15.8.16 DUTY TO REPORT:

Any operator who filed for bankruptcy shall provide notice to the division, in writing, through the processes provided for under the rules of the United States bankruptcy court.

[19.15.8.16 NMAC - N, 6/30/2015]

PART 9: WELL OPERATOR PROVISIONS

19.15.9.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.9.1 NMAC - N, 12/1/08]

19.15.9.2 SCOPE:

19.15.9 NMAC applies to persons or entities operating oil or gas wells within New Mexico.

[19.15.9.2 NMAC - N, 12/1/08]

19.15.9.3 STATUTORY AUTHORITY:

19.15.9 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Section 70-2-6, Section 70-2-11 and Section 70-2-12.

[19.15.9.3 NMAC - N, 12/1/08]

19.15.9.4 DURATION:

Permanent.

[19.15.9.4 NMAC - N, 12/1/08]

19.15.9.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.9.5 NMAC - N, 12/1/08]

19.15.9.6 OBJECTIVE:

To require an operator of a well or wells to register with the division prior to commencing operations and to require the reporting of a change of operator or a change of name to the division.

[19.15.9.6 NMAC - N, 12/1/08]

19.15.9.7 DEFINITIONS

[RESERVED]

[See 19.15.2 NMAC for definitions.]

[19.15.9.7 NMAC - N, 12/1/08]

19.15.9.8 OPERATOR REGISTRATION:

A. Prior to commencing operations, an operator of a well or wells in New Mexico shall register with the division as an operator. Applicants shall provide the following to the financial assurance administrator in the division's Santa Fe office:

(1) an oil and gas registration identification (OGRID) number obtained from the division, the state land office or the taxation and revenue department;

(2) a current address of record to be used for notice and a current emergency contact name and telephone number for each district in which the operator operates wells; and

(3) the financial assurance 19.15.8 NMAC requires.

B. The division may deny registration as an operator if:

(1) the applicant is not in compliance with Subsection A of 19.15.5.9 NMAC;

(2) an officer, director, partner in the applicant or person with an interest in the applicant exceeding 25 percent, is or was within the past five years an officer, director, partner or person with an interest exceeding 25 percent in another entity that is not currently in compliance with Subsection A of 19.15.5.9 NMAC;

(3) the applicant is or was within the past five years an officer, director, partner or person with an interest exceeding 25 percent in another entity that is not currently in compliance with Subsection A of 19.15.5.9 NMAC;

(4) the applicant is a corporation or limited liability company and is not registered with the public regulation commission to do business in New Mexico; or

(5) the applicant is a limited partnership and is not registered with the New Mexico secretary of state to do business in New Mexico.

C. An operator shall inform the division of its current address of record and emergency contact names and telephone numbers by submitting changes in writing to the division's financial assurance administrator in the division's Santa Fe office within 30 days of the change.

D. The division may require an operator or applicant to identify its current and past officers, directors and partners and its current and past ownership interest in other operators.

[19.15.9.8 NMAC - Rp, 19.15.3.100 NMAC, 12/1/08]

19.15.9.9 CHANGE OF OPERATOR:

A. A change of operator occurs when the entity responsible for a well or a group of wells changes. A change of operator may result from a sale, assignment by a court, a change in operating agreement or other transaction. Under a change of operator, wells are moved from the OGRID number of the operator of record with the division to the new operator's OGRID number.

B. The operator of record with the division and the new operator shall apply for a change of operator by jointly filing a form C-145 using the division's web-based online

application. If the operator of record with the division is unavailable, the new operator shall apply to the division for approval of change of operator without a joint application. The operator shall make such application in writing and provide documentary evidence of the applicant's right to assume operations. The new operator shall not commence operations until the division approves the application for change of operator.

C. The director or the director's designee may deny a change of operator if:

(1) the new operator is not in compliance with Subsection A of 19.15.5.9 NMAC; or

(2) the new operator is acquiring wells, facilities or sites subject to a compliance order requiring remediation or abatement of contamination, or compliance with 19.15.25.8 NMAC, and the new operator has not entered into an agreed compliance order setting a schedule for compliance with the existing order.

D. In determining whether to grant or deny a change of operator when the new operator is not in compliance with Subsection A of 19.15.5.9 NMAC, the director or the director's designee shall consider such factors as whether the non-compliance with Subsection A of 19.15.5.9 NMAC is caused by the operator not meeting the financial assurance requirements of 19.15.8 NMAC, being subject to a division or commission order finding the operator to be in violation of an order requiring corrective action, having a penalty assessment that has been unpaid for more than 70 days since the issuance of the order assessing the penalty or having more than the allowed number of wells out of compliance with 19.15.25.8 NMAC. If the non-compliance is caused by the operator having more than the allowed number of wells not in compliance with 19.15.25.8 NMAC, the director or director's designee shall consider the number of wells not in compliance, the length of time the wells have been out of compliance and the operator's efforts to bring the wells into compliance.

[19.15.9.9 NMAC - Rp, 19.15.3.100 NMAC, 12/1/08]

19.15.9.10 CHANGE OF NAME:

A. A change of operator name occurs when the name of the entity responsible for a well or wells changes but the entity does not change. For a change of name, the OGRID number remains the same, but division records are changed to reflect the new operator name.

B. An operator shall apply for a change of name by filing a form C-146 using the division's web-based online application and supplying documentary proof that the change is a name change and not a change of operator. If the operator is a corporation, limited liability company or limited partnership, the name must be registered with the public regulation commission or the New Mexico secretary of state, as applicable. The division shall not approve a change of name until the state land office and the taxation and revenue department have cleared the change of name on the OGRID.

[19.15.9.10 NMAC - Rp, 19.15.3.100 NMAC, 12/1/08]

19.15.9.11 EXAMPLES OF CHANGE OF OPERATOR AND CHANGE OF NAME:

A. Mr. Smith, a sole proprietor, operates five wells under the name "Smith oil company". Mr. Smith changes the name of his company to "Smith production company". The name of the entity operating the wells has changed, but the entity has not changed. Mr. Smith should apply for a change of name.

B. Mr. Smith incorporates his business, changing from the sole proprietorship, "Smith production company", to a corporation: "Smith production company, inc.". The entity responsible for the wells has changed, and Mr. Smith and "Smith production company, inc." should apply for a change of operator.

C. Smith production company, inc., a New Mexico operator, merges with XYZ, inc., which does not operate in New Mexico. At the surviving entity's election, this transaction may be treated as a change of name from Smith production company, to XYZ, inc., maintaining the existing OGRID, or as a change of operator, with a new OGRID.

D. Two New Mexico operators, Smith production company, inc. and Jones production company, inc., merge. The surviving corporation is Jones production company, inc. A different entity now operates the wells Smith production company, formerly operated, and the wells must be placed under that entity's OGRID. Jones production company, inc. and Smith production company, inc. should apply for a change of operator as to the wells Smith production company, inc. operated.

[19.15.9.11 NMAC - Rp, 19.15.3.100 NMAC, 12/1/08]

PART 10: SAFETY

19.15.10.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.10.1 NMAC - N, 12/1/08]

19.15.10.2 SCOPE:

19.15.10 NMAC applies to persons or entities engaged in oil and gas development and production within New Mexico.

[19.15.10.2 NMAC - N, 12/1/08]

19.15.10.3 STATUTORY AUTHORITY:

19.15.10 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Section 70-2-6, Section 70-2-11 and Section 70-2-12.

[19.15.10.3 NMAC - N, 12/1/08]

19.15.10.4 DURATION:

Permanent.

[19.15.10.4 NMAC - N, 12/1/08]

19.15.10.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.10.5 NMAC - N, 12/1/08]

19.15.10.6 OBJECTIVE:

To establish safety procedures for drilling and production of oil and gas wells.

[19.15.10.6 NMAC - N, 12/1/08]

19.15.10.7 DEFINITIONS

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

[19.15.10.7 NMAC - N, 12/1/08]

19.15.10.8 SAFETY PROCEDURES FOR DRILLING AND PRODUCTION:

A. An operator shall:

(1) clean oil wells into a pit permitted pursuant to 19.15.17 NMAC or a tank, not less than 40 feet from the derrick floor and 150 feet from a fire hazard;

(2) produce flowing oil wells through an oil and gas separator of ample capacity and in good working order;

(3) not place or leave a boiler or portable electric lighting generator nearer than 150 feet to a producing well or oil tank; and

(4) remove rubbish or debris that might constitute a fire hazard to a distance of at least 150 feet from the vicinity of wells and tanks and burn or dispose of waste in a manner as to avoid creating a fire hazard.

B. When coming out of the hole with drill pipe, the operator shall circulate drilling fluid until equalized and subsequently maintain drilling fluid level at a height sufficient to control bottom hole pressures. During course of drilling, the operator shall test blowout preventers at least once each 24-hour period.

[19.15.10.8 NMAC - Rp, 19.15.3.114 NMAC, 12/1/08]

PART 11: HYDROGEN SULFIDE GAS

19.15.11.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.11.1 NMAC - N, 12/1/08]

19.15.11.2 SCOPE:

19.15.11 NMAC applies to a person subject to the division's jurisdiction, including a person engaged in drilling, stimulating, injecting into, completing, working over or producing an oil, gas or carbon dioxide well or a person engaged in gathering, transporting, storing, processing or refining of oil, gas or carbon dioxide. 19.15.11 NMAC does not exempt or otherwise excuse surface waste management facilities the division permits pursuant to 19.15.36 NMAC from more stringent conditions on the handling of hydrogen sulfide required of such facilities by 19.15.36 NMAC or more stringent conditions in permits issued pursuant to 19.15.36 NMAC, nor shall the facilities be exempt or otherwise excused from the requirements set forth in 19.15.11 NMAC by virtue of permitting under 19.15.36 NMAC.

[19.15.11.2 NMAC - Rp, 19.15.3.118 NMAC, 12/1/08]

19.15.11.3 STATUTORY AUTHORITY:

19.15.11 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Section 70-2-6, Section 70-2-11 and Section 70-2-12.

[19.15.11.3 NMAC - N, 12/1/08]

19.15.11.4 DURATION:

Permanent.

[19.15.11.4 NMAC - N, 12/1/08]

19.15.11.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.11.5 NMAC - N, 12/1/08]

19.15.11.6 OBJECTIVE:

To require oil and gas operations be conducted in a manner that protects the public from exposure to hydrogen sulfide gas.

[19.15.11.6 NMAC - N, 12/1/08]

19.15.11.7 DEFINITIONS:

A. "ANSI" means the American national standards institute.

B. "Area of exposure" means the area within a circle constructed with a point of escape at its center and the radius of exposure as its radius.

C. "Dispersion technique" is a mathematical representation of the physical and chemical transportation characteristics, dilution characteristics and transformation characteristics of hydrogen sulfide gas in the atmosphere.

D. "Escape rate" means the maximum volume (Q) that is used to designate the possible rate of escape of a gaseous mixture containing hydrogen sulfide, as set forth in 19.15.11 NMAC.

(1) For existing gas facilities or operations, the escape rate is calculated using the maximum daily rate of the gaseous mixture produced or handled or the best estimate thereof. For an existing gas well, the escape rate is calculated using the current daily absolute open flow rate against atmospheric pressure or the best estimate of that rate.

(2) For new gas operations or facilities, the escape rate is calculated as the maximum anticipated flow rate through the system. For a new gas well, the escape rate is calculated using the maximum open-flow rate of offset wells in the pool or reservoir, or the pool or reservoir average of maximum open-flow rates.

(3) For existing oil wells, the escape rate is calculated by multiplying the producing gas/oil ratio by the maximum daily production rate or the best estimate of the maximum daily production rate.

(4) For new oil wells, the escape rate is calculated by multiplying the producing gas/oil ratio by the maximum daily production rate of offset wells in the pool

or reservoir, or the pool or reservoir average of the producing gas/oil ratio multiplied by the maximum daily production rate.

(5) For facilities or operations not mentioned, the escape rate is calculated using the actual flow of the gaseous mixture through the system or the best estimate of the actual flow of the gaseous mixture through the system.

E. "GPA" means the gas processors association.

F. "LEPC" means the local emergency planning committee established pursuant to the Emergency Planning and Community Right-To-Know Act, 42 U.S.C. section 11001.

G. "NACE" means the national association of corrosion engineers.

H. "Potentially hazardous volume" means the volume of hydrogen sulfide gas of such concentration that:

- (1) the 100-ppm radius of exposure includes a public area;
- (2) the 500-ppm radius of exposure includes a public road; or
- (3) the 100-ppm radius of exposure exceeds 3000 feet.

I. "Public area" means a building or structure that is not associated with the well, facility or operation for which the radius of exposure is being calculated and that is used as a dwelling, office, place of business, church, school, hospital or government building, or a portion of a park, city, town, village or designated school bus stop or other similar area where members of the public may reasonably be expected to be present.

J. "Public road" means a federal, state, municipal or county road or highway.

K. "Radius of exposure" means the radius constructed with the point of escape as its starting point and its length calculated using the following Pasquill-Gifford derived equation, or by such other method as the division may approve:

(1) for determining the 100-ppm radius of exposure: $X = [(1.589)(\text{hydrogen sulfide concentration})(Q)]^{0.6258}$, where "X" is the radius of exposure in feet, the "hydrogen sulfide concentration" is the decimal equivalent of the mole or volume fraction of hydrogen sulfide in the gaseous mixture and "Q" is the escape rate expressed in cubic feet per day (corrected for standard conditions of 14.73 psi absolute and 60 degrees fahrenheit);

(2) for determining the 500-ppm radius of exposure: $X = [(0.4546)(\text{hydrogen sulfide concentration})(Q)]^{0.6258}$, where "X" is the radius of exposure in feet, the "hydrogen sulfide concentration" is the decimal equivalent of the mole or volume fraction of hydrogen sulfide in the gaseous mixture and "Q" is the escape rate

expressed in cubic feet per day (corrected for standard conditions of 14.73 psi absolute and 60 degrees fahrenheit);

(3) for a well being drilled, completed, recompleted, worked over or serviced in an area where insufficient data exists to calculate a radius of exposure but where hydrogen sulfide could reasonably be expected to be present in concentrations in excess of 100 ppm in the gaseous mixture, a 100-ppm radius of exposure equal to 3000 feet is assumed.

[19.15.11.7 NMAC - Rp, 19.15.3.118 NMAC, 12/1/08]

19.15.11.8 REGULATORY THRESHOLD:

A. Determination of hydrogen sulfide concentration.

(1) Each person shall determine the hydrogen sulfide concentration in the gaseous mixture within wells, facilities or operations either by testing (using a sample from each well, facility or operation); testing a representative sample; or using process knowledge in lieu of testing. If the person uses a representative sample or process knowledge, the concentration derived from the representative sample or process knowledge shall be reasonably representative of the hydrogen sulfide concentration within the well, facility or operation.

(2) The person shall conduct the tests used to make the determination referred to in Paragraph (1) of Subsection A of 19.15.11.8 NMAC in accordance with applicable ASTM or GPA standards or by another division-approved method.

(3) If the person conducted a test prior to January 31, 2003 that otherwise meets the requirements of Paragraphs (1) and (2) of Subsection A of 19.15.11.8 NMAC, new testing is not required.

(4) If a change or alteration may materially increase the hydrogen sulfide concentration in a well, facility or operation, the person shall make a new determination in accordance with 19.15.11 NMAC.

B. Concentrations determined to be below 100 ppm. If the hydrogen sulfide concentration in a given well, facility or operation is less than 100 ppm, the person is not required to take further actions pursuant to 19.15.11 NMAC.

C. Concentrations determined to be above 100 ppm.

(1) If the person determines the hydrogen sulfide concentration in a given well, facility or operation is 100 ppm or greater, then the person shall calculate the radius of exposure and comply with applicable requirements of 19.15.11 NMAC.

(2) If calculation of the radius of exposure reveals that a potentially hazardous volume is present, the person shall provide results of the hydrogen sulfide concentration determination and the calculation of the radius of exposure to the division. For a well, facility or operation, the person shall accomplish the determination, calculation and submission 19.15.11.8 NMAC requires before operations begin.

D. Recalculation. The person shall calculate the radius of exposure if the hydrogen sulfide concentration in a well, facility or operation increases to 100 ppm or greater. The person shall also recalculate the radius of exposure if the actual volume fraction of hydrogen sulfide increases by a factor of 25 percent in a well, facility or operation that previously had a hydrogen sulfide concentration of 100 ppm or greater. If calculation or recalculation of the radius of exposure reveals that a potentially hazardous volume is present, the person shall provide the results to the division within 60 days.

[19.15.11.8 NMAC - Rp, 19.15.3.118 NMAC, 12/1/08]

19.15.11.9 HYDROGEN SULFIDE CONTINGENCY PLAN:

A. When required. If a well, facility or operation involves a potentially hazardous volume of hydrogen sulfide, the person shall develop a hydrogen sulfide contingency plan that the person will use to alert and protect the public in accordance with the Subsections B through I of 19.15.11.9 NMAC.

B. Plan contents.

(1) API guidelines. The person shall develop the hydrogen sulfide contingency plan with due consideration of paragraph 7.6 of the guidelines in the API publication Recommended Practices for Oil and Gas Producing and Gas Processing Plant Operations Involving Hydrogen Sulfide, RP-55, most recent edition, or with due consideration to another division-approved standard.

(2) Required contents. The hydrogen sulfide contingency plan shall contain information on the following subjects, as appropriate to the well, facility or operation to which it applies.

(a) Emergency procedures. The hydrogen sulfide contingency plan shall contain information on emergency procedures the person will follow in the event of a release and shall include, at a minimum, information concerning the responsibilities and duties of personnel during the emergency, an immediate action plan as described in the API document referenced in Paragraph (1) of Subsection B of 19.15.11.9 NMAC, and telephone numbers of emergency responders, public agencies, local government and other appropriate public authorities. The plan shall also include the locations of potentially affected public areas and public roads and shall describe proposed evacuation routes, locations of road blocks and procedures for notifying the public, either through direct telephone notification using telephone number lists or by means of

mass notification and reaction plans. The plan shall include information on the availability and location of necessary safety equipment and supplies.

(b) Characteristics of hydrogen sulfide and sulfur dioxide. The hydrogen sulfide contingency plan shall include a discussion of the characteristics of hydrogen sulfide and sulfur dioxide.

(c) Maps and drawings. The hydrogen sulfide contingency plan shall include maps and drawings that depict the area of exposure and public areas and public roads within the area of exposure.

(d) Training and drills. The hydrogen sulfide contingency plan shall provide for training and drills, including training in the responsibilities and duties of essential personnel and periodic on-site or classroom drills or exercises that simulate a release, and shall describe how the person will document the training, drills and attendance. The hydrogen sulfide contingency plan shall also provide for training of residents as appropriate on the proper protective measures to be taken in the event of a release, and shall provide for briefing of public officials on issues such as evacuation or shelter-in-place plans.

(e) Coordination with state emergency plans. The hydrogen sulfide contingency plan shall describe how the person will coordinate emergency response actions under the plan with the division and the New Mexico state police consistent with the New Mexico hazardous materials emergency response plan.

(f) Activation levels. The hydrogen sulfide contingency plan shall include the activation level and a description of events that could lead to a release of hydrogen sulfide sufficient to create a concentration in excess of the activation level.

C. Plan activation. The person shall activate the hydrogen sulfide contingency plan when a release creates a hydrogen sulfide concentration greater than the activation level set forth in the hydrogen sulfide contingency plan. At a minimum, the person shall activate the plan whenever a release may create a hydrogen sulfide concentration of more than 100 ppm in a public area, 500 ppm at a public road or 100 ppm 3000 feet from the site of release.

D. Submission.

(1) Where submitted. The person shall submit the hydrogen sulfide contingency plan to the division.

(2) When submitted. The person shall submit a hydrogen sulfide contingency plan for a new well, facility or operation before operations commence. The hydrogen sulfide contingency plan for a drilling, completion, workover or well servicing operation shall be on file with the division before operations commence and may be submitted separately or along with the APD or may be on file from a previous submission. A

person shall submit a hydrogen sulfide contingency plan within 180 days after the person becomes aware or should have become aware that a public area or public road is established that creates a potentially hazardous volume where none previously existed.

(3) Electronic submission. A filer who operates more than 100 wells or who operates an oil pump station, compressor station, refinery or gas plant shall submit each hydrogen sulfide contingency plan in electronic format. The filer may submit the hydrogen sulfide contingency plan through electronic mail, through an Internet filing or by delivering electronic media to the division, so long as the electronic submission is compatible with the division's systems.

E. Failure to submit plan. A person's failure to submit a hydrogen sulfide contingency plan when required may result in denial of an application for permit to drill, cancellation of an allowable for the subject well or other enforcement action appropriate to the well, facility or operation.

F. Review, amendment. The person shall review the hydrogen sulfide contingency plan any time a subject addressed in the plan materially changes and make appropriate amendments. If the division determines that a hydrogen sulfide contingency plan is inadequate to protect public safety, the division may require the person to add provisions to the plan or amend the plan as necessary to protect public safety.

G. Retention and inspection. The hydrogen sulfide contingency plan shall be reasonably accessible in the event of a release, maintained on file at all times and available for division inspection.

H. Annual inventory of contingency plans. On an annual basis, each person required to prepare one or more hydrogen sulfide contingency plans pursuant to 19.15.11 NMAC shall file with the appropriate local emergency planning committee and the state emergency response commission an inventory of the wells, facilities and operations for which plans are on file with the division and the name, address and telephone number of a point of contact.

I. Plans required by other jurisdictions. The person may submit a hydrogen sulfide contingency plan the BLM or other jurisdiction require that meets the requirements of 19.15.11.9 NMAC to the division in satisfaction of 19.15.11.9 NMAC.

[19.15.11.9 NMAC - Rp, 19.15.3.118 NMAC, 12/1/08]

19.15.11.10 SIGNS, MARKERS:

For each well, facility or operation involving a hydrogen sulfide concentration of 100 ppm or greater, the person shall install and maintain signs or markers that conform with the current ANSI standard Z535.1-2002 (Safety Color Code), or some other division-approved standard. The sign or marker shall be readily readable, and shall contain the

words "poison gas" and other information sufficient to warn the public that a potential danger exists. The person shall prominently post signs or markers at locations, including entrance points and road crossings, sufficient to alert the public that a potential danger exists.

[19.15.11.10 NMAC - Rp, 19.15.3.118 NMAC, 12/1/08]

19.15.11.11 PROTECTION FROM HYDROGEN SULFIDE DURING DRILLING, COMPLETION, WORKOVER AND WELL SERVICING OPERATIONS:

A. API standards. The person shall conduct drilling, completion, workover and well servicing operations involving a hydrogen sulfide concentration of 100 ppm or greater with due consideration to the guidelines in the API publications Recommended Practice for Oil and Gas Well Servicing and Workover Operations Involving Hydrogen Sulfide, RP-68, and Recommended Practices for Drilling and Well Servicing Operations Involving Hydrogen Sulfide, RP-49, most recent editions, or some other division-approved standard.

B. Detection and monitoring equipment. Drilling, completion, workover and well servicing operations involving a hydrogen sulfide concentration of 100 ppm or greater shall include hydrogen sulfide detection and monitoring equipment as follows.

(1) Each drilling and completion site shall have an accurate and precise hydrogen sulfide detection and monitoring system that automatically activates visible and audible alarms when the hydrogen sulfide's ambient air concentration reaches a predetermined value the operator sets, not to exceed 20 ppm. The operator shall locate a sensing point at the shale shaker, rig floor and bell nipple for a drilling site and the cellar, rig floor and circulating tanks or shale shaker for a completion site.

(2) For workover and well servicing operations, the person shall locate one operational sensing point as close to the well bore as practical. Additional sensing points may be necessary for large or long-term operations.

(3) The operator shall provide and maintain as operational hydrogen sulfide detection and monitoring equipment during drilling when drilling is within 500 feet of a zone anticipated to contain hydrogen sulfide and continuously thereafter through all subsequent drilling.

C. Wind indicators. Drilling, completion, workover and well servicing operations involving a hydrogen sulfide concentration of 100 ppm or greater shall include wind indicators. The person shall have equipment to indicate wind direction present and visible at all times. The person shall install at least two devices to indicate wind direction at separate elevations that visible from all principal working areas at all times. When a sustained hydrogen sulfide concentration is detected in excess of 20 ppm at a detection point, the person shall display red flags.

D. Flare system. For drilling and completion operations in an area where it is reasonably expected that a potentially hazardous hydrogen sulfide volume will be encountered, the person shall install a flare system to safely gather and burn hydrogen-sulfide-bearing gas. The person shall locate flare outlets at least 150 feet from the well bore. Flare lines shall be as straight as practical. The person shall equip the flare system with a suitable and safe means of ignition. Where noncombustible gas is to be flared, the system shall provide supplemental fuel to maintain ignition.

E. Well control equipment. When the 100 ppm radius of exposure includes a public area, the following well control equipment is required.

(1) Drilling. The person shall install a remote-controlled well control system that is operational at all times beginning when drilling is within 500 vertical feet of the formation believed to contain hydrogen sulfide and continuously thereafter during drilling. The well control system shall include, at a minimum, a pressure and hydrogen-sulfide-rated well control choke and kill system including manifold and blowout preventer that meets or exceeds the specifications in API publications Choke and Kill Systems, 16C and Blowout Prevention Equipment Systems for Drilling Wells, RP 53 or other division-approved specifications. The person shall use mud-gas separators. The person shall test and maintain these systems pursuant to the specifications referenced, according to the requirements of 19.15.11 NMAC, or as the division otherwise approves.

(2) Completion, workover and well servicing. The person shall install a remote controlled pressure and hydrogen-sulfide-rated well control system that meets or exceeds API specifications or other division-approved specifications that is operational at all times during a well's completion, workover and servicing.

F. Mud program. Drilling, completion, workover and well servicing operations involving a hydrogen sulfide concentration of 100 ppm or greater shall use a hydrogen sulfide mud program capable of handling hydrogen sulfide conditions and well control, including de-gassing.

G. Well testing. Except with prior division approval, a person shall conduct drill-stem testing of a zone that contains hydrogen sulfide in a concentration of 100 ppm or greater only during daylight hours and not permit formation fluids to flow to the surface.

H. If hydrogen sulfide encountered during operations. If hydrogen sulfide was not anticipated at the time the division issued a permit to drill but is encountered during drilling in a concentration of 100 ppm or greater, the operator shall satisfy the requirements of 19.15.11 NMAC before continuing drilling operations. The operator shall notify the division of the event and the mitigating steps that the operator has or is taking as soon as possible, but no later than 24 hours following discovery. The division may grant verbal approval to continue drilling operations pending preparation of a required hydrogen sulfide contingency plan.

[19.15.11.11 NMAC - Rp, 19.15.3.118 NMAC, 12/1/08]

19.15.11.12 PROTECTION FROM HYDROGEN SULFIDE AT OIL PUMP STATIONS, PRODUCING WELLS, TANK BATTERIES AND ASSOCIATED PRODUCTION FACILITIES, PIPELINES, REFINERIES, GAS PLANTS AND COMPRESSOR STATIONS:

A. API standards. A person shall conduct operations at oil pump stations and producing wells, tank batteries and associated production facilities, refineries, gas plants and compressor stations involving a hydrogen sulfide concentration of 100 ppm or greater with due consideration to the guidelines in the API publication Recommended Practices for Oil and Gas Producing and Gas Processing Plant Operations Involving Hydrogen Sulfide, RP-55, latest edition or some other division-approved standard.

B. Security. A person shall protect well sites and other unattended, fixed surface facilities involving a hydrogen sulfide concentration of 100 ppm or greater from public access by fencing with locking gates when the location is within 1/4 mile of a public area. For the purposes of Subsection B of 19.15.11.12 NMAC, a surface pipeline is not considered a fixed surface facility.

C. Wind direction indicators. Oil pump stations, producing wells, tank batteries and associated production facilities, pipelines, refineries, gas plants and compressor stations involving a hydrogen sulfide concentration of 100 ppm or greater shall have equipment to indicate wind direction. The person shall install wind direction equipment that is visible from all principal working areas at all times.

D. Control equipment. When the 100 ppm radius of exposure includes a public area, the following additional measures are required.

(1) The person shall install and maintain in good operating condition safety devices, such as automatic shut-down devices, to prevent hydrogen sulfide's escape. Alternatively, the person shall establish safety procedures to achieve the same purpose.

(2) A well shall possess a secondary means of immediate well control through the use of an appropriate christmas tree or downhole completion equipment. The equipment shall allow downhole accessibility (reentry) under pressure for permanent well control.

E. Tanks or vessels. The person shall chain each stair or ladder leading to the top of a tank or vessel containing 300 ppm or more of hydrogen sulfide in the gaseous mixture or mark it to restrict entry.

[19.15.11.12 NMAC - Rp, 19.15.3.118 NMAC, 12/1/08]

19.15.11.13 PERSONNEL PROTECTION AND TRAINING:

The person shall provide persons responsible for implementing a hydrogen sulfide contingency plan training in hydrogen sulfide hazards, detection, personal protection and contingency procedures.

[19.15.11.13 NMAC - Rp, 19.15.3.118 NMAC, 12/1/08]

19.15.11.14 STANDARDS FOR EQUIPMENT THAT MAY BE EXPOSED TO HYDROGEN SULFIDE:

Whenever a well, facility or operation involves a potentially hazardous hydrogen sulfide volume, the person shall select equipment with consideration for both the hydrogen sulfide working environment and anticipated stresses and shall use NACE Standard MR0175 (latest edition) or some other division-approved standard for selection of metallic equipment or, if applicable, use adequate protection by chemical inhibition or other methods that control or limit hydrogen sulfide's corrosive effects.

[19.15.11.14 NMAC - Rp, 19.15.3.118 NMAC, 12/1/08]

19.15.11.15 EXEMPTIONS:

A person may petition the director or the director's designee for an exemption to a requirement of 19.15.11 NMAC. A petition shall provide specific information as to the circumstances that warrant approval of the exemption requested and how the person will protect public safety. The director or the director's designee, after considering all relevant factors, may approve an exemption if the circumstances warrant and so long as the person protects public safety.

[19.15.11.15 NMAC - Rp, 19.15.3.118 NMAC, 12/1/08]

19.15.11.16 NOTIFICATION OF THE DIVISION:

The person shall notify the division upon a release of hydrogen sulfide requiring activation of the hydrogen sulfide contingency plan as soon as possible, but no more than four hours after plan activation, recognizing that a prompt response should supersede notification. The person shall submit a full report of the incident to the division on form C-141 no later than 15 days following the release.

[19.15.11.16 NMAC - Rp, 19.15.3.118 NMAC, 12/1/08]

PART 12: POOLS

19.15.12.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.12.1 NMAC - N, 12/1/08]

19.15.12.2 SCOPE:

19.15.12 NMAC applies to persons engaged in oil and gas development and production within New Mexico.

[19.15.12.2 NMAC - N, 12/1/08]

19.15.12.3 STATUTORY AUTHORITY:

19.15.12 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Section 70-2-6, Section 70-2-11, Section 70-2-12, Section 70-2-16 and Section 70-2-17.

[19.15.12.3 NMAC - N, 12/1/08]

19.15.12.4 DURATION:

Permanent.

[19.15.12.4 NMAC - N, 12/1/08]

19.15.12.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.12.5 NMAC - N, 12/1/08]

19.15.12.6 OBJECTIVE:

To regulate oil and gas operations that involve commingling of oil or gas from different pools or leases, in order to prevent waste and protect correlative rights.

[19.15.12.6 NMAC - N, 12/1/08]

19.15.12.7 DEFINITIONS

A. "Diverse ownership" means leases or pools have different working, royalty or overriding royalty interest owners or different ownership percentages of the same working, royalty or overriding royalty interest owners.

B. "Identical ownership" means leases or pools have the same working, royalty and overriding royalty owners in exactly the same percentages.

C. "Lease" means a contiguous geographical area of identical ownership overlying a pool or portion of a pool. An area pooled, unitized or communitized, either by agreement or by division order, or a participating area shall constitute a lease. If there is diversity of

ownership between different pools, or between different zones or strata, then each such pool, zone or stratum having diverse ownership shall be considered a separate lease.

[19.15.12.7 NMAC - Rp, 19.15.5.303 NMAC, 12/1/08]

19.15.12.8 CLASSIFYING AND DEFINING POOLS:

The division shall determine whether a particular well or pool is a gas or oil well, or a gas or oil pool, and from time to time classify and reclassify wells and name pools accordingly, and shall determine the limits of a pool or pools producing oil or gas and from time to time re-determine such limits.

[19.15.12.8 NMAC - Rp, 19.15.1.15 NMAC, 12/1/08]

19.15.12.9 SEGREGATION OF PRODUCTION FROM DIFFERENT POOLS OR LEASES:

A. Pool segregation required. An operator shall produce each pool as a single common source of supply and complete, case, maintain and operate wells in the pool so as to prevent communication within the well bore with other pools. An operator shall at all times segregate oil or gas produced from each pool. The combination commingling of production, before marketing, with production from other pools without division approval is prohibited.

B. Lease segregation required. An operator shall not transport oil or gas from a lease until it has been accurately measured or determined by other methods acceptable to the division. An operator shall at all times segregate production from each lease. The combination or commingling of production, before marketing, with production from other leases without division approval is prohibited.

C. Exceptions. The division may permit exceptions to Subsections A and B of 19.15.12.9 NMAC for surface commingling, downhole commingling and off-lease storage or measurement pursuant to 19.15.12.10 NMAC, 19.15.12.11 NMAC and 19.15.12.12 NMAC, respectively. Exceptions granted by previous division orders remain in effect in accordance with their terms and conditions.

[19.15.12.9 NMAC - Rp, 19.15.5.303 NMAC, 12/1/08]

19.15.12.10 SURFACE COMMINGLING - OIL, GAS OR OIL AND GAS:

A. To prevent waste, to promote conservation and to protect correlative rights, the division may grant exceptions to permit the surface commingling of oil or gas in common facilities from two or more pools, two or more leases or combinations of pools and leases provided that:

(1) the division shall approve the method the applicant uses to allocate the production to the various leases or pools to be commingled;

(2) if state, federal or tribal lands are involved, the operator has notified the state land office or BLM, as applicable, of the proposed commingling; and

(3) the operator has met the other applicable requirements in 19.15.12.10 NMAC.

B. Specific requirements and provisions for commingling of leases, pools or leases and pools with identical ownership.

(1) Measurement and allocation methods.

(a) Well test method. If all wells or units to be commingled are marginal and are physically incapable of producing the top proration unit allowable for their respective pools, or if all affected pools are unprorated, the division shall permit commingling without separately measuring the production from each pool or lease. Instead, the operator may determine the production from each well and from each pool or lease from well tests conducted periodically, but no less than annually. The well test method shall not apply to wells or units that can produce an amount of oil equal to the top proration unit allowable for the pool but are restricted because of high gas-oil ratios. The operator of a marginal commingling installation shall notify the division any time a well or unit commingled under 19.15.12.10 NMAC becomes capable of producing the top proration unit allowable for its pool, at which time the division shall require separate measurement.

(b) Metering method. The operator may determine production from each pool or lease by separately metering before commingling.

(c) Subtraction method. If production from all except one of the pools or leases to be commingled is separately measured, the operator may determine the production from the remaining pool or lease by the subtraction method as follows:

(i) for oil, the net production from the unmetered pool or lease shall be the difference between the net pipeline runs with the beginning and ending stock adjustments and the sum of the net production of the metered pools or leases;

(ii) for gas, the net production from the unmetered pool or lease shall be the difference between the volume recorded at the sales meter and the sum of the volumes recorded at the individual pool or lease meters.

(d) Top allowable producers. If a well or unit in a prorated pool to be commingled can physically be produced at top proration unit allowable rates (even if restricted because of high gas-oil ratios), the division may permit commingling only if the

operator or a gatherer, transporter or processor meters the production from the unit prior to commingling, or determines it by the subtraction method.

(e) Alternative methods. An operator may determine production from each pool or lease to be commingled by other methods the division has specifically approved prior to commingling. The division shall determine what evidence is necessary to support a request to use an alternative method.

(2) Prior to commingling, the applicant shall notify the division by filing form C-103 in the division's Santa Fe office with the following information set forth in the form or attached to the form:

(a) identification of each of the leases, pools or leases and pools to be commingled;

(b) the method of allocation the applicant will use; if the applicant proposes using the well test method for production from a prorated pool, the notification to the division shall be accompanied by a tabulation of production showing that the average daily production of an affected proration unit over a 60-day period has been below the top proration unit allowable for the subject pool (or for a newly drilled well without a 60-day production history, a tabulation of the available production) or other evidence acceptable to the division to establish that the well or wells on the unit are not capable of producing the top proration unit allowable; if the proposed allocation method is other than an approved method provided in Subsection B of 19.15.12.10 NMAC, the operator shall submit evidence of the method's reliability;

(c) a certification by a licensed attorney or qualified petroleum landman that the ownership in the pools and leases to be commingled is identical as defined in 19.15.12.7 NMAC; and

(d) evidence of notice to the state land office or the BLM, if required.

(3) Approval. The division may authorize commingling without a notice or hearing and the operator may commence commingling upon the division's approval of form C-103, subject to compliance with any conditions of the approval the division noted, provided that the operator shall not commence commingling involving state, federal or tribal leases unless or until approved by the state land office or the BLM, as applicable.

C. Specific requirements and provisions for commingling of leases, pools or leases and pools with diverse ownership.

(1) Measurement and allocation methods. Where there is diversity of ownership between two or more leases, two or more pools or between different pools and leases, the division shall only permit surface commingling of production from the leases and pools if the operator accurately meters production from each of such pools

or leases or determines the production by other methods the division has specifically approved prior to commingling.

(2) Meter proving and calibration frequencies.

(a) Oil. The operator shall test each meter used in oil production accounting for accuracy as follows: monthly, if more than 100,000 barrels of oil per month are measured through the meter; quarterly, if between 10,000 and 100,000 barrels of oil per month are measured through the meter; and semi-annually, if less than 10,000 barrels of oil per month are measured through the meter.

(b) Gas. For each gas sales and allocation meter, the operator shall test the metering equipment's accuracy at the point of delivery or allocation following the initial installation and following repair and retested: quarterly, if 100 MCFGPD or more are measured through the meter; and semi-annually, if less than 100 MCFGPD are measured through the meter.

(c) Correction and adjustment. If a meter proving and calibration test reveals inaccuracy in the metering equipment of more than two percent, the operator shall correct the volume measured and adjust the meter to zero error. The operator shall submit a corrected report adjusting the volume of oil or gas measured and showing the calculations made in correcting the volumes. The operator shall correct the volumes back to the time the inaccuracy occurred, if known. If the time is unknown, the operator shall correct the volumes for the last half of the period elapsed since the last calibration date. If a test reveals an inaccuracy of less than two percent, the operator shall adjust the meter, but correction of prior production is not required.

(3) Low production gas wells. For gas wells producing less than 15 MCFGPD, the operator may estimate production as an acceptable alternative to individual well measurement provided that commingling of production from different pools or leases does not take place unless otherwise authorized pursuant to 19.15.12 NMAC.

(4) Approval process.

(a) In general. Where there is diversity of ownership, the division may grant an exception to the requirements of 19.15.12.9 NMAC to permit surface commingling of production from different leases, pools or leases and pools only after notice and an opportunity for hearing as provided in Paragraph (4) of Subsection C of 19.15.12.10 NMAC.

(b) Application. The operator shall submit an application for administrative approval to the division's Santa Fe office on form C-107-B, which shall contain a list of the parties (interest owners) owning an interest in the production to be commingled (including owners of royalty and overriding royalty interests whether or not they have a right or option to take their interests in kind) and a method of allocating production to ensure the protection of correlative rights.

(c) Notice. The applicant shall notify the interest owners in accordance with 19.15.4.12 NMAC. The applicant shall submit a statement attesting that the applicant, on or before the date the applicant submitted the application to the division, notified each of the interest owners by sending them a copy of the application and the attachments to the application, by certified mail, return receipt requested, and advising them that they must file any objection in writing with the division's Santa Fe office within 20 days from the date the division received the application. The division may approve the application administratively, without hearing, upon receipt of written waivers from interest owners, or if no interest owner has filed an objection within the 20-day period. If the division receives an objection, it shall set the application for hearing. The division shall notify the applicant, who shall give formal notice of the hearing to each party who has filed an objection and to such other persons as the division directs.

(d) Hearing ordered by the division. The division may set for hearing an application for administrative approval of surface commingling, and, in such case, the applicant shall give notice of the hearing in the manner the division directs.

(e) Notice by publication. When an applicant is unable to locate all interest owners after exercising reasonable diligence, the applicant shall provide notice by publication and submit proof of publication with the application. Such proof shall consist of a copy of the legal advertisement that was published in a newspaper of general circulation in the county or counties in which the commingled production is located. The advertisement shall include:

(i) the applicant's name, address, telephone number and contact party;

(ii) the location by section, township and range of the leases from which production will be commingled and the location of the commingling facility;

(iii) the source of all commingled production by pool name; and

(iv) a notation that interested parties must file objections or requests for hearing in writing with the division's Santa Fe office within 20 days after publication, or the division may approve the application.

(f) Effect of protest. The division shall include protests and requests for hearing it receives in the case file; provided however, the division shall not consider the protest as evidence. If the protesting party does not appear at the hearing, the division may grant application without receiving additional evidence in support of the application.

(g) Additions. A surface commingling order may authorize, prospectively, the inclusion of additional pools or leases within defined parameters set forth in the order, provided that:

(i) the notice to the interest owners includes a statement that authorization for subsequent additions is being sought and of the parameters for the additions the applicant proposes, and

(ii) the division finds that subsequent additions within defined parameters will not, in reasonable probability, reduce the commingled production's value or otherwise adversely affect the interest owners; a subsequent application to amend an order to add to the commingled production other leases, pools or leases and pools that are within the defined parameters requires notice only to the owners of interests in the production to be added, unless the division otherwise directs.

(h) State, federal or tribal lands. Notwithstanding the issuance of an exception under 19.15.12.10 NMAC, an operator shall not commence commingling involving state, federal or tribal leases unless or until approved by the state land office or the BLM, as applicable.

[19.15.12.10 NMAC - Rp, 19.15.5.303 NMAC, 12/1/08]

19.15.12.11 DOWNHOLE COMMINGLING:

A. The director may grant an exception to 19.15.12.9 NMAC to permit the commingling of multiple producing pools in existing or proposed well bores when the following conditions are met.

(1) The fluids from each pool are compatible and combining the fluids will not damage the pools.

(2) The commingling will not jeopardize the efficiency of present or future secondary recovery operations in the pools to be commingled.

(3) The bottom perforation of the lower zone is within 150 percent of the depth of the top perforation in the upper zone and the lower zone is at or below normal pressure with normal pressure assumed to be 0.433 psi per foot of depth. If the pools to be commingled are not within this vertical interval, then evidence is required to demonstrate that commingling will not result in shut-in or flowing well bore pressures in excess of any commingled pool's fracture parting pressure. The fracture parting pressure is assumed to be 0.65 psi per foot of depth unless the applicant submits other measured or calculated pressure data acceptable to the division.

(4) The commingling will not result in the permanent loss of reserves due to cross-flow in the well bore.

(5) Fluid-sensitive formations that may be subject to damage from water or other produced liquids are protected from contact with the liquids produced from other pools in the well.

(6) If any of the pools being commingled is prorated, or the well's production has been restricted by division order in any manner, the allocated production from each producing pool in the commingled well bore shall not exceed the top oil or gas allowable rate for a well in that pool or rate restriction applicable to the well.

(7) The commingling will not reduce the value of the total remaining production.

(8) Correlative rights will not be violated.

B. The director may rescind authority to commingle production in a well bore and require the operator produce the pools separately if, in the director's opinion, waste or reservoir damage is resulting, correlative rights are being impaired or the efficiency of a secondary recovery project is being impaired, or any changes or conditions render the installation no longer eligible for downhole commingling.

C. When the conditions set forth in Subsection A of 19.15.12.11 NMAC are satisfied, the director may approve a request to downhole commingle production in one of the following ways.

(1) Individual exceptions. An operator shall file applications to downhole commingle in well bores located outside of an area subject to a downhole commingling order issued in a "reference case" and not within a pre-approved pool or area on form C-107-A with the division.

(a) The director may administratively approve a form C-107-A in the absence of a valid objection filed within 20 days after the division's receipt of the application if, in the director's opinion, waste will not occur and correlative rights will not be impaired.

(b) In those instances where the ownership or percentages between the pools to be commingled is not identical, applicant shall send a copy of form C-107-A to interest owners in the spacing unit by certified mail, return receipt requested.

(c) The applicant shall send copies of form C-107-A to the state land office for wells in spacing units containing state lands or the BLM for wells in spacing units containing federal or tribal lands.

(d) The director may set an administratively filed form C-107-A for hearing.

(2) Exceptions for wells located in pre-approved pools or areas. Applicants shall file applications to downhole commingle in well bores within pools or areas that have been established by the division as "pre-approved pools or areas" pursuant to Paragraph (2) of Subsection D of 19.15.12.11 NMAC on form C-103 at the appropriate division district office. The district supervisor of the appropriate division district office may approve the proposed downhole commingling following receipt of form C-103. In addition to the information required by form C-103, the applicant shall include:

(a) the number of the division order that established pre-approved pool or area;

(b) the names of pools to be commingled;

(c) perforated intervals;

(d) allocation method and supporting data;

(e) a statement that the commingling will not reduce the total remaining production's value;

(f) in those instances where the ownership or percentages between the pools to be commingled is not identical, a statement attesting that applicant sent notice to the interest owners in the spacing unit by certified mail, return receipt requested of its intent to apply for downhole commingling and no objection was received within 20 days of sending this notice; and

(g) a statement attesting that applicant sent a copy of form C-103 to the state land office for wells in spacing units containing state lands or the BLM for wells in spacing units containing federal or tribal lands using sundry notice form 3160-5.

(3) Exceptions for wells located in areas subject to a downhole commingling order issued in a "reference case". Applicants shall file applications to downhole commingle in well bores within an area subject to a division order that excepted any of the criteria required by 19.15.12.11 NMAC or form C-107-A with the district supervisor of the appropriate division district office and, except for the place of filing, shall meet the requirements of the applicable order issued in that "reference case".

D. Applications for establishing a "reference case" or for pre-approval of downhole commingling on an area-wide or pool-wide basis.

(1) Reference cases. If sufficient data exists for a lease, pool, formation or geographical area to render it unnecessary to repeatedly provide the data on form C-107-A, an operator may except any of the various criteria required under 19.15.12.11 NMAC or set forth in form C-107-A by establishing a "reference case". The division, upon its own motion or application from an operator, may establish "reference cases" either administratively or by hearing. Upon division approval of such "reference cases" for specific criteria, the division shall require subsequent form C-107-A only to cite the division order number that established the exceptions and not require the applicant to submit data for those criteria. The division may approve applications involving exceptions to the specific criteria required by 19.15.12.11 NMAC or by form C-107-A after the applicant sends notice to the interest owners in the affected spacing units by certified mail, return receipt requested, based on evidence that the approval would adequately satisfy the conditions of Subsection A of 19.15.12.11 NMAC.

(2) Pre-approval of downhole commingling on a pool-wide or area-wide basis. If sufficient data exists for multiple formations or pools that have previously been commingled or are proposed to be commingled, the division, upon its own motion or application from an operator, may establish downhole commingling on a pool-wide or area-wide basis either administratively or by hearing.

(a) Applications for pre-approval shall include the data required by form C-107-A, a list of the names and address of operators in the pools, previous orders authorizing downhole commingling for the pools or area and a map showing the location of wells in the pools or area and indicating those wells approved for downhole commingling.

(b) The director may approve applications for pre-approval of downhole commingling on a pool-wide or area-wide basis after the applicant sends notice to operators in the affected pools or area by certified mail, return receipt requested, based on evidence that such approval adequately satisfies the conditions of 19.15.12.11 NMAC.

(c) Upon approval of certain pools or areas for downhole commingling, an operator may obtain approval for subsequent applications for approval to downhole commingle wells within those pools or areas by filing form C-103 in accordance with Paragraph (2) of Subsection C of 19.15.12.11 NMAC.

(3) The division shall maintain and continually update a list of pre-approved pools or areas in Subsection E of 19.15.12.11 NMAC.

E. Pre-approved pools and areas. Downhole commingling is approved within the following pool combinations or geographical areas (provided, however, that the operator shall file form C-103 with the appropriate division district office in accordance with the procedure set forth in Paragraph (2) of Subsection C of 19.15.12.11 NMAC):

Pre-approved pools or geographic areas for downhole commingling, permian basin

[19.15.12.11 NMAC - Rp, 19.15.5.303 NMAC, 12/1/08]

PART 13: COMPULSORY POOLING

19.15.13.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.13.1 NMAC - N, 12/1/08]

19.15.13.2 SCOPE:

19.15.13 NMAC applies to persons engaged in oil and gas development and production within New Mexico.

[19.15.13.2 NMAC - N, 12/1/08]

19.15.13.3 STATUTORY AUTHORITY:

19.15.13 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Section 70-2-6, Section 70-2-11, Section 70-2-12 and Section 70-2-17.

[19.15.13.3 NMAC - N, 12/1/08]

19.15.13.4 DURATION:

Permanent.

[19.15.13.4 NMAC - N, 12/1/08]

19.15.13.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.13.5 NMAC - N, 12/1/08]

19.15.13.6 OBJECTIVE:

To establish requirements for implementation of the division's statutory authority to pool interests in oil and gas spacing units.

[19.15.13.6 NMAC - N, 12/1/08]

19.15.13.7 DEFINITIONS:

A. "Infill well" means a well in a compulsory pooled proration or spacing unit to be completed in a pool in which an existing well drilled pursuant to the compulsory pooling order has been completed and not plugged and abandoned.

B. "Operator", for the purposes of 19.15.13 NMAC, means the division or commission appointed operator of a compulsory pooled proration or spacing unit, or its successor.

C. "Pooled working interest" means a working interest or unleased mineral interest that is pooled by division or commission order and not by voluntary agreement of the owner of the interest, except for an unleased mineral interest on federal, state or tribal lands.

[19.15.13.7 NMAC - N, 12/1/08]

19.15.13.8 CHARGE FOR RISK:

A. General rule. Compulsory pooling orders the division enters pursuant to NMSA 1978, Section 70-2-17, as amended, may provide for the recovery, out of the share of production allocable to the working interest of a party that elects not to pay its proportionate share of well costs in advance, in addition to reasonable well costs and costs of supervision and management, of a charge for risk associated with the drilling, completion or working over and re-completion of each unit well for which the order provides. Unless otherwise ordered pursuant to Subsection D of 19.15.13.8 NMAC, the charge for risk is 200 percent of well costs.

B. Well costs shall include the reasonable costs of drilling, reworking, diverting, deepening, plugging back and testing the well; completing the well in a formation pooled by the order; and equipping the well for production.

(1) If, however, a well was previously completed in another formation or bottom hole location, or was previously abandoned without completion, well costs as to that well shall mean only the reasonable costs of re-entering, reworking, diverting, deepening, plugging back or testing the well; completion in the pooled formation or formations and; if necessary, reequipping the well for production, unless the division determines that allowance of all or some portion of historical costs of drilling is just and reasonable due to particular circumstances.

(2) If a well is completed in two or more formations having diverse ownership or a different risk charge percentage, the order shall provide for allocation of well costs between the formations.

(3) As to an interest owner who elects not to pay its share of well costs associated with a specific well in advance, as provided in the applicable order, well costs shall include costs of a subsequent operation undertaken to secure or enhance production from a formation pooled by the order prior to the time that the entire amount of the non-consenting owner's share of well costs and applicable risk charge have been recovered from the non-consenting owner's share of the well's production. The costs shall include expenses for reworking, diverting, deepening, plugging back, testing, completion or recompletion and equipping for production, but not ordinary operating expenses.

(4) Well costs shall also include reasonable costs of drilling, testing, completing and equipping a substitute well if, in the drilling of a well pursuant to a compulsory pooling order, the operator loses the hole or encounters mechanical difficulties rendering it impracticable to drill to the objective depth and the substitute well is located within 330 feet of the original well and the operator commences drilling within 10 days of the original well's abandonment.

C. An applicant for compulsory pooling is not required to present technical evidence justifying the risk charge provided in Subsection A of 19.15.13.8 NMAC.

D. Exceptions. A person responding to a compulsory pooling application who seeks a different risk charge than that provided in Subsection A of 19.15.13.8 NMAC shall so state in a timely pre-hearing statement filed with the division and served on the applicant in accordance with 19.15.4.13 NMAC, and shall have the burden to prove the justification for the risk charge sought by relevant geologic or technical evidence. The hearing examiner may allow a responding party who has not filed a pre-hearing statement, but who appears in person or by attorney at the hearing, to offer evidence in support of a different risk charge than that Subsection A of 19.15.13.8 NMAC provides, but in such cases the hearing examiner shall allow a continuance of the hearing, if requested, to enable the applicant to present rebuttal evidence.

[19.15.13.8 NMAC - Rp, 19.15.1.35 NMAC, 12/1/08]

19.15.13.9 INFILL WELLS:

Whenever 19.15.15 NMAC or an applicable pool order authorizes one or more infill wells within a proration or spacing unit pooled by division or commission order pursuant to NMSA 1978, Section 70-2-17, either the operator or an owner of a pooled working interest may, at any time after completion of the initial well provided in the pooling order, propose drilling of an infill well.

[19.15.13.9 NMAC - Rp, 19.15.1.36 NMAC, 12/1/08]

19.15.13.10 PROPOSAL BY THE OPERATOR:

A. If the operator proposes an infill well, it shall notify each pooled working interest owner of the proposal by certified mail, return receipt requested, specifying the proposed well's location and depth and including a schedule of estimated well costs and a statement of each pooled working interest owner's gross working interest percentage.

B. Each pooled working interest owner may elect to participate in the proposed infill well by notice in writing to the operator within 30 days after the owner receives the proposal, provided that the election to participate shall not be effective unless the owner so electing pays to the operator the amount of the owner's share of estimated well costs within 30 days after the date of transmission of its notice of election to participate.

C. A pooled working interest owner not electing to participate in the proposed infill well shall be deemed to have elected to become a non-consenting owner with respect to the infill well. The operator shall withhold from the proceeds of the well's production accruing to the working interest of a non-consenting owner the non-consenting owner's share of costs, as defined in 19.15.13 NMAC, of the infill well, together with a risk charge computed at the same rate as provided in the pooling order with respect to the initial well. The operator shall distribute the amounts withheld from the non-consenting owner's share of production for well costs and risk charges proportionately to the persons who have advanced the infill well's cost.

D. Unless it withdraws the proposal the operator shall commence drilling of the proposed infill well no later than 120 days after the expiration of the initial notice period of 30 days. The director may extend the time for commencement of drilling once for not more than an additional 120 days, upon showing of good cause for the extension, without notice or hearing. If the operator has not commenced drilling within the time provided no election previously made shall be binding on a party. If the operator still desires to drill the infill well, it shall resubmit written notice proposing the well as if no prior proposal had been made.

[19.15.13.10 NMAC - Rp, 19.15.1.36 NMAC, 12/1/08]

19.15.13.11 PROPOSAL BY POOLED WORKING INTEREST OWNER:

A. If a pooled working interest owner proposes an infill well, it shall notify the operator of the proposal by certified mail, return receipt requested, specifying the proposed well's location and depth and including a schedule of estimated well costs. The proposing owner shall mail a copy of the proposal to each of the other pooled working interest owners, or their successors in title as identified by documents of record in the office of the clerk of the county where the proposed well will be located, at the same time that it mails the proposal to the operator.

B. The operator shall, within 60 days after receipt of such notice, either propose an infill well at the specified location and depth as an operator proposal pursuant to 19.15.13.10 NMAC, or notify the owner proposing the well that it declines to do so.

(1) If the operator proposes the well and fewer than all working interest owners elect to participate, the operator may withdraw the proposal unless the originally proposing owner, within 30 days of receipt of notice of such occurrence, advances the share of estimated well costs allocable to all non-consenting owners of pooled working interests.

(2) If the operator proposes the well and all owners consent to the well or the originally proposing owner advances the share of well costs allocable to an otherwise unsubscribed interest, the operator shall commence drilling the proposed infill well within 120 days after it receives notice that either condition has occurred. The director may extend the time for commencement of drilling once for not more than an additional 120 days, upon showing of good cause for the extension, without notice or hearing. Well costs applicable to a non-consenting owner of a pooled working interest, together with the risk charge provided in the original pooling order, shall be recoverable out of the non-consenting owner's share of production as in other cases.

C. If the operator declines to propose a well proposed to it by a pooled working interest owner or fails to commence the well within the time provided, the proposing owner may apply to the division for an order authorizing the drilling of the proposed infill well under the compulsory pooling order's terms. The owner filing the application shall give notice of the application as provided in 19.15.4.12 NMAC to the owners of working

interests in the proration or spacing unit, including those whose interests in the proration or spacing unit are pooled by agreement, and, if the proration or spacing unit includes state, federal or tribal minerals, to the state land office or the BLM, as applicable.

[19.15.13.11 NMAC - Rp, 19.15.1.36 NMAC, 12/1/08]

19.15.13.12 REFUND OF MONEY ADVANCED:

If the operator does not commence an infill well proposed pursuant to 19.15.13.10 NMAC within the time provided, including an extension the division allows, it shall refund amounts it received from a pooled party as advance payment of well costs for the well within 10 days after the expiration of the time provided for commencement of drilling, together with interest on the amount received calculated at the rate of bank of America prime plus three percentage points.

[19.15.13.12 NMAC - Rp, 19.15.1.36 NMAC, 12/1/08]

19.15.13.13 DETERMINATION OF REASONABLE COSTS:

The provision of the applicable compulsory pooling order regarding reporting of actual well costs to the division and to pooled working interest owners, opportunity for objections to those costs, determinations of reasonableness of well costs and adjustment of the amount paid to a participating pooled working interest owner to reflect reasonable well costs shall apply to a well drilled pursuant to 19.15.13.10 NMAC or 19.15.13.11 NMAC.

[19.15.13.13 NMAC - Rp, 19.15.1.36 NMAC, 12/1/08]

PART 14: DRILLING PERMITS

19.15.14.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.14.1 NMAC - N, 12/1/2008; A, 6/26/2018]

19.15.14.2 SCOPE:

19.15.14 NMAC applies to persons engaged in drilling oil and gas wells within New Mexico.

[19.15.14.2 NMAC - N, 12/1/2008]

19.15.14.3 STATUTORY AUTHORITY:

19.15.14 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-6, Section 70-2-11 and Section 70-2-12 NMSA 1978.

[19.15.14.3 NMAC - N, 12/1/2008]

19.15.14.4 DURATION:

Permanent.

[19.15.14.4 NMAC - N, 12/1/2008]

19.15.14.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.14.5 NMAC - N, 12/1/2008]

19.15.14.6 OBJECTIVE:

To require an operator to obtain a permit prior to commencing drilling, deepening or re-entry operations or before plugging a well back to a different pool or completing or re-completing a well in an additional pool and to establish procedures for application for and approval or denial of the permit.

[19.15.14.6 NMAC - N, 12/1/2008]

19.15.14.7 DEFINITIONS:

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

19.15.14.8 PERMIT TO DRILL, DEEPEN OR PLUG BACK:

A. Permit required. An operator is required to obtain a permit approved by the division prior to commencing drilling, deepening or re-entry operations, commencing an additional lateral, plugging a well back to a different pool, or completing or re-completing a well in an additional pool.

B. Mineral owner or working interest owner consent required.

(1) An operator shall not file an application for permit to drill nor commence drilling operations until the operator has either:

(a) received the consent of at least one working interest owner or owner of an unleased mineral interest at the proposed bottom hole location; or

(b) obtained a compulsory pooling order from the division.

(2) In addition, an operator filing an application for permit to drill a horizontal well shall comply with Paragraph (1) of Subsection A of 19.15.16.15 NMAC.

[19.15.14.8 NMAC - Rp, 19.15.3.102 NMAC, 12/1/2008; A, 2/15/2012; A, 4/16/2012; A, 6/26/2018]

19.15.14.9 APPLICATIONS:

An operator shall file a complete form C-101 and complete form C-102 with the division and meet the following requirements, if applicable:

A. an applicant for a permit to drill a well within the corporate limits of a city, town or village shall give notice to the duly constituted governing body of the city, town or village or its duly authorized agent and certify on form C-101 that it gave such notice;

B. an applicant for a permit to drill in a quarter-quarter section containing an existing well or wells operated by another operator shall concurrently file a plat or other acceptable document locating and identifying the well or wells, furnish a copy of the application to the other operator or operators in the quarter-quarter section and certify on form C-101 that it furnished the copies; and

C. an applicant for a permit to operate a well in a spacing or proration unit containing an existing well or wells operated by another operator shall also comply with Subsection B of 19.15.15.12 NMAC.

[19.15.14.9 NMAC - Rp, 19.15.3.102 NMAC and 19.15.13.1101 NMAC, 12/1/2008]

19.15.14.10 APPROVAL OR DENIAL OF A PERMIT TO DRILL, DEEPEN OR PLUG BACK:

A. The director or the director's designee may deny a permit to drill, deepen or plug back if the applicant is not in compliance with Subsection A of 19.15.5.9 NMAC. In determining whether to grant or deny the permit, the director or the director's designee shall consider such factors as whether the non-compliance with Subsection A of 19.15.5.9 NMAC is caused by the operator not meeting the financial assurance requirements of 19.15.8 NMAC, being subject to a division or commission order finding the operator to be in violation of an order requiring corrective action, having a penalty assessment that has been unpaid for more than 70 days since the issuance of the order assessing the penalty or having more than the allowed number of wells out of compliance with 19.15.25.8 NMAC. If the non-compliance is caused by the operator having more than the allowed number of wells not in compliance with 19.15.25.8 NMAC, the director or director's designee shall consider the number of wells not in compliance, the length of time the wells have been out of compliance and the operator's efforts to bring the wells into compliance.

B. The division may impose conditions on an approved permit to drill, deepen or plug back.

C. If the division denies the permit it shall return the form C-101 to the applicant with the cause for rejection stated.

[19.15.14.10 NMAC - Rp, 19.15.3.102 NMAC and 19.15.13.1101 NMAC, 12/1/2008]

19.15.14.11 APPROVED FORM C-101 AT WELL SITE:

The operator shall keep a copy of the approved form C-101 at the well site during drilling operations.

[19.15.14.11 NMAC - Rp, 19.15.3.102 NMAC, 12/1/2008]

PART 15: WELL SPACING AND LOCATION

19.15.15.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.15.1 NMAC - N, 12/1/2008; A, 6/26/2018]

19.15.15.2 SCOPE:

19.15.15 NMAC applies to persons engaged in drilling oil and gas wells within New Mexico.

[19.15.15.2 NMAC - N, 12/1/2008]

19.15.15.3 STATUTORY AUTHORITY:

19.15.15 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-6, Section 70-2-11 and Section 70-2-12 NMSA 1978, which authorizes the division to establish well spacing.

[19.15.15.3 NMAC - N, 12/1/2008; A, 6/26/2018]

19.15.15.4 DURATION:

Permanent.

[19.15.15.4 NMAC - N, 12/1/2008]

19.15.15.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.15.5 NMAC - N, 12/1/2008]

19.15.15.6 OBJECTIVE:

To classify wells and establish well location and well acreage requirements and procedures for multiple operators within a spacing unit, obtaining approval of unorthodox well locations and for pooling or communitizing small acreage oil lots.

[19.15.15.6 NMAC - N, 12/1/2008]

19.15.15.7 DEFINITIONS

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

[19.15.15.7 NMAC - N, 12/1/2008]

19.15.15.8 CLASSIFICATION OF WELLS: WILDCAT AND DEVELOPMENT WELLS:

A. Wildcat well.

(1) In San Juan, Rio Arriba, Sandoval and McKinley counties, a wildcat well is a well to be drilled the spacing unit of which is a distance of two miles or more from:

(a) the outer boundary of a defined pool that has produced oil or gas from the formation to which the well is projected to be drilled; and

(b) a well that has produced oil or gas from the formation to which the proposed well is projected to be drilled.

(2) In all counties except San Juan, Rio Arriba, Sandoval and McKinley, a wildcat well is a well to be drilled the spacing unit of which is a distance of one mile or more from:

(a) the outer boundary of a defined pool that has produced oil or gas from the formation to which the well is projected to be drilled; and

(b) a well that has produced oil or gas from the formation to which the proposed well is projected.

B. Development well.

(1) A well that is not a wildcat well is classified as a development well for the nearest pool that has produced oil or gas from the formation to which the well is projected to be drilled. The operator shall space, drill, operate and produce a development well in accordance with the rule or order in effect for that pool, provided the well is completed in that pool.

(2) An operator shall operate and produce a well classified as a development well for a pool but completed in a producing formation not included in that pool's vertical limits in accordance with the rule in effect for the nearest pool that is producing from that formation within the two miles in San Juan, Rio Arriba, Sandoval and McKinley counties or within one mile everywhere else. If there is no designated pool for that producing formation within the two miles in San Juan, Rio Arriba, Sandoval and McKinley counties or within one mile everywhere else, the well shall be re-classified as a wildcat well.

[19.15.15.8 NMAC - Rp, 19.15.3.104 NMAC, 12/1/2008]

19.15.15.9 OIL WELL ACREAGE AND WELL LOCATION REQUIREMENTS:

A. A wildcat well that the operator projects to drill as an oil well to a formation and in an area that in the division's opinion may reasonably be presumed to produce oil rather than gas, and each development well for a defined oil pool unless otherwise provided in special pool orders, shall be located on a spacing unit consisting of approximately 40 contiguous surface acres, substantially in the form of a square that is a legal subdivision of the United States public land surveys and is a governmental quarter-quarter section or lot, and shall be located no closer than 330 feet to a boundary of the unit. Unless otherwise provided in applicable special pool order, a 40-acre oil spacing unit may contain up to four wells. Only those 40-acre spacing units committed to active secondary recovery projects shall be permitted more than four wells.

B. If a well drilled as an oil well is completed as a gas well but does not conform to the applicable gas well location requirements, the operator shall apply for administrative approval for a non-standard location before the well can produce. The director may set the application for hearing.

[19.15.15.9 NMAC - Rp, 19.15.3.104 NMAC, 12/1/2008]

19.15.15.10 GAS WELL ACREAGE AND WELL LOCATION REQUIREMENTS:

A wildcat well that the operator projects to drill as a gas well to a formation and in an area that in the division's opinion may reasonably be presumed to produce gas rather than oil and each development well for a defined gas pool, unless otherwise provided in special pool orders, shall be spaced and located as follows.

A. 640-acre spacing applies to a deep gas well in Rio Arriba, San Juan, Sandoval or McKinley county that is projected to be drilled to a gas producing formation older than the Dakota formation or is a development well within a gas pool created and defined by

the division after June 1, 1997 in a formation older than the Dakota formation, which formation or pool is located within the surface outcrop of the pictured cliffs formation (*i.e.*, the San Juan basin). The well shall be located on a spacing unit consisting of 640 contiguous surface acres, more or less, substantially in the form of a square that is a section and legal subdivision of the United States public land surveys and shall be located no closer than:

- (1) 1200 feet to an outer boundary of the spacing unit;
- (2) 130 feet to a quarter section line; and
- (3) 10 feet to a quarter-quarter section line or subdivision inner boundary.

B. 320-acre spacing applies to a deep gas well in Lea, Chaves, Eddy or Roosevelt county that is projected to be drilled to a gas producing formation, or is within a defined gas pool, that is in the Wolfcamp or an older formation. The well shall be located on a spacing unit consisting of 320 surface contiguous acres, more or less, comprising any two contiguous quarter sections of a single section that is a legal subdivision of the United States public land surveys provided that:

- (1) the initial well on a 320-acre unit is located no closer than 660 feet to the outer boundary of the quarter section on which the well is located and no closer than 10 feet to a quarter-quarter section line or subdivision inner boundary; and
- (2) only one infill well on a 320-acre unit shall be allowed provided that the well is located in the quarter section of the 320-acre unit not containing the initial well and is no closer than 660 feet to the outer boundary of the quarter section and no closer than 10 feet to a quarter-quarter section line or subdivision inner boundary.

C. 160-acre spacing applies to a gas well not covered above. The well shall be located in a spacing unit consisting of 160 surface contiguous acres, more or less, substantially in the form of a square that is a quarter section and a legal subdivision of the United States public land surveys and shall be located no closer than 660 feet to an outer boundary of the unit and no closer than 10 feet to a quarter-quarter section or subdivision inner boundary.

[19.15.15.10 NMAC - Rp, 19.15.3.104 NMAC, 12/1/2008]

19.15.15.11 ACREAGE ASSIGNMENT:

A. Well tests and classification. The operator of a wildcat or development gas well to which more than 40 acres has been dedicated shall conduct a potential test within 30 days following the well's completion and file the test with the division within 45 days following the test's completion. (See 19.15.19.8 NMAC.)

(1) The completion date for a gas well is the date of the conclusion of active completion work on the well.

(2) If the division determines that a well should not be classified as a gas well, the division shall reduce the acreage dedicated to the well to the standard acreage for an oil well.

(3) The operator's failure to file the test within the specified time subjects the well to the acreage reduction.

B. Non-standard spacing units. An operator shall not produce a well that does not have the required amount of acreage dedicated to it for the pool or formation in which it is completed until the division has formed and dedicated a standard spacing unit for the well or approved a non-standard spacing unit.

(1) Division district offices may approve non-standard spacing units without notice when the unorthodox size or shape is necessitated by a variation in the legal subdivision of the United States public land surveys or consists of an entire governmental section, and the non-standard spacing unit is not less than seventy percent or more than one hundred-thirty percent of a standard spacing unit. The operator shall obtain division approval of form C-102 showing the proposed non-standard spacing unit and the acreage contained in the unit.

(2) The director may approve administratively an application for non-standard spacing units after notice and opportunity for hearing when the unorthodox size or shape is necessitated by a variation in the legal subdivision of the United States public land surveys or the following facts exist:

(a) the non-standard spacing unit consists of a single quarter-quarter section or lot or quarter-quarter sections or lots joined by a common side; and

(b) the non-standard spacing unit lies wholly within a single quarter section if the well is completed in a pool or formation for which 40, 80 or 160 acres is the standard spacing unit size; a single half section if the well is completed in a pool or formation for which 320 acres is the standard spacing unit size; or a single section if the well is completed in a pool or formation for which 640 acres is the standard spacing unit size.

(3) An operator shall file an application for administrative approval of a non-standard spacing unit pursuant to Paragraph (2) of Subsection B of 19.15.15.11 NMAC or Paragraph (5) of Subsection B of 19.15.16.15 NMAC, with the division's Santa Fe office that is accompanied by:

(a) a plat showing the spacing unit and an applicable standard spacing unit for that pool or formation, the proposed well dedications and all adjoining spacing units;

(b) a list of affected persons entitled to notice of the application; and

(c) a statement discussing the reasons for the formation of the non-standard spacing unit.

(4) The applicant shall submit a statement attesting that the applicant, on or before the date the applicant submitted the application to the division, notified the affected persons identified on the list described in Paragraph (3) of Subsection B of 19.15.15.11 NMAC by sending a copy of the application, including a copy of the plat described in Paragraph (3) of Subsection B of 19.15.15.11 NMAC, by certified mail, return receipt requested, advising them that if they have an objection they must file the objection in writing with the division within 20 days from the date the division receives the application. The director may approve the application without hearing upon receipt of waivers from all the notified persons or if no person has filed an objection within the 20-day period.

(5) The director may set for hearing an application for administrative approval.

C. Exceptions to number of wells per spacing unit. The director may permit exceptions to 19.15.15 NMAC or special pool orders concerning the number of wells allowed per spacing unit only after notice and opportunity for hearing. An applicant for an exception shall notify all affected persons in adjoining spacing units in the same pool or in adjoining tracts not included in such spacing units.

[19.15.15.11 NMAC - Rp, 19.15.3.104 NMAC, 12/1/2008; A, 6/26/2018]

19.15.15.12 SPECIAL RULES FOR MULTIPLE OPERATORS WITHIN A SPACING UNIT:

A. Allowable production. If an operator completes a well in an oil pool or prorated gas pool, located within a proration unit containing an existing well or wells producing from that pool and operated by a different operator, unless all operators of wells producing from that proration unit agree, the allowable production from the newly completed well shall not exceed the difference between the allowable production for the proration unit and the actual production from the pool of the existing well or wells within the proration unit. The division may authorize exceptions to Subsection A of 19.15.15.12 NMAC after hearing following appropriate notice.

B. Notice requirements.

(1) An operator who intends to operate a well in a spacing or proration unit containing an existing well or wells operated by another operator shall, prior to filing the application for permit to drill, deepen or plug back for the well, furnish written notification of its intent to the operator of each existing well, and, if the unit includes state, federal or tribal minerals, to the state land office or BLM, as applicable; provided that separate notification to the BLM is not required if the operator will file the application with the BLM pursuant to 19.15.7.11 NMAC.

(2) The operator shall send the notices by certified mail, return receipt requested, and shall specify the proposed well's location and depth.

(3) The applicant shall submit with its application for permit to drill, deepen or plug back either

(a) a statement attesting that, at least 20 days before the date that the application was submitted to the division, the applicant sent notices to the designated parties, by certified mail, return receipt requested, advising them that if they have an objection they must deliver a written statement of objection to the proposing operator within 20 days of the date the operator mailed the notice, and that it has received no such objection; or

(b) written waivers from all persons required to be notified (the BLM's approval of the application being deemed equivalent to waiver by that agency); in event of objection, the division may approve the application only after hearing.

C. Transfer of wells. If an operator transfers operation of less than all its wells located within a spacing or proration unit to another operator, and the spacing unit includes state, federal or tribal minerals, the operator shall, prior to filing form C-145 to effectuate the transfer, notify in writing the state land office or BLM, as applicable, of the transfer.

D. Compulsory pooled units. No provision of 19.15.15 NMAC authorizes the operation of a producing well within a unit described in an existing compulsory pooling order by an operator other than the operator designated in the order.

E. Federal or state exploratory units. No provision of 19.15.15 NMAC authorizes a producing well's operation within a federal exploratory unit or state exploratory unit by an operator other than the unit's designated operator except as provided by BLM regulations or state land office rules applicable to the unit.

[19.15.15.12 NMAC - Rp, 19.15.3.104 NMAC, 12/1/2008; A, 6/26/2018]

19.15.15.13 UNORTHODOX LOCATIONS:

A. Well locations within a secondary recovery, tertiary recovery or pressure maintenance project for producing wells or injection wells that are unorthodox based on 19.15.15.9 NMAC's requirements and are necessary for an efficient production and injection pattern are authorized, provided that the unorthodox location within the project is no closer than the required minimum distance to the outer boundary of the lease or unitized area, and no closer than 10 feet to a quarter-quarter section line or subdivision inner boundary. These locations only require such prior approvals as are necessary for an orthodox location.

B. The director may grant an exception to the well location requirements of 19.15.15.9 NMAC, 19.15.15.10 NMAC and 19.15.16.15 NMAC or special pool orders after notice and opportunity for hearing when the exception is necessary to prevent waste or protect correlative rights.

C. The operator shall submit applications for administrative approval pursuant to Subsection B of 19.15.15.13 NMAC to the division's Santa Fe office accompanied by a plat showing the spacing unit, the proposed unorthodox well location and the adjoining spacing units and wells; a list of affected persons entitled to notice pursuant to Paragraph (2) of Subsection A of 19.15.4.12 NMAC; and information evidencing the need for the exception. The division shall give notice as required in 19.15.4.9 NMAC and the operator shall give notice as required by Paragraph (2) of Subsection A of 19.15.4.12 NMAC.

D. The applicant shall submit a statement attesting that the applicant, on or before the date that the applicant submitted the application to the division, sent notification to the affected persons by furnishing a copy of the application, including a copy of the plat described in Subsection C of 19.15.15.13 NMAC, by certified mail, return receipt requested, advising them that if they have an objection they shall file it in writing with the division within 20 days from the date the division receives the application. The director may approve the unorthodox location upon receipt of waivers from all the affected persons or if no affected person has filed an objection within the 20-day period.

E. The director may set for hearing an application for administrative approval of an unorthodox location.

F. Whenever the division approves an unorthodox location, it may order any action necessary to offset an advantage of the unorthodox location.

[19.15.15.13 NMAC - Rp, 19.15.3.104 NMAC, 12/1/2008; A, 6/26/2018]

19.15.15.14 EFFECT OF NON-STANDARD UNITS ON ALLOWABLES:

A. If the drilling tract is within a prorated/allocated oil pool or is subsequently placed within the pool and the drilling tract consists of less than 39½ acres or more than 40½ acres, the top proration unit allowable for the well shall be increased or decreased in the proportion that the number of acres in the drilling tract bears to 40.

B. If the drilling tract is within a prorated/allocated gas pool or is subsequently placed within the pool and the drilling tract consists of less than 158 acres or more than 162 acres in 160-acre pools, less than 316 acres or more than 324 acres in 320-acre pools or less than 632 acres or more than 648 acres in 640-acre pools, the top allowable for the well shall be decreased or increased in the proportion that the number of acres in the drilling tract bears to a standard spacing unit for the pool.

C. In computing acreage under Subsections A and B of 19.15.15.14 NMAC, less than one quarter acre shall not be counted but one-half acre or more shall count as one acre.

D. The provisions of Subsections A and B of 19.15.15.14 NMAC apply only to wells completed after January 1, 1950.

[19.15.15.14 NMAC - Rp, 19.15.3.104 NMAC, 12/1/2008]

19.15.15.15 DIVISION-INITIATED EXCEPTIONS:

To prevent waste, the division may, after hearing, set different spacing requirements and require different acreage for drilling tracts in a defined oil or gas pool.

[19.15.15.15 NMAC - Rp, 19.15.3.104 NMAC, 12/1/2008; A, 6/26/2018]

19.15.15.16 POOLING OR COMMUNITIZATION OF SMALL OIL LOTS:

A. The division may approve the pooling or communitization of fractional oil lots of 20.49 acres or less with a contiguous oil spacing unit when the ownership is common and the tracts are part of the same lease with the same royalty interests if the following requirements are satisfied:

(1) the operator applies to the division's Santa Fe office for administrative approval with an application accompanied by:

(a) a plat showing the dimensions and acreage involved, the acreage's ownership, the location of existing and proposed wells and adjoining spacing units;

(b) a list of affected persons in the oil lots and the contiguous spacing unit to be pooled or communitized; and

(c) a statement discussing the reasons for the pooling or communitization; and

(2) the applicant submits a statement attesting that the applicant, on or before the date the applicant submitted the application to the division, sent notification to the affected persons by submitting a copy of the application, including a copy of the plat described in Paragraph (1) of Subsection A of 19.15.15.16 NMAC, by certified mail, return receipt requested, advising them that if they have an objection they must file it in writing with the division within 20 days from the date the division receives the application.

B. The director may approve the application upon receipt of waivers from all the notified persons or if no person has filed an objection within the 20-day period.

C. The director may set for hearing an application for administrative approval.

D. The division may consider the common ownership and common lease requirements met if the applicant furnishes with the application a copy of an executed pooling agreement communitizing the tracts involved.

19.15.16.4 DURATION:

Permanent.

[19.15.16.4 NMAC - Rp, 19.15.3.4 NMAC, 12/1/2008]

19.15.16.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.16.5 NMAC - Rp, 19.15.3.5 NMAC, 12/1/2008]

19.15.16.6 OBJECTIVE:

To regulate the drilling and production of oil and gas wells within the state.

[19.15.16.6 NMAC - Rp, 19.15.3.6 NMAC, 12/1/2008]

19.15.16.7 DEFINITIONS:

These definitions apply specifically to 19.15.16 NMAC. For additional definitions that may apply see 19.15.2 NMAC.

A. "Azimuth" means the deviation in the horizontal plane of a well bore expressed in terms of compass degrees.

B. "Completed interval" means that portion of a well bore or lateral that is:

- (1) cased, cemented and perforated;
- (2) an open hole; or
- (3) isolated by a packer or other non-permeable means and open to the formation.

C. "Deviated well" means a well bore that is intentionally deviated from vertical but not with an intentional azimuth.

D. "Directional well" means a well bore that is intentionally deviated from vertical with an intentional azimuth but is not a horizontal well.

E. "First take point" means the shallowest measured depth of the well bore where the completed interval starts.

F. "Horizontal spacing unit" means the spacing unit dedicated to a horizontal well.

G. "Horizontal well" means a well bore with one or more laterals that extend a minimum of 100 feet laterally in the target zone. A well with multiple laterals from a common well bore in the same or different target zones or formations shall be considered one well.

H. "Infill horizontal well" means a horizontal well the completed interval or intervals of which are located wholly within the horizontal spacing unit dedicated to a previously drilled or proposed horizontal well in the same pool and that the operator designates as an infill horizontal well on form C-102. For the purposes of this definition, "proposed" means that an APD has been submitted to a regulatory agency.

I. "Kick-off point" means the point at which a directional or horizontal well is intentionally deviated from the vertical.

J. "Last take point" means the deepest measured depth of the well bore where the completed interval ends.

K. "Lateral" means the portion of a directional or horizontal well past the point where the well bore has been intentionally deviated from the vertical.

L. "Multi-lateral well" means a horizontal well with multiple laterals from a common well bore in the same or different target zones or formations.

M. "Open hole" means that portion of a well bore or lateral that is:

(1) not cased, or

(2) cased, but the casing is not cemented in place, and is not otherwise isolated from the formation.

N. "Terminus" means the farthest point drilled along the well bore or lateral.

O. "Tract" means a legal subdivision of the United States public survey substantially in the form of a square or rectangle.

P. "Unitized area" means any area where ownership of production from the relevant pool or formation is consolidated pursuant to an agreement, whether voluntary and filed in the county land records, or approved by federal or state authority, including but not limited to a statutory unit, an approved enhanced recovery unit, a participating area in a federal exploratory unit, a federal unit which does not provide for participating areas, a state exploratory unit or a communitized unit if all interests in the communitized unit are committed to the communitization agreement.

Q. "Vertical well" means a well that does not have an intentional departure or course deviation from the vertical.

[19.15.16.7 NMAC - Rp, 19.15.3.111 NMAC, 12/1/2008; A, 2/15/2012; A, 6/26/2018]

19.15.16.8 SIGN ON WELLS:

A. An operator shall identify wells and related facilities the division regulates by a sign, which shall remain in place until the operator plugs and abandons the well and closes the related facilities.

B. For drilling wells, the operator shall post the sign on the derrick or not more than 20 feet from the well.

C. The sign shall be of durable construction and the lettering shall be legible and large enough to be read under normal conditions at a distance of 50 feet.

D. The wells on each lease or property shall be numbered in non-repetitive, logical and distinctive sequence.

E. An operator shall have 90 days from the effective date of an operator name change to change the operator name on the well sign unless the division grants an extension of time, for good cause shown along with a schedule for making the changes.

F. Each sign shall show the:

- (1)** well number;
- (2)** property name;
- (3)** operator's name;
- (4)** location by footage, quarter-quarter section, township and range (or unit letter can be substituted for the quarter-quarter section); and
- (5)** API number.

[19.15.16.8 NMAC - Rp, 19.15.3.103 NMAC, 12/1/2008]

19.15.16.9 SEALING OFF STRATA:

A. During the drilling of an oil well, injection well or other service well, the operator shall seal and separate the oil, gas and water strata above the producing or injection horizon to prevent their contents from passing into other strata.

B. The operator shall ensure that fresh waters and waters of present or probable value for domestic, commercial or stock purposes are confined to their respective strata and are adequately protected by division-approved methods. The operator shall take special precautions by methods satisfactory to the division in drilling and abandoning wells to guard against loss of artesian water from the strata in which it occurs, and the contamination of artesian water by objectionable water, oil or gas.

C. The operator shall ensure that water is shut off and excluded from the various oil- and gas-bearing strata that are penetrated. The operator shall ordinarily make water shut-offs by cementing casing.

[19.15.16.9 NMAC - Rp, 19.15.3.106 NMAC, 12/1/2008]

19.15.16.10 CASING AND TUBING REQUIREMENTS:

A. The operator shall equip a well drilled for oil or gas with surface and intermediate casing strings and cement as may be necessary to effectively seal off and isolate all water-, oil- and gas-bearing strata and other strata encountered in the well down to the

casing point. In addition, the operator shall equip a well completed for oil or gas production with a string of properly cemented production casing at sufficient depth to ensure protection of oil- and gas-bearing strata encountered in the well, including the strata to be produced.

B. The operator shall use sufficient cement on surface casing to fill the annular space behind the casing to the top of the hole, provided that authorized division field personnel may allow exceptions to this requirement when known conditions in a given area render compliance impracticable.

C. Cementing shall be by pump and plug method unless the division expressly authorizes some other method.

D. Cementing shall be with conventional-type hard-setting cements to which the operator has added additives (lighteners, densifiers, extenders, accelerators, retarders, etc.) to suit conditions in the well.

E. Authorized division field personnel may, when conditions warrant, allow exceptions to Subsection D of 19.15.16.10 NMAC and permit the operator to use oil-base casing packing material in lieu of hard-setting cements on intermediate and production casing strings; provided that when the operator uses such materials on the intermediate casing string, the operator places conventional-type hard-setting cements throughout all oil- and gas-bearing zones and throughout at least the lowermost 300 feet of the intermediate casing string. When the operator uses such materials on the production casing string, the operator shall place conventional-type hard-setting cements throughout all oil- and gas-bearing zones that shall extend upward a minimum of 500 feet above the uppermost perforation or, in the case of an open-hole completion, 500 feet above the production casing shoe.

F. The operator shall test casing strings and prove satisfactory as provided in Subsection I of 19.15.16.10 NMAC.

G. After cementing, but before commencing tests Subsection I of 19.15.16.10 NMAC requires, all casing strings shall stand cemented in accordance with one of the options in Paragraphs (1) and (2) of Subsection G of 19.15.16.10 NMAC. Regardless of which option the operator chooses, the casing shall remain stationary and under pressure for at least eight hours after the operator places the cement. Casing shall be under pressure if the operator uses some acceptable means of holding pressure or if the operator employs one or more float valves to hold the cement in place. The operator shall either

(1) allow casing strings to stand cemented a minimum of 18 hours prior to commencing tests; an operator using this option shall report on form C-103 the actual time the cement was in place before the operator initiated tests; or

(2) in the counties of San Juan, Rio Arriba, McKinley, Sandoval, Lea, Eddy, Chaves and Roosevelt only, allow casing strings to stand cemented until the cement reaches a compressive strength of at least 500 psi in the "zone of interest" before commencing tests; provided however, that the operator shall not commence tests until the cement is in place for at least eight hours.

(a) The "zone of interest" for surface and intermediate casing strings is the bottom 20 percent of the casing string, but is no more than 1000 feet nor less than 300 feet of the bottom-part of the casing unless the casing is set at less than 300 feet. The "zone of interest" for production casing strings includes the interval or intervals where immediate completion is contemplated.

(b) To determine that a minimum compressive strength of 500 psi has been attained, the operator shall use the typical performance data for the particular cement mix used in the well, at the minimum temperature indicated for the zone of interest by Figure 107-A, Temperature Gradient Curves. Typical performance data used shall be that data the cement manufacturer or a competent materials testing agency furnishes, as determined in accordance with the latest edition of API publication Recommended Practice for Testing Well Cements, RP 10B-2.

(See Temperature Gradient - Page 17A)

H. An operator using the compressive strength criterion in Paragraph (2) of Subsection G of 19.15.16.10 NMAC shall report the following information on form C-103:

(1) volume of cement slurry in cubic feet and brand name of cement and additives, percent additives used and sequence of placement if the operator uses more than one type cement slurry;

(2) approximate temperature of cement slurry when mixed;

(3) estimated minimum formation temperature in zone of interest;

(4) estimate of cement strength at time of casing test; and

(5) actual time cement in place prior to starting test.

I. The operator shall test casing strings except conductor pipe after cementing and before commencing other operations on the well. The operator shall file form C-103 with the division for each casing string reporting the grade and weight of pipe used. In the case of combination strings utilizing pipe of varied grades or weights, the operator shall report the footage of each grade and weight used. The operator shall also report results of the casing test, including actual pressure held on pipe and the pressure drop observed on the same form C-103.

(1) The operator shall pressure test casing strings in wells drilled with rotary tools. Minimum casing test pressure shall be approximately one-third of the manufacturer's rated internal yield pressure except that the test pressure shall not be less than 600 psi and need not be greater than 1500 psi. In cases where combination strings are involved, the above test pressure shall apply to the lowest pressure rated casing used. The operator shall apply test pressures for a period of 30 minutes. If a drop of more than ten percent of the test pressure occurs the casing shall be considered defective and the operator shall apply corrective measures.

(2) The operator may test casing strings in wells drilled with cable tools as outlined in Paragraph (1) of Subsection I of 19.15.16.10 NMAC, or by bailing the well dry in which case the hole shall remain satisfactorily dry for a period of at least one hour before the operator commences further operations on the well.

J. Well tubing requirements.

(1) The operator shall tube flowing oil wells equipped with casing larger in size than two and seven-eighths inch OD.

(2) The operator shall tube gas wells equipped with casing larger in size than three and one-half inch OD.

(3) The operator shall set tubing as near the bottom as practical and tubing perforations shall not be more than 250 feet above top of pay zone.

(4) The district supervisor of the appropriate division district office, upon application, may grant exceptions to these requirements, provided waste will not be caused.

(5) The district supervisor may request that the director review an application. The operator shall submit information and give notice as the director requests. The division may approve un-protested applications after 20 days of receipt of the application and supporting information. If a person protests the application, or the director decides, the division shall set the application for hearing.

[19.15.16.10 NMAC - Rp, 19.15.3.107 NMAC, 12/1/2008]

19.15.16.11 DEFECTIVE CASING OR CEMENTING:

If a well appears to have a defective casing program or faultily cemented or corroded casing that will permit or may create underground waste or contamination of fresh waters, the operator shall give written notice to the division within five working days and proceed with diligence to use the appropriate method and means to eliminate the hazard. If the hazard of waste or contamination of fresh water cannot be eliminated, the operator shall properly plug and abandon the well.

[19.15.16.11 NMAC - Rp, 19.15.3.108 NMAC, 12/1/2008]

19.15.16.12 BLOWOUT PREVENTION:

(See Subsection B of 19.15.10 NMAC also)

A. The operator shall install and maintain blowout preventers in good working order on drilling rigs operating in areas of known high pressures at or above the projected depth of the well and in areas where pressures that will be encountered are unknown, and on workover rigs working on wells in which high pressures are known to exist.

B. The operator shall install and maintain blowout preventers in good working order on drilling rigs and workover rigs operating within the corporate limits of a city, town or village, or within 1320 feet of habitation, a school or a church, wherever located.

C. An operator, when filing form C-101 or form C-103 for an operation requiring blowout prevention equipment in accordance with Subsections A and B of 19.15.16.12 NMAC, shall submit a proposed blowout prevention program for the well. The district supervisor may modify the program as submitted if, in the district supervisor's judgment, modification is necessary.

[19.15.16.12 NMAC - Rp, 19.15.3.109 NMAC, 12/1/2008]

19.15.16.13 PULLING OUTSIDE STRINGS OF CASING:

In pulling outside strings of casing from an oil or gas well, the operator shall keep and leave the space outside the casing left in the hole full of mud-laden fluid or cement of adequate specific gravity to seal off fresh and salt water strata and strata bearing oil or gas not producing.

[19.15.16.13 NMAC - Rp, 19.15.3.110 NMAC, 12/1/2008]

19.15.16.14 DEVIATION TESTS AND WELLBORE SURVEYS; VERTICAL, DEVIATED AND DIRECTIONAL WELLS:

A. Vertical and deviated well bores.

(1) Deviation tests required. An operator shall test a vertical or deviated well that is drilled or deepened at reasonably frequent intervals to determine the deviation from the vertical. The operator shall make the tests at least once each 500 feet or at the first bit change succeeding 500 feet. The operator shall file with the division along with its form C-104 a tabulation of deviation tests run that is sworn to and notarized.

(2) Excessive deviation. When the deviation averages more than five degrees in a 500-foot interval, the operator shall include the calculations of the hole's maximum possible horizontal displacement. When the maximum possible horizontal

displacement exceeds the distance to the appropriate unit's nearest outer boundary line the operator shall run a directional survey to establish the location of the well's completed interval.

(3) Unorthodox well locations. If the results of the directional survey of a vertical or deviated well indicate that the completed interval is more than 50 feet from the approved surface location and closer than the minimum setback requirements to the applicable unit's outer boundary, then the well is considered unorthodox. To obtain authority to produce the well, the operator shall file an application with the division's Santa Fe office, and shall follow the process outlined in Subsection C of 19.15.15.13 NMAC to obtain approval of the unorthodox well location.

(4) Directional survey requirements. Upon the director's request, the operator shall directionally survey a vertical or deviated well. The operator shall file directional surveys run on a well, in division-approved format, with the division upon the well's completion. The division shall not approve a form C-104 for the well until the operator has filed the directional surveys.

B. Directional well bores.

(1) Directional drilling. The appropriate division district office may grant a permit to directionally drill a well bore if every point of the completed interval is projected to be located at a distance greater than or equal to the minimum setback distance from the applicable spacing unit's outer boundaries or at an unorthodox well location the division previously approved.

(2) Unorthodox well locations. If all or part of a directional well's completed interval is projected to be located less than the minimum distance from the outer boundary of the well's spacing unit, the well's location is considered unorthodox. To obtain approval for the well's location, the operator shall file an application in the division's Santa Fe office in accordance with Subsection C of 19.15.15.13 NMAC.

(3) Directional surveys required. An operator shall run a directional survey on each well drilled pursuant to Subsection B of 19.15.16.14 NMAC. The operator shall file a directional survey, in division-approved format, with the division upon the well's completion. The division shall not approve a form C-104 for the well until the operator files the directional survey. The well's location will be considered unorthodox if the directional survey indicates that part of a well's completed interval, as drilled, is located more than 50 feet from its projected location and closer to an outer boundary of the spacing unit than applicable minimum setback distance. For previously approved unorthodox well locations, the well's as-drilled location is unorthodox if the directional survey indicates that any part of the completed interval is located more than 50 feet (or, if less, twenty-five percent of the previously authorized distance) closer to the outer boundary of the spacing unit than the approved location.

C. Directional survey specifications. Directional surveys that 19.15.16.14 NMAC requires shall have shot points no more than 200 feet apart and shall be run by competent surveying companies. The division shall allow exceptions to the minimum shot point spacing provided the survey's accuracy is still within acceptable limits.

[19.15.16.14 NMAC - Rp, 19.15.3.111 NMAC, 12/1/2008; A, 2/15/2012; A, 6/26/2018]

19.15.16.15 HORIZONTAL WELLS:

A. General provisions.

(1) An operator shall not file an application for permit to drill nor commence the drilling of a horizontal oil or gas well until the operator has either:

(a) received the consent of at least one working interest owner or unleased mineral interest owner of each tract (in the target pool or formation) in which any part of the horizontal oil or gas well's completed interval will be located; or

(b) obtained a compulsory pooling order from the division for an appropriate horizontal spacing unit.

(2) Each horizontal well shall be dedicated to a standard horizontal spacing unit or an approved non-standard horizontal spacing unit, except for infill horizontal wells and multi-lateral horizontal wells described in Subparagraph (a) of Paragraph (7) of Subsection B of 19.15.16.15 NMAC, which may be dedicated to an existing or proposed horizontal spacing unit.

(3) A horizontal spacing unit that does not meet the following criteria for a standard horizontal spacing unit shall be considered a non-standard horizontal spacing unit and must be approved pursuant to the process described in Paragraph (5) of Subsection B of 19.15.16.15 NMAC.

(4) Subject to Paragraph (9) of Subsection B of 19.15.16.15 NMAC, horizontal spacing units can overlap other horizontal spacing units or vertical well spacing units.

B. Well spacing.

(1) Standard horizontal spacing units for horizontal oil wells. In lieu of an oil spacing unit described in Subsection A of 19.15.15.9 NMAC, the operator shall dedicate to each horizontal oil well a standard horizontal spacing unit that meets the following criteria.

(a) The horizontal spacing unit shall comprise one or more contiguous tracts that the horizontal oil well's completed interval penetrates, each of which consists of a governmental quarter-quarter section or equivalent.

(b) In addition to tracts the horizontal oil well penetrates, the operator may include quarter-quarter sections or equivalent tracts in the standard horizontal spacing unit that are located within 330 feet of the proposed horizontal oil well's completed interval (measured along a line perpendicular to the proposed completed interval or its tangent).

(c) If, however, the perimeter of the area that includes all the tracts that the horizontal oil well penetrates encloses an area that is substantially rectangular, then the operator may not bring in additional tracts that would result in a non-rectangular horizontal spacing unit.

(d) The horizontal spacing unit shall contain at least the minimum acreage required by existing or subsequently adopted special pool orders for a spacing unit in any pool where all or part of the horizontal oil well's completed interval is located.

(2) Exception for pools with larger spacing. If the horizontal oil well is located entirely or partially in a pool for which existing or subsequently adopted special pool orders prescribe oil spacing units larger than 40 acres, then the horizontal spacing unit may, as an alternative to quarter-quarter sections, comprise one or more tracts of the size and configuration so prescribed, provided that the standard horizontal spacing unit shall include only such tracts that are oriented in the same direction. If a horizontal oil well's completed interval is located within two or more pools for the same formation, and the operator elects to construct a standard horizontal spacing unit utilizing tracts of the size and configuration prescribed by special pool orders, the operator shall use tracts of the maximum tract size prescribed for any of the included pools.

(3) Standard horizontal spacing units for horizontal gas wells. In lieu of a gas spacing unit described in 19.15.15.10 NMAC, the operator shall dedicate to each horizontal gas well a standard horizontal spacing unit that meets all the following criteria.

(a) The horizontal spacing unit shall comprise one or more contiguous tracts that the horizontal gas well's completed interval penetrates, each of which consists of a governmental quarter section or equivalent.

(b) In addition to tracts the well penetrates, the operator may include quarter sections or equivalent tracts in the standard horizontal spacing unit that are located within 330 feet of the proposed horizontal gas well's completed interval (measured along a line perpendicular to the proposed completed interval or its tangent).

(c) If, however, the perimeter of the area that includes all the tracts that the horizontal gas well penetrates encloses an area that is substantially rectangular, then the operator may not bring in additional tracts that would result in a non-rectangular horizontal spacing unit.

(d) The horizontal spacing unit shall contain at least the minimum acreage required by 19.15.15.10 NMAC or by existing or subsequently adopted special pool orders for a spacing unit in any pool where all or part of the horizontal gas well's completed interval is located.

(4) Exception for pools with larger spacing. If the horizontal gas well is located entirely or partially in an area or pool for which 19.15.15.10 NMAC or existing or subsequently adopted special pool orders prescribe gas spacing units larger than 160 acres, then the horizontal spacing unit may, as an alternative to quarter sections, comprise one or more tracts of the size and configuration so prescribed, provided that the standard horizontal spacing unit shall include only such tracts that are oriented in the same direction. If a horizontal gas well's completed interval is located within two or more pools for the same formation, and the operator elects to construct a standard horizontal spacing unit utilizing tracts of the size and configurations prescribed by 19.15.15.10 NMAC or special pool orders, the operator shall use the maximum tract size prescribed for any of the included pools.

(5) Non-standard horizontal spacing units.

(a) Administrative approval. The division may approve non-standard horizontal spacing units for horizontal oil or gas wells after notice and opportunity for hearing, if necessary to prevent waste or protect correlative rights, in accordance with the procedures provided for director approval of non-standard spacing units in Paragraphs (3) through (5) of Subsection B of 19.15.15.11 NMAC.

(b) Notice. The operator shall give notice of any application for approval of a non-standard horizontal spacing unit, by certified mail, return receipt requested, to affected persons in all tracts that:

(i) are excluded from the horizontal spacing unit, if the horizontal spacing unit would be a standard horizontal spacing unit except for the exclusion of such tracts; or

(ii) adjoin the non-standard horizontal spacing unit, in all other cases.

(c) Form of notice. The notice shall comply with Paragraph (4) of Subsection B of 19.15.15.11 NMAC.

(d) Unless otherwise authorized by the division, the operator shall not commence drilling in the proposed non-standard spacing unit until the division issues a final order granting the application.

(6) State, federal or tribal lands. If the horizontal spacing unit includes state, federal or tribal minerals, the operator shall send a copy of form C-102 to the applicable affected persons identified in Subparagraphs (d) and (e) of Paragraph (8) of Subsection A of 19.15.2.7 NMAC. No horizontal spacing unit may be designated that lies partly

within, and partly outside of, a state exploratory unit, or a federal exploratory unit or participating area if the horizontal spacing unit includes state trust lands, without the written consent of the commissioner of public lands.

(7) Multi-lateral horizontal wells.

(a) Multiple laterals in the same pool or formation and oriented such that the completed interval of each lateral is located entirely within the boundaries of a horizontal spacing unit for the longest lateral may be dedicated to the same horizontal spacing unit.

(b) Except as provided in Subparagraph (a) of Paragraph (7) of Subsection B of 19.15.16.15 NMAC, the operator of a multi-lateral horizontal well shall dedicate a separate horizontal spacing unit to each lateral.

(c) The division may grant exceptions to the requirements of Subparagraphs (a) and (b) of Paragraph (7) of Subsection B of 19.15.16.15 NMAC pursuant to Paragraph (5) of Subsection B of 19.15.16.15 NMAC.

(8) Unitized areas. For a horizontal well the completed interval of which is located wholly within a unitized area or an area with uniform ownership as to the mineral estate in the objective formation, the horizontal spacing unit configuration requirements of Subparagraph (c) of Paragraph (1) and Subparagraph (c) of Paragraph (3) of Subsection B of 19.15.16.15 NMAC do not apply.

(9) Existing and subsequent wells in horizontal spacing units.

(a) Existing wells. Existing wells in spacing units, horizontal or otherwise, that are wholly or partially included in a new horizontal spacing unit remain dedicated to their existing spacing units and are not part of the new horizontal spacing unit unless otherwise agreed by all working interest owners in the existing and new spacing units. If all owners (and BLM or state land office, if federal or state minerals are included, and the appropriate governmental authority if tribal minerals are included, in the old or new spacing unit) agree to re-dedicate the existing well to the new horizontal spacing unit, the operator shall file an amended form C-102 reflecting the re-dedication, and shall attach a certificate to the effect that all owners have agreed in writing thereto.

(b) Subsequent wells in existing spacing units. Subject to the terms of any applicable operating agreement, or to 19.15.13 NMAC or any applicable compulsory pooling order as to any compulsory pooled interests:

(i) a horizontal well that will have a completed interval partially in an existing well's spacing unit, and in the same pool or formation, may be drilled only with the approval of, or, in the absence of approval, after notice to, all operators and working interest owners of record or known to the applicant in the existing and new well's spacing units;

(ii) any subsequent well, horizontal or otherwise, with a completed interval located wholly within an existing well's horizontal spacing unit, and in the same pool or formation, if not designated as an infill horizontal well, may be drilled only with the approval of, or, in the absence of approval, after notice to, all operators and working interest owners of record or known to the applicant in the existing and new well's spacing units; and

(iii) the notice procedures of Subsection B of 19.15.15.12 NMAC shall apply to notices required pursuant to Items (i) or (ii) of Subparagraph (b) of Paragraph (9) of Subsection B of 19.15.16.15 NMAC.

(c) The provisions of 19.15.13.10 NMAC and 19.15.13.11 NMAC shall apply to any proposal to drill an infill horizontal well in a horizontal spacing unit subject to a compulsory pooling order unless the order includes specific provisions for such additional well.

(10) Pooling of horizontal spacing units. Whenever the operator of any horizontal well shall dedicate thereto lands comprising a standard or approved non-standard horizontal spacing unit in which there are two or more separately owned parcels of land, or royalty interests or undivided interests in oil or gas minerals which are separately owned, or any combination thereof, that have not been previously pooled for oil and gas production from the horizontal spacing unit, the operator shall obtain voluntary agreements pooling said lands or interests or an order of the division pooling said lands before producing the horizontal well.

(11) Protests. Without limitation of any other right or remedy, an owner of a tract that adjoins a proposed or existing horizontal spacing unit but is not included therein who contends that a horizontal well in the adjoining horizontal spacing unit is impairing, or will impair, the owner's correlative rights may file a protest with the division. The division, after notice and hearing, may grant such relief as it determines to be necessary and appropriate, including, but not limited to, imposing a limitation on the rate or amount of production from the adjoining horizontal spacing unit.

C. Setbacks.

(1) Generally. The following setback distances shall apply to each horizontal well.

(a) The distance in the horizontal plane from any point in the completed interval to any outer boundary of the horizontal spacing unit, measured along a line perpendicular to the completed interval or to the tangent thereof, shall be a minimum of 330 feet for an oil well or 660 feet for a gas well.

(b) The first and last take point of a horizontal well shall be no closer than 100 feet for an oil well or 330 feet for a gas well, in the horizontal plane, to any outer boundary of the horizontal spacing unit.

(2) District office to approve. The appropriate division district office may grant a permit for a horizontal well provided every point in the well's completed interval complies with the setback requirements described above or is located at an unorthodox well location the division has approved.

(3) Surface location. A horizontal well's surface location may be located anywhere inside or outside the boundaries of the horizontal spacing unit, provided the completed interval is located at an orthodox, or division-approved unorthodox, well location within the horizontal spacing unit.

(4) Internal setbacks. No internal setbacks are applicable within the horizontal spacing unit.

(5) Unorthodox well locations. The horizontal well's location is considered unorthodox if:

(a) any part of the horizontal well's completed interval is projected to be closer to an outer boundary of the horizontal spacing unit than allowed by Paragraph (1) of Subsection C of 19.15.16.15 NMAC, or other applicable rule or special pool order;

(b) a directional survey shows that the horizontal well's first or last take point, as drilled, is located closer to the outer boundary of the horizontal spacing unit than allowed by Subparagraph (b) of Paragraph (1) of Subsection C of 19.15.16.15 NMAC;

(c) a directional survey shows that any part of the horizontal well's completed interval, as drilled, is more than 50 feet from its projected location and closer to the outer boundary of the horizontal spacing unit than allowed by Subparagraph (a) of Paragraph (1) of Subsection C of 19.15.16.15 NMAC or other applicable rule or special pool order; or

(d) for previously approved unorthodox well locations, if a directional survey shows that any part of the completed interval is located more than 50 feet (or, if less, twenty-five percent of the previously authorized distance) closer to the outer boundary of the horizontal spacing unit than the approved location.

(6) Approval of unorthodox well locations. To obtain approval for the unorthodox well location, the operator shall file an application in the division's Santa Fe office in accordance with the procedures described in Subsections B, C and D of 19.15.15.13 NMAC. For Subparagraph (a) of Paragraph (5) of Subsection C of 19.15.16.15 NMAC, the operator shall obtain approval for the location before drilling the well. For Subparagraphs (b), (c) and (d) of Paragraph (5) of Subsection C of 19.15.16.15 NMAC, the operator shall obtain approval for the as-drilled location before producing the horizontal well.

(7) Unitized areas. For a horizontal well the completed interval of which is located wholly within in a unitized area or an area with uniform ownership as to the

mineral estate in the objective formation, the setbacks prescribed in Subsection C of 19.15.16.15 NMAC apply only to the outer boundaries of the unitized area, area of uniform ownership or of any uncommitted tract or partially committed tract, instead of the outer boundaries of the horizontal spacing unit.

D. Allowables.

(1) Oil allowables and gas-oil ratios. Unless the division determines, after notice and hearing, that to prevent waste a reduced allowable must be assigned to a pool, the division shall assign to a horizontal oil well in an oil pool an oil allowable equal to the amount of oil that the horizontal oil well can produce. If any non-marginal proration unit exists in the same pool as a horizontal oil well, the division shall assign to each oil well located in the unit an allowable equal to its productive capacity. Production of gas or oil from any horizontal oil well shall not be limited by a limiting gas-oil ratio as provided in Subsection A of 19.15.20.13 NMAC.

(2) Gas allowables. The division shall assign to a horizontal gas well completed in a prorated gas pool an allowable equal to the amount of gas the horizontal gas well can produce. If any non-marginal gas proration unit exists in the same pool as a horizontal gas well, the division shall assign a top proration unit allowable for gas to such unit that is equal to the amount of gas than the unit can produce.

(3) Effective dates. Paragraphs (1) and (2) of Subsection D of 19.15.16.15 NMAC shall apply to all pools and areas of the state commencing on the first day of the first month after June 26, 2018 but shall cease to apply to any particular pool on the date of any order, hereafter issued following notice and hearing, whereby the division or commission determines that reduced allowables for such pool are necessary to prevent waste.

E. Other matters.

(1) Directional survey requirements. The operator of each horizontal well shall run a directional survey and file the directional survey, in a division-approved format, upon the well's completion. Directional surveys shall have shot points no more than 200 feet apart and shall be run by competent surveying companies. The division shall allow exceptions to the minimum shot point spacing provided the survey's accuracy is still within acceptable limits. The division shall not approve a form C-104 for the well until the operator has filed the required directional survey.

(2) Downhole commingling.

(a) Pools or laterals in the same formation. Provisions of 19.15.12.11 NMAC requiring approval for downhole commingling do not apply to commingling of oil or gas within a single lateral of a horizontal well bore that is produced from adjacent pools within the same formation, or from multiple laterals of a single well bore that are

completed in the same pool or formation and dedicated to the same horizontal spacing unit.

(b) Other multi-lateral wells. Except as provided in Subparagraph (a) of Paragraph (2) of Subsection E of 19.15.16.15 NMAC, horizontal wells with multiple laterals shall only be produced pursuant to division-approved downhole commingling authority obtained pursuant to 19.15.12.11 NMAC, unless pool segregation is maintained until the fluids reach the wellhead.

(3) Conflicts with existing rules or special pool orders. Provisions of statewide rules or special pool orders in effect on February 15, 2012 that limit the number of wells that may simultaneously produce from the portion of a pool or area underlying a spacing unit, or a particular portion of a spacing unit, do not apply to horizontal wells. Provisions of statewide rules or special pool rules in effect on June 26, 2018, save and except the special provisions for the Purple Sage; Wolfcamp (Gas) Pool in ordering paragraphs (1) through (7) of division order R-14262, that conflict with any of any provisions in 19.15.16.15 NMAC do not apply to horizontal wells. Special pool orders or amendments thereto adopted after June 26, 2018 shall prevail over rules as provided in 19.15.2.9 NMAC.

(4) Transitional provisions. Any horizontal well drilled, commenced or permitted prior to June 26, 2018 shall retain as its horizontal spacing unit the standard or non-standard spacing unit or project area originally dedicated thereto. If that area is not a standard horizontal spacing unit as provided in Subsection B of 19.15.16.15 NMAC, that area is hereby approved as a non-standard horizontal spacing unit for the horizontal well so drilled, commenced or permitted.

[19.15.16.15 NMAC - Rp, 19.15.3.112 NMAC, 12/1/2008; 19.15.16.15 NMAC - N, 2/15/2012; A, 6/26/2018; A, 11/27/2018]

19.15.16.16 MULTIPLE COMPLETIONS; BRADENHEAD GAS WELLS:

A. Multiple completions.

(1) Filing. An operator intending to multiple complete shall file form C-101 or C-103 with the division for approval before completing and C-104 after completing along with information required by the form instructions.

(2) Operation and testing.

(a) The operator shall complete and produce wells so that commingling of hydrocarbons from separate pools does not occur.

(b) The operator shall commence a segregation or packer leakage test within 20 days after the multiple completion. The operator shall also make segregation tests or packer leakage tests any time the packer is disturbed. The operator shall conduct other

tests and determinations the division requires. The operator shall notify the appropriate division district office 48 hours in advance of tests so the district office may schedule personnel to witness the tests. Offset operators may witness such tests and shall advise the operator in writing if they desire to be notified of the tests. The operator shall file test results with the division within 20 days of test completion. In the event a segregation or packer leakage test indicates communication between separate pools, the operator shall immediately notify the division and commence corrective action on the well.

(c) The operator shall equip wells so that reservoir pressure may be determined for each of the separate pools, and may install meters so that the gas or oil produced from each of the separate pools may be accurately measured.

(d) No multiple completion shall produce in a manner unnecessarily wasting reservoir energy.

(e) The division may require the operator to properly plug a zone of a multiple-completed well if the plugging appears necessary to prevent waste, protect correlative rights or protect ground water, public health or the environment.

B. Bradenhead gas wells.

(1) The division may permit production of gas from a bradenhead gas well only after hearing, except as noted in Paragraph (3) of Subsection B of 19.15.16.16 NMAC.

(2) The operator shall submit the application for a hearing to the division in triplicate and include an exhibit showing the location of wells on applicant's lease and offset wells on offset leases, together with a diagrammatic sketch showing the casing program, formation tops, estimated top of cement on each casing string run and other pertinent data, including drill stem tests.

(3) The director may grant an exception to Subsection A of 19.15.16.16 NMAC's requirements without notice and hearing where the operator files the application in due form, and when the lowermost producing zone involved in the completion is an oil or gas producing zone within an oil or gas pool's defined limits and the producing zone to be produced through the bradenhead connection is a gas producing zone within a gas pool's defined limits. The applicant shall include with the application a written stipulation that the applicant has properly notified offset operators.

(4) The applicant shall furnish operators who offset the lease upon which the subject well is located a copy of the application. The director shall wait at least 10 days before approving gas production from the bradenhead gas well, and shall approve the production only in the absence of an offset operator's objection. If an operator objects to the completion the director shall consider the matter only after proper notice and hearing.

(5) The division may waive the 10-day waiting period requirement if the applicant furnishes the division with the written consent to the production of gas from the bradenhead connection by the offset operators involved.

(6) Subsection B of 19.15.16.16 NMAC shall apply only to wells completed after January 1, 1950 or, in Lea County after February 1, 1937, as bradenhead gas wells.

[19.15.16.16 NMAC - Rp, 19.15.3.113 NMAC, 12/1/2008; 19.15.16.16 NMAC - Rn & A, 19.15.16.15 NMAC, 2/15/2012]

19.15.16.17 SHOOTING AND CHEMICAL TREATMENT OF WELLS:

If shooting, fracturing or treating a well injures the producing formation, injection interval, casing or casing seat and may create underground waste or contaminate fresh water, the operator shall within five working days notify in writing the division and proceed with diligence to use the appropriate method and means for rectifying the damage. If shooting, fracturing or chemical treating results in the well's irreparable injury the division may require the operator to properly plug and abandon the well.

[19.15.16.17 NMAC - Rp, 19.15.3.115 NMAC, 12/1/2008; 19.15.16.17 NMAC - Rn, 19.15.16.16 NMAC, 2/15/2012]

19.15.16.18 WELL AND LEASE EQUIPMENT:

A. The operator shall install and maintain Christmas tree fittings or wellhead connections in first class condition so that necessary pressure tests may easily be made on flowing wells. On oil wells the Christmas tree fittings shall have a test pressure rating at least equivalent to the calculated or known pressure in the reservoir from which production is expected. On gas wells the Christmas tree fittings shall have a test pressure equivalent to at least 150 percent of the calculated or known pressure in the reservoir from which production is expected.

B. The operator shall install and maintain valves in good working order to permit pressures to be obtained on both casing and tubing. The operator shall equip each flowing well to control properly the flowing of each well, and in case of an oil well, produce the well into an oil and gas separator of a type the industry generally uses.

[19.15.16.18 NMAC - Rp, 19.15.3.117 NMAC, 12/1/2008; 19.15.16.18 NMAC - Rn, 19.15.16.17 NMAC, 2/15/2012]

19.15.16.19 LOG, COMPLETION AND WORKOVER REPORTS:

A. Completion report. Within 45 days after the completion of a well drilled for oil or gas, or the recompletion of a well into a different common source of supply, the operator shall file a completion report with the division on form C-105. For the purpose of

19.15.16.19 NMAC, a hole drilled or cored below fresh water or that penetrates oil- or gas-bearing formations or that an owner drills is presumed to be a well drilled for oil or gas. The operator shall signify on form C-105, or alternatively on form C-103, whether the well has been hydraulically fractured.

B. Hydraulic fracture disclosure. For a hydraulically fractured well, the operator shall also complete and file with the FracFocus chemical disclosure registry a completed hydraulic fracturing disclosure within 45 days after completion, recompletion or other hydraulic fracturing treatment of the well. The hydraulic fracturing disclosure shall be completed on a then current edition of the hydraulic fluid product component information form published by FracFocus and shall include complete and correct responses disclosing all information called for by the FracFocus form, provided that:

(1) the division does not require the reporting of information beyond the material safety data sheet data as described in 29 C.F.R. 1910.1200;

(2) the division does not require the reporting or disclosure of proprietary, trade secret or confidential business information; and

(3) the division shall download and archive New Mexico FracFocus submissions on a quarterly basis.

C. If the FracFocus chemical disclosure registry is temporarily inoperable, the operator of a well on which hydraulic fracturing treatment(s) were performed shall file the information required by the then most recent FracFocus form with the division along with Well Completion Report (form C-105) or Sundry Notice (form C-103) reporting the hydraulic fracture treatment and file the information on the FracFocus internet website when the website is again operable. If the FracFocus chemical disclosure registry is discontinued or becomes permanently inoperable, the operator shall continue filing the information with the division until otherwise provided by rule or order.

[19.15.16.19 NMAC - Rp, 19.15.13.1104 NMAC, 12/1/2008; 19.15.16.19 NMAC - Rn & A, 19.15.16.18 NMAC, 2/15/2012; A, 9/26/2017]

19.15.16.20 ALLOWABLES AND AUTHORIZATION TO TRANSPORT OIL AND GAS:

A. The division may assign an allowable to a newly completed or re-completed well or a well completed in an additional pool or issue an operator authorization to transport oil or gas from the well if the operator:

(1) has filed a complete form C-104;

(2) has provided a sworn and notarized tabulation of all deviation tests the operator has run on the well, and directional surveys with calculated bottom hole

location, in accordance with the requirements of 19.15.16.14 NMAC or 19.15.16.15 NMAC;

(3) has dedicated a standard spacing unit or horizontal spacing unit for the pool in which the well is completed, a standard spacing unit or horizontal spacing unit has been communitized or pooled and dedicated to the well or the division has approved a non-standard spacing unit or horizontal spacing unit; and

(4) complies with Subsection A of 19.15.5.9 NMAC.

B. The allowable the division assigns to an oil well is effective at 7:00 a.m. on the completion date, provided the division receives form C-104 during the month of completion. The date of completion shall be that date when new oil is delivered into the stock tanks. Unless otherwise specified by special pool orders, the allowable the division assigns to a gas well is effective at 7:00 a.m. on the date of connection to a gas transportation facility, as evidenced by an affidavit of connection from the transporter to the division, or the date of receipt of form C-104 by the division, whichever date is later.

[19.15.16.20 NMAC – Rn, 19.15.16.19 NMAC, 2/15/2012; A, 6/26/2018]

19.15.16.21 WATER USE REPORT:

A. For a hydraulically fractured well, an operator shall report, on form C-103 or C-105, the amount of water reported on the disclosure required by Subsection B of 19.15.16.19 NMAC and the breakdown of that amount by:

- (1) produced water;
- (2) water other than produced water that has 10,000 or more mg/l TDS;
- (3) water other than produced water that has more than 1,000 mg/l TDS but less than 10,000 mg/l TDS; and
- (4) water other than produced water that has 1,000 mg/l TDS or less.

B. All such reports shall be compiled and reported monthly on the division section of the department website.

[19.15.16.21 NMAC – N, 10/13/2020]

PART 17: PITS, CLOSED-LOOP SYSTEMS, BELOW-GRADE TANKS AND SUMPS

19.15.17.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.17.1 NMAC - Rp, 19.15.17.1 NMAC, 6/28/13]

19.15.17.2 SCOPE:

19.15.17 NMAC applies to persons engaged in oil and gas development and production within New Mexico.

[19.15.17.2 NMAC - Rp, 19.15.17.2 NMAC, 6/28/13]

19.15.17.3 STATUTORY AUTHORITY:

19.15.17 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Section 70-2-6, Section 70-2-11 and Section 70-2-12.

[19.15.17.3 NMAC - Rp, 19.15.17.3 NMAC, 6/28/13]

19.15.17.4 DURATION:

Permanent.

[19.15.17.4 NMAC - Rp, 19.15.17.4 NMAC, 6/28/13]

19.15.17.5 EFFECTIVE DATE:

June 28, 2013, unless a later date is cited at the end of a section.

[19.15.17.5 NMAC - Rp, 19.15.17.5 NMAC, 6/28/13]

19.15.17.6 OBJECTIVE:

To regulate pits, closed-loop systems, and below-grade tanks and sumps used in connection with oil and gas operations for the protection of fresh water, public health and the environment.

[19.15.17.6 NMAC - Rp, 19.15.17.6 NMAC, 6/28/13]

19.15.17.7 DEFINITIONS:

A. "Alluvium" means detrital material that water or other erosional forces have transported and deposited at points along a watercourse's flood plain. It typically is composed of sands, silts and gravels; exhibits high porosity and permeability; and generally carries fresh water.

B. "Below-grade tank" means a vessel with greater than a five barrel capacity, excluding sumps and pressurized pipeline drip traps, installed within an excavation or buried below the surrounding ground surface's elevation. Below-grade tank does not

include an above-ground storage tank that is located above or at the surrounding ground surface's elevation and is surrounded by berms.

C. "Closed-loop system" means a system that uses above ground steel tanks for the management of drilling fluids.

D. "Continuously flowing watercourse" means a river, stream or creek that is named or delineated by a solid blue line on a USGS quadrangle map having a scale factor of 1:24,000, or an irrigation channel, or a water course that typically has water flowing during the majority of the days of the year. This does not include ephemeral washes, arroyos, and similar depressions that do not have flowing water during the majority of the days of the year.

E. "Division-approved facility" means a division-permitted surface waste management or injection facility, a facility permitted pursuant to 20.6.2 NMAC, a facility approved pursuant to 19.15.35.8 NMAC or other facility that the division specifically approves for the particular purpose. The division shall not approve any facility not otherwise permitted unless it finds that the facility's use for the specified purpose will protect fresh water, public health and the environment and comply with other applicable federal or state statutes, federal regulations, state rules and local ordinances.

F. "Emergency pit" means a pit that is constructed during an emergency to contain a spill in the event of a release.

G. "Exception" means authorization from the division's Santa Fe office to depart from the requirements of 19.15.17 NMAC.

H. "Floodplain" means US army corps of engineers or FEMA documented 100-year floodplain.

I. "Life-form ratio" means the relative percentage of regionally native plant species in each of the following classifications: shrubs, forbs, and grasses.

J. "Low chloride fluids" means water-based fluids that contain less than 15,000 mg/liter of chlorides as determined by field or laboratory analysis.

K. "Measureable" means a layer of oil, the thickness of which is discernible by color cutting or other acceptable method.

L. "Multi-well fluid management pit" means a pit used for the storage, treatment and recycling of stimulation fluids and flow-back water during the drilling and completion of multiple wells. Multi-well fluid management pits may not be used for the disposal of drilling, completion or other waste. Multi-well fluid management pits may be located either onsite or offsite of a well drilling location and may remain in use until all wells with approved application for permit to drill that are identified in the pit permit are completed. Any addition of wells or extensions for permits to drill identified in the pit permit shall go

to hearing. Any containment structure such as a pond, pit, or other impoundment that holds only fresh water that has not been treated for oil field purposes, is not a multi-well fluid management pit.

M. "Onsite" means within the boundaries of a single lease where exploration and production waste is generated.

N. "Permanent pit" means a pit used for collection, retention or storage of produced water or brine that is constructed with the conditions and for the duration provided in its permit, and is not a temporary pit.

O. "Restore" means to return a site to its former condition, in the manner and to the extent required by applicable provisions of 19.15.17 NMAC.

P. "Significant watercourse" means a watercourse with a defined bed and bank either named or identified by a dashed blue line on a USGS 7.5 minute quadrangle map or the next lower order tributary with a defined bed and bank of such watercourse.

Q. "Sump" means a subgrade impermeable vessel that is partially buried in the ground, is in contact with the ground surface, or is a collection device incorporated within a secondary containment system, which remains predominantly empty, serves as a drain or receptacle for de minimis releases on an intermittent basis and is not used to store, treat, dispose of or evaporate products or wastes. Buckets, pails, drip pans or similar vessels that are not in contact with the ground surface are not sumps.

R. "Temporary pit" means a pit, including a drilling or workover pit, which is constructed with the intent that the pit will hold liquids and mineral solids. Temporary pits may be used for one or more wells and must be located at one of the associated permitted well drilling locations. Temporary pits must be closed within six months from the date the operator releases the drilling or workover rig from the first well using the pit. Any containment structure such as a pond, pit, or other impoundment that holds only fresh water that has not been treated for oil field purposes, is not a temporary pit.

S. "Variance" means authorization from the appropriate division district office to depart from the requirements of 19.15.17 NMAC. A variance may not be obtained where exceptions are required by a provision of 19.15.17 NMAC.

T. "Visible" when used with respect to oil on the surface of a pit means any amount of oil whether measurable or a sheen on the pit's liquid surface.

[19.15.17.7 NMAC - Rp, 19.15.17.7 NMAC, 6/28/13]

19.15.17.8 PERMIT OR REGISTRATION REQUIRED:

A. A person shall not construct or use a pit except in accordance with a division-issued permit. Only an operator may apply for a division-issued permit. After June 16,

2008, an unlined pit is prohibited and the division shall not issue a permit for an unlined pit.

B. The division may issue a single permit for all pits or division-approved alternative methods associated with a single application for permit to drill.

C. All below-grade tanks installed after June 28, 2013 must be registered with the appropriate division district office. The operator shall file a single registration for all below-grade tanks associated with a single application for permit to drill.

D. Closed-loop systems and sumps do not require a division-issued permit or registration with the division's district office.

[19.15.17.8 NMAC - Rp, 19.15.17.8 NMAC, 6/28/13]

19.15.17.9 PERMIT APPLICATION AND REGISTRATION:

A. An operator shall use the appropriate form C-144 to apply to the division for a permit to construct or use a pit or proposed alternative method, or to register a below-grade tank. The operator shall submit the form C-144 either separately or as an attachment to a permit application for a facility with which the pit, below-grade tank or proposed alternative method will be associated. An operator shall use a C-101, C-103 or applicable bureau of land management form to notify the appropriate division district office of construction or use of a closed-loop system.

B. The permit application shall include a detailed plan as follows.

(1) Permanent pits. A registered professional engineer shall certify engineering, design and construction specifications as contained in the plan for permanent pits. The plan shall include:

(a) a quality control/quality assurance construction and installation plan;

(b) operating and maintenance procedures;

(c) a closure plan;

(d) a hydrogeologic report that provides sufficient information and detail on the site's topography, soils, geology, surface hydrology and ground water hydrology to enable the division's Santa Fe office to evaluate the actual and potential effects on soils, surface water and ground water;

(e) detailed information on dike protection and structural integrity; and leak detection, including an adequate fluid collection and removal system;

(f) liner specifications and compatibility;

- (g)** freeboard and overtopping prevention;
- (h)** prevention of nuisance or hazardous odors, including H₂S;
- (i)** an emergency response plan, unless the permanent pit is part of a facility that has an integrated contingency plan;
- (j)** type of oil field waste stream;
- (k)** climatological factors, including freeze-thaw cycles;
- (l)** a monitoring and inspection plan;
- (m)** erosion control; and
- (n)** other pertinent information the environmental bureau in the division's Santa Fe office requests.

(2) Temporary pits. The plan for design and construction of a temporary pit shall follow applicable liner manufacturers' requirements. The permit application also shall include operating and maintenance procedures, a closure plan and hydrogeologic data that provides sufficient information and detail on the site's topography, soils, geology, surface hydrology and ground water hydrology to enable the appropriate division district office to evaluate compliance with the siting criteria of 19.15.17.10 NMAC. In the absence of site-specific ground water data, the operator can provide a reasonable determination of probable ground water depth using data generated by models, cathodic well lithology, published information or other tools as approved by the appropriate division district office. The plan for a temporary pit may incorporate by reference a standard design for multiple temporary pits that the operator files with the application or has previously filed with the appropriate division district office. The operator may utilize, with approval by the appropriate division district office, standardized plans for pit construction, pit closure, and other plans which will remain approved until a subsequent plan is either required by the appropriate division district office or is submitted by the operator and approved by the appropriate division district office. A copy of the approved standardized plan shall be included in the division's electronic well file for each associated well.

(3) Below-grade tanks. The registration of a below-grade tank shall include operating and maintenance procedures, a closure plan and a hydrogeologic report that demonstrates compliance with the siting criteria of 19.15.17.10 NMAC. In the absence of site-specific ground water data, the operator can provide a reasonable determination of probable ground water depth using data generated by models, cathodic well lithology, published information or other tools as approved by the appropriate division district office. The registration of a below-grade tank may incorporate by reference a standard design for multiple below-grade tanks that the operator files with the application or has previously filed with the appropriate division district office. The operator may utilize, with

approval by the appropriate division district office, standardized plans for below-grade tank construction, and other plans which will remain approved until a subsequent plan is either required by the appropriate division district office or is submitted by the operator and approved by the appropriate division district office. A copy of the approved standardized plan shall be included in the division's electronic well file for each associated well.

(4) Multi-well fluid management pits. The design and construction plan for a multi-well fluid management pit shall follow applicable liner manufacturers' requirements. The permit application also shall include operating and maintenance procedures, a list of wells with approved application for permit to drill associated with the pit, a closure plan and hydrogeologic data that provides sufficient information and detail on the site's topography, soils, geology, surface hydrology and ground water hydrology to enable the appropriate division district office to evaluate compliance with the siting criteria of 19.15.17.10 NMAC. In the absence of site-specific ground water data, the operator can provide a reasonable determination of probable ground water depth using data generated by models, cathodic well lithology, published information or other tools as approved by the appropriate division district office. The plan for a multi-well fluid management pit may incorporate by reference a standard design for multiple fluid management pits that the operator files with the application or has previously filed with the appropriate division district office. The operator may utilize, with approval by the appropriate division district office, standardized plans for pit construction, pit closure, and other plans which will remain approved until a subsequent plan is either required by the appropriate division district office or is submitted by the operator and approved by the appropriate division district office.

C. Filing of permit application.

(1) Permanent pits: An operator shall file an application on form C-144, including required attachments, with the division's Santa Fe office to request approval to use or construct a permanent pit and shall provide a copy to the appropriate division district office.

(2) Temporary pits, and multi-well fluid management pits. An operator shall file an application on form C-144, including required attachments, with the appropriate division district office. If the operator plans to use a temporary pit, or multi-well fluid management pit, the operator shall provide the proposed pit location on form C-102.

[19.15.17.9 NMAC - Rp, 19.15.17.9 NMAC, 6/28/13]

19.15.17.10 SITING REQUIREMENTS:

A. Except as otherwise provided in 19.15.17 NMAC.

(1) An operator shall not locate a temporary pit containing low chloride fluid:

(a) where ground water is less than 25 feet below the bottom of the pit; a variance may be granted for a pit used solely to cavitate a coal bed methane well and where the operator demonstrated that the proposed operation will protect groundwater during the temporary pit's use;

(b) within (i) 100 feet of any continuously flowing watercourse or any other significant watercourse, or (ii) 200 feet of any lakebed, sinkhole or playa lake (measured from the ordinary high-water mark);

(c) within 300 feet from an occupied permanent residence, school, hospital, institution or church in existence at the time of initial application;

(d) within (i) 200 feet of a spring or a private, domestic fresh water well used by less than five households for domestic or stock watering purposes, or (ii) 300 feet of any other fresh water well or spring, in existence at the time of the initial application;

(e) within incorporated municipal boundaries or within a defined municipal fresh water well field covered under a municipal ordinance adopted pursuant to NMSA 1978, Section 3-27-3, as amended, unless the municipality specifically approves;

(f) within 100 feet of a wetland;

(g) within the area overlying a subsurface mine, unless a variance is granted that approves the proposed location based upon the operator's demonstration that the temporary pit's construction and use will not compromise the subsurface integrity;

(h) within an unstable area, unless a variance is granted upon a demonstration that the operator has incorporated engineering measures into the design to ensure that the temporary pit's integrity is not compromised; or

(i) within a 100-year floodplain.

(2) Unless a variance is specifically provided for in Paragraph (1) of Subsection A of 19.15.17.10 NMAC, an operator must obtain an exception to locate a temporary pit containing low chloride fluids inside setbacks set forth in Paragraph (1) of Subsection A of 19.15.17.10 NMAC.

(3) An operator shall not locate a temporary pit containing fluids that are not low chloride fluids:

(a) where ground water is less than 50 feet below the bottom of the pit; a variance may be granted for a pit used solely to cavitate a coal bed methane well and where the operator demonstrated that the proposed operation will protect groundwater during the temporary pit's use;

(b) within (i) 300 feet of any continuously flowing watercourse or any other significant watercourse or (ii) 200 feet of any lakebed, sinkhole or playa lake (measured from the ordinary high-water mark);

(c) within 300 feet from an occupied permanent residence, school, hospital, institution or church in existence at the time of initial application;

(d) within (i) 500 feet of a spring or a private, domestic fresh water well used by less than five households for domestic or stock watering purposes, or (ii) 1,000 feet of any other fresh water well or spring, in existence at the time of the initial application;

(e) within incorporated municipal boundaries or within a defined municipal fresh water well field covered under a municipal ordinance adopted pursuant to NMSA 1978, Section 3-27-3, as amended, unless the municipality specifically approves;

(f) within 300 feet of a wetland;

(g) within the area overlying a subsurface mine, unless a variance is granted that approves the proposed location based upon the operator's demonstration that the temporary pit's construction and use will not compromise the subsurface integrity;

(h) within an unstable area, unless a variance is granted upon a demonstration that the operator has incorporated engineering measures into the design to ensure that the temporary pit's integrity is not compromised; or

(i) within a 100-year floodplain.

(4) An operator must obtain a variance to locate a temporary pit containing non-low chloride fluids inside setbacks set forth in Paragraph (3) of Subsection A of 19.15.17.10 NMAC. The operator must obtain an exception to locate a non-low chloride fluids temporary pit inside setbacks set forth in Paragraph (1) of Subsection A of 19.15.17.10 NMAC.

(5) An operator shall not locate a permanent pit or multi-well fluid management pit:

(a) where ground water is less than 50 feet below the bottom of the permanent pit;

(b) within 300 feet of a continuously flowing watercourse, or 200 feet of any other significant watercourse or lakebed, sinkhole or playa lake (measured from the ordinary high-water mark), unless the division's Santa Fe office approves an alternative distance based upon the operator's demonstration that surface and ground water will be protected;

(c) within 1000 feet from a permanent residence, school, hospital, institution or church in existence at the time of initial application;

(d) within 500 feet of a spring or a fresh water well used for domestic or stock watering purposes, in existence at the time of initial application;

(e) within incorporated municipal boundaries or within a defined municipal fresh water well field covered under a municipal ordinance adopted pursuant to NMSA 1978, Section 3-27-3, as amended, unless the municipality specifically approves;

(f) within 500 feet of a wetland;

(g) within the area overlying a subsurface mine, unless the operator obtains an exception and demonstrates that the pit's construction and use will not compromise subsurface integrity;

(h) within an unstable area, unless the operator demonstrates that it has incorporated engineering measures into the design to ensure that the pit's integrity is not compromised; or

(i) within a 100-year floodplain.

(6) An operator must obtain an exception to locate a permanent pit or multi-well fluid management pit inside setbacks set forth in Paragraph (5) of Subsection A of 19.15.17.10 NMAC.

(7) An operator shall not locate material excavated from a pit's construction:

(a) within 100 feet of a continuously flowing watercourse or a significant watercourse;

(b) 200 feet from a lakebed, sinkhole or playa lake (measured from the ordinary high-water mark);

(c) within 100 feet of a wetland; or

(d) within a 100-year floodplain.

(8) An operator shall not locate a below-grade tank:

(a) within 100 feet of a continuously flowing watercourse, significant watercourse, lakebed, sinkhole, wetland or playa lake (measured from the ordinary high-water mark);

(b) within 200 feet of a spring or a fresh water well used for public or livestock consumption;

(c) where depth to ground water is less than 25 feet below the bottom of the tank.

B. An emergency pit is exempt from the siting criteria of 19.15.17 NMAC.

C. Closure for burial trenches and in place closure.

(1) An operator shall not implement trench or in-place closure:

(a) where ground water is less than 25 feet below the bottom of the buried waste;

(b) within 100 feet of a continuously flowing watercourse, or 200 feet of any other significant watercourse or lakebed, sinkhole or playa lake (measured from the ordinary high-water mark);

(c) within 300 feet from an occupied permanent residence, school, hospital, institution or church in existence at the time of initial application;

(d) within 300 feet of a spring or private, domestic fresh water well used for domestic or stock watering purposes;

(e) within incorporated municipal boundaries or within a defined municipal fresh water well field covered under a municipal ordinance adopted pursuant to NMSA 1978, Section 3-27-3, as amended, unless the municipality specifically approves;

(f) within 300 feet of a wetland;

(g) within the area overlying a subsurface mine, unless the division specifically approves the proposed location based upon the operator's demonstration that subsurface integrity will not be compromised;

(h) within an unstable area, unless the operator demonstrates that it has incorporated engineering measures into the design to ensure that the onsite closure method will prevent contamination of fresh water and protect public health and the environment; or

(i) within a 100 year floodplain.

(2) An operator must obtain a variance to locate a burial trench inside setbacks set forth in Paragraph (3) of Subsection A of 19.15.17.10 NMAC. The operator must obtain an exception to locate a burial trench inside setbacks set forth in Paragraph (1) of Subsection A of 19.15.17.10 NMAC.

[19.15.17.10 NMAC - Rp, 19.15.17.10 NMAC, 6/28/13]

19.15.17.11 DESIGN AND CONSTRUCTION SPECIFICATIONS:

A. General specifications. An operator shall design and construct a pit, closed-loop system, below-grade tank or sump to contain liquids and solids; prevent contamination of fresh water; and protect public health and the environment.

B. Stockpiling of topsoil. Prior to constructing a pit, except a pit constructed in an emergency, the operator shall strip and stockpile the topsoil for use as the final cover or fill at the time of closure.

C. Signs. The operator shall post an upright sign not less than 12 inches by 24 inches with lettering not less than two inches in height in a conspicuous place on the fence surrounding the pit or below-grade tank, unless the pit or below-grade tank is located on a site where there is an existing well, signed in compliance with 19.15.16.8 NMAC, that is operated by the same operator. The operator shall post the sign in a manner and location such that a person can easily read the legend. The sign shall provide the following information: the operator's name; the location of the site by quarter-quarter or unit letter, section, township and range; and emergency telephone numbers.

D. Fencing.

(1) The operator shall fence or enclose a pit or below-grade tank in a manner that deters unauthorized access and shall maintain the fences in good repair. Fences are not required if there is an adequate surrounding perimeter fence that prevents unauthorized access to the well site or facility, including the pit or below-grade tank. During drilling or workover operations, the operator is not required to fence the edge of the pit adjacent to the drilling or workover rig.

(2) The operator shall fence or enclose a pit located within 1000 feet of an occupied permanent residence, school, hospital, institution or church with a chain link security fence, at least six feet in height with at least two strands of barbed wire at the top. The operator shall ensure that all gates associated with the fence are closed and locked when responsible personnel are not onsite. During drilling or workover operations, the operator is not required to fence the edge of the temporary pit adjacent to the drilling or workover rig.

(3) The operator shall fence any other pit or below-grade tank to exclude livestock with a four foot fence that has at least four strands of barbed wire evenly spaced in the interval between one foot and four feet above ground level.

E. Netting. The operator shall ensure that a permanent pit, a multi-well fluid management pit, or an open top tank is screened, netted or otherwise rendered non-hazardous to wildlife, including migratory birds. Where netting or screening is not feasible, the operator shall on a monthly basis inspect for, and within 30 days of discovery, report discovery of dead migratory birds or other wildlife to the appropriate

wildlife agency and to the appropriate division district office in order to facilitate assessment and implementation of measures to prevent incidents from reoccurring.

F. Temporary pits. The operator shall design and construct a temporary pit in accordance with the following requirements.

- (1)** The operator shall design and construct a temporary pit to ensure the confinement of liquids to prevent releases.
- (2)** A temporary pit shall have a properly constructed foundation and interior slopes consisting of a firm, unyielding base, smooth and free of rocks, debris, sharp edges or irregularities to prevent the liner's rupture or tear. The operator shall construct a temporary pit so that the slopes are no steeper than two horizontal feet to one vertical foot (2H:1V). The appropriate division district office may approve an alternative to the slope requirement if the operator demonstrates that it can construct and operate the temporary pit in a safe manner to prevent contamination of fresh water and protect public health and the environment.
- (3)** The operator shall design and construct a temporary pit with a geomembrane liner. The geomembrane liner shall consist of 20- mil string reinforced LLDPE or equivalent liner material that the appropriate division district office approves. The geomembrane liner shall be composed of an impervious, synthetic material that is resistant to petroleum hydrocarbons, salts and acidic and alkaline solutions. The liner material shall be resistant to ultraviolet light. Liner compatibility shall comply with EPA SW-846 Method 9090A.
- (4)** The operator shall minimize liner seams and orient them up and down, not across, a slope. The operator shall use factory welded seams where possible. Prior to field seaming, the operator shall overlap liners four to six inches. The operator shall minimize the number of field seams in corners and irregularly shaped areas. Qualified personnel shall field weld and test liner seams.
- (5)** Construction shall avoid excessive stress-strain on the liner.
- (6)** Geotextile is required under the liner where needed to reduce localized stress-strain or protuberances that may otherwise compromise the liner's integrity.
- (7)** The operator shall anchor the edges of all liners in the bottom of a compacted earth-filled trench. The anchor trench shall be at least 18 inches deep, unless anchoring to encountered bedrock provides equivalent anchoring.
- (8)** The operator shall ensure that the liner is protected from any fluid force or mechanical damage at any point of discharge into or suction from the lined temporary pit.

(9) The operator shall design and construct a temporary pit to prevent run-on of surface water. A berm, ditch, proper sloping or other diversion shall surround a temporary pit to prevent run-on of surface water. During drilling operations, the edge of the temporary pit adjacent to the drilling or workover rig is not required to have run-on protection if the operator is using the temporary pit to collect liquids escaping from the drilling or workover rig and run-on will not result in a breach of the temporary pit.

(10) The volume of a temporary pit shall not exceed 10 acre feet, including freeboard.

(11) The part of a temporary pit used to vent or flare gas during a drilling or workover operation that is designed to allow liquids to drain to a separate temporary pit does not require a liner, unless the appropriate division district office requires an alternative design in order to protect surface water, ground water and the environment. The operator shall not allow freestanding liquids to remain on the unlined portion of a temporary pit used to vent or flare gas.

G. Permanent pits. The operator shall design and construct a permanent pit in accordance with the following requirements.

(1) Each permanent pit shall have a properly constructed foundation consisting of a firm, unyielding base, smooth and free of rocks, debris, sharp edges or irregularities to prevent the liner's rupture or tear. The operator shall construct a permanent pit so that the inside grade of the levee is no steeper than two horizontal feet to one vertical foot (2H:1V). The levee shall have an outside grade no steeper than three horizontal feet to one vertical foot (3H:1V). The levee's top shall be wide enough to install an anchor trench and provide adequate room for inspection and maintenance.

(2) Each permanent pit shall contain, at a minimum, a primary (upper) liner and a secondary (lower) liner with a leak detection system appropriate to the site's conditions. The edges of all liners shall be anchored in the bottom of a compacted earth-filled trench. The anchor trench shall be at least 18 inches deep.

(3) The primary (upper) liner and secondary (lower) liner shall be geomembrane liners. The geomembrane liner shall consist of 30-mil flexible PVC or 60-mil HDPE liner, or an equivalent liner material the division's Santa Fe office approves. The geomembrane liner shall have a hydraulic conductivity no greater than 1×10^{-9} cm/sec. The geomembrane liner shall be composed of an impervious, synthetic material that is resistant to ultraviolet light, petroleum hydrocarbons, salts and acidic and alkaline solutions. Liner compatibility shall comply with EPA SW-846 Method 9090A, or subsequent relevant publication.

(4) The division's Santa Fe office may approve other liner media if the operator demonstrates to the satisfaction of the division's Santa Fe office that the alternative liner protects fresh water, public health, and the environment as effectively as the specified media.

(5) The operator shall minimize liner seams and orient them up and down, not across, a slope. The operator shall use factory welded seams where possible. The operator shall ensure field seams in geosynthetic material are thermally seamed (hot wedge) with a double track weld to create an air pocket for non-destructive air channel testing. The operator shall test a seam by establishing an air pressure between 33 and 37 psi in the pocket and monitoring that the pressure does not change by more than one percent during five minute after the pressure source is shut off from the pocket. Prior to field seaming, the operator shall overlap liners four to six inches and orient seams, up and down, not across, the slope. The operator shall minimize the number of field seams in corners and irregularly shaped areas. There shall be no horizontal seams within five feet of the slope's toe. Qualified personnel shall perform field welding and testing.

(6) At a point of discharge into or suction from the lined permanent pit, the operator shall ensure that the liner is protected from excessive hydrostatic force or mechanical damage. External discharge or suction lines shall not penetrate the liner.

(7) The operator shall place a leak detection system between the upper and lower geomembrane liners that consists of two feet of compacted soil with a saturated hydraulic conductivity of 1×10^{-5} cm/sec or greater to facilitate drainage. The leak detection system shall consist of a properly designed drainage and collection and removal system placed above the lower geomembrane liner in depressions and sloped to facilitate the earliest possible leak detection. Piping used shall be designed to withstand chemical attack from oil field waste or leachate; structural loading from stresses and disturbances from overlying oil field waste, cover materials, equipment operation or expansion or contraction; and to facilitate clean-out maintenance. The material the operator places between the pipes and laterals shall be sufficiently permeable to allow the transport of fluids to the drainage pipe. The slope of the interior sub-grade and of drainage lines and laterals shall be at least a two percent grade, i.e., two feet vertical drop per 100 horizontal feet. The piping collection system shall be comprised of solid and perforated pipe having a minimum diameter of four inches and a minimum wall thickness of schedule 80. The operator shall seal a solid sidewall riser pipe to convey collected fluids to a collection, observation and disposal system located outside the permanent pit's perimeter. The operator may install alternative methods that the division's Santa Fe office approves.

(8) The operator shall notify the division's Santa Fe office at least 72 hours prior to the primary liner's installation so that a representative of the environmental bureau in the division's Santa Fe office may inspect the leak detection system before it is covered.

(9) The operator shall construct a permanent pit in a manner that prevents overtopping due to wave action or rainfall and maintain a three foot freeboard at all times.

(10) The volume of a permanent pit shall not exceed 10 acre-feet, including freeboard.

(11) The operator shall maintain a permanent pit to prevent run-on of surface water. A permanent pit shall be surrounded by a berm, ditch or other diversion to prevent run-on of surface water.

H. Drying pads associated with closed-loop systems.

(1) An operator of a closed-loop system with drying pads shall design and construct the drying pads to include the following:

(a) appropriate liners that prevent the contamination of fresh water and protect public health and the environment;

(b) sumps to facilitate the collection of liquids derived from drill cuttings; and

(c) berms that prevent run-on of surface water or fluids.

I. Below-grade tanks. The operator shall design and construct a below-grade tank in accordance with the following requirements, as applicable.

(1) The operator shall ensure that a below-grade tank is constructed of materials resistant to the below-grade tank's particular contents and resistant to damage from sunlight.

(2) A below-grade tank shall have a properly constructed foundation consisting of a level base free of rocks, debris, sharp edges or irregularities to prevent punctures, cracks or indentations of the liner or tank bottom.

(3) The operator shall construct a below-grade tank to prevent overflow and the collection of surface water run-on.

(4) An operator shall construct a below-grade tank in accordance with one of the following designs.

(a) An operator may construct and use a below-grade tank that does not have double walls provided that the below-grade tank's side walls are open for visual inspection for leaks, the below-grade tank's bottom is elevated a minimum of six inches above the underlying ground surface and the below-grade tank is underlain with a geomembrane liner, which may be covered with gravel, to divert leaked liquid to a location that can be visually inspected. The operator shall equip below-grade tanks designed in this manner with a properly operating automatic high-level shut-off control device and manual controls to prevent overflows. The geomembrane liner shall consist of 30-mil flexible PVC or 60-mil HDPE liner, or an equivalent liner material that the appropriate division district office approves. The geomembrane liner shall have a

hydraulic conductivity no greater than 1×10^{-9} cm/sec. The geomembrane liner shall be composed of an impervious, synthetic material that is resistant to ultraviolet light, petroleum hydrocarbons, salts and acidic and alkaline solutions. Liner compatibility shall comply with EPA SW-846 Method 9090A, or subsequent relevant EPA publication.

(b) All below-grade tanks, in which the side walls are not open for visible inspection for leaks shall be double walled with leak detection capability.

(c) An operator may construct a below-grade tank according to an alternative system that the appropriate division district office approves based upon the operator's demonstration that the alternative provides equivalent or better protection.

(5) The operator of a single walled below-grade tank constructed and installed prior to June 16, 2008 that has the side walls open for visual inspection and that does not meet all the requirements in Paragraphs (1) through (4) of Subsection I of 19.15.17.11 NMAC is not required to equip or retrofit the below-grade tank to comply with Paragraphs (1) through (4) of Subsection I of 19.15.17.11 NMAC so long as it demonstrates integrity. If the existing below-grade tank does not demonstrate integrity, the operator shall promptly drain the below-grade tank and remove it from service and comply with the closure requirements of 19.15.17.13 NMAC.

(6) The operator of a single walled below-grade tank constructed and installed prior to June 16, 2008 and where any portion of the tank sidewall is below the ground surface and not visible shall equip or retrofit the below-grade tank to comply with Paragraphs (1) through (4) of Subsection I of 19.15.17.11 NMAC, or close it, by June 16, 2013. If the existing below-grade tank does not demonstrate integrity, the operator shall promptly drain the below-grade tank, remove it from service and comply with the closure requirements of 19.15.17.13 NMAC.

(7) The operator of a double walled below-grade tank constructed and installed prior to June 16, 2008 and which does not meet all the requirements in Paragraphs (1) through (4) of Subsection I of 19.15.17.11 NMAC is not required to equip or retrofit the below-grade tank to comply with Paragraphs (1) through (4) of Subsection I of 19.15.17.11 NMAC so long as it demonstrates integrity. If the existing below-grade tank does not demonstrate integrity, the operator shall promptly drain the below-grade tank, remove it from service and comply with the closure requirements of 19.15.17.13 NMAC.

J. Multi-well fluid management pits. The operator shall design and construct a multi-well fluid management pit in accordance with the following requirements.

(1) The operator shall design and construct the pit to ensure the confinement of liquids to prevent releases and to prevent overtopping due to wave action or rainfall.

(2) The pit shall have a properly constructed foundation and interior slopes consisting of a firm, unyielding base, smooth and free of rocks, debris, sharp edges or

irregularities to prevent the liner's rupture or tear. Geotextile is required under the liner where needed to reduce localized stress-strain or protuberances that may otherwise compromise the liner's integrity. The operator shall construct a multi-well fluid management pit so that the slopes are no steeper than two horizontal feet to one vertical foot (2H:1V). The levee shall have an outside grade no steeper than three horizontal feet to one vertical foot (3H:1V). The levee's top shall be wide enough to install an anchor trench and provide adequate room for inspection and maintenance. The appropriate division district office may approve an alternative to the slope requirement if the operator demonstrates that it can construct and operate the pit in a manner that provides equivalent or better protection to fresh water, public health and the environment.

(3) Each multi-well fluid management pit shall contain, at a minimum, a primary (upper) liner and a secondary (lower) liner with a leak detection system appropriate to the site's conditions. The edges of all liners shall be anchored in the bottom of a compacted earth-filled trench. The anchor trench shall be at least 18 inches deep.

(4) The primary (upper) liner and secondary (lower) liner shall be geomembrane liners. The geomembrane liner shall consist of 30-mil flexible PVC or 60-mil HDPE liner, or an equivalent liner material that the division's district office approves. The geomembrane liner shall have a hydraulic conductivity no greater than 1×10^{-9} cm/sec. The geomembrane liner shall be composed of an impervious, synthetic material that is resistant to ultraviolet light, petroleum hydrocarbons, salts and acidic and alkaline solutions. Liner compatibility shall comply with EPA SW-846 Method 9090A or subsequent relevant publication.

(5) The appropriate division's district office may approve other liner media if the operator demonstrates to the satisfaction of the appropriate division's district office that the alternative liner protects fresh water, public health, and the environment as effectively as the specified media.

(6) The operator shall minimize liner seams and orient them up and down, not across, a slope. The operator shall use factory welded seams where possible. The operator shall ensure field seams in geosynthetic material are thermally seamed. Prior to field seaming, the operator shall overlap liners four to six inches. The operator shall minimize the number of field seams in corners and irregularly shaped areas. There shall be no horizontal seams within five feet of the slope's toe. Qualified personnel shall perform field welding and testing.

(7) At a point of discharge into or suction from the lined multi-well fluid management pit, the operator shall ensure that the liner is protected from excessive hydrostatic force or mechanical damage. External discharge or suction lines shall not penetrate the liner.

(8) The operator shall place a leak detection system between the upper and lower geomembrane liners that consists of two feet of compacted soil with a saturated hydraulic conductivity of 1×10^{-5} cm/sec or greater to facilitate drainage. The leak detection system shall consist of a properly designed drainage and collection and removal system placed above the lower geomembrane liner in depressions and sloped to facilitate the earliest possible leak detection. The operator may install alternative methods that the appropriate division's district office approves.

(9) The operator shall maintain a multi-well fluid management pit to prevent run-on of surface water. A multi-well fluid management pit shall be surrounded by a berm, ditch or other diversion to prevent run-on of surface water.

K. Burial trenches for closure. The operator shall design and construct a burial trench in accordance with the following requirements.

(1) A trench shall have a properly constructed foundation and side walls consisting of a firm, unyielding base, smooth and free of rocks, debris, sharp edges or irregularities to prevent the liner's rupture or tear.

(2) Geotextile is required under the liner where needed to reduce localized stress-strain or protuberances that may otherwise compromise the liner's integrity.

(3) A trench shall be constructed with a geomembrane liner. The geomembrane shall consist of a 20-mil string reinforced LLDPE liner or equivalent liner that the appropriate division district office approves. The geomembrane liner shall be composed of an impervious, synthetic material that is resistant to petroleum hydrocarbons, salts and acidic and alkaline solutions. Liner compatibility shall comply with EPA SW-846 Method 9090A.

(4) The operator shall minimize liner seams and orient them up and down, not across, a slope. The operator shall use factory welded seams where possible. Prior to field seaming, the operator shall overlap liners four to six inches and orient liner seams parallel to the line of maximum slope, i.e., oriented along, not across, the slope. The operator shall minimize the number of field seams in corners and irregularly shaped areas. Qualified personnel shall perform field welding and testing.

(5) The operator shall install sufficient liner material to reduce stress-strain on the liner.

(6) The operator shall ensure that the outer edges of all liners are secured for the deposit of the excavated waste material into the trench.

[19.15.17.11 NMAC - Rp, 19.15.17.11 NMAC, 6/28/13]

19.15.17.12 OPERATIONAL REQUIREMENTS:

A. General specifications. An operator shall maintain and operate a pit or closed-loop system, below-grade tank or sump in accordance with the following requirements.

(1) The operator shall operate and maintain a pit or closed-loop system, below-grade tank or sump to contain liquids and solids and maintain the integrity of the liner, liner system or secondary containment system, prevent contamination of fresh water and protect public health and the environment.

(2) The operator shall recycle, reuse, reclaim or dispose of all drilling fluids in a manner consistent with division rules.

(3) The operator shall not discharge into or store any hazardous waste in a pit, closed-loop system, below-grade tank or sump.

(4) If a pit liner's integrity is compromised above the liquid's surface then the operator shall repair the damage or initiate replacement of the liner within 48 hours of discovery or seek a variance from the appropriate division district office.

(5) If a pit or below-grade tank develops a leak, or if any penetration of the pit liner occurs below the liquid's surface, then the operator shall remove all liquid above the damage or leak within 48 hours of discovery, notify the appropriate division office pursuant to 19.15.29 NMAC and repair the damage or replace the pit liner or below-grade tank as applicable.

(6) The injection or withdrawal of liquids from a pit shall be accomplished through a header, diverter or other hardware that prevents damage to the liner by erosion, fluid jets or impact from installation and removal of hoses or pipes.

(7) The operator shall operate and install a pit, below-grade tank or sump to prevent the collection of surface water run-on.

(8) The operator shall install, or maintain on site, an oil absorbent boom or other device to contain an unanticipated release.

B. Temporary pits. An operator shall maintain and operate a temporary pit in accordance with the following additional requirements.

(1) Only fluids or mineral solids generated or used during the drilling, completion or workover process may be discharged into a temporary pit. The operator shall maintain a temporary pit free of miscellaneous solid waste or debris. Immediately after cessation of a drilling or workover operation, the operator shall remove any visible layer of oil from the surface of a drilling or workover pit.

(2) The operator shall maintain at least two feet of freeboard for a temporary pit. For temporary extenuating circumstances an operator may maintain a freeboard of

less than two feet. In such circumstances the operator shall maintain a log describing such circumstances and make the log available to the division upon request.

(3) The operator shall inspect a temporary pit containing drilling fluids at least daily while the drilling or workover rig is on location. Thereafter, the operator shall inspect the temporary pit weekly so long as liquids remain in the temporary pit. The operator shall maintain a log of such inspections and make the log available for the appropriate division district office's review upon request.

(4) The operator shall remove all free liquids from the surface of a temporary pit within 60 days from the date that the operator releases the last drilling or workover rig associated with the relevant pit permit. The operator shall note the date of the drilling or workover rig's release on form C-105 or C-103 upon well or workover completion. The appropriate division district office may grant an extension of up to two months, not to exceed temporary pit life span under Subsection R of 19.15.17.7 NMAC.

(5) The operator shall remove any liquids from the temporary pit used for cavitation within 48 hours after completing cavitation. The operator may request and receive additional time to remove the liquids from the temporary pit used for cavitation if the operator demonstrates to the appropriate division district office's satisfaction that it is not feasible to access the location within 48 hours.

C. Permanent pits. An operator shall maintain and operate a permanent pit in accordance with the following additional requirements.

(1) The operator shall maintain at least three feet of freeboard for a permanent pit; the operator shall permanently mark such level on the permanent pit.

(2) No oil or floating hydrocarbon shall be present in a permanent pit.

(3) The operator shall inspect the pit weekly while the pit has fluids and document at least monthly until the pit is closed. Inspections will include monitoring of the leak detection system. The operator shall maintain a log of such inspections and make the log available for the appropriate division district office's review upon request.

D. Below-grade tanks. An operator shall maintain and operate a below-grade tank in accordance with the following additional requirements.

(1) The operator shall not allow a below-grade tank to overflow or allow surface water run-on to enter the below-grade tank.

(2) The operator shall remove any measurable layer of oil from the fluid surface of a below-grade tank.

(3) The operator shall inspect the below-grade tank for leakage and damage at least monthly. The operator shall document the integrity of each tank at least annually and maintain a written record of the integrity for five years.

(4) The operator shall maintain adequate freeboard to prevent overtopping of the below-grade tank.

(5) The operator of a below-grade tank who discovers that the below-grade tank does not demonstrate integrity or that the below-grade tank develops any of the conditions identified in Paragraph (5) of Subsection A of 19.15.17.12 NMAC shall repair the damage or close the existing below-grade tank pursuant to the closure requirements of 19.15.17.13 NMAC.

(6) The operator of a below-grade tank who equips or retrofits the existing tank to comply with Paragraphs (1) through (4) of Subsection I of 19.15.17.11 NMAC shall visually inspect the area beneath the below-grade tank during the retrofit and document any areas that are wet, discolored or showing other evidence of a release on form C-141. The operator shall measure and report to the division the concentration of contaminants in the wet or discolored soil with respect to the standards set forth in Table I of 19.15.17.13 NMAC. If there is no wet or discolored soil or if the concentration of contaminants in the wet or discolored soil is less than the standard set forth in Table I of 19.15.17.13 NMAC, then the operator shall proceed with the closure requirements of 19.15.17.13 NMAC prior to initiating the retrofit or replacement.

E. Sumps. The operator shall maintain and operate a sump in accordance with the following additional requirements.

(1) The operator shall visually inspect a sump's integrity annually and promptly repair or replace a sump that fails the inspection.

(2) The operator shall maintain records of sump inspections and make the records available for the appropriate division district office's review upon request.

F. Multi-well fluid management pits. An operator shall maintain and operate a multi-well fluid management pit in accordance with the following additional requirements.

(1) No operator shall place any substances in the pit other than stimulation fluids, produced water used for stimulation and drilling, and flow back from multiple wells.

(2) The operator shall remove any visible layer of oil from the surface of the pit.

(3) The operator shall maintain at least three feet of freeboard for the pit.

(4) The operator shall inspect the pit weekly while the pit has fluids and document at least monthly until the pit is closed. Inspections will include monitoring of the leak detection system. The operator shall maintain a log of such inspections and make the log available for the appropriate division district office's review upon request.

(5) The operator shall remove all fluids within 60 days from the date the operator ceases all stimulation operations associated with the pit permit. The appropriate division district office may grant an extension of up to two months.

[19.15.17.12 NMAC - Rp, 19.15.17.12 NMAC, 6/28/13]

19.15.17.13 CLOSURE AND SITE RECLAMATION REQUIREMENTS:

A. Closure plans. A closure plan that an operator submits in an application or registration pursuant to Subsection B of 19.15.17.9 NMAC, or any other closure plan required pursuant to 19.15.17 NMAC, shall describe the proposed closure method and the proposed procedures and protocols to implement and complete the closure.

B. Closure plans for a multi-well fluid management pit shall be filed with the appropriate division district office and shall describe the proposed procedures and protocols for the removal of all unused stimulation liquids and the disposition of liner materials and other pit contents.

C. Closure where wastes are destined for disposal at division approved off-site facilities. This subsection applies to permanent pits, temporary pits, multi-well fluid management pits, drying pads and tanks associated with closed-loop systems and below-grade tanks.

(1) Notwithstanding the following, the operator of any pit or below-grade tank shall not commence closure without first obtaining approval of the closure plan submitted with the permit application or registration pursuant to 19.15.17.9 NMAC.

(2) The operator shall close the pit, drying pad or below-grade tank by first removing all contents and, if applicable, synthetic liners and transferring those materials to a division approved facility.

(3) The operator shall test the soils beneath the pit, drying pad for closed-loop system or below-grade tank as follows.

(a) At a minimum, a five point composite sample to include any obvious stained or wet soils, or other evidence of contamination shall be taken under the liner or the below-grade tank and that sample shall be analyzed for the constituents listed in Table I of 19.15.17.13 NMAC.

(b) If any contaminant concentration is higher than the parameters listed in Table I of 19.15.17.13 NMAC, the division may require additional delineation upon

review of the results and the operator must receive approval before proceeding with closure.

(c) If all contaminant concentrations are less than or equal to the parameters listed in Table I of 19.15.17.13 NMAC, then the operator can proceed to backfill the pit, pad, or excavation with non-waste containing, uncontaminated, earthen material.

D. Closure where wastes are destined for burial in place or into nearby division approved pits or trenches. This subsection applies to waste from temporary pits and closed-loop systems, when such waste may be disposed of in place in the existing temporary pit or disposed of at a nearby temporary pit or burial trench that is not a permitted commercial facility regulated under 19.15.36 NMAC. A nearby temporary pit or burial trench that receives waste from another temporary pit must be onsite within the same lease.

(1) The operator shall not commence closure without first obtaining approval of the closure plan submitted with the permit application.

(2) The operator shall demonstrate and comply with the siting criteria set forth in Subsection C of 19.15.17.10 NMAC.

(3) Prior to closure the operator shall remove all free liquids reasonably achievable from the pit or drying pad and tank associated with a closed-loop system and dispose of such liquids at a division approved facility.

(4) When closing a temporary pit the operator shall stabilize or solidify the remaining temporary pit contents to a capacity sufficient to support the final cover of the temporary pit. When transferring the waste contents from a drying pad and tank associated with a closed-loop system into a temporary pit or burial trench, the operator shall stabilize or solidify the waste contents to a capacity sufficient to support the final cover of the temporary pit or burial trench. The operator shall not mix the contents with soil or other material at a mixing ratio of greater than 3:1, soil or other material to contents. The waste mixture must pass the paint filter liquids test (EPA SW-846, Method 9095 or other test methods approved by the division).

(5) The operator shall collect, at a minimum, a five point composite of the contents of the temporary pit or drying pad/tank associated with a closed-loop system to demonstrate that, after the waste is solidified or stabilized with soil or other non-waste material at a ratio of no more than 3:1 soil or other non-waste material to waste, the concentration of any contaminant in the stabilized waste is not higher than the parameters listed in Table II of 19.15.17.13 NMAC.

(6) If, after appropriate stabilization, the concentrations of all contaminants in the contents from a temporary pit or drying pad and tank associated with a closed-loop system are less than or equal to the parameters of listed in Table II of 19.15.17.13

NMAC, the operator may either proceed to dispose of wastes in an existing temporary pit or construct a burial trench for disposal of these wastes.

(7) If the concentration of any contaminant in the contents, after mixing with soil or non-waste material to a maximum ratio of 3:1, from a temporary pit or drying pad/tank associated with a closed-loop system is higher than constituent concentrations shown in Table II of 19.15.17.13 NMAC, then closure must proceed in accordance with Subsection C of 19.15.17.13 NMAC.

(8) Upon achieving all applicable waste stabilization in the temporary pit or transfer of stabilized wastes to the temporary pit or burial trench, the operator shall:

(a) fold the outer edges of the trench liner to overlap the waste material in the trench prior to the installation of the geomembrane cover;

(b) install a geomembrane cover over the waste material in the lined trench or temporary pit; the operator shall install the geomembrane cover in a manner that prevents the collection of infiltration water in the lined trench or temporary pit and on the geomembrane cover after the soil cover is in place; the geomembrane cover shall consist of a 20-mil string reinforced LLDPE liner or equivalent cover that the appropriate division district office approves; the geomembrane cover shall be composed of an impervious, synthetic material that is resistant to petroleum hydrocarbons, salts and acidic and alkaline solutions; cover compatibility shall comply with EPA SW-846 Method 9090A;

(c) cover the pit/trench with non-waste containing, uncontaminated, earthen materials and construct a soil cover prescribed by the division in Paragraph (3) of Subsection H of 19.15.17.13 NMAC.

(9) If the operator has removed the wastes and the liner to a burial trench pursuant to this subsection, the operator shall test the soils beneath the temporary pit as follows.

(a) At a minimum, a five point composite sample to include any obvious stained or wet soils, or other evidence of contamination shall be taken under the liner or the below-grade tank and that sample shall be analyzed for the constituents listed in Table I of 19.15.17.13 NMAC.

(b) If any contaminant concentration is higher than the parameters listed in Table I of 19.15.17.13 NMAC, the division may require additional delineation upon review of the results and the operator must receive approval before proceeding with closure.

(c) If all contaminant concentration are less than or equal to the parameters listed in Table I of 19.15.17.13 NMAC, then the operator can proceed to backfill the pit, pad, or excavation with non-waste containing, uncontaminated, earthen material.

E. Closure notice.

(1) The operator shall notify the surface owner by certified mail, return receipt requested that the operator plans closure operations at least 72 hours, but not more than one week, prior to any closure operation. Notice shall include well name, API number and location. Evidence of mailing of the notice to the address of the surface owner shown in the county tax records is sufficient to demonstrate compliance with this requirement.

(2) The operator of a temporary pit, multi-well fluid management pit, below-grade tank or an operator who is approved for onsite closure shall notify the appropriate division district office verbally and in writing at least 72 hours, but not more than one week, prior to any closure operation. The notice shall include the operator's name and the location to be closed by unit letter, section, township and range. If the closure is associated with a particular well, then the notice shall also include the well's name, number and API number.

(3) An operator of a permanent pit shall notify the Santa Fe office at least 60 days prior to cessation of operations and provide a proposed schedule for closure. If there is no closure plan on file with the Santa Fe office applicable to the permanent pit, the operator shall provide a closure plan with this notice. Upon receipt of the notice and proposed schedule, the Santa Fe office shall review the current closure plan for adequacy and inspect the site.

(4) When onsite burial occurs on private land, the operator shall file a deed notice identifying the exact location of the onsite burial with the county clerk in the county where the onsite burial occurs.

F. Closure report and burial identification.

(1) Within 60 days of closure completion, the operator shall submit a closure report on form C-144, with necessary attachments to document all closure activities including sampling results; information required by 19.15.17 NMAC; and details on back-filling, capping and covering, where applicable. In the closure report, the operator shall certify that all information in the report and attachments is correct and that the operator has complied with all applicable closure requirements and conditions specified in the approved closure plan. If the operator used a temporary pit, the operator shall provide a plat of the pit location on form C-1 05 within 60 days of closing the temporary pit.

(2) If the operator elects to conduct onsite burial under Subsection D of 19.15.17.13 NMAC, the operator shall report the exact location of the onsite burial on form C-105 filed with the division.

(3) The operator shall place a steel marker at the center of an onsite burial. The steel marker shall be not less than four inches in diameter and shall be cemented in

a three-foot deep hole at a minimum. The steel marker shall extend at least four feet above mean ground level and at least three feet below ground level. The operator name, lease name and well number and location, including unit letter, section, township and range, and that the marker designates an onsite burial location shall be welded, stamped or otherwise permanently engraved into the metal of the steel marker. A person shall not build permanent structures over an onsite burial without the appropriate division district office's written approval. A person shall not remove an onsite burial marker without the division's written permission.

G. Timing requirements for closure. An operator shall close a pit, drying pad associated with a closed-loop system or below-grade tank within the following time periods.

(1) An operator shall close a permitted permanent pit within 60 days of cessation of operation of the pit in accordance with a closure plan approved by the appropriate office.

(2) An operator shall close a permitted temporary pit within six months from the date that the operator releases the drilling or workover rig. The operator shall note the date of the drilling or workover rig's release on form C-105 or C-103, filed with the division, upon the well's or work-over's completion. The appropriate division district office may grant an extension not to exceed three months.

(3) An operator shall close a drying pad used for a closed-loop system within six months from the date that the operator releases the drilling or workover rig. The operator shall note the date of the drilling or workover rig's release on form C-105 or C-103, filed with the division, upon the well's or work-over's completion. The appropriate division district office may grant an extension not to exceed six months.

(4) Closure methods for below-grade tanks.

(a) Within 60 days of cessation of operations, the operator shall remove liquids and sludge from a below-grade tank prior to implementing a closure method and shall dispose of the liquids and sludge in a division-approved facility.

(b) Within six months of cessation of operations, the operator shall remove the below-grade tank and dispose of it in a division-approved facility or recycle, reuse, or reclaim it in a manner that the appropriate division district office approves. If there is any equipment associated with a below-grade tank, then the operator shall remove the equipment, unless the equipment is required for some other purpose.

(5) An operator shall close a multi-well fluid management pit within six months from the date that the operator ceases all stimulation operations on all wells identified in the permit. The operator shall note the date of the cessation of drilling and stimulation operations on form C-105 or C-103 filed with the division. The appropriate division district office may grant an extension for closure not to exceed six months.

H. Reclamation of pit locations, onsite burial locations and drying pad locations.

(1) Site contouring.

(a) Once the operator has closed a pit or trench or is no longer using a drying pad, below-grade tank or an area associated with a closed-loop system, pit, trench or below-grade tank, the operator shall reclaim the pit location, drying pad location, below-grade tank location or trench location and all areas associated with the closed-loop system, pit, trench or below-grade tank including associated access roads to a safe and stable condition that blends with the surrounding undisturbed area. The operator shall substantially restore the impacted surface area to the condition that existed prior to oil and gas operations by placement of the soil cover as provided in Paragraph (2) of Subsection H of 19.15.17.13 NMAC, recontour the location and associated areas to a contour that approximates the original contour and blends with the surrounding topography and re-vegetate according to Paragraph (5) in Subsection H of 19.15.17.13 NMAC.

(b) The operator may propose an alternative to the re-vegetation or recontouring requirement if the operator demonstrates to the appropriate district office that the proposed alternative provides equal or better prevention of erosion, and protection of fresh water, public health and the environment. The proposed alternative shall be agreed upon by the surface owner. The operator shall submit the proposed alternative, with written documentation that the surface owner agrees to the alternative, to the division for approval.

(c) Areas reasonably needed for production operations or for subsequent drilling operations shall be compacted, covered, paved, or otherwise stabilized and maintained in such a way as to minimize dust and erosion to the extent practicable.

(2) Soil cover designs for drying pads associated with closed-loop systems and below-grade tanks. The soil cover for closures after site contouring, where the operator has removed the below-grade tank or drying pad contents and liner, and if necessary remediated the soil beneath the below-grade tank or drying pad liner to chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, shall consist of the background thickness of topsoil or one foot of suitable material, whichever is greater.

(3) Soil cover designs for reclamation of pit locations and onsite burial locations. The soil cover for burial in-place or trench burial shall consist of a minimum of four feet of non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0. The soil cover shall include either the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater.

(4) The operator shall construct the soil cover to the site's existing grade and prevent ponding of water and erosion of the cover material.

(5) Reclamation and re-vegetation.

(a) Reclamation of areas no longer in use. All areas disturbed by the closure of pits and below-grade tanks, except areas reasonably needed for production operations or for subsequent drilling operations, shall be reclaimed as early and as nearly as practicable to their original condition or their final land use and shall be maintained to control dust and minimize erosion to the extent practicable.

(b) Topsoils and subsoils shall be replaced to their original relative positions and contoured so as to achieve erosion control, long-term stability and preservation of surface water flow patterns. The disturbed area then shall be reseeded in the first favorable growing season following closure of a pit, drying pad associated with a closed-loop system or below-grade tank.

(c) Reclamation of all disturbed areas no longer in use shall be considered complete when all ground surface disturbing activities at the site have been completed, and a uniform vegetative cover has been established that reflects a life-form ratio of plus or minus fifty percent (50%) of pre-disturbance levels and a total percent plant cover of at least seventy percent (70%) of pre-disturbance levels, excluding noxious weeds.

(d) Other regulatory requirements. The re-vegetation and reclamation obligations imposed by other applicable federal or tribal agencies on lands managed by those agencies shall supersede these provisions and govern the obligations of any operator subject to those provisions, provided that the other requirements provide equal or better protection of fresh water, human health and the environment.

(e) The operator shall notify the division when reclamation and re-vegetation are complete.

Table I			
Closure Criteria for Soils Beneath Below-Grade Tanks, Drying Pads Associated with			
Closed-Loop Systems and Pits where Contents are Removed			
Depth below bottom of pit to groundwater less than 10,000 mg/l TDS	Constituent	Method*	Limit**
≤50 feet	Chloride	EPA 300.0	600 mg/kg
	TPH	EPA SW-846	100 mg/kg

[19.15.17.13 NMAC - Rp, 19.15.17.13 NMAC, 6/28/13]

19.15.17.14 EMERGENCY ACTIONS:

A. Permit not required. In an emergency an operator may construct a pit without a permit to contain fluids, solids or wastes, if an immediate danger to fresh water, public health or the environment exists.

B. Construction standards. The operator shall construct an emergency pit, to the extent possible given the emergency, in a manner that is consistent with the requirements for a temporary pit specified in 19.15.17 NMAC and that prevents the contamination of fresh water and protects public health and the environment.

C. Notice. The operator shall notify the appropriate division district office as soon as possible (if possible before construction begins) of the need for such pit's construction.

D. Use and duration. A pit constructed in an emergency may be used only for the emergency's duration. If the emergency lasts more than 48 hours, then the operator shall seek the appropriate division district office's approval for the pit's continued use. The operator shall remove all fluids, solids or wastes within 48 hours after cessation of use unless the appropriate division district office extends that time period.

[19.15.17.14 NMAC - Rp, 19.15.17.14 NMAC, 6/28/13]

19.15.17.15 EXCEPTIONS AND VARIANCES:

A. Variances.

(1) An operator shall demonstrate with a complete application to the appropriate division district office that the requested variance provides equal or better protection of fresh water, public health and the environment. The appropriate division district office shall approve or deny the variance within 60 days of receipt of the complete application.

(2) If the appropriate division district office denies the variance then it shall notify the operator within 60 days of receipt of the complete application for the reasons of denial by certified mail, return receipt requested. If the operator requests a hearing within 10 days after receipt of such notice, the division shall set the matter for hearing, with notice to the operator and the appropriate division district office.

(3) An application for a variance shall include:

(a) a statement in detail explaining why the applicant wants to vary from the requirement of 19.15.17 NMAC, and

(b) a detailed written demonstration that the variance will provide equal or better protection of fresh water, public health and the environment.

(4) If a variance goes to hearing pursuant to Paragraph (2) of Subsection A of 19.15.17.15 NMAC, in addition to the hearing process required by 19.15.4 NMAC, the application for hearing shall include:

(a) a copy of the complete application submitted for a variance under Paragraph (3) of Subsection A of 19.15.17.15 NMAC;

(b) proof of notification to the surface owner of the location of the requested variance.

(5) The division clerk will set the application for hearing as soon as practicable.

B. Exceptions.

(1) An operator may apply to the division's Santa Fe office for an exception that is allowed by a provision of 19.15.17 NMAC.

(2) The operator shall give written notice by certified mail, return receipt requested, to:

(a) the surface owner of record where the exception is requested, or will be located;

(b) surface owners of record within one-half mile of such location;

(c) the county commission of the county where the pit, or proposed alternative is, or will be, located;

(d) the appropriate city official if the pit, or proposed alternative is, or will be, located within city limits, within one-half mile of the city limits or within the city's zoning and planning jurisdiction;

(e) federal agencies managing lands within one-half mile of such location;

(f) affected tribal or pueblo governments; and

(g) such other persons as the division's Santa Fe office may direct.

(3) Receipt of notice that is given pursuant to this sub-part shall not be construed as an indication of standing to request a hearing pursuant to Paragraph (6) of Subsection B of 19.15.17.15 NMAC.

(4) The operator shall issue public notice by publication one time in a newspaper of general circulation in the county where the pit, or proposed alternative, is, or will be located. Required written and public notices require the division's Santa Fe

office's approval. The division shall post notice of the application on the division's website.

(5) An operator shall demonstrate with a complete application to the Santa Fe office that the requested exception provides equal or better protection of fresh water, public health and the environment. The Santa Fe office shall approve or deny the exception within 90 days of receipt of the complete application.

(6) Within 30 days after the operator or the division sends notice of the requested exception anyone may submit comments to the director and any person with standing to contest the requested exception may request a hearing. If the director determines that a request for hearing presents issues that have technical merit or there is significant interest from the affected public, then the director may cause the matter to be set for hearing. If the director determines that a hearing is not necessary due to technical merit, significant public interest or otherwise then the Santa Fe office may grant the exception without a hearing. The Santa Fe office may grant the exception administratively if the Santa Fe office receives no comments or requests for hearing within the time for commenting.

(7) If the Santa Fe office denies the exception then it shall notify the operator within 90 days of receipt of the complete application for the reasons of denial by certified mail, return receipt requested. If the operator requests a hearing within 21 days after receipt of such notice, the division shall set the matter for hearing, with notice to the operator and the appropriate division district office.

(8) An application for an exception shall include:

(a) a statement in detail explaining why the applicant wants an exception to the requirement of 19.15.17 NMAC, and

(b) a detailed written demonstration that the exception will provide equal or better protection of fresh water, public health and the environment.

(9) If an exception goes to hearing pursuant to Subsection B of 19.15.17.15 NMAC, in addition to the requirements of 19.15.4 NMAC, the hearing application shall include:

(a) a copy of the complete application submitted for the exception; and

(b) a proof of notification of the hearing application to parties identified in Paragraph (2) of Subsection B of 19.15.17.15 NMAC.

(10) The division clerk will set the application for hearing as soon as practicable.

[19.15.17.15 NMAC - Rp, 19.15.17.15 NMAC, 6/28/13]

19.15.17.16 PERMIT APPROVALS, CONDITIONS, DENIALS, REVOCATIONS, SUSPENSIONS, MODIFICATIONS OR TRANSFERS:

A. The division shall review all applications to permit facilities subject to 19.15.17 NMAC. Within 30 days of receiving an application the division shall make an administrative completeness determination or provide written notice of deficiencies to the application's signatory. The application will be considered complete if written notice is not provided by the division within the 30 day evaluation period.

B. Whether or not the division deems an application to be administratively complete within the 30 day evaluation period, the division shall also have an additional 30 days to approve, deny or approve with conditions an application. If the division does not take action within the 60 days review period, then the application is deemed denied and the operator may file an application for hearing with the division clerk.

C. Conditions. The division may impose conditions or requirements that it determines are necessary and proper for the protection of fresh water, public health, and the environment provided the conditions or requirements are based on the provisions of the Oil and Gas Act 70-2 NMSA or current division regulations. The division shall incorporate such additional conditions or requirements into the permit.

D. Denial of application. The division shall deny, in writing, an application for a permit if it finds that the application and materials that the operator submitted for consideration with the application do not sufficiently demonstrate that the operator can construct, operate and close the proposed pit, or proposed alternative in a manner that is protective of fresh water, public health, and the environment.

E. Revocation, suspension or modification of a permit. The operator may apply to the division for a modification of the permit pursuant to 19.15.17 NMAC. The operator shall demonstrate that the proposed modification complies with the applicable provisions of 19.15.17 NMAC. The division may revoke, suspend or impose additional operating conditions or limitations on a permit at any time, after notice and opportunity for a hearing, if the division determines that the operator or the permitted facility is in material breach of any applicable statutes or rules, or that such action is necessary for the protection of fresh water, public health or the environment. The division shall notify the operator by certified mail, return receipt requested, of any intended revocation, suspension or imposition of additional conditions, and the operator shall have 10 days after receipt of notification to request a hearing pursuant to 19.15.4 NMAC. The division may suspend a permit or impose additional conditions or limitations without hearing in an emergency to forestall an imminent threat to fresh water, public health, or the environment, subject to the provisions of NMSA 1978, Section 70-2-23, as amended.

F. Transfer of a permit. The operator shall not transfer a permit without the division's prior written approval. The division's approval of an application to transfer a well or other facility with which a permitted pit is associated shall constitute approval of the transfer of the permit for the pit.

G. Division approvals. The division shall grant or confirm any division approval authorized by a provision of 19.15.17 NMAC by written statement. Written statements include e-mail.

[19.15.17.16 NMAC - Rp, 19.15.17.16 NMAC, 6/28/13]

PART 18: PRODUCTION OPERATING PRACTICES

19.15.18.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.18.1 NMAC - N, 12/1/2008; A, 05/25/2021]

19.15.18.2 SCOPE:

19.15.18 NMAC applies to persons engaged in oil and gas development and production within New Mexico.

[19.15.18.2 NMAC - N, 12/1/08]

19.15.18.3 STATUTORY AUTHORITY:

19.15.18 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-6, Section 70-2-11 and Section 70-2-12 NMSA 1978.

[19.15.18.3 NMAC - N, 12/1/2008; A, 05/25/2021]

19.15.18.4 DURATION:

Permanent.

[19.15.18.4 NMAC - N, 12/1/08]

19.15.18.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.18.5 NMAC - N, 12/1/08]

19.15.18.6 OBJECTIVE:

To regulate the production of oil and gas wells within the state in order to prevent waste, protect correlative rights and protect public health and the environment.

[19.15.18.6 NMAC - N, 12/1/08]

19.15.18.7 DEFINITIONS:

"Drip" means a liquid hydrocarbon incidentally accumulating in a gas gathering or transportation system.

[19.15.2.7 NMAC - Rp, Subsection A of 19.15.5.314 NMAC, 12/1/08]

19.15.18.8 GAS-OIL RATIO AND PRODUCTION TESTS:

A. An operator shall take a gas-oil ratio test no sooner than 20 days nor later than 30 days following the completion or recompletion of each oil well, if:

- (1)** the well is a wildcat, or
- (2)** the well is located in a pool that is not exempt from 19.15.18.8 NMAC's requirements.

B. Provisions of 19.15.18.8 NMAC that are applicable to the pool shall govern wells completed within one mile of the outer boundary of a defined oil pool producing from the same formation. The operator shall report the test results to the division on form C-116 within 10 days following the test's completion. The gas-oil ratio the operator reports shall become effective for proration purposes on the first day of the calendar month following the date they are reported.

C. Each operator shall take an annual gas-oil ratio test of each producing oil well, located within a pool not exempted from the requirements of 19.15.18.8 NMAC, during a period the division prescribes. The division shall establish a gas-oil ratio survey schedule setting forth the period in which operators are to take gas-oil ratio tests for each pool where the division requires a test. The gas-oil ratio test shall be a test the division designates, made by the method and in the manner the division in its discretion may prescribe from time to time.

D. An operator shall file the results of gas-oil ratio tests taken during survey periods with the division on form C-116 not later than the 10th of the month following the close of the survey period for the pool in which the well is located. The gas-oil ratios thus reported shall become effective for proration purposes on the first day of the second month following the survey period's close. Unless the operator files form C-116 within the required time limit, the division shall not assign a further allowable to the affected well until the operator file form C-116.

E. In the case of special tests taken between regular gas-oil ratio surveys, the gas-oil ratio becomes effective for proration purposes upon the date the division receives form C-116 reporting the test results. A special test does not exempt a well from the regular survey.

F. During a gas-oil ratio test, an operator shall not produce a well at a rate exceeding the top proration unit allowable for the pool in which it is located by more than twenty-five percent.

G. The director may exempt such pools as the director deems proper from the gas-oil ratio test requirements of 19.15.18.8 NMAC. The exemption shall be by division order directed to the operators in the pool being exempted.

H. The director may require annual productivity tests of oil wells in pools exempt from gas-oil ratio tests, during a period the division prescribes. The division shall establish an oil well productivity survey schedule setting forth the period in which productivity tests are to be taken for each pool where the division requires the tests.

I. An operator shall file the results of productivity tests taken during survey periods with the division on form C-116 (with the word "exempt" inserted in the column normally used for reporting gas production) not later than the 10th of the month following the close of the survey period for the pool in which the well is located. Unless the operator files form C-116 within the required time limit, the division shall not assign further allowables to the affected well until the operator files form C-116.

J. In the case of special productivity tests taken between regular test survey periods, which result in a change of allowable assigned to the well, the allowable change shall become effective upon the date the division receives form C-116. A special test does not exempt a well from the regular survey.

K. During the productivity test, an operator shall not produce a well at a rate exceeding the top proration unit allowable for the pool in which it is located by more than twenty-five percent.

[19.15.18.8 NMAC - Rp, 19.15.5.301 NMAC, 12/1/2008; A, 05/25/2021]

19.15.18.9 BOTTOM HOLE PRESSURE TESTS:

The operator shall make a bottom hole pressure test on the discovery well of a new pool and shall report the results of the test to the division within 30 days after the discovery well's completion. On or before December 1 of each calendar year the division shall designate the months in which operators shall take bottom hole pressure tests in designated pools. The division shall include in the designated list the required shut-in pressure time and datum of tests to be taken in each pool. In the event a newly discovered pool is not included in the division's list, the division shall issue a supplementary bottom hole pressure schedule. Tests the division designates shall only apply to flowing wells in each pool. A person qualified by both training and experience to make such test shall make the test with an approved bottom hole pressure instrument that is calibrated against an approved dead-weight tester at intervals frequent enough to ensure its accuracy within one percent. Unless the division otherwise designates, all wells shall remain completely shut in for at least 24 hours prior to the test. In the event

the division does not establish a definite datum the operator shall obtain the bottom hole determination as close as possible to the mid-point of the reservoir's productive sand. The operator shall report the test results to the division on form C-124, which shall contain the information required by Subsection B of 19.15.7.32 NMAC.

[19.15.18.9 NMAC - Rp, 19.15.5.302 NMAC, 12/1/08]

19.15.18.10 CONTROL OF MULTIPLE COMPLETED WELLS:

The operator shall at all times operate, produce and maintain multiple completed wells that the division has authorized in a manner to ensure the complete segregation of the various common sources of supply. The division may require the operator take tests the division deems necessary to determine the effectiveness of segregation of the different common sources of supply.

[19.15.18.10 NMAC - Rp, 19.15.5.304 NMAC, 12/1/08]

19.15.18.11 [RESERVED]

[19.15.18.11 NMAC - Rp, 19.15.5.305 NMAC, 12/1/2008; Repealed, 05/25/2021]

19.15.18.12 [RESERVED]

[19.15.18.12 NMAC - Rp, 19.15.5.306 NMAC, 12/1/2008; Repealed, 05/25/2021]

19.15.18.13 OPERATION AT BELOW ATMOSPHERIC PRESSURE:

A. An operator may use vacuum pumps, gathering system compressors or other devices to operate a well or gathering system at below atmospheric pressure only if that operator has:

(1) executed a written agreement with the operator of the downstream gathering system or pipeline to which the well or gathering system so operated is immediately connected allowing operation of the well or gathering system at below atmospheric pressure; and

(2) filed a sundry notice in the appropriate division district office for each well operated at below atmospheric pressure or served by a gathering system operated at below atmospheric pressure, within 90 days before beginning operation at below atmospheric pressure, notifying the division that the well or gathering system serving the well is being operated at below atmospheric pressure.

B. A gathering system operator may use vacuum pumps, gathering system compressors or other devices to operate a gathering system at below atmospheric pressure, or may accept gas originating from a well operated at below atmospheric pressure or that has been carried by an upstream gathering system operated at below

atmospheric pressure, only if that operator has executed a written agreement with the operator of the downstream gathering system or pipeline to which the gathering system is immediately connected allowing delivery of gas from a well or gathering system that has been operated at below atmospheric pressure into the downstream gathering system or pipeline.

[19.15.18.13 NMAC - Rp, 19.15.5.307 NMAC, 12/1/08]

19.15.18.14 PRODUCED WATER:

An operator shall report monthly on form C-115 the amount of water produced with the oil and gas from each well.

[19.15.18.14 NMAC - Rp, 19.15.5.308 NMAC, 12/1/2008; A, 05/25/2021]

19.15.18.15 AUTOMATIC CUSTODY TRANSFER EQUIPMENT:

A. Oil shall be received and measured in facilities of an approved design. The facilities shall permit the testing of each well at reasonable intervals and may be comprised of manually gauged, closed stock tanks for which the operator of the ACT system has prepared proper strapping tables, or of ACT equipment. The division shall permit ACT equipment's use only after the operator complies with the following. The operator shall file with the division form C-106 and receive approval for use of the ACT equipment prior to transferring oil through the ACT system. The carrier shall not accept delivery of oil through the ACT system until the division has approved form C-106.

B. The operator of the ACT system shall submit form C-106 to the appropriate division district office, which is accompanied by the following:

(1) plat of the lease showing all wells that the any well operator will produce into the ACT system;

(2) schematic diagram of the ACT equipment, showing on the diagram all major components such as surge tanks and their capacity, extra storage tanks and their capacity, transfer pumps, monitors, reroute valves, treaters, samplers, strainers, air and gas eliminators, back pressure valves and metering devices (indicating type and capacity, *i.e.* whether automatic measuring tank, positive volume metering chamber, weir-type measuring vessel or positive displacement meter); the schematic diagram shall also show means employed to prove the measuring device's accuracy; and

(3) letter from transporter agreeing to utilization of ACT system as shown on schematic diagram.

C. The division shall not approve form C-106 unless the operator of the ACT system will install and operate the ACT system in compliance with the following requirements.

(1) Provision is made for accurate determination and recording of uncorrected volume and applicable temperature, or of temperature corrected volume. The system's overall accuracy shall equal or surpass manual methods.

(2) Provision is made for representative sampling of the oil transferred for determination of API gravity and BS&W content.

(3) Provision is made if required by either the oil's producer or the transporter to give adequate assurance that the ACT system runs only merchantable oil.

(4) Provision is made for set-stop counters to stop the flow of oil through the ACT system at or prior to the time the allowable has been run. Counters shall provide non-reset totalizers that are visible for inspection at all times.

(5) Necessary controls and equipment are enclosed and sealed, or otherwise arranged to provide assurance against, or evidence of, accidental or purposeful mismeasurement resulting from tampering.

(6) The ACT system's components are properly sized to ensure operation within the range of their established ratings. All system components that require periodic calibration or inspection for proof of continued accuracy are readily accessible; the frequency and methods of the calibration or inspection shall be as set forth in Paragraph (12) of Subsection C of 19.15.18.15 NMAC.

(7) The control and recording system includes adequate fail-safe features that provide assurance against mismeasurement in the event of power failure, or the failure of the ACT system's component parts.

(8) The ACT system and allied facilities include fail-safe equipment as may be necessary, including high level switches in the surge tank or overflow storage tank that, in the event of power failure or malfunction of the ACT or other equipment, will shut down artificially lifted wells connected to the ACT system and will shut in flowing wells at the well-head or at the header manifold, in which latter case the operator of the ACT system shall pressure test all flowlines to at least 1½ times the maximum well-head shut-in pressure prior to the ACT system's initial use and every two years thereafter.

(9) As an alternative to the requirements of Paragraph (8) of Subsection C of 19.15.18.15 NMAC the producer shall provide and at all times maintain a minimum of available storage capacity above the normal high working level of the surge tank to receive and hold the amount of oil that may be produced during maximum unattended time of lease operation.

(10) In all ACT systems employing automatic measuring tanks, weir-type measuring vessels, positive volume metering chambers or any other volume measuring container, the container and allied components shall be properly calibrated prior to initial use and shall be operated, maintained and inspected as necessary to ensure against

incrustation, changes in clingage factors, valve leakage or other leakage and improper action of floats, level detectors, etc.

(11) In ACT systems employing positive displacement meters, the meter and allied components shall be properly calibrated prior to initial use and shall be operated, maintained and inspected as necessary to ensure against oil mismeasurement.

(12) The operator of the ACT system shall check the measuring and recording devices of ACT systems for accuracy at least once each month unless it has obtained an exception to such determination from the division. Where applicable, the operator of the ACT system shall use API standard 1101, Measurement of Petroleum Hydrocarbons by Positive Displacement Meter. Meters may be proved against master meters, portable prover tanks or prover tanks permanently installed on the lease. If the operator of the ACT system uses permanently installed prover tanks, the distance between the opening and closing levels and the provision for determining the opening and closing readings shall be sufficient to detect variations of 5/100 of one percent. The operator of the ACT system shall file reports of determination on the division form entitled "meter test report" or on another acceptable form in duplicate with the appropriate division district office.

(13) To obtain an exception to the requirement in Paragraph (12) of Subsection C of 19.15.18.15 NMAC that all measuring and recording devices be checked for accuracy once each month, either the producer or transporter may file a request with the director setting forth facts pertinent to the exception. The application shall include a history of the average factors previously obtained, both tabulated and plotted on a graph of factors versus time, showing that the particular installation has experienced no erratic drift. The applicant shall also furnish evidence that the other interested party has agreed to the exception. The director may then set the frequency for determination of the system's accuracy at the interval which the director deems prudent.

D. The division may revoke its approval of an ACT system's form C-106 if the system's operator fails to operate it in compliance with 19.15.18.15 NMAC.

[19.15.18.15 NMAC - Rp, 19.15.5.309 NMAC, 12/1/08]

19.15.18.16 TANKS, OIL TANKS, FIRE WALLS AND TANK IDENTIFICATION:

A. No person shall store or retain oil in earthen reservoirs or in open receptacles. Dikes or fire walls are not required except an operator shall erect and maintain fire walls around permanent oil tanks or tank batteries that are within the corporate limits of a city, town or village, or where such tanks are closer than 150 feet to a producing oil or gas well or 500 feet to a highway or inhabited dwelling or closer than 1000 feet to a school or church, or where the tanks are so located that the division deems them an objectional hazard. Where fire walls are required, fire walls shall form a reservoir having a capacity one-third larger than the capacity of the enclosed tank or tanks.

B. The operator shall identify oil tanks, tank batteries, ACT systems, tanks used for produced water collection or disposal and tanks used for sediment oil treatment or storage by a sign posted on or not more than 50 feet from the tank, tank battery or system. The sign shall be of durable construction and the operator shall keep the lettering on the sign in a legible condition; the lettering shall be large enough to be legible under normal conditions at a distance of 50 feet and the sign shall identify the operator's name, the name of the lease being served by the tank or system, if any, and the location of the tank or system by unit letter, section, township and range.

[19.15.18.16 NMAC - Rp, 19.15.5.310 NMAC, 12/1/2008; A, 05/25/2021]

19.15.18.17 SEDIMENT OIL, TANK CLEANING AND TRANSPORTATION OF MISCELLANEOUS HYDROCARBONS:

A. No person shall clean a tank of sediment oil or remove sediment oil from a lease without the appropriate division district office's prior approval. The lease operator or the company contracted or otherwise authorized to perform the tank cleaning may receive authorization for tank cleaning by obtaining division approval on form C-117-A. No operator, contractor or other party shall clean a tank of sediment oil or remove sediment oil from a lease without an approved copy of form C-117-A at the site.

B. No person shall destroy sediment oil without the appropriate division district office's approval of an application to destroy the sediment oil on form C-117-A. Unless a person receiving an authorization to destroy sediment oil utilizes the authorization to destroy sediment oil within 10 days after division approval of the form C-117-A the authorization is automatically revoked. However, the district supervisor may approve one 10 day extension for good cause shown.

C. A person, other than a treating plant operator, who cleans a tank of sediment oil and removes sediment oil from a lease shall file form C-117-B with the division setting out all information the form requires.

D. A person taking possession of or disposing of sediment oil shall test a representative sample of sediment oil in a manner designed to accurately estimate the percentage of good oil expected to be recovered from the sediment oil. The person shall perform the test prior to transport and prior to commingling with sediment oil from other leases or sources and record the results on form C-117-A. The division recommends the standard centrifugal tests prescribed by API publication Sediment and Water, Sect: 4: Determination of Sediment and Water in Crude Oil by the Centrifuge Method (Field Procedure), MPMS 10.4. The person may use other test procedures if the procedures reliably predict the percentage of good oil to be recovered from sediment oil.

E. A person taking possession of or disposing of sediment oil shall report sediment oil removed from storage on form C-115 together with the form C-117-A permit number.

F. Except in an emergency, no person shall deliver miscellaneous hydrocarbons to a treating plant or other facility until that person has obtained division approval on form C-117-A.

G. Whenever an emergency exists that requires delivery of miscellaneous hydrocarbons to a treating plant or other facilities prior to approval of form C-117-A, the transporter of the hydrocarbons shall notify the supervisor of the appropriate division district office of the emergency's nature and extent on the first working day following the emergency and shall file form C-117-A within two working days following the emergency. For prolonged emergencies, the district supervisor may authorize the extended movement of miscellaneous hydrocarbons to a treating plant or other facilities during the emergency period and shall approve a form C-117-A filed subsequent to the emergency's conclusion covering the entire volume of miscellaneous hydrocarbons transported.

[19.15.18.17 NMAC - Rp, 19.15.5.311 NMAC, 12/1/08]

19.15.18.18 EMULSION, BASIC SEDIMENTS AND TANK BOTTOMS:

The operator shall operate wells producing oil in a manner that reduces as much as practicable the formation of emulsion and basic sediments. No person shall allow these substances and tank bottoms to pollute fresh waters or cause surface damage.

[19.15.18.18 NMAC - Rp, 19.15.5.313 NMAC, 12/1/08]

19.15.18.19 GATHERING, TRANSPORTING AND SALE OF DRIP:

A. The waste of drip is prohibited when it is economically feasible to salvage the drip.

B. A person may move and sell drip, provided it complies with 19.15.18.19 NMAC.

C. A person shall not transport or sell drip until the gas transporter files form C-104 designating the drip transporter authorized to remove the drip from its gas gathering or transportation system.

D. Each month, a person transporting drip within the state shall complete and maintain for division inspection form C-112, showing the amount, source and disposition of drip handled during the reporting period, and such other reports as the division may require.

E. Prior to commencement of operations, every person transporting drip directly from a gas gathering or transportation system shall file with the division plats drawn to scale, locating and identifying each drip trap that the person is authorized to service.

F. A person transporting drip directly from a gas gathering or transportation system shall keep a record of daily acquisitions from each drip trap that the person is authorized to service and make the records available at all reasonable times for inspection by the division or its authorized representatives.

G. A gas transporter shall, on or before the first day of November of each year, file with the division maps of its entire gas gathering and transportation systems, locating and identifying on the map each drip trap in the systems, the maps to be accompanied by a report, on a division-prescribed form, showing the disposition being made of the drip from each of the drip traps.

19.15.19.6 OBJECTIVE:

To regulate the gas production within the state in order to prevent waste, protect correlative rights and protect public health and the environment.

[19.15.19.6 NMAC - Rp, 19.15.6.6 NMAC, 12/1/08]

19.15.19.7 DEFINITIONS:

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

19.15.19.8 METHOD OF DETERMINING GAS WELL POTENTIAL:

A. An operator shall conduct tests to determine the daily open flow potential volumes of gas wells from which gas is being used or marketed. The operator shall report the tests on division-prescribed forms within 60 days after

- (1) the date of the well's initial connection to a gas transportation facility; and
- (2) the date of reconnection following workover.

B. To establish comparable open flow capacity, the operator shall test wells in accordance with the division's Manual for back-pressure testing of natural gas wells. If the division approves the alternate method for testing, the operator shall test all wells producing from a common source of supply in a uniform and comparable manner.

C. The operator of a gas well that is not connected to a gas gathering facility shall test the well within 30 days following a christmas tree's installation. The operator shall take the tests in accordance with the procedure for testing unconnected gas well contained in the division's *manual for back-pressure testing of natural gas wells*. The operator shall report the tests on form C-122 in compliance with 19.15.7.31 NMAC and file it within 10 days following the test's completion.

[19.15.19.8 NMAC - Rp, 19.15.6.401 NMAC, 12/1/08]

19.15.19.9 GAS FROM GAS WELLS TO BE MEASURED:

A. The transporter of gas produced shall account for the gas by metering or other division-approved method and report it to the division. The owner or operator of the gas transportation facility shall report gas produced from a gas well and delivered to a gas transportation facility. The well operator shall report gas produced from a gas well and required to be reported by 19.15.19.9 NMAC that is not delivered to and reported by a gas transportation facility.

B. An operator may apply to the district supervisor, using form C-136, for approval of one of the following procedures for measuring gas.

(1) In the event a well is not capable of producing more than 15 MCFD, a measurement method agreed upon by the operator and transporter whereby the parties establish by annual test the producing rate of the well under normal operating conditions and apply that rate to the period of time the well is in a producing status. If the well is capable of producing greater than five MCFD, the transporter shall attach a device to the line that determines the actual time period that the well is flowing.

(2) An operator may produce a well that has a producing capacity of 100 MCFD or less and that is on a multi-well lease without the well being separately metered when the gas is measured using a lease meter at a CPD. The lease's ownership shall be common throughout including working interest, royalty and overriding royalty ownership.

(3) If normal operating conditions change, either party may request a new well test, the cost of which the party requesting the new well test shall bear unless the parties otherwise agree.

C. The operator and transporter shall report the well volumes on forms C-115 and C-111 based upon the approved method of measurement and, in the case of a CPD, upon the method of allocation of production to individual wells the district supervisor approves.

[19.15.19.9 NMAC - Rp, 19.15.6.403 NMAC, 12/1/08]

19.15.19.10 [RESERVED]

[19.15.19.10 NMAC – Rp, 19.15.6.404 NMAC, 12/1/2008; Repealed, 05/25/2021]

19.15.19.11 STORAGE GAS:

With the exception of the requirement to meter and report monthly the amount of gas injected and the amount of gas withdrawn from storage, in the absence of waste 19.15.19 NMAC shall not apply to gas being injected into or removed from storage. (See 19.15.7.40 NMAC)

[19.15.19.11 NMAC - Rp, 19.15.6.405 NMAC, 12/1/08]

19.15.19.12 CARBON DIOXIDE:

The rules relating to gas, gas wells and gas reservoirs including those provisions relating to well locations, acreage dedication requirements, casing and cementing requirements and measuring and reporting of production also apply to carbon dioxide gas, carbon dioxide wells and carbon dioxide reservoirs.

[19.15.19.12 NMAC - Rp, 19.15.6.406 NMAC, 12/1/08]

19.15.19.13 DISCONNECTION OF GAS WELLS:

The operator shall report gas wells that are disconnected from intrastate gas transportation facilities to the division within 30 days of the date of disconnection. The operator shall file the notice on form C-130 in compliance with 19.15.7.39 NMAC.

[19.15.19.13 NMAC - Rp, 19.15.6.407 NMAC, 12/1/08]

PART 20: OIL PRORATION AND ALLOCATION

19.15.20.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.20.1 NMAC - Rp, 19.15.7.1 NMAC, 12/1/08]

19.15.20.2 SCOPE:

19.15.20 NMAC applies to persons engaged in oil development and production within New Mexico.

[19.15.20.2 NMAC - Rp, 19.15.7.2 NMAC, 12/1/08]

[19.15.20.4 NMAC - Rp, 19.15.7.4 NMAC, 12/1/08]

19.15.20.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.20.5 NMAC - Rp, 19.15.7.5 NMAC, 12/1/08]

19.15.20.6 OBJECTIVE:

To establish requirements implementing the division's statutory authority to prorate and allocate oil production.

[19.15.20.6 NMAC - Rp, 19.15.7.6 NMAC, 12/1/08]

19.15.20.7 DEFINITIONS:

A. "Date of completion" means the date when new oil is delivered into the stock tanks.

B. "Marginal unit" means a proration unit that is incapable of producing the top proration unit allowable for the pool in which it is located as evidenced by well tests, production history or other report or form the operator files with the division.

C. "Non-marginal unit" means a proration unit that is incapable of producing top proration unit allowable for the pool in which it is located and to which the division has assigned a top proration unit allowable.

D. "Recovered load oil" means oil or liquid hydrocarbon that has been used in an operation in an oil or gas well, and that has been recovered as a merchantable product.

[19.15.20.7 NMAC - Rp, 19.15.7.7 NMAC, Subsection D of 19.15.7.503 NMAC and Subsection B of 19.15.7.508 NMAC, 12/1/08]

19.15.20.8 REGULATION OF OIL POOLS:

A. To prevent waste, the division shall prorate and distribute the allowable production among the producers in a pool upon a reasonable basis and recognizing correlative rights.

B. After notice and hearing, the division, in order to prevent waste and protect correlative rights, may enter special orders pertaining to a pool.

[19.15.20.8 NMAC - Rp, 19.15.7.501 NMAC, 12/1/08]

19.15.20.9 RATE OF PRODUCING WELLS:

A. Daily tolerance.

(1) Oil wells located on units capable of producing their allowables may overproduce one day and underproduce another. No unit capable of producing its allowable, except for the purpose of testing, in the process of completing or recompleting a well or for tests made for the purpose of obtaining scientific data, shall produce any day more than 125 percent of the daily top proration unit allowable for the pool in which the well is located. (Subject to the foregoing, an underproduction may be made up by production from the same unit within the same month, and in like manner

any overproduction shall be adjusted or balanced by underproduction from the same unit, within the same proration period).

(2) Certain wells must, as a matter of practicality, be produced at daily rates in excess of 125 percent of the daily top proration unit allowable for the pool in which the wells are located. The director may grant exceptions to the provisions of Paragraph (1) of Subsection A of 19.15.20.9 NMAC, without formal hearing, where an operator has filed application setting out the reasons for the requested exception.

(a) Applicants for the exceptions shall, at the time of filing, furnish each operator in the pool in which the well is located a copy of the application.

(b) The applicant shall include in an application for exception or attach to the application a formal written statement that the applicant has served every operator in the pool in which the well is located with a copy of the application.

(3) The director shall wait at least 10 days after receipt before approving the application, and shall approve the application only in absence of objection from an operator or interested party, or in the director's discretion. In the event the director fails to approve the application, the division after notice shall hear and determine the matter.

B. Monthly tolerance. No unit shall produce during any one proration period more than the unit's allowable production for the proration period plus a tolerance of not to exceed five days allowable production. This permissive tolerance of overproduction from a unit is subject to all other provisions of 19.15.20.9 NMAC and particularly to the provisions of Subsection D of 19.15.20.9 NMAC. The operator shall adjust or balance permissive tolerance of overproduction from a unit by subsequent corresponding underproduction from the same unit. The division shall consider overproduction within the permitted tolerance as oil produced against the allowable production assigned to the unit for the proration period during which the overproduction is adjusted or balanced by underproduction.

C. Production in excess of monthly allowable, plus tolerance.

(1) Oil produced from a unit in excess of the assigned monthly allowable plus the permissive proration period tolerance shall be "illegal oil" as defined in the Oil and Gas Act, unless the excess oil:

(a) is produced as a result of mistake or error;

(b) results from mechanical failure beyond the operator's immediate control;
or

(c) results from essential tests of the unit within the purview of division rules.

(2) Whenever production from a unit for a proration period exceeds the assigned allowable, plus the permitted tolerance authorized in Subsection B of 19.15.20.9 NMAC and the cause of the excess reasonably falls within Subparagraphs (a), (b) or (c) of Paragraph (1) of Subsection C of 19.15.20.9 NMAC, the producer or operator shall briefly set forth the excess production's cause together with a proposed plan for production adjustment in the comments area of form C-115 for the month in which the excess production occurs. The excess production shall be considered as oil produced against the allowable assigned to the unit for the following proration period, and it may be transported from the lease tanks only as and when the unit accrues daily allowable to offset the excess production.

D. General.

(1) The tolerance permitted on a daily or monthly basis as provided in Subsections A and B of 19.15.20.9 NMAC does not increase a producing unit's allowable or grant an operator authority to market or a transporter authority to transport any quantity of oil in excess of the unit's allowable.

(2) The possession of a quantity of oil in lease storage at the end of a proration period in excess of five days allowable plus any rerun allowable oil is a violation of 19.15.20.9 NMAC, unless the operator reports the possession in the manner and within the time provided in Subsection C of 19.15.20.9 NMAC for filing form C-115.

E. Storage records. Producers and transporters of oil shall maintain adequate records showing unrun allowable oil in storage at the end of each proration period. The storage oil shall be the amount of oil in tanks from which oil is measured and delivered to the transporter.

[19.15.20.9 NMAC - Rp, 19.15.7.502 NMAC, 12/1/08]

19.15.20.10 AUTHORIZATION FOR PRODUCTION OF OIL:

A. Except as provided below, the daily top proration unit allowable for an oil pool is 100 percent of the depth bracket allowable for the pool determined pursuant to 19.15.20.12 NMAC.

B. The division may, within five days prior to the end of the month, determine the likelihood the total producing capacity of all oil wells in the state exceeding anticipated reasonable market demand for oil from the state. If the division determines that the capacity may exceed the anticipated reasonable market demand, and that a market demand factor of less than 100 percent may be necessary to prevent waste, it shall immediately institute proper proceedings for a hearing to be held before the 20th day of the following month to determine actual reasonable market demand up to a maximum of six months.

C. At the hearing the division shall consider all evidence of market demand for oil from this state, and if it determines that the market demand percentage factor should be less than 100 percent, issue an order establishing the market demand factor and set a date for the next market demand hearing.

D. The division shall multiply the market demand factor established by the applicable depth bracket allowable for each well and each pool to determine its unit allowable. A fraction of a barrel is regarded as a full barrel in determining top proration unit allowable. Upon initial establishment of a market demand factor, and from time to time thereafter, the division shall issue a proration schedule authorizing the production of oil from the various proration units in the various pools in the state. A well completed or recompleted after the schedule's issuance and for which the division has approved form C-104, shall, by supplement to the schedule, be authorized a daily allowable equal to the top proration unit allowable in effect. The allowable for the well is effective at 7:00 a.m. on the date of the completion, provided the operator submits form C-104 and the division approves the form within 10 days following the completion date; otherwise the allowable is effective on the date the division approves the form C-104.

E. A non-marginal unit may produce the top proration unit allowable without waste and subject to the provisions of 19.15.18.7 NMAC, 19.15.20.9 NMAC and 19.15.20.13 NMAC and all other applicable rules.

F. A marginal unit may produce any amount of oil that it is capable of producing without waste up to the pool's top proration unit allowable, subject to the provisions of 19.15.18.7 NMAC, 19.15.20.9 NMAC and 19.15.20.13 NMAC and all other applicable rules if the division has assigned an allowable to the unit to authorize the production.

G. A penalized non-marginal unit is a proration unit to which, because of an excessive gas-oil ratio, the division has assigned an allowable determined in accordance with the procedure in 19.15.20.13 NMAC. In calculating a penalized allowable, a fraction of a barrel is regarded as a full barrel.

H. The division shall make and distribute a periodic tabulation of all supplements to the current proration schedule.

I. The division shall adhere to 19.15.15.14 NMAC in fixing top proration unit allowables.

J. If it becomes necessary for an oil transporter to resort to pipeline proration, the transporter shall, as soon as possible and not later than 24 hours after the effective date of the pipeline proration, notify the division of its decision to prorate. Upon receipt of the notice from the transporter, the division may take such emergency action as it deems proper or upon its own motion, after notice, hold a hearing for the purpose of considering any action within its authority to preserve and protect correlative rights.

K. In case of pipeline proration an operator the pipeline proration affects may apply to the division for authorization to have an underproduction resulting from the pipeline proration included in subsequent proration schedules. The operator shall apply upon a division-prescribed form and file it with the division within 30 days after the close of the first proration period in which the pipeline proration underproduction occurred. The authorization is limited to wells capable of producing the daily top proration unit allowable for the period.

L. In approving the application the division shall determine the time period during which the underproduction shall be made up without injury to the well or pool, and shall include the time period in the regularly approved proration schedules following the pipeline proration's conclusion.

[19.15.20.10 NMAC - Rp, 19.15.7.503 NMAC, 12/1/08]

19.15.20.11 AUTHORIZATION FOR PRODUCTION OF OIL WHILE COMPLETING, RECOMPLETING OR TESTING AN OIL WELL:

A. If an operator does not have sufficient lease storage to hold oil produced from a well during its drilling, completing, recompleting or testing, the operator may produce and sell from the well an amount of oil necessary to drill, complete, recomplete or test the well; provided however, that the operator shall file with the division a written application stating the circumstances at the well and setting forth in the application the estimated amount of oil to be produced during the aforementioned operations, and provided further that the division approves the application. Oil produced during drilling, completion or recompletion or testing a well shall be charged against the well's allowable production.

B. The division shall not place a well on the proration schedule until the operator files with the division and the division approves the form C-104.

[19.15.20.11 NMAC - Rp, 19.15.7.504 NMAC, 12/1/08]

19.15.20.12 DEPTH BRACKET ALLOWABLES:

A. Subject to the market demand percentage factor determined pursuant to 19.15.20.10 NMAC, the daily oil allowable for each oil pool in the state shall equal the appropriate depth bracket allowable below. The depth of the casing shoe or the top perforation in the casing, whichever is higher, in the first well completed in the pool shall determine the pool's depth classification. Daily oil allowables for each of the several ranges of depth and spacing patterns are as follows, shown in barrels:

<u>POOL DEPTH RANGE</u>	<u>DEPTH BRACKET ALLOWABLE</u>		
	<u>40 Acres</u>	<u>80 Acres</u>	<u>160 Acres</u>
0 to 4999 feet	80	160	
5000 to 5999	107	187	347

6000 to 6999	142	222	382
7000 to 7999	187	267	427
8000 to 8999	230	310	470
9000 to 9999	275	355	515
10,000 to 10,999	320	400	560
11,000 to 11,999	365	445	605
12,000 to 12,999	410	490	650
13,000 to 13,999	455	535	695
14,000 to 14,999	500	580	740
15,000 to 15,999	545	625	785
16,000 to 16,999	590	670	830
17,000 and deeper	635	715	875

B. The 40-acre depth bracket allowables apply to all undesignated wells not governed by special pool orders and to all pools developed on the normal 40-acre statewide spacing unit.

C. The 80-acre and 160-acre depth bracket allowables apply to wells governed by applicable special pool orders the division issues as an exception to the normal 40-acre statewide spacing unit.

D. The division may, where deemed appropriate, assign to a given pool a special depth bracket allowable at variance to the depth bracket allowable normally assigned to a pool of similar depth and spacing. The special allowable may be more or less than the regular depth bracket allowable and shall be assigned only after notice and hearing.

E. In assigning a lesser than regular depth bracket allowable, the division may consider, among other pertinent factors, reservoir damage, casinghead gas production and disposition, water production and disposition, transportation facilities, the prevention of surface or underground waste and the protection of correlative rights.

F. The division shall assign a greater than regular depth bracket allowable only after sufficient reservoir information is available to ensure that the allowable can be produced without damage to the reservoir and without causing surface or underground waste. The division shall also consider the availability of oil transportation and marketing facilities; casinghead gas transportation, processing and marketing facilities; water disposal facilities; the protection of correlative rights; and other pertinent factors.

[19.15.20.12 NMAC - Rp, 19.15.7.505 NMAC, 12/1/08]

19.15.20.13 GAS-OIL RATIO LIMITATION:

A. In allocated pools containing a well or wells producing from a reservoir that contains both oil and gas, each proration unit shall produce only that volume of gas equivalent to the applicable limiting gas-oil ratio multiplied by the pool's top unit oil allowable. In the event the division has not set a gas-oil ratio limit for a particular oil

pool, the limiting gas-oil ratio shall be 2000 cubic feet of gas for each barrel of oil produced. In allocated oil pools the division shall place all producing wells, whether oil or casinghead gas, on the oil proration schedule.

B. Unless specifically exempted by division order issued after hearing, the division shall place a gas-oil ratio limitation on all allocated oil pools, and penalize all proration units having a gas-oil ratio exceeding the pool's limit in accordance with the following procedure.

(1) A proration unit that, on the basis of the latest official gas-oil ratio test, has a gas-oil ratio that exceeds the limiting gas-oil ratio and has the capacity to produce above the top casinghead gas volume calculated by Subsection A of 19.15.20.13 NMAC for the pool in which it is located may produce daily that number of barrels of oil that the division determines by multiplying the current top proration unit allowable by a fraction, the numerator of which shall be the limiting gas-oil ratio for the pool and the denominator of which shall be the well's official test gas-oil ratio, and the proration unit shall be designated non-marginal.

(2) A unit containing a well or wells producing from a reservoir that contains both oil and gas shall produce only that volume of gas equivalent to the applicable limiting gas-oil ratio multiplied by the top proration unit allowable currently assigned to the pool.

(3) A marginal unit may produce the same volume of gas that it would be permitted to produce if it were a non-marginal unit.

C. The division shall indicate non-marginal proration units to which gas-oil ratio adjustments are applied in the proration schedule with adjusted allowables stated.

D. In cases of new pools, the limit shall be 2000 cubic feet per barrel until such time as changed by division order issued after a hearing. Upon petition and after notice and hearing according to law, the division shall determine or redetermine the specific gas-oil ratio limit that is applicable to a particular allocated oil pool.

[19.15.20.13 NMAC - Rp, 19.15.7.506 NMAC, 12/1/08]

19.15.20.14 UNITIZED AREAS:

After petition and notice and hearing, the division may approve the combining of contiguous developed proration units into a unitized area.

[19.15.20.14 NMAC - Rp, 19.15.7.507 NMAC, 12/1/08]

19.15.20.15 RECOVERED LOAD OIL:

A. An operator may run recovered load oil from the lease on which it is recovered, provided the operator obtains division approval of form C-126. The operator shall file form C-126 with the appropriate division district office. Upon approval, the division shall return one copy to the operator and send one copy to the designated transporter as authority to transport the oil.

B. 19.15.20.15 NMAC applies only to oil that has been obtained from a source other than the lease on which it is used.

[19.15.20.15 NMAC - Rp, 19.15.7.508 NMAC, 12/1/08]

19.15.20.16 OIL DISCOVERY ALLOWABLE:

A. In addition to the normally assigned allowable, the division may assign an oil discovery allowable to a well completed as a bona fide discovery well in a new common source of supply. The oil discovery allowable shall be in the amount of five barrels for each foot of depth of the well from the surface of the ground to the top of the perforations in the new pool or the depth of the casing shoe, whichever is higher. In counties where there is no other current oil production, and in a county when the discovery is the deepest oil production in the county, the oil discovery allowable shall be 10 barrels per foot of depth.

B. The date of discovery the division uses to determine the well that should properly receive the oil discovery allowable for a new pool is the date the operator completes the well and runs new oil into stock tanks. Provided however, an operator drilling through and discovering a new oil pool in the course of drilling to a lower horizon may file an affidavit of the discovery within seven days after making drill stem tests of the pool, accompanying the affidavit with all available pool data. If, prior to the well's completion, another operator claims discovery of a similar pool and there are reasonable grounds to believe the pools are one and the same, the division shall not assign a discovery allowable to either well until after the initial well for which the affidavit was filed is completed. If at that time the operator of the initial well formally applies for the discovery allowable in the pool, the division shall determine after hearing which well receives the discovery allowable.

C. To obtain an oil discovery allowable, the owner of a discovery well shall file form C-109 with the appropriate division district office and the division's Santa Fe office. Each copy of the form shall be accompanied by the following.

(1) A map depicting all wells within a two-mile radius of the discovery well. The owner of the discovery shall clearly show producing oil and gas wells and the formations from which they are producing or have produced as well as all dry holes and the depths to which they were drilled. Maps shall be on a scale one inch equals 1000 feet and shall also indicate the names of all lessees of record in the depicted area.

(2) A complete electrical log of the subject well with the tops and bottoms of producing formations in the subject well and in nearby wells identified thereon.

(3) If the application is based on horizontal separation, a sub-surface structural map of the producing formations for which the owner of the discovery seek the discovery allowable, showing seismic or geological interpretation of the subject structure and any troughs, faults, pinch-outs, etc., that separate the subject well from nearby wells producing from the same formation or formations.

(4) A geological cross-section prepared from electrical logs of the subject well and nearby wells establishing horizontal as well as vertical separation from other wells depicted on the plat that are producing or have produced from the discovery formation or formations.

(5) A summary of all available reservoir data including bottom hole pressure data, fluid levels, core analyses, reservoir liquid characteristics and any other pertinent data on the subject reservoir as well as other nearby reservoirs that may help establish whether the subject well is in fact a discovery.

D. If, in the division staff's opinion, good cause exists to bring the pool for hearing as a discovery, and the division has received no objection from another operator, the division shall place the pool on the first available hearing docket for inclusion by the staff in its regular pool nomenclature case. If the staff disagrees with the applicant's contention that a new pool has been discovered or if within 10 days after receiving a copy of the application another operator files with the division an objection to the creation of a new pool and the assignment of a discovery allowable, the division shall notify the applicant. The applicant will be expected to present the evidence supporting the applicant's case. Or, if the applicant so desires, the division may set the application for separate hearing on other than the nomenclature docket for presentation of evidence by the applicant.

E. The effective date of a well's discovery allowable is 7:00 a.m. on the first day of the month next succeeding the month in which the division approves the discovery.

F. The total discovery allowable attributable to each zone in the well shall be produced over a two-year period commencing with the time of authorization. The well's daily allowable for each pool receiving the discovery allowable shall not exceed the daily top proration unit allowable for the pool plus the total pool discovery allowable divided by 730 days (731 days if a leap year is included).

G. A discovery well may produce only that volume of gas equivalent to the applicable limiting gas-oil ratio for the pool multiplied by the top proration unit allowable for the pool plus the daily oil discovery allowable. In addition to all other statewide rules not specifically excepted in 19.15.20.16 NMAC, the provisions of 19.15.20.9 NMAC relating to daily tolerance, monthly tolerance and underproduction and overproduction

shall apply to oil discovery allowables as well as to regular allowables for discovery wells.

H. Nothing contained in 19.15.20.16 NMAC prohibits the division from curtailing the discovery allowables of wells during times of depressed market demand. However, the division shall reinstate such discovery allowables for production at the earliest possible date. Further, when it appears reservoir damage or waste may result from production of the oil discovery allowable within the normal two-year period, the division may, after notice and hearing, extend the period.

[19.15.20.16 NMAC - Rp, 19.15.7.509 NMAC, 12/1/08]

PART 21: GAS PRORATION AND ALLOCATION

19.15.21.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.21.1 NMAC - Rp, 19.15.8.1 NMAC, 12/1/08]

19.15.21.2 SCOPE:

19.15.21 NMAC applies to persons engaged in gas development and production within New Mexico.

[19.15.21.2 NMAC - Rp, 19.15.8.2 NMAC, 12/1/08]

19.15.21.3 STATUTORY AUTHORITY:

19.15.21 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Section 70-2-6, Section 70-2-11, Section 70-2-12, Section 70-2-16 and Section 70-2-17.

[19.15.21.3 NMAC - Rp, 19.15.8.3 NMAC, 12/1/08]

19.15.21.4 DURATION:

Permanent.

[19.15.21.4 NMAC - Rp, 19.15.8.4 NMAC, 12/1/08]

19.15.21.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.21.5 NMAC - Rp, 19.15.8.5 NMAC, 12/1/08]

19.15.21.6 OBJECTIVE:

To establish requirements implementing the division's statutory authority to prorate and allocate gas production to prevent waste and protect correlative rights.

[19.15.21.6 NMAC - Rp, 19.15.8.6 NMAC, 12/1/08]

19.15.21.7 DEFINITIONS:

A. "Acreage factor" means a GPU's acreage factor determined to the nearest hundredth of a unit by dividing the acreage assigned to the GPU by a number equal to the number of acres in a standard GPU for the pool. However, the acreage tolerance provided in Subparagraph (b) of Paragraph (1) of Subsection A of 19.15.8.21.12 NMAC shall apply.

B. "AD factor" means an acreage multiplied by the deliverability factor is calculated in pools in which acreage and deliverability are proration factors. The product obtained by multiplying the acreage factor by the calculated deliverability (expressed as MCF per day) for that GPU is known as the AD factor for that GPU. The AD factor is computed to the nearest whole unit.

C. "Allocation hearing" means a hearing the division holds twice each year to determine pool allocations for the ensuing allocation period.

D. "Allocation period" means a six-month period beginning at 7:00 a.m. April 1 and October 1 of each year.

E. "Balancing date" means the date beginning at 7:00 a.m. April 1 of each year; the 12 months following this date is the gas proration period.

F. "Broker" means a third party who negotiates contracts for purchase and resale.

G. "Classification period" means a three month period beginning at 7:00 a.m. on April 1, July 1, October 1 and January 1 of each year.

H. "Deliverability pressure" means the designated delivery pressure at which pipeline companies can accept gas from gas wells depending on the pipeline's capacity.

I. "Gas pool" means a pool that the division has designated as a gas pool after notice and hearing.

J. "Gas proration unit (GPU)" means the acreage allocated to a well, or in the case of an infill well or wells to a group of wells, for purposes of spacing and proration. A GPU may be either of a standard or nonstandard size as provided in 19.15.21 NMAC.

K. "Gas purchaser" means the purchaser (where the producer first exchanges ownership of the gas to the purchaser for an agreed value) of the gas from a gas well or GPU.

L. "Gas transporter" means a taker of gas, the party servicing the well meter or the party responsible for measuring the gas sold from the well or beneficially used off-lease. This could be at the wellhead, at any other point on the lease or at a division-authorized point where connection is made for gas transportation or utilization (other than is necessary for maintaining the well's producing ability). The gas transporter can be the gatherer, transporter, producer or a delegate of one of those parties. The gas transporter shall be identified on form C-115 and shall be responsible for creating and maintaining form C-111 as required under 19.15.7.21 NMAC's provisions.

M. "Infill well" means an additional producing well on a GPU that serves as a companion well to an existing well on the GPU.

N. "Marginal GPU" means a proration unit that is incapable of producing or has not produced the non-marginal allowable based on pool allocation factors. Marginal GPUs do not accrue over or underproduction.

O. "Non-marginal GPU" means a proration unit receiving an allowable based upon pool allocation factors. Non-marginal proration units accrue over or underproduction.

P. "Overproduction" means the volume of gas produced on a GPU in a month greater than the assigned non-marginal allowable (does not include gas used in maintaining the GPU's wells' producing ability). Overproduction accumulates month to month during the proration period.

Q. "Prorated gas pool" means a gas pool in which, after notice and hearing, the division allocates production according to 19.15.21 NMAC and any applicable special pool orders.

R. "Proration period" means the 12-month period beginning April 1 of each year.

S. "Shadow allowable" means the gas volume calculated for a marginal GPU that is equal to the allowable assigned to a non-marginal GPU in the same pool of the same A (acreage) or A and AD (acreage deliverability) factors as the marginal GPU.

T. "Underproduction" means the volume of assigned non-marginal allowable not produced on a GPU. Underproduction accumulates month to month during the proration period.

[19.15.21.7 NMAC - Rp, 19.15.8.7 NMAC, 12/1/08]

19.15.21.8 ALLOCATION OF GAS PRODUCTION:

When the division determines that allocation of gas production in a designated gas pool is necessary to prevent waste the division, after notice and hearing, shall consider the nominations of purchasers from that gas pool and other relevant data, fix the pool's allowable production and allocate production among the gas wells in the pool delivering to a gas transportation facility upon a reasonable basis and recognizing correlative rights. The division shall include in the pool's proration schedule gas wells that the division finds are being unreasonably discriminated against through denial of access to a gas transportation facility that is reasonably capable of handling the type of gas the wells produce.

[19.15.21.8 NMAC - Rp, 19.15.8.601 NMAC, 12/1/08]

19.15.21.9 PRORATION PERIOD:

The proration period shall be at least six months and the division shall make the pool allowable and allocations of the pool allowable at least 30 days prior to each proration period.

[19.15.21.9 NMAC - Rp, 19.15.8.602 NMAC, 12/1/08]

19.15.21.10 ADJUSTMENT OF ALLOWABLES:

When the actual market demand from an allocated gas pool during a proration period is more than or less than the allowable the division set for the pool for the period, the division shall adjust the gas proration unit allowables for the pool for the next proration period so that each gas proration unit has a reasonable opportunity to produce its fair share of the gas production from the pool and so that correlative rights are protected.

[19.15.21.10 NMAC - Rp, 19.15.8.603 NMAC, 12/1/08]

19.15.21.11 GAS PRORATION UNITS:

Before issuing a proration schedule for an allocated gas pool, the division after notice and hearing shall fix the pool's gas proration unit.

[19.15.21.11 NMAC - Rp, 19.15.8.604 NMAC, 12/1/08]

19.15.21.12 GAS PRORATION RULES:

A. Well acreage and location requirements.

(1) Standard gas proration unit size and well spacing.

(a) Unless otherwise provided for in applicable special pool orders, operators shall drill gas wells in prorated gas pools according to the well spacing and acreage

requirements contained in 19.15.21 NMAC provided that when an operator drills a well in a pool with 640 acre spacing, a government section shall comprise the proration unit.

(b) A GPU an operator drills according to Subparagraph (a) of Paragraph (1) of Subsection A of 19.15.21.12 NMAC that contains acreage within the tolerances below is a standard GPU for calculating allowables:

Standard Proration Unit	Acreage Tolerance
160 acres	158-162 acres
320 acres	316-324 acres
640 acres	632-648 acres

(2) Nonstandard gas proration units.

(a) The district supervisor of the appropriate division district office may approve a nonstandard GPU without notice and hearing when the GPU's unorthodox size and shape is necessitated by a variation in the legal subdivision of the United States public land surveys and the nonstandard GPU is not less than 75 percent nor more than 125 percent of a standard GPU by accepting a form C-102 land plat from the operator showing the proposed nonstandard GPU with the number of acres contained in the proposed nonstandard GPU, and shall assign an allowable to the nonstandard GPU based upon the acreage factor for that acreage.

(b) The division may approve nonstandard proration units and unorthodox locations according to applicable special pool orders or division rules.

B. Nominations.

(1) Gas purchasers or gas transporters shall nominate. Each gas purchaser or each gas transporter shall file with the division its nomination for the amount of gas that it in good faith desires to purchase or expects to transport during the ensuing allocation period from each gas pool 19.15.21 NMAC regulates. The purchaser may delegate the nomination responsibility to the transporter, operator or broker by notifying the division's Santa Fe office. The purchaser shall submit the nomination for each pool to the division's Santa Fe office on form C-121-A by the first day of the month during which the division will consider at its allocation hearing the nominations for the succeeding allocation period. The division shall consider at its allocation hearing the nominations received, actual production and other factors the division deems applicable in determining the amount of gas that may be produced without waste during the ensuing allocation period.

(2) The director may suspend Subsection B of 19.15.21.12 NMAC whenever it appears that the nominations are of little or no value.

(3) Schedule. The division shall issue a gas proration schedule for each allocation period showing the monthly allowable for each GPU that the operator may produce during each month of the ensuing allocation period, each GPUs' current classification and other information as is necessary to show the allowable production status of each GPU on the schedule. The division may issue supplemental proration schedules during an allocation period as necessary to show changes in GPU classification, adjustments to allowables due to changes in market conditions or to reflect other changes the division deems necessary.

(4) Proration of all gas wells within a pool. The division shall include in the proration schedule the gas wells, in the gas pools 19.15.21 NMAC regulates, delivering to a gas transporter, and shall include in the proration schedule wells that the division finds are being unreasonably discriminated against through denial of access to a gas transportation facility, which are reasonably capable of handling the type of gas the wells produce.

C. Allocation and granting of allowables.

(1) Filing of form C-102 and form C-104 required. The division shall not assign a GPU an allowable before receipt of form C-102 and the approval date of form C-104.

(2) How allowables are calculated. The total allowable to be allocated to each gas pool for each allocation period shall equal the estimated market demand as the division determines, plus any adjustments the director deems necessary to equate the total pool allowable to the estimated market demand. The director may make adjustments the director deems necessary to compensate for overproduction, underproduction and other circumstances that may necessitate the adjustment to equate the pool allowable to the anticipated market demand. The director shall establish estimated market demand for each pool from any information the director requires and can consist of nominations from purchasers, transporters or other parties having knowledge of market demand for gas from the pools, actual past production figures, seasonal trends or any other factors the director deems necessary to establish estimated market demand. The director is not required to use all the information requested and can establish market demand by any method the director approves. The division shall assign a monthly allowable to each GPU entitled to an allowable for the ensuing allocation period by allocating the pool allowable among all such GPUs in that pool according to the procedure set forth in 19.15.21 NMAC. Should market conditions indicate a change is necessary, the director may adjust allowables up or down during the six-month allocation period using a maximum of 10 percent as a guideline.

(3) Marginal GPU allowable. The monthly allowable the division assigns to each marginal GPU shall equal the marginal GPU's average monthly production from its latest classification period.

(4) Non-marginal GPU allowable. The division shall determine non-marginal GPU allowables in conformance with the applicable special pool orders.

(a) In pools where acreage is the only proration factor, the division shall allocate the total non-marginal allowables to each GPU in the proportion that each GPU acreage factor bears to the total acreage factor for all non-marginal GPUs.

(b) In pools where acreage and deliverability are proration factors:

(i) the division shall allocate a percentage as set forth in special pool orders of the non-marginal allowable to each GPU in the proportion that each GPU's AD factor bears to the total AD factor for all non-marginal GPU's in the pool; and

(ii) the division shall allocate the remaining non-marginal allowable to non-marginal GPUs among each GPU in the proportion that each GPU's acreage factor bears to the total acreage factor for all non-marginal GPUs in the pool.

(5) New connects assignment of allowables. Allowables to newly completed gas wells shall commence, in pools where acreage is the only proration factor, on the date of first delivery of gas to a gas transporter as demonstrated by an affidavit the transporter furnishes to the appropriate division district office or the approval date of form C-102 and form C-104, whichever is later.

(6) Gas charged against GPU's allowable. Except as provided in the special pool orders, the operator shall charge the volume of produced gas sold or beneficially used other than lease fuel from each GPU against the GPU's allowable; however, the operator shall not charge the gas it uses in maintaining the well's producing ability against the allowable.

(7) Change in acreage. If an operator requests to change the acreage assigned to a GPU, the operator shall file form C-102 with the appropriate division district office. The revised allowable, as the division determines, assigned to the GPU shall be effective on the first day of the month following the division's receipt of the notification.

(8) Minimum allowables. After notice and hearing, the division may assign minimum allowables for prorated gas pools to avoid waste, encourage efficient operations and to prevent wells' premature abandonment. (See special pool orders for minimum allowable amount.) In determining the volume of minimum allowable for a well with a standard proration unit, the division shall take into account economic and engineering factors such as drilling and operating costs, anticipated revenues, taxes and any similar data that establish that the ultimate recovery of hydrocarbons will increase from the pool because of the adoption of a minimum allowable for the pool. Once adopted, the division shall proportionally adjust minimum allowable for wells with nonstandard proration units.

(9) Deliverability tests. In pools where acreage and deliverability are proration factors, an operator shall test wells on non-marginal GPUs in accordance with division rules and the division shall use the test results in calculating deliverabilities for the succeeding proration period. The operator shall test wells on GPUs reclassified to non-marginal within 90 days of the order and thereafter in accordance with the appropriate testing schedule for the pool. Wells on marginal GPUs are exempt from deliverability testing.

D. Balancing of production.

(1) Underproduction. A non-marginal GPU that has an underproduced status as of the end of a gas proration period may carry the underproduction forward in the next gas proration period and may produce the underproduction in addition to the allowable assigned during the succeeding period. The division shall cancel an underproduction carried forward into a gas proration period and remaining unproduced at the end of the gas proration period.

(2) Balancing underproduction. Production during any one month of a gas proration period greater than the allowable the division assigned to a GPU for such a month shall be applied against the underproduction carried into such a period in determining the amount of allowable, if any, to be canceled.

(3) Overproduction. A GPU that has an overproduced status as of the end of a gas proration period shall carry the overproduction forward into the next gas proration period. The overproduction shall be made up by underproduction during the succeeding gas proration period. The division shall shut-in a GPU that has not made up the overproduction carried into a gas proration period by the end of the period until the overproduction is made up.

(a) Twelve-times overproduced, northwest. For the prorated gas pools of northwest New Mexico, if the division determines that a GPU is overproduced in an amount exceeding 12 times its current year January allowable (or, in the case of a newly connected well, a marginal well or a well recently reclassified as non-marginal, 12 times the January allowable assigned to a non-marginal GPU of similar acreage and deliverability factors), it shall be shut in until its overproduction is less than 12 times its January allowable, as determined hereinabove.

(b) Six-times overproduced, southeast. For the prorated gas pools of southeast New Mexico, if the division determines that a GPU is overproduced in an amount exceeding six times its current year January allowable (or, in the case of a newly connected well, a marginal well or a well recently reclassified as non-marginal, six times the January allowable assigned to a non-marginal GPU of a similar acreage factor), the division shall shut-in the GPU until its overproduction is less than six times its January allowable, as determined in Subsection C of 19.15.21 NMAC.

(4) Exception to shut in for overproduction. The director may permit a GPU that is subject to shut-in pursuant to Paragraph (3) of Subsection D of 19.15.21.12 NMAC to produce up to 250 MCF of gas per month upon the operator's proper showing to the director that complete shut-in would cause undue hardship, provided however, the director may rescind permission for a GPU produced greater than the monthly rate the director.

(5) Balancing overproduction. Allowable assigned to a GPU during a one month of a gas proration period greater than the production for the same month shall be applied against the overproduction chargeable to the GPU in determining the overproduction that must be made up pursuant to the provisions of Paragraph (3) of Subsection D of 19.15.21.12 NMAC above.

(6) Exception to balancing overproduction. The director may allow the operator to make up overproduction at a lesser rate than permitted under Paragraph (3) of Subsection D of 19.15.21.12 NMAC upon the operator's showing at public hearing that the lesser rate is necessary to avoid material damage to the well.

(7) Hardship gas wells. If a GPU containing a hardship gas well is overproduced, the operator shall take the necessary steps to reduce production in order to reduce the overproduction. An overproduction existing at the time of a well's designation as a hardship gas well or accruing to the GPU after the designation shall be carried forward until it is made up by underproduction. The division shall not permit a GPU containing a hardship gas well, which GPU is overproduced, to produce at a rate higher than the minimum producing rate the division authorized.

(8) Moratorium on shut-ins. The director may grant a pool-wide moratorium of up to three months as to the shutting in of gas wells in a pool during periods of high demand emergency upon the operator's proper showing that the emergency exists, and that a significant number of the wells in the pool are subject to shut-in pursuant to the provisions of Paragraph (3) of Subsection D of 19.15.21.12 NMAC. The director shall not grant a moratorium beyond three months except after notice and hearing.

(9) The director may reinstate allowable to wells that suffered cancellation of allowable under Paragraph (1) of Subsection D of 19.15.21.12 NMAC or Paragraph (3) of Subsection E of 19.15.21.12 NMAC or loss of allowable due to reclassification of a well under Paragraph (2) of Subsection E of 19.15.21.12 NMAC if the cancellation or loss of allowable was caused by non-access or limited access to the average market demand in the pool rather than inability of the well to produce. Upon petition, with a showing of circumstances that prevented production of the non-marginal allowable, and evidence that the well was capable of producing at allowable rates during the period for which reinstatement is requested, the allowable may be reinstated in such amounts needed to avoid curtailment or shut-in of the well for excessive overproduction. The division may approve the petition administratively or docket the petition for hearing within 30 days after receipt in the division's Santa Fe office.

E. Classification of GPUs.

(1) Reclassification by the director. The director may reclassify a marginal or non-marginal GPU anytime the GPUs producing ability justifies reclassification. The director may suspend the reclassification of GPUs on the director's own initiative, or upon an affected interest owner's proper showing, if it appears that the suspension is necessary to permit underproduced GPUs, which would otherwise be reclassified, a proper opportunity to make up the underproduction.

(2) Reclassification to marginal. The director may reclassify a non-marginal GPU as marginal in either of the following ways.

(a) After the production data is available for the last month of each classification period, the director may reclassify a GPU that had an underproduced status at the beginning of the allocation period to marginal if its highest single month's production during the classification period is less than its average monthly allowable during the period. However, the operator of a GPU so classified, or other affected interest owner, shall have 30 days after receipt of notification of marginal classification in which to submit satisfactory evidence to the division that the GPU is not of marginal character and should not be so classified.

(b) The director may reclassify a GPU that is underproduced more than the overproduction limit as described in Paragraph (3) of Subsection D of 19.15.21.12 NMAC as marginal.

(3) Cancellation of underproduction for marginal GPU. The division shall not permit a GPU that is classified as marginal to accumulate underproduction, and shall cancel an underproduction accrued to a GPU before its classification as marginal.

(4) Reclassification to non-marginal. If, at the end of a classification period, a marginal GPU has produced more gas during the proration period to that time than its shadow allowable for that same period, the division shall reclassify the GPU as a non-marginal GPU.

(5) Reinstatement of status. The division shall reinstate to a GPU reclassified to non-marginal under the provisions of Paragraph (4) of Subsection E of 19.15.21.12 NMAC all underproduction that accrued or would have accrued as a non-marginal GPU from the current proration period. The division may reinstate underproduction from the prior proration period after notice and hearing. Uncompensated-for overproduction accruing to the GPU while marginal shall be chargeable upon reclassification to non-marginal.

F. Reporting of production - C-111 and C-115 reports. Transporters and operators shall create and maintain for division inspection or file, as applicable, gas transportation and production reports pursuant to 19.15.7.21 NMAC and 19.15.7.24 NMAC provided that upon the director's approval as to the specific program to be used, a producer or

transporter of gas may report metered production of gas on a chart-period basis; provided the following provisions apply to each gas well:

- (1) reports for a month shall include not less than 24 or more than 32 reported days;
- (2) reported days may include as many as the last seven days of the previous month but no days of the succeeding month; and
- (3) the total of the monthly reports for a year shall include not less than 360 or more than 368 reported days.

G. For purposes of Subsection F of 19.15.21.12 NMAC, the term "month" means "calendar month" for those reporting on a calendar month basis, and means "reporting month" for those reporting on a chart-period basis according to the exception provided in Subsection F of 19.15.21.12 NMAC.

[19.15.21.12 NMAC - Rp, 19.15.8.605 NMAC, 12/1/08]

19.15.21.13 TESTS AND TEST PROCEDURES FOR PRORATED POOLS IN NORTHWEST NEW MEXICO:

A. Type of tests required for wells completed in prorated gas pools.

(1) **Reclassified GPUs.** An operator of a well on a GPU that the director has reclassified as non-marginal shall conduct deliverability tests on that well within 90 days of the order reclassifying it, unless there are current tests on file with the division or that order requires a new test. A current test is a test that was conducted during the last test period for that pool or later.

(2) **Non-marginal GPUs.** Operators shall conduct deliverability tests on wells on non-marginal GPUs every five years. If the division determines that a well's test data and production data warrant more frequent testing of the well, the division may set up special testing schedules for that well.

(3) **Scheduling of tests.**

(a) **Notification of pools to be tested.** By September 1 of each year the division's Aztec district office shall notify operators of non-marginal GPUs if their wells will be tested during the following test period.

(b) **The operators shall file the results of all deliverability tests required with the Aztec district office within 90 days following the completion of each test. Provided however, that a test completed between December 31 of the test year and March 10 of the following year is due no later than March 31. The division shall not grant an extension of time for filing tests beyond March 31 except after notice and hearing.**

(c) The operator's failure to file a test within the above-prescribed times subjects the GPU to the loss of one day's allowable for each day the test is late.

(d) A well scheduled for testing during its test year may have the conditioning period, test flow period and part of the seven-day shut-in period conducted in December of the previous year provided that, if the seven-day shut-in period immediately follows the test flow period, the operator shall measure the seven-day shut-in pressure in January of the test year. The earliest date that a well can be scheduled for a deliverability test is such that the test flow period would end on December 25 of the previous year.

(e) Downhole commingled wells are to be scheduled for tests on dates for the pool of the well's lowermost prorated completion.

(f) In the event the division shuts-in a well for overproduction, the operator may produce the well for a period of time to secure a test after written notification to the division. The operator shall use gas produced during this testing period in determining the well's over/under produced status.

(g) An operator may schedule a well for a deliverability retest upon notification to the Aztec district office at least 10 days before the operator will commence the test. The retest shall be for substantial reason and is subject to the division's approval. The operator shall conduct a retest in conformance with the deliverability test procedures of 19.15.21.13 NMAC. The division may require the retesting of a well by notification to the operator to schedule the retest. The operator shall identify these tests, as filed on form C-122-A, as "RETEST" in the remarks column.

(4) Witnessing of tests. Any or all of the following may witness a deliverability test: a division representative, an offset operator, a representative of the gas transportation facility connected to the well under test or a representative of the gas transportation facility taking gas from an offset operator.

B. Procedure for testing.

(1) The test shall begin by producing a well in the normal operating manner into the pipeline through either the casing or tubing, but not both, for a period of 14 consecutive days. This is known as the conditioning period. The operator shall not change the production valve and choke settings during either the conditioning or flow periods, except during the first 10 days of the conditioning period when maximum production would over-range the meter chart or location production equipment. The first 10 days of the conditioning period shall not have more than 48 hours of cumulative interruptions of flow. The 11th to 14th days, inclusive of the conditioning period, shall have no interruptions of flow. An interruption of flow that occurs as the well's normal operation as stop-cock flow, intermittent flow or well blow down shall not be counted as shut-in time in either the conditioning or flow period.

(2) The operator shall determine daily flowing rate from an average of seven or eight consecutive producing days, following a minimum conditioning period of 14 consecutive days of production. This is known as the flow period.

(3) The operator shall measure instantaneous pressure by a deadweight gauge or other division-approved method during the seven-day or eight-day flow period at the casinghead, tubinghead and orifice meter, and record it along with instantaneous meter-chart static pressure reading.

(4) If a well is producing through a compressor that is located between the wellhead and the meter run, the operator shall report the meter run pressure and the wellhead casing pressure and the wellhead tubing pressure on form C-122-A. Neither the suction pressure nor the discharge pressure of the compressor is considered wellhead pressure. The operator shall enter a note in the remarks portion on form C-122-A stating: "This well produced through a compressor".

(5) When it is necessary to restrict the flow of gas between the wellhead and the orifice meter, the operator shall determine the ratio of the downstream pressure, psi absolute, to the upstream pressure, psi absolute. When this ratio is 0.57 or less, the operator shall consider critical flow conditions to exist across the restriction.

(6) When more than one restriction between the wellhead and the orifice meter causes the pressures to reflect critical flow between the wellhead and the orifice meter, the operator shall measure the pressures across each of these restrictions to determine whether critical flow exists at any restriction. When critical flow does not exist at any restriction, the operator shall report the pressures taken to disprove the critical flow to the division on form C-122-A in item (n) of the form. When critical flow conditions exist, the operator shall measure the instantaneous flowing pressures required in Paragraph (3) of Subsection B of 19.15.21.13 NMAC during the last 48 hours of the seven-day or eight-day flow period.

(7) When critical flow exists between the wellhead and the orifice meter, the operator shall use the measured wellhead flowing pressure of the string through which the well flowed during the test as P_t when calculating the static wellhead working pressure (P_w) using the method established in Paragraph (9) of Subsection B of 19.15.21.13 NMAC

(8) When critical flow does not exist at any restriction, P_t shall be the corrected average static pressure from the meter chart plus friction loss from the wellhead to the orifice meter.

(9) The operator shall calculate the static wellhead working pressure (P_w) of a well under test seven-day or eight-day average static tubing pressure if the well is flowing through the casing; it shall be the calculated seven-day or eight-day average static casing pressure if the well is flowing through the tubing. The operator shall calculate the static wellhead working pressure (P_w) by applying the tables and

procedures set out in the Gas Well Testing Manual for Northwest New Mexico available from the division.

(10) To obtain the shut-in pressure of a well under test, the operator shall shut-in the well some time during the current testing season for a period of seven to 14 consecutive days, which have been preceded by a minimum of seven days of uninterrupted production. The operator shall measure the shut-in pressure on the seventh to 14th day of shut-in of the well with a deadweight gauge or other division-approved method. The operator shall measure the seven-day shut-in pressure on both the tubing and the casing when communication exists between the two strings. The operator shall use the higher of such pressures as P_c in the deliverability calculation. When the division determines a shut-in pressure to be abnormally low or the well can not be shut-in due to "HARDSHIP" classification, the operator shall determine the shut-in pressure to be used as P_c by one of the following methods:

- (a)** a division-designated value;
- (b)** an average shut-in pressure of all offset wells completed in the same zone; offset wells include the four side and four corner wells, if available; or
- (c)** a calculated surface pressure based on a calculated bottom hole pressure; the operator shall make the calculations in accordance with the examples in the "Gas Well Testing Manual for Northwest New Mexico".

(11) The operator shall take all wellhead pressures, as well as the flowing meter pressure tests that are to be taken during the seven-day or eight-day deliverability test period in Subsection B of 19.15.21.13 NMAC, with a deadweight gauge or other division-approved method. The operator shall record and maintain the pressure readings and the date and time according to the chart in the operator's records with the test information.

(12) The operator shall change and arrange orifice meter charts to reflect upon a single chart the flow data for the gas from each well for the full seven-day or eight-day deliverability test period; however, the division shall not void a test if the operator satisfactorily explains the necessity for using test volumes through two chart periods. The operator shall make corrections for pressure base, measured flowing temperature, specific gravity and supercompressibility, provided however, if the specific gravity of the gas from a well under test is not available, the operator may assume an estimated specific gravity for the well, based upon that of gas from nearby wells, the specific gravity of which has been actually determined by measurement.

(13) The purchasing company that integrates the flow charts shall determine the average flowing meter pressure for the seven-day or eight-day flow period and the corrected integrated volume and furnish them to the operator or testing agency.

(14) The operator shall calculate the seven-day or eight-day flow period volume from the integrated readings as determined from the flow period orifice meter chart. The operator shall divide volume calculated by the number of testing days on the chart to determine the average daily rate of flow during the flow period. The flow period shall have a minimum of seven and a maximum of eight legibly recorded flowing days to be acceptable for test purposes. The operator shall correct the volume used in this calculation to the division's standard conditions of 15.025 psi absolute pressure base, 60 degrees fahrenheit temperature base and 0.60 specific gravity base.

(15) The operator shall calculate the daily volume of flow, as determined from the flow period chart readings, by applying the basic orifice meter formula or other acceptable industry standard practices.

$$Q = C' (h_w P_f)^{.5}$$

Where:

Q = metered volume of flow MCFD @ 15.025 psi absolute, 60 degrees fahrenheit and 0.60 specific gravity.

C' = the 24-hour basic orifice meter flow factor corrected for flowing temperature, gravity and supercompressibility.

h_w = daily average differential meter pressure from flow period chart.

P_f = daily average flowing meter pressure from flow period chart.

(16) The basic orifice meter flow factors, flowing temperature factor and specific gravity factor shall be determined from the tables in the manual.

(17) The operator shall use the daily flow period average corrected flowing meter pressure, psi gauge, to determine the supercompressibility factor. The operator may obtain supercompressibility tables from the division.

(18) When the operator makes a supercompressibility correction for a gas containing either nitrogen or carbon dioxide in excess of two percent, the operator shall determine the gas' supercompressibility factors.

(19) The division may approve use of tables for calculating rates of flow from integrator readings that do not specifically conform to the division's *manual for back-pressure testing of natural gas wells* for determining the daily flow period rates of flow upon the operator's showing that the tables are appropriate and necessary.

(20) The operator shall correct the daily average integrated rate of flow for the seven-day or eight-day flow period for meter error by multiplication by a correction factor. The operator shall determine the correction factor by dividing the square root of

the deadweight flowing meter pressure, psi absolute, by the square root of the chart flowing meter pressure, psi absolute.

(21) The operator shall calculate the deliverability of gas at the deliverability pressure of a well under test from the test data derived from the required tests using the following deliverability formula:

$$\frac{(P_c^2 - P_d^2)^n}{D = Q [(P_c^2 - P_w^2)]}$$

Where:

D = deliverability MCFD at the deliverability pressure, (P_d), (at standard conditions of 15.025 psi absolute, 60 degrees fahrenheit and 0.60 specific gravity).

Q = daily flow rate in MCFD, at wellhead pressure (P_w).

P_c = seven-day shut-in wellhead pressure, psi absolute.

P_d = deliverability pressure, psi absolute, as defined above.

P_w = average static wellhead working pressure, as determined from seven-day or eight-day flow period, psi absolute, and calculated from tables in the manual entitled Pressure Loss Due to Friction Tables for Northwest New Mexico.

n = average pool slope of back pressure curves as follows:

for pictured cliffs and shallower formations, 0.85; and

for formations deeper than pictured cliffs, 0.75.

(Note: Special orders for any specific pool or formation may supersede the above values. Check special pool orders if in doubt.)

(22) The value of the multiplier in the above formula (ratio factor after the application of the pool slope) by which Q is multiplied shall not exceed a limiting value the division determines and announces periodically. The division shall make the determination after a study of the test data of the pool obtained during the previous testing season.

(23) The operator shall test downhole commingled wells in the test year for the pool of the well's lowermost prorated completion and shall use pool slope (n) and the lowermost pool's deliverability pressure. The operator shall use the total flow rate from the downhole commingled well to calculate a value of deliverability. For each prorated gas zone of a downhole commingled well the operator shall file a form C-122-A. Also, in

the summary portion of that form all zones shall indicate the same data for line h, P_c , Q, P_w and P_d . The value shown for deliverability (D) is that percentage of the well's total deliverability that is applicable to this zone. The operator shall place a note in the remarks column that indicates the percentage of deliverability to be allocated to this zone of the well.

(24) The division shall consider a test prescribed in 19.15.21 NMAC acceptable if the average flow rate for the final seven-day or eight-day deliverability test is not more than 10 percent in excess of any consecutive seven-day or eight-day average of the preceding two weeks. The division may declare a deliverability test not meeting this requirement and require the operator to re-test the well.

(25) The operator shall make charts relative to deliverability tests or copies of the charts available to the division upon its request.

(26) Operators shall use only testing agencies, whether individuals, companies, pipeline companies or operators, that maintain a log of all tests they have accomplished including all field test data. The operator shall maintain the data collected pursuant to tests Subsection B of 19.15.21.13 NMAC requires for a period of not less than two years plus the current test year.

(27) Forms C-122-A and C-122-B are adopted for use in the northwest New Mexico area in open form subject to modification by the division as experience may indicate desirable or necessary.

(28) The operator shall conduct and report deliverability tests for gas wells in formations in accordance with 19.15.21.13 NMAC. Provided, however, 19.15.21.13 NMAC is subject to a specific modification or change contained in special pool orders the division adopts for a pool after notice and hearing.

C. Informational tests.

(1) One-point back pressure test. The operator may take a one-point back pressure test on newly completed wells before their connection or reconnection to a gas transportation facility. This test is a required official test, but the operator may take the test for informational purposes. When taken, the operator shall take and report this test as prescribed in Paragraph (2) of Subsection C of 19.15.21.13 NMAC.

(2) Test procedure.

(a) The operator shall accomplish this test after a minimum shut-in of seven days. The operator shall measure the shut-in pressure with a deadweight gauge or other division-approved method.

(b) The flow rate shall be that rate in MCFD measured at the end of a three hour test flow period. The flow from the well shall be for three hours through a positive choke, which has a 3/4 inch orifice.

(c) The operator shall install a two-inch nipple that provides a mechanical means of accurately measuring the pressure and temperature of the flowing gas immediately upstream from the positive choke.

(d) The operator shall calculate the absolute open flow using the conventional back pressure formula as shown in the division's *manual for back-pressure testing of natural gas wells*.

(e) The operator shall report the observed data and flow calculations in duplicate on form C-122.

(f) Non-critical flow shall be considered to exist when the choke pressure is 13 psi gauge or less. When this condition exists the operator shall measure the flow rate with a pitot tube and nipple as specified in the division's *manual for back-pressure testing of natural gas wells* or in the division's manual of tables and procedure for pitot tests. The operator shall install the pitot test nipple immediately downstream from the 3/4-inch positive choke.

(g) The operator shall test a well completed with two-inch nominal size tubing (1.995-inch internal diameter) or larger through the tubing.

(3) The operator may conduct other tests for informational purposes prior to obtaining a pipeline connection for a newly completed well upon receiving specific approval to conduct the other tests from the Aztec district office. The Aztec district office shall base approval of these tests primarily upon the volume of gas to be vented.

[19.5.21.13 NMAC - Rp, 19.15.8.606 NMAC, 12/1/08]

PART 22: HARDSHIP GAS WELLS

19.15.22.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.22.1 NMAC - N, 12/1/08]

19.15.22.2 SCOPE:

19.15.22 NMAC applies to persons engaged in oil and gas development and production within New Mexico.

[19.15.22.2 NMAC - N, 12/1/08]

19.15.22.3 STATUTORY AUTHORITY:

19.15.22 NMAC is adopted pursuant to NMSA 1978, Section 70-2-6, Section 70-2-11 and Section 70-2-12.

[19.15.22.3 NMAC - N, 12/1/08]

19.15.22.4 DURATION:

Permanent.

[19.15.22.4 NMAC - N, 12/1/08]

19.15.22.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.22.5 NMAC - N, 12/1/08]

19.15.22.6 OBJECTIVE:

To provide an application and approval process for hardship gas well classification.

[19.15.22.6 NMAC - N, 12/1/08]

19.15.22.7 DEFINITIONS:

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

19.15.22.8 HARDSHIP GAS WELL:

A. The division shall not classify a well as a hardship gas well except after notice and hearing or upon the division's appropriate administrative action.

B. Wells the division approves as hardship gas wells under 19.15.22.9 NMAC and 19.15.22.10 NMAC have priority access over other gas wells to the current available gas market to the extent that they might otherwise be restricted below the approved minimum flow rate.

[19.15.22.8 NMAC - Rp, 19.15.6.408 NMAC, 12/1/08]

19.15.22.9 APPLICATION FOR HARDSHIP GAS WELL CLASSIFICATION:

A. An operator shall apply for hardship gas well classification in the form the division prescribes and shall include the following:

- (1)** a narrative description of the problems that lead the applicant to believe that underground waste will occur if the well is shut-in or curtailed below its ability to produce;
- (2)** documentation that the applicant has made all reasonable and economic attempts to eliminate or correct the problem or an explanation and justification as to why the applicant did not make such attempts;
- (3)** a well bore sketch;
- (4)** historical data such as permanent loss of productivity after shut-in, frequency and actual costs of swabbing after shut-in or curtailment including length of swab time required, actual cost figures showing the inability to continue operations without special relief or other data that would show that shut-in or curtailment would cause underground waste;
- (5)** if failure to obtain a hardship gas well classification would result in the well's premature abandonment, a calculation of the reserves that would be lost by the failure;
- (6)** the minimum sustainable producing rate as determined by a minimum flow or log-off test or documentation of well production history;
- (7)** a plat or map showing the proration unit dedicated to the well and the offsetting acreage's ownership;
- (8)** the name of the authorized transporter (and purchaser if different) of gas; and
- (9)** other data the applicant considers relevant.

B. The operator shall file an application for hardship gas well classification with the division's Santa Fe office and send a copy to the appropriate division district office.

C. In addition, the applicant shall notify the transporter and purchaser of gas from the well and all offset operators of the application and the requested minimum producing rate and shall so certify to the division in the application.

[19.15.22.9 NMAC - Rp, 19.15.6.409 NMAC, 12/1/08]

19.15.22.10 PROCESSING OF APPLICATIONS FOR HARDSHIP GAS WELLS:

A. The director may administratively approve an application for hardship gas well classification or the director may set the matter for notice and hearing.

B. The division shall list applications that the director is to approve administratively in the dockets of division or commission hearings that are issued from time to time.

(1) If no affected party files a written objection to the proposed administrative action within 20 days following the date of the hearing for which the docket is issued, the director may approve the application. If an affected party files an objection before or within the 20 day period, the division shall set the application for hearing unless the applicant withdraws the application.

(2) The director, on the director's own or upon an affected party's request, may require a minimum flow (log-off) test on the well for which the hardship classification is sought. The applicant shall give notice to the division, the gas transporter and purchaser and the requesting affected party of a minimum flow test conducted following the request, in order that the test may, at the option of the division or the parties, be witnessed. The applicant shall give notice of a minimum flow test conducted prior to submitting a hardship gas well application to the appropriate division district office, the gas transporter and purchaser and offset operators in order that the test may, at the option of the parties, be witnessed.

[19.15.22.10 NMAC - Rp, 19.15.6.410 NMAC, 12/1/08]

19.15.22.11 EMERGENCY HARDSHIP GAS WELL CLASSIFICATION:

A. The district supervisor of the appropriate division district office may grant emergency approval of a hardship gas well classification upon receipt of a copy of the application and attachments and a request by the applicant.

B. The district supervisor shall approve the emergency classification in writing and send a copy to the director, the applicant and the purchaser. The district supervisor may only give emergency approval for 90 days and on a one time only basis.

[19.15.22.11 NMAC - Rp, 19.15.6.411 NMAC, 12/1/08]

19.15.22.12 LIMITS ON HARDSHIP GAS WELL CLASSIFICATION:

A. No hardship gas well classification shall be retained for a period in excess of one year unless the applicant annually requests an extension of the classification and certifies that the well's condition has not substantially changed.

B. The division on its own motion may require that the applicant show cause why the division should not rescind approval of the hardship gas well classification in cases of suspected abuse, changed market conditions or other reason.

C. A well the division has classified as a hardship gas well located in a prorated gas pool shall accumulate over or under production. The division shall not shut in a well classified as a hardship gas well for reason of over production.

D. Affected parties may petition the division for hearing for the purpose of offsetting a ratable take advantage that the operator of a hardship gas well might gain.

[19.15.22.12 NMAC - Rp, 19.15.6.412 NMAC, 12/1/08]

PART 23: OFF LEASE TRANSPORT OF CRUDE OIL OR CONTAMINANTS

19.15.23.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.23.1 NMAC - N, 12/1/08]

19.15.23.2 SCOPE:

19.15.23 NMAC applies to persons engaged in the off-lease transport of oil or contaminants.

[19.15.23.2 NMAC - N, 12/1/08]

19.15.23.3 STATUTORY AUTHORITY:

19.15.23 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Section 70-2-6, Section 70-2-11 and Section 70-2-12, which authorizes the division to regulate the transport of oil or gas or their products through the use of certificates of clearance or tenders.

[19.15.23.3 NMAC - N, 12/1/08]

19.15.23.4 DURATION:

Permanent.

[19.15.23.4 NMAC - N, 12/1/08]

19.15.23.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.23.5 NMAC - N, 12/1/08]

19.15.23.6 OBJECTIVE:

To document the transport of oil or lease condensate or liquids that may contain oil, lease condensate, sediment oil or miscellaneous hydrocarbons to verify the location from where they were removed.

[19.15.23.6 NMAC - N, 12/1/08]

19.15.23.7 DEFINITIONS:

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

19.15.23.8 DOCUMENTATION REQUIRED:

A. Off-lease transportation of oil or lease condensate by motor vehicle shall be pursuant to an approved form C-104 and shall be accompanied by a run ticket or equivalent document. The documentation shall identify the transporter's name and address, the operator's name, the name of the lease or facility from which the oil was taken, the date of removal, the API gravity of the oil, the observed percentage of BS&W, the volume of oil or opening and closing tank gauges or meter readings and the driver's signature. The document shall provide space for recording of the lease number and for the signature of the operator or the operator's representative.

B. Off-lease transportation of oil or lease condensate by motor vehicle shall be accompanied by documentation sufficient to verify the location of the tanks or facility from which the transporter removed the liquid. The location may be shown on the run ticket or equivalent document or may be carried separately.

C. Off-lease transportation of liquids that may contain oil, lease condensate, sediment oil or miscellaneous hydrocarbons shall be accompanied by a run ticket, work order or equivalent document, *i.e.*, form C-117-A. The documentation shall identify the transporter's name and address, the operator's name, the name of the lease or facility from which the liquid was removed, the nature of the liquid removed including the observed percentage of liquid hydrocarbons, the volume or estimated volume of liquids and the destination.

D. Off-lease transportation of liquids that may contain oil, lease condensate, sediment oil or miscellaneous hydrocarbons shall be accompanied by documentation sufficient to verify the location of the tanks or facility from which the transporter removed the liquid. The location may be shown on the run ticket or equivalent document or may be carried separately.

E. The transporter shall carry the documentation required under Subsections A and B of 19.15.23.8 NMAC in the vehicle during transportation and produce the documentation for examination and inspection by a division employee, a state police officer or other law enforcement officer upon identification and request.

F. Except where the owner and the transporter are the same, one copy of the documentation shall be left at the facility from which the oil or other liquids were removed.

[19.15.23.8 NMAC - Rp, 19.15.10.804 NMAC, 12/1/08]

19.15.23.9 OFF-LEASE TRANSPORTATION OR STORAGE PRIOR TO MEASUREMENT:

A. The division may grant exceptions to the requirements of Subsection B of 19.15.12.9 NMAC administratively, without hearing, to permit production from one lease to be transported prior to measurement to another lease for storage on that lease when:

(1) the operator files an application for off-lease transportation or storage prior to measurement on form C-107-B with the division's Santa Fe office and sends one copy to the appropriate division district office;

(2) the production is from the same common source of supply;

(3) commingling of production from different leases will not result;

(4) there will be no intercommunication of the handling, separating, treating or storage facilities designated to each lease;

(5) parties owning working interests in the production to be transported off lease prior to measurement have been notified of the application in accordance with 19.15.4.12 NMAC and have consented in writing, or the applicant furnishes proof that the parties were notified by registered or certified mail of its intent to transport the production from one lease to another lease for storage prior to measurement, and after a period of 20 days following receipt of the application, no party has filed objection to the application with the division; and

(6) if state, federal or tribal lands are involved, the operator has notified the state land office or the BLM, as applicable.

B. The division may set for hearing an application for approval of off-lease transportation or storage prior to measurement, in which event notice of hearing shall be given, pursuant to 19.15.4.12 NMAC, to owners of working interests in the production to be transported off lease prior to measurement, and to such other owners as the division may direct.

[19.15.23.9 NMAC - Rp, 19.15.5.303 NMAC, 12/1/08]

PART 24: ILLEGAL SALE AND RATABLE TAKE

19.15.24.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.24.1 NMAC - Rp, 19.15.10.1 NMAC and 19.15.11.1 NMAC, 12/1/08]

19.15.24.2 SCOPE:

19.15.24 NMAC applies to those persons involved in the sale, purchase or transport of oil or gas.

[19.15.24.2 NMAC - Rp, 19.15.10.2 NMAC and 19.15.11.2 NMAC, 12/1/08]

19.15.24.3 STATUTORY AUTHORITY:

19.15.24 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Section 70-2-6, Section 70-2-11, Section 70-2-19 and Section 70-2-22, which authorizes the division to regulate the sale, purchase or acquisition, or the transportation, refining, processing or handling of oil or gas produced in excess of the amount allowed by statute, rule or commission or division order.

[19.15.24.3 NMAC - Rp, 19.15.10.3 NMAC and 19.15.11.3 NMAC, 12/1/08]

19.15.24.4 DURATION:

Permanent.

[19.15.24.4 NMAC - Rp, 19.15.10.4 NMAC and 19.15.11.4 NMAC, 12/1/08]

19.15.24.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.24.5 NMAC - Rp, 19.15.10.5 and 19.15.11.5 NMAC, 12/1/08]

19.15.24.6 OBJECTIVE:

To regulate oil and gas purchasing and transport.

[19.15.24.6 NMAC - Rp, 19.15.10.6 NMAC and 19.15.11.6 NMAC, 12/1/08]

19.15.24.7 DEFINITIONS

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

19.15.24.8 GAS SALES BY LESS THAN ONE HUNDRED PERCENT OF THE OWNERS IN A WELL:

When there are separate owners in a well and where an owner's gas is not being sold with the well's current production, the owner may, if necessary to protect the owner's correlative rights, petition the division for a hearing seeking appropriate relief.

[19.15.24.8 NMAC - Rp, 19.15.6.414 NMAC, 12/1/08]

19.15.24.9 ILLEGAL SALE PROHIBITED:

The sale, purchase or acquisition or the transporting, refining, processing or handling in any other way of oil or of gas in whole or in part (or a gas product so produced) produced in excess of the amount a statute or a division rule or order allows is prohibited.

[19.15.24.9 NMAC - Rp, 19.15.10.801 NMAC and 19.15.11.901 NMAC, 12/1/08]

19.15.24.10 RATABLE TAKE; COMMON PURCHASER OF OIL:

A. A person engaged in the purchase of oil to be transported through pipelines is a common purchaser of oil, and shall without discrimination in favor of one producer as against another in the same field, purchase oil tendered to it that has been lawfully produced in the vicinity of, or that may be reasonably reached by pipelines through which it is transporting oil or the pipelines' gathering branches or that may be delivered to the pipeline or the pipelines' gathering branches by truck or otherwise and shall fully perform all a common purchaser's duties.

B. If a common purchaser does not need all the oil lawfully produced within a field, or if it is unable to purchase all the oil, then it shall purchase from each producer in a field ratably, taking and purchasing the same quantity of oil from each well to the extent that each well is capable of producing its ratable portions. However, nothing in Subsection B of 19.15.24.10 NMAC requires more than one pipeline connection for each producing well.

C. In the event a common purchaser of oil is also a producer or is affiliated with a producer, directly or indirectly, the common purchaser shall not discriminate in favor of its own production or in favor of the production of an affiliated producer as against that of others and the common purchaser shall treat the oil produced by the common purchaser or the common purchaser's affiliate as that produced by another producer for the purposes of ratable taking.

D. It shall be unlawful for a common purchaser to unjustly or unreasonably discriminate as to the relative quantities of oil it purchases in various fields of the state; the division to determine the justice or reasonableness, shall consider the production and age of wells in the respective fields and all other factors. It is the intent of

19.15.24.10 NMAC that all fields be allowed to produce and market a just and equitable share of the oil produced and marketed in the state, insofar as the oil can be produced and marketed economically and without waste.

E. In order to preclude premature abandonment, the common purchaser within its purchasing area shall make 100 percent purchases from units of settled production producing 10 barrels or less daily of crude petroleum in lieu of ratable purchases or takings. However, where the common purchaser's takings are curtailed below 10 barrels per unit of crude petroleum daily, then the common purchaser shall purchase equally from all units within its purchasing area, regardless of their producing ability insofar as they are capable of producing.

[19.15.24.10 NMAC - Rp, 19.15.10.802 NMAC, 12/1/08]

19.15.24.11 PRODUCTION OF LIQUID HYDROCARBONS FROM GAS WELLS:

A. Liquid hydrocarbons produced incidental to the authorized production of gas from a well the division has classified as a gas well are legal production.

B. For purposes of 19.15.24.11 NMAC the division shall consider gas produced from a gas well to be authorized production with the following exceptions:

- (1)** when the operator produces the well without an approved form C-104, designating the gas transporter and the oil or condensate transporter for the well; or
- (2)** when the division has directed the operator to shut-in the well.

C. In the event the division directs an operator to shut-in a gas well, the operator and the division shall immediately notify both the gas transporter and oil transporter.

[19.15.24.11 NMAC - Rp, 19.15.10.803 NMAC, 12/1/08]

19.15.24.12 Ratable Take of Gas:

A. A person engaged in purchasing from one or more producers, gas produced from gas wells or casinghead gas produced from oil wells shall be a common purchaser of gas within each common supply source from which it purchases, and shall purchase gas lawfully produced from gas wells or casinghead gas produced from oil wells with which its gas transportation facilities are connected in the pool and other gas lawfully produced within the pool and tendered to a point on its gas transportation facilities.

B. The common purchaser shall make purchases without unreasonable discrimination in favor of one producer against another in the price paid, the quantities purchased, the bases of measurement or the gas transportation facilities afforded for gas of like quantity, quality and pressure available from the wells.

C. In the event the common purchaser is also a producer, the common purchaser shall not discriminate in favor of the common purchaser on production from gas wells or casinghead gas produced from oil wells in which the common purchaser has an interest, direct or indirect, as against other production from gas wells or casinghead gas produced from oil wells in the same pool. For the purposes of 19.15.24.12 NMAC, reasonable differences in prices paid or facilities afforded, or both, do not constitute unreasonable discrimination if the differences bear a fair relationship to differences in quality, quantity or pressure of the gas available or to the relative lengths of time during which the gas will be available to the purchaser. The provisions of Subsection C of 19.15.24.12 NMAC shall not apply to:

- (1)** a well or pool used for storage and withdrawal from storage of gas originally produced not in violation of division rules or orders;
- (2)** a person purchasing gas principally for use in the recovery or production of oil or gas; or
- (3)** a well that the division designates a hardship well.

D. A common purchaser taking gas produced from gas wells or casinghead gas produced from oil wells from a common source of supply shall take ratably under division rules and orders, concerning quantity, as the division or commission promulgates consistent with 19.15.24.12 NMAC. The division or commission, in promulgating the rules and orders may consider the gas' quality and the deliverability, the gas' pressure at the point of delivery, acreage attributable to the well, market requirements in the case of unprorated pools and other pertinent factors.

E. Nothing in 19.15.24.12 NMAC requires, directly or indirectly, a common purchaser to purchase gas of a quality, under a pressure or under other condition by reason of which the common purchaser cannot economically and satisfactorily use the gas by means of the common purchaser's gas transportation facilities then in service.

[19.15.24.12 NMAC - Rp, 19.15.11.902 NMAC, 12/1/08]

PART 25: PLUGGING AND ABANDONMENT OF WELLS

19.15.25.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.25.1 NMAC - Rp, 19.15.4.1 NMAC, 12/1/2008; A, 1/15/2019]

19.15.25.2 SCOPE:

19.15.25 NMAC applies to persons that operate oil or gas wells within New Mexico.

[19.15.25.2 NMAC - Rp, 19.15.4.2 NMAC, 12/1/2008]

19.15.25.3 STATUTORY AUTHORITY:

19.15.25 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-12 NMSA 1978, which authorizes the division to require dry or abandoned wells to be plugged so as to confine oil, gas or water in the strata in which they are found and to prevent them from escaping into other strata.

[19.15.25.3 NMAC - Rp, 19.15.4.3 NMAC, 12/1/2008]

19.15.25.4 DURATION:

Permanent.

[19.15.25.4 NMAC - Rp, 19.15.4.4 NMAC, 12/1/2008]

19.15.25.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.25.5 NMAC - Rp, 19.15.4.5 NMAC, 12/1/2008]

19.15.25.6 OBJECTIVE:

To establish requirements for properly abandoning and plugging wells drilled for oil or gas or service wells including seismic, core, exploration or injection wells or placing the wells in temporary abandonment in order to protect public health, fresh water and the environment.

[19.15.25.6 NMAC - Rp, 19.15.4.6 NMAC, 12/1/2008]

19.15.25.7 DEFINITIONS:

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

19.15.25.8 WELLS TO BE PROPERLY ABANDONED:

A. The operator of wells drilled for oil or gas or services wells including seismic, core, exploration or injection wells, whether cased or uncased, shall plug the wells as Subsection B of 19.15.25.8 NMAC requires.

B. The operator shall either properly plug and abandon a well or place the well in approved temporary abandonment in accordance with 19.15.25 NMAC within 90 days after:

- (1) a 60 day period following suspension of drilling operations;
- (2) a determination that a well is no longer usable for beneficial purposes; or
- (3) a period of one year in which a well has been continuously inactive.

[19.15.25.8 NMAC - Rp, 19.15.4.201 NMAC, 12/1/2008]

19.15.25.9 NOTICE OF PLUGGING:

A. The operator shall file notice of intention to plug with the division on form C-103 prior to commencing plugging operations. The notice shall provide all the information 19.15.7.14 NMAC requires including operator and well identification and proposed procedures for plugging the well.

B. In addition, the operator shall provide a well bore diagram showing the proposed plugging procedure.

C. The operator shall notify the division 24 hours prior to commencing plugging operations. In the case of a newly drilled dry hole, the operator may obtain verbal approval from the appropriate district supervisor or the district supervisor's representative of the plugging method and time operations are to begin. The operator shall file written notice in accordance with 19.15.25.11 NMAC with the division within 10 days after the district supervisor has given verbal approval.

[19.15.25.9 NMAC - Rp, 19.15.4.202 NMAC, 12/1/2008]

19.15.25.10 PLUGGING:

A. Before an operator abandons a well, the operator shall plug the well in a manner that permanently confines all oil, gas and water in the separate strata in which they are originally found. The operator may accomplish this by using mud-laden fluid, cement and plugs singly or in combination as approved by the division on the notice of intention to plug.

B. The operator shall mark the exact location of plugged and abandoned wells with a steel marker not less than four inches in diameter set in cement and extending at least four feet above mean ground level. The operator name, lease name and well number and location, including unit letter, section, township and range, shall be welded, stamped or otherwise permanently engraved into the marker's metal. A person shall not build permanent structures preventing access to the wellhead over a plugged and

abandoned well without the division's written approval. A person shall not remove a plugged and abandonment marker without the division's written approval.

C. The operator may use below-ground plugged and abandonment markers only with the division's written approval when an above-ground marker would interfere with agricultural endeavors. The below-ground marker shall have a steel plate welded onto the abandoned well's surface or conductor pipe and shall be at least three feet below the ground surface and of sufficient size so that all the information 19.15.16.8 NMAC requires can be stenciled into the steel or welded onto the steel plate's surface. The division may require a re-survey of the well location.

D. As soon as practical, but no later than one year after the completion of plugging operations, the operator shall:

- (1)** level the location;
- (2)** remove deadmen and other junk; and
- (3)** take other measures necessary or required by the division to restore the location to a safe and clean condition.

E. The operator shall close all pits and below-grade tanks pursuant to 19.15.17 NMAC.

F. Upon completion of plugging and clean up restoration operations as required, the operator shall contact the appropriate division district office to arrange for an inspection of the well and location.

[19.15.25.10 NMAC - Rp, 19.15.4.202 NMAC, 12/1/2008]

19.15.25.11 REPORTS FOR PLUGGING AND ABANDONMENT:

A. The operator shall file form C-105 as provided in 19.15.7.16 NMAC.

B. Within 30 days after completing required restoration work, the operator shall file with the division a record of the work done on form C-103 as provided in 19.15.7.14 NMAC.

C. The division shall not approve the record of plugging or release a bond until the operator has filed necessary reports and the division has inspected and approved the location.

[19.15.25.11 NMAC - Rp, 19.15.4.202 NMAC, 12/1/2008]

19.15.25.12 APPROVED TEMPORARY ABANDONMENT:

The division may place a well in approved temporary abandonment for a period of up to five years. Prior to the expiration of an approved temporary abandonment the operator shall return the well to beneficial use under a plan the division approves, permanently plug and abandon the well and restore and remediate the location or apply for a new approval to temporarily abandon the well. An operator is limited to placing the following numbers of wells in approved temporary abandonment:

- A.** one well, if the operator operates between one and five wells; or
- B.** one-third of all wells (rounded to the nearest whole number), if the operator operates more than five wells.

[19.15.25.12 NMAC - Rp, 19.15.4.203 NMAC, 12/1/2008; A, 1/15/2019]

19.15.25.13 REQUEST FOR APPROVAL AND PERMIT FOR APPROVED TEMPORARY ABANDONMENT:

A. An operator seeking approval for approved temporary abandonment shall submit on form C-103 a notice of intent to seek approved temporary abandonment for the well describing the proposed temporary abandonment procedure the operator will use. The operator shall not commence work until the division has approved the request. The operator shall give 24 hours' notice to the appropriate division district office before beginning work.

B. The division shall not approve a permit for approved temporary abandonment until the operator furnishes evidence demonstrating that the well's casing and cementing are mechanically and physically sound and in such condition as to prevent:

- (1)** damage to the producing zone;
- (2)** migration of hydrocarbons or water;
- (3)** the contamination of fresh water or other natural resources; and
- (4)** the leakage of a substance at the surface.

C. The operator shall demonstrate both internal and external mechanical integrity pursuant to Subsection A of 19.15.25.14 NMAC.

D. Upon successful completion of the work on the temporarily abandoned well, the operator shall submit a request for approved temporary abandonment to the appropriate division district office on form C-103 together with other information Subsection E of 19.15.7.14 NMAC requires.

E. The division shall not approve a permit for approved temporary abandonment until the operator provides financial assurance for the well that complies with Subsection D of 19.15.8.9 NMAC.

F. The division shall specify the permit's expiration date, which shall be not more than five years from the date of approval.

[19.15.25.13 NMAC - Rp, 19.15.4.203 NMAC, 12/1/2008; A, 1/15/2019]

19.15.25.14 DEMONSTRATING MECHANICAL INTEGRITY:

A. An operator may use the following methods of demonstrating internal casing integrity for wells to be placed in approved temporary abandonment:

(1) the operator may set a cast iron bridge plug within 100 feet of uppermost perforations or production casing shoe, load the casing with inert fluid and pressure test to 500 psi surface pressure with a pressure drop of not more than 10 percent over a 30 minute period;

(2) the operator may run a retrievable bridge plug or packer to within 100 feet of uppermost perforations or production casing shoe, and test the well to 500 psi surface pressure for 30 minutes with a pressure drop of not greater than 10 percent over a 30 minute period; or

(3) the operator may demonstrate that the well has been completed for less than five years and has not been connected to a pipeline.

B. During the testing described in Paragraphs (1) and (2) of Subsection A of 19.15.25.14 NMAC the operator shall:

(1) open all casing valves during the internal pressure tests and report a flow or pressure change occurring immediately before, during or immediately after the 30 minute pressure test;

(2) top off the casing with inert fluid prior to leaving the location;

(3) report flow during the test in Paragraph (2) of Subsection A of 19.15.25.14 NMAC to the appropriate division district office prior to completion of the temporary abandonment operations; the division may require remediation of the flow prior to approving the well's temporary abandonment.

C. An operator may use any method approved by the EPA in 40 C.F.R. section 146.8(c) to demonstrate external casing and cement integrity for wells to be placed in approved temporary abandonment.

D. The division shall not accept mechanical integrity tests or logs conducted more than 12 months prior to submittal.

E. The operator shall record mechanical integrity tests on a chart recorder with a maximum two hour clock and maximum 1000 pound spring, which has been calibrated within the six months prior to conducting the test. Witnesses to the test shall sign the chart. The operator shall submit the chart with form C-103 requesting approved temporary abandonment.

F. The division may approve other testing methods the operator proposes if the operator demonstrates that the test satisfies the requirements of Subsection B of 19.15.25.13 NMAC.

[19.15.25.14 NMAC - Rp, 19.15.4.203 NMAC, 12/1/2008]

19.15.25.15 WELLS TO BE USED FOR FRESH WATER:

A. When a well to be plugged may safely be used as a fresh water well and the landowner agrees to take over the well for that purpose, the operator does not need to plug the well above the sealing plug set below the fresh water formation.

B. The operator shall comply with other requirements contained in 19.15.25.9 NMAC through 19.15.25.11 NMAC regarding plugging, including surface restoration and reporting requirements.

C. Upon completion of plugging operations, the operator shall file with the division a written agreement signed by the landowner whereby the landowner agrees to assume responsibility for the well. Upon the filing of this agreement and division approval of well abandonment operations, the operator is no longer responsible for the well, and the division may release bonds on the well.

[19.15.25.15 NMAC - Rp, 19.15.4.204 NMAC, 12/1/2008]

PART 26: INJECTION

19.15.26.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.26.1 NMAC - Rp, 19.15.9.1 NMAC, 12/1/2008; A, 12/27/2018]

19.15.26.2 SCOPE:

19.15.26 NMAC applies to persons constructing, operating or closing an injection well under the Oil and Gas Act. 19.15.26 NMAC does not apply to other classes of injection

wells regulated under the Water Quality Act, the Geothermal Resources Development Act or the Surface Mining Act.

[19.15.26.2 NMAC - Rp, 19.15.9.2 NMAC, 12/1/2008; A, 12/27/2018]

19.15.26.3 STATUTORY AUTHORITY:

19.15.26 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-6, Section 70-2-11 and Paragraphs (13), (14), (15), (21) and (22) of Subsection B of Section 70-2-12 NMSA 1978.

[19.15.26.3 NMAC - Rp, 19.15.9.3 NMAC, 12/1/2008; A, 12/27/2018]

19.15.26.4 DURATION:

Permanent.

[19.15.26.4 NMAC - Rp, 19.15.9.4 NMAC, 12/1/08]

[19.15.26.5 NMAC - Rp, 19.15.9.5 NMAC, 12/1/08]

19.15.26.6 OBJECTIVE:

To regulate injection wells under the Oil and Gas Act and to maintain primary enforcement authority for the Safe Drinking Water Act (42 U.S.C. 300f et seq.) Underground Injection Control (UIC) program for UIC Class II wells.

[19.15.26.6 NMAC - Rp, 19.15.9.6 NMAC, 12/1/2008; A, 12/27/2018]

19.15.26.7 DEFINITIONS:

"Fluid" means any material or substance which flows or moves whether in a semisolid, liquid, sludge, gas or any other form or state.

19.15.26.7 NMAC - Rp, 19.15.9.701 NMAC, 12/1/2008; A, 12/27/2018]

19.15.26.8 INJECTION OF FLUIDS INTO RESERVOIRS:

A. Permit for injection required

(1) A permit is required under 19.15.26 NMAC for any injection wells that inject:

(a) produced water or other fluids that are brought to the surface in connection with natural gas storage operations or conventional oil or natural gas production and may be commingled with waste waters from gas plants that are an integral part of production operations, unless those waters are classified as a hazardous waste at the time of injection;

(b) fluids for enhanced recovery of oil or natural gas; and

(c) fluids for storage of hydrocarbons that are liquid at standard temperature and pressure.

(2) The division shall grant a permit for injection under 19.15.26.8 NMAC only to an operator who is in compliance with Subsection A of 19.15.5.9 NMAC. The division may revoke a permit for injection issued under 19.15.26.8 NMAC after notice and hearing if the operator is not in compliance with Subsection A of 19.15.5.9 NMAC.

B. Method of making application.

(1) The operator shall apply for authority to construct and operate an injection well by submitting form C-108 complete with all attachments to the division.

(2) The applicant shall furnish, by certified or registered mail, a copy of the application to each owner of the land surface on which each injection or disposal well is to be located and to each leasehold operator and other affected persons, as defined in Subsection A of 19.15.2.7 NMAC, within any tract wholly or partially contained within one-half mile of the well.

C. Administrative approval.

(1) If the application is for administrative approval rather than for a hearing, it shall be accompanied by a copy of a legal notice the applicant published in a newspaper of general circulation in the county in which the proposed injection well is located. The legal notice shall include:

(a) the applicant's name, address, phone number and contact party;

(b) the injection well's intended purpose, with the exact location of single wells or the section, township and range location of multiple wells;

(c) the formation name and depth with expected maximum injection rates and pressures; and

(d) a notation that interested parties shall file objections or requests for hearing with the division within 15 days.

(2) The division shall not approve an application for administrative approval until 15 days following the division's receipt of form C-108 complete with all attachments including evidence of mailing as required under Paragraph (2) of Subsection B of 19.15.26.8 NMAC and proof of publication as required by Paragraph (1) of Subsection C of 19.15.26.8 NMAC.

(3) If the division does not receive an objection within the 15-day period, and a hearing is not otherwise required, the division may approve the application administratively.

D. Hearings. If a written objection to an application for administrative approval of an injection well is filed within 15 days after receipt of a complete application, if 19.15.26.8 NMAC requires a hearing or if the director deems a hearing advisable, the division shall set the application for hearing and give notice of the hearing.

E. Produced water disposal wells.

(1) The director may grant an application for a produced water disposal well administratively, without hearing, only when the waters to be disposed of are mineralized to such a degree as to be unfit for domestic, stock, irrigation or other general use and when the waters are to be disposed of into a formation older than Triassic (Lea county only) and the division receives no objections pursuant to Subsection C of 19.15.26.8 NMAC.

(2) The division shall not permit disposal into zones containing waters having total dissolved solids concentrations of 10,000 mg/l or less except after public notice and hearing, provided that the division may, by order issued after public notice and hearing, establish exempted aquifers for such zones where the division may administratively approve the injection.

(3) Notwithstanding the provisions of Paragraph (2) of Subsection E of 19.15.26.8 NMAC, the director may authorize disposal into such zones administratively if the waters to be disposed of are of higher quality than the native water in the disposal zone.

F. Pressure maintenance, secondary recovery and enhanced oil recovery injection projects.

(1) The division shall set applications for establishment of pressure maintenance, secondary recovery and enhanced oil recovery injection projects for hearing. The division shall fix the project area and the allowable formula for an injection project on an individual basis after notice and hearing.

(2) The project area of an injection project shall comprise the spacing or proration units a given operator owns or operates upon which injection wells are located plus spacing or proration units the same operator owns or operates that directly or

diagonally offset the injection tracts and have producing wells completed on them in the same formation; provided however, that the division may include in the project area additional spacing or proration units not directly or diagonally offsetting an injection tract if, after notice and hearing, the operator establishes that the additional units have wells completed on the unit that have experienced a substantial response to water injection.

(3) The allowable the division assigns to wells in an injection project area shall equal the wells' ability to produce and is not subject to the depth bracket allowable for the pool or to the market demand percentage factor.

(4) Nothing in Subsection F of 19.15.26.8 NMAC shall prohibit the division's assignment of special allowables to wells in buffer zones after notice and hearing. The division may assign special allowables in the limited instances where it is established at a hearing that it is imperative for the protection of correlative rights to do so.

(5) The division may authorize the expansion of injection projects and the placement of additional wells on injection after hearing or administratively, subject to the notice requirements of Subsection B of 19.15.26.8 NMAC.

(6) The director may grant an exception to the hearing requirements of Subsection A of 19.15.26.8 NMAC for conversion to injection of additional wells provided that the wells are necessary to develop or maintain thorough and efficient injection operations for an authorized project and provided that the division does not receive an objection pursuant to Subsection C of 19.15.26.8 NMAC.

(7) An established injection project shall have only one designated operator. The division shall set for hearing an application for exception.

G. Storage wells.

(1) The director may grant administratively, without hearing, an application for the underground storage of liquefied petroleum gas or liquid hydrocarbons in secure caverns within massive salt beds, provided the applicant has complied with the notice provisions of Subsection B of 19.15.26.8 NMAC and the division receives no objections pursuant to Subsection C of 19.15.26.8 NMAC.

(2) In addition to the filing requirements of Subsection B of 19.15.26.8 NMAC, the applicant for approval of a storage well under Subsection G of 19.15.26.8 NMAC shall file the following:

(a) with the director, financial assurance in accordance with the provisions of 19.5.8 NMAC; and

(b) with the appropriate division district office:

(i) form C-101;

(ii) form C-102; and

(iii) form C-105.

[19.15.26.8 NMAC - Rp, 19.15.9.701 NMAC, 12/1/2008; A, 12/27/2018]

19.15.26.9 CASING AND CEMENTING OF INJECTION WELLS:

The operator of a well used for injection of gas, air, water or other medium into a formation shall case the well with safe and adequate casing or tubing so as to prevent leakage, and set and cement the casing or tubing to prevent the movement of formation or injected fluid from the injection zone into another zone or to the surface around the outside of a casing string.

[19.15.26.9 NMAC - Rp, 19.15.9.702 NMAC, 12/1/08]

19.15.26.10 OPERATION AND MAINTENANCE:

A. The operator of an injection well shall equip, operate, monitor and maintain the well to facilitate periodic testing and to assure continued mechanical integrity that will result in no significant leak in the tubular goods and packing materials used and no significant fluid movement through vertical channels adjacent to the well bore.

B. The operator of an injection project shall operate and maintain at all times the injection project, including injection wells, producing wells and related surface facilities, in such a manner as will confine the injected fluids to the interval or intervals approved and prevent surface damage or pollution resulting from leaks, breaks or spills.

C. The operator shall report the failure of an injection well, producing well or surface facility, which failure may endanger underground sources of drinking water, to the division under the "immediate notification" procedure of 19.15.29.10 NMAC

D. The operator shall report injection well or producing well failures requiring casing repair or cementing to the division prior to commencement of workover operations.

E. The division may restrict the injected volume and pressure for, or shut-in, injection wells or projects that have exhibited failure to confine injected fluids to the authorized injection zone or zones, until the operator has identified and corrected the failure.

[19.15.26.10 NMAC - Rp 19.15.9.703 NMAC, 12/1/08]

19.15.26.11 TESTING, MONITORING, STEP-RATE TESTS, NOTICE TO THE DIVISION, REQUESTS FOR PRESSURE INCREASES:

A. Testing.

(1) Prior to commencement of injection and any time the operator pulls the tubing or reseats the packer, the operator shall test the well to assure the integrity of the casing and the tubing and packer, if used, including pressure testing of the casing-tubing annulus to a minimum of 300 psi for 30 minutes or such other pressure or time as the appropriate district supervisor may approve. The operator shall use a pressure recorder and submit copies of the chart to the appropriate division district office within 30 days following the test date.

(2) At least once every five years thereafter, the operator shall test an injection well to assure its continued mechanical integrity. Tests demonstrating continued mechanical integrity shall include the following:

(a) measurement of annular pressures in a well injecting at positive pressure under a packer or a balanced fluid seal;

(b) pressure testing of the casing-tubing annulus for a well injecting under vacuum conditions; or

(c) other tests that are demonstrably effective and that the division may approve for use.

(3) Notwithstanding the test procedures outlined in Paragraphs (1) and (2) of Subsection A of 19.15.26.11 NMAC, the division may require the operator to conduct more comprehensive testing of the injection well when deemed advisable, including the use of tracer surveys, noise logs, temperature logs or other test procedures or devices.

(4) In addition, the division may order that the operator conduct special tests prior to the expiration of five years if the division believes conditions so warrant. The division shall consider a special test that demonstrates a well's continued mechanical integrity the equivalent of an initial test for test scheduling purposes, and the regular five-year testing schedule shall be applicable thereafter.

(5) The operator shall advise the division of the date and time any initial, five-year or special tests are to be commenced so the division may witness the tests.

B. Monitoring. The operator shall equip an injection well so that the injection pressure and annular pressure may be determined at the wellhead and the injected volume may be determined at least monthly.

C. Step-rate tests, notice to the division, requests for injection pressure limit increases.

(1) Whenever an operator conducts a step-rate test for the purpose of increasing an authorized injection or disposal well pressure limit, the operator shall give notice of the date and time of the test in advance to the appropriate division district office.

(2) The operator shall submit copies of injection or disposal well pressure-limit increase applications and supporting documentation to the division's Santa Fe office and to the appropriate division district office.

[19.15.26.11 NMAC - Rp, 19.15.9.704 NMAC, 12/1/08]

19.15.26.12 COMMENCEMENT, DISCONTINUANCE AND ABANDONMENT OF INJECTION OPERATIONS:

A. The following provisions apply to injection projects, storage projects, produced water disposal wells and special purpose injection wells.

B. Notice of commencement and discontinuance.

(1) Immediately upon the commencement of injection operations in a well, the operator shall notify the division of the date the operations began.

(2) Within 30 days after permanent cessation of gas or liquefied petroleum gas storage operations or within 30 days after discontinuance of injection operations into any other well, the operator shall notify the division of the date of the discontinuance and the reasons for the discontinuance.

(3) Before temporarily abandoning or plugging an injection well, the operator shall obtain approval from the appropriate division district office in the same manner as when temporarily abandoning or plugging oil and gas wells or dry holes.

C. Abandonment of injection operations.

(1) Whenever there is a continuous one-year period of non-injection into all wells in an injection or storage project or into a produced water disposal well or special purpose injection well, the division shall consider the project or well abandoned, and the authority for injection shall automatically terminate ipso facto.

(2) For good cause shown, the director may grant an administrative extension or extensions of injection authority as an exception to Paragraph (1) of Subsection C of 19.15.26.12 NMAC, provided that any such extension may be granted only prior to the end of one year or continuous non-injection, or during the term of a previously granted extension.

[19.15.26.12 NMAC - Rp, 19.15.9.705 NMAC, 12/1/2008; A, 12/27/2018]

19.15.26.13 RECORDS AND REPORTS:

A. The operator of an injection well or project for secondary or other enhanced recovery, pressure maintenance, gas storage, produced water disposal or injection of other fluids shall keep accurate records and shall report monthly to the division gas or

fluid volumes injected, stored or produced as required on the appropriate form listed below:

- (1) secondary or other enhanced recovery on form C-115;
- (2) pressure maintenance on form C-115 and as otherwise prescribed by the division;
- (3) produced water disposal not regulated by 19.15.36 NMAC on form C-115;
- (4) produced water disposal at surface waste management facilities regulated by 19.15.36 NMAC on form C-120-A;
- (5) gas storage on form C-131-A; and
- (6) injection of other fluids on a division-prescribed form.

B. The operator of a liquefied petroleum gas storage project shall report to the division annually on form C-131-B.

[19.15.26.13 NMAC - Rp, 19.15.9.706 NMAC, 12/1/2008; A, 12/27/2018]

19.15.26.14 RECLASSIFICATION OF WELLS:

The director may reclassify an injection well from a category defined in Subsection B of 19.15.26.8 NMAC to another category without notice and hearing upon the request and proper showing by the injection well's operator.

[19.15.26.14 NMAC - Rp, 19.15.9.707 NMAC, 12/1/08]

19.15.26.15 TRANSFER OF AUTHORITY TO INJECT:

A. Authority to inject granted under a division order is not transferable except upon division approval. An operator may obtain approval of transfer of authority to inject by filing completed form C-145.

B. The division may require the operator to demonstrate mechanical integrity of each injection well that will be transferred prior to approving transfer of authority to inject.

[19.15.26.15 NMAC - Rp, 19.15.9.708 NMAC, 12/1/08]

PART 27: VENTING AND FLARING OF NATURAL GAS

19.15.27.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.27.1 NMAC – N, 05/25/2021]

19.15.27.2 SCOPE:

19.15.27 NMAC applies to persons engaged in oil and gas exploration and production within New Mexico.

[19.15.27.2 NMAC – N, 05/25/2021]

19.15.27.3 STATUTORY AUTHORITY:

19.15.27 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-6, Section 70-2-11 and Section 70-2-12 NMSA 1978.

[19.15.27.3 NMAC – N, 05/25/2021]

19.15.27.4 DURATION:

Permanent.

[19.15.27.4 NMAC – N, 05/25/2021]

19.15.27.5 EFFECTIVE DATE:

May 25, 2021, unless a later date is cited at the end of a section.

[19.15.27.5 NMAC – N, 05/25/2021]

19.15.27.6 OBJECTIVE:

To regulate the venting and flaring of natural gas from wells and production equipment and facilities to prevent waste and protect correlative rights, public health, and the environment.

[19.15.27.6 NMAC – N, 05/25/2021]

19.15.27.7 DEFINITIONS:

Terms shall have the meaning specified in 19.15.2 NMAC except as specified below.

A. "ALARM" means advanced leak and repair monitoring technology for detecting natural gas leaks or releases that is not required by applicable state or federal law, rule, or regulation, and which the division has approved as eligible to earn a credit against the reported volume of lost natural gas pursuant to Paragraph (4) of Subsection B of 19.15.27.9 NMAC.

B. "Average daily well production" means the number derived by dividing the total volume of natural gas produced from a single well in the preceding 12 months by the number of days that natural gas was produced from the well during the same period.

C. "Average daily facility production" means, for a facility receiving production from two or more wells, the number derived by dividing the total volume of natural gas produced from all wells at the facility during the preceding 12 months by the number of days, not to exceed 365, that natural gas was produced from one or more wells during the same period.

D. "AVO" means audio, visual and olfactory.

E. "Completion operations" means the period that begins with the initial perforation of the well in the completed interval and concludes at the end of separation flowback.

F. "Drilling operations" means the period that begins when a well is spud and concludes when casing and cementing has been completed and casing slips have been set to install the tubing head.

G. "Exploratory well" means a well located in a spacing unit the closest boundary of which is two miles or more from:

(1) the outer boundary of a defined pool that has produced oil or gas from the formation to which the well is or will be completed; and

(2) an existing gathering pipeline as defined in 19.15.28 NMAC.

H. "Emergency" means a temporary, infrequent, and unavoidable event in which the loss of natural gas is uncontrollable or necessary to avoid a risk of an immediate and substantial adverse impact on safety, public health, or the environment, but does not include an event arising from or related to:

(1) the operator's failure to install appropriate equipment of sufficient capacity to accommodate the anticipated or actual rate and pressure of production;

(2) except as provided in Subparagraph (4), the operator's failure to limit production when the production rate exceeds the capacity of the related equipment or natural gas gathering system as defined in 19.15.28 NMAC, or exceeds the sales contract volume of natural gas;

(3) scheduled maintenance;

(4) venting or flaring of natural gas for more than eight hours after notification that is caused by an emergency, unscheduled maintenance, or malfunction of a natural gas gathering system;

(5) the operator's negligence;

(6) recurring equipment failure 4 or more times within a single reporting area pursuant to Subsection A of 19.15.27.9 experienced by the operator within the preceding 30 days; or

(7) Four or more emergencies within a single reporting area, pursuant to Subsection A of 19.15.27.9 NMAC, experienced by the operator within the preceding 30 days, unless the division determines the operator could not have reasonably anticipated the current event and it was beyond the operator's control.

I. **"Flare" or "Flaring"** means the controlled combustion of natural gas in a device designed for that purpose.

J. **"Flare stack"** means a device equipped with a burner used to flare natural gas.

K. **"Gas-to-oil ratio (GOR)"** for purposes of 19.15.27 NMAC means the ratio of natural gas to oil in the production stream expressed in standard cubic feet of natural gas per barrel of oil.

L. **"Initial flowback"** means the period during completion operations that begins with the onset of flowback and concludes when it is technically feasible for a separator to function.

M. **"Malfunction"** means a sudden, unavoidable failure or breakdown of equipment beyond the reasonable control of the operator that substantially disrupts operations, but does not include a failure or breakdown that is caused entirely or in part by poor maintenance, careless operation, or other preventable equipment failure or breakdown.

N. **"N₂"** means nitrogen gas.

O. **"Natural gas"** means a gaseous mixture of hydrocarbon compounds, primarily composed of methane, and includes both casinghead gas and gas as those terms are defined in 19.15.2 NMAC.

P. **"Production operations"** means the period that begins on the earlier of 31 days following the commencement of initial flowback or following completion of separation flowback and concludes when the well is plugged and abandoned.

Q. **"Producing in paying quantities"** mean the production of a quantity of oil and gas that yields revenue in excess of operating expenses.

R. "Separation flowback" means the period during completion operations that begins when it is technically feasible for a separator to function and concludes no later than 30 days after the commencement of initial flowback.

S. "Vent" or "Venting" means the release of uncombusted natural gas to the atmosphere.

[19.15.27.7 NMAC – N, 05/25/2021]

19.15.27.8 VENTING AND FLARING OF NATURAL GAS:

A. Venting or flaring of natural gas during drilling, completion, or production operations that constitutes waste as defined in 19.15.2 NMAC is prohibited. The operator has a general duty to maximize the recovery of natural gas by minimizing the waste of natural gas through venting and flaring. During drilling, completion and production operations, the operator may vent or flare natural gas only as authorized in Subsections B, C and D of 19.15.27.8 NMAC. In all circumstances, the operator shall flare rather than vent natural gas except when flaring is technically infeasible or would pose a risk to safe operations or personnel safety, and venting is a safer alternative than flaring.

B. Venting and flaring during drilling operations.

(1) The operator shall capture or combust natural gas if technically feasible using best industry practices and control technologies.

(2) A properly-sized flare stack shall be located at a minimum of 100 feet from the nearest surface hole location unless otherwise approved by the division.

(3) In an emergency or malfunction, the operator may vent natural gas to avoid a risk of an immediate and substantial adverse impact on safety, public health, or the environment. The operator shall report natural gas vented or flared during an emergency or malfunction to the division pursuant to Paragraph (1) of Subsection G of 19.15.27.8 NMAC.

C. Venting and flaring during completion or recompletion operations.

(1) During initial flowback, the operator shall route flowback fluids into a completion or storage tank and, if technically feasible under the applicable well conditions, flare rather than vent and commence operation of a separator as soon as it is technically feasible for a separator to function.

(2) During separation flowback, the operator shall capture and route natural gas from the separation equipment:

(a) to a gas flowline or collection system, reinject into the well, or use on-site as a fuel source or other purpose that a purchased fuel or raw material would serve; or

(b) to a flare if routing the natural gas to a gas flowline or collection system, reinjecting it into the well, or using it on-site as a fuel source or other purpose that a purchased fuel or raw material would serve would pose a risk to safe operation or personnel safety.

(3) If natural gas does not meet gathering pipeline quality specifications, the operator may flare the natural gas for 60 days or until the natural gas meets the pipeline quality specifications, whichever is sooner, provided that:

(a) a properly-sized flare stack is equipped with an automatic igniter or continuous pilot;

(b) the operator analyzes natural gas samples twice per week;

(c) the operator routes the natural gas into a gathering pipeline as soon as the pipeline specifications are met; and

(d) the operator provides the pipeline specifications and natural gas analyses to the division upon request.

D. Venting and flaring during production operations. The operator shall not vent or flare natural gas except:

(1) during an emergency or malfunction;

(2) to unload or clean-up liquid holdup in a well to atmospheric pressure, provided

(a) the operator does not vent after the well achieves a stabilized rate and pressure;

(b) for liquids unloading by manual purging, the operator remains present on-site until the end of unloading or posts at the well site the contact information of the personnel conducting the liquids unloading operation and ensures that personnel remains within 30 minutes' drive time of the well being unloaded until the end of unloading, takes all reasonable actions to achieve a stabilized rate and pressure at the earliest practical time and takes reasonable actions to minimize venting to the maximum extent practicable;

(c) for a well equipped with a plunger lift system or an automated control system, the operator optimizes the system to minimize the venting of natural gas; or

(d) during downhole well maintenance, only when the operator uses a workover rig, swabbing rig, coiled tubing unit or similar specialty equipment and minimizes the venting of natural gas to the extent that it does not pose a risk to safe operations and personnel safety and is consistent with best management practices;

(3) during the first 12 months of production from an exploratory well, or as extended by the division for good cause shown, provided:

(a) the operator proposes and the division approves the well as an exploratory well;

(b) the operator is in compliance with its statewide gas capture requirements; and

(c) within 15 days of determining an exploratory well is capable of producing in paying quantities, the operator submits an updated form C-129 to the division, including a natural gas management plan and timeline for connecting the well to a natural gas gathering system or as otherwise approved by the division; or

(4) during the following activities unless prohibited by applicable state or federal law, rule, or regulation for the emission of hydrocarbons and volatile organic compounds:

(a) gauging or sampling a storage tank or other low-pressure production vessel;

(b) loading out liquids from a storage tank or other low-pressure production vessel to a transport vehicle;

(c) repair and maintenance, including blowing down and depressurizing production equipment to perform repair and maintenance;

(d) normal operation of a gas-activated pneumatic controller or pump;

(e) normal operation of a storage tank or other low-pressure production vessel, but not including venting from a thief hatch that is not properly closed or maintained on an established schedule;

(f) normal operation of dehydration units and amine treatment units;

(g) normal operations of compressors, compressor engines, and turbines;

(h) normal operations of valves, flanges and connectors that is not the result of inadequate equipment design or maintenance;

(i) a bradenhead test;

- (j) a packer leakage test;
- (k) a production test lasting less than 24 hours unless the division requires or approves a longer test period;
- (l) when natural gas does not meet the gathering pipeline specifications, provided the operator analyzes natural gas samples twice per week to determine whether the specifications have been achieved, routes the natural gas into a gathering pipeline as soon as the pipeline specifications are met and provides the pipeline specifications and natural gas analyses to the division upon request; or
- (m) Commissioning of pipelines, equipment, or facilities only for as long as necessary to purge introduced impurities from the pipeline or equipment.

E. Performance standards.

- (1) The operator shall design completion and production separation equipment and storage tanks for maximum anticipated throughput and pressure to minimize waste.
- (2) The operator of a permanent storage tank associated with production operations that is routed to a flare or control device installed after May 25, 2021, shall equip the storage tank with an automatic gauging system that reduces the venting of natural gas.
- (3) The operator shall combust natural gas in a flare stack that is properly sized and designed to ensure proper combustion efficiency.
 - (a) A flare stack installed or replaced after May 25, 2021, shall be equipped with an automatic ignitor or continuous pilot.
 - (b) A flare stack installed before May 25, 2021, shall be retrofitted with an automatic ignitor, continuous pilot, or technology that alerts the operator that the flare may have malfunctioned no later than 18 months after May 25, 2021.
 - (c) A flare stack located at a well or facility, with an average daily production of equal to or less than 60,000 cubic feet of natural gas shall be equipped with an automatic ignitor or continuous pilot if the flare stack is replaced after May 25, 2021.
- (4) A flare stack constructed after May 25, 2021, shall be securely anchored and located at least 100 feet from the well and storage tanks unless otherwise approved by the division.
- (5) The operator shall conduct an AVO inspection on the frequency specified below to confirm that all production equipment is operating properly and there are no leaks or releases except as allowed in Subsection D of 19.15.27.8 NMAC.

(a) During an AVO inspection the operator shall inspect all components, including flare stacks, thief hatches, closed vent systems, pumps, compressors, pressure relief devices, valves, lines, flanges, connectors, and associated piping to identify defects, leaks, and releases by:

- (i)** a comprehensive external visual inspection;
- (ii)** listening for pressure and liquid leaks; and
- (iii)** smelling for unusual and strong odors.

(b) The operator shall conduct an AVO inspection weekly:

- (i)** during the first year of production; and
- (ii)** on a well or facility with an average daily production greater than 60,000 cubic feet of natural gas.

(c) The operator shall conduct an AVO inspection weekly if the operator is on site, and in no case less than once per calendar month with at least 20 calendar days between inspections:

- (i)** on a well or facility with an average daily production equal to or less than 60,000 cubic feet of natural gas; and
- (ii)** on shut-in, temporarily abandoned, or inactive wells.

(d) The operator shall make and keep a record of an AVO inspection for not less than five years and make such record available for inspection by the division upon request.

(6) Subject to the division's prior written approval, the operator may use a remote or automated monitoring technology to detect leaks and releases in lieu of an AVO inspection.

(7) for facilities constructed after May 25, 2021, facilities shall be designed to minimize waste;

(8) Operators have an obligation to minimize waste and shall resolve emergencies as quickly and safely as is feasible.

F. Measurement or estimation of vented and flared natural gas.

(1) The operator shall measure or estimate the volume of natural gas that it vents, flares, or beneficially uses during drilling, completion, and production operations regardless of the reason or authorization for such venting or flaring.

(2) The operator shall install equipment to measure the volume of natural gas flared from existing process piping or a flowline piped from equipment such as high pressure separators, heater treaters, or vapor recovery units associated with a well or facility associated with a well authorized by an APD issued after May 25, 2021, that has an average daily production greater than 60,000 cubic feet of natural gas.

(3) Measuring equipment shall conform to an industry standard such as American Petroleum Institute (API) Manual of Petroleum Measurement Standards (MPMS) Chapter 14.10 Measurement of Flow to Flares.

(4) Measuring equipment shall not be designed or equipped with a manifold that allows the diversion of natural gas around the metering element except for the sole purpose of inspecting and servicing the measurement equipment.

(5) If metering is not practicable due to circumstances such as low flow rate or low pressure venting and flaring, the operator may estimate the volume of vented or flared natural gas using a methodology that can be independently verified.

(6) For a well that does not require measuring equipment, the operator shall estimate the volume of vented and flared natural gas based on the result of an annual GOR test for that well reported on form C-116 to allow the division to independently verify the volume and rate of the flared natural gas.

(7) The operator shall install measuring equipment whenever the division determines that metering is practicable or the existing measuring equipment or GOR test is not sufficient to measure the volume of vented and flared natural gas.

G. Reporting of vented or flared natural gas.

(1) Venting or flaring caused by an emergency, a malfunction or of long duration.

(a) The operator shall notify the division of venting or flaring that exceeds 50 MCF in volume and either results from an emergency or malfunction, or lasts eight hours or more cumulatively within any 24-hour period from a single event by filing a form C-129 in lieu of a C-141, except as provided by Subparagraph (d) of Paragraph (1) of Subsection G of 19.15.27.8 NMAC, with the division as follows:

(i) for venting or flaring that equals or exceeds 50 MCF but less than 500 MCF from a single event, notify the division in writing by filing a form C-129 no later than 15 days following discovery or commencement of venting or flaring;

(ii) for venting or flaring that equals or exceeds 500 MCF or otherwise qualifies as a major release as defined in 19.15.29.7 NMAC from a single event, notify the division verbally or by e-mail as soon as possible and no later than 24 hours following discovery or commencement of venting or flaring and provide the information

required in form C-129. No later than 15 days following the discovery or commencement of venting or flaring, the operator shall file a form C-129 that verifies, updates, or corrects the verbal or e-mail notification; and

(iii) no later than 15 days following the termination of venting or flaring, notify the division by filing a form C-129.

(b) The operator shall provide and certify the accuracy of the following information in the form C-129:

(i) operator's name;

(ii) name and type of facility;

(iii) equipment involved;

(iv) compositional analysis of vented or flared natural gas that is representative of the well or facility;

(v) date(s) and time(s) that venting or flaring was discovered or commenced and terminated;

(vi) measured or estimated volume of vented or flared natural gas;

(vii) cause and nature of venting or flaring;

(viii) steps taken to limit the duration and magnitude of venting or flaring;
and

(ix) corrective actions taken to eliminate the cause and recurrence of venting or flaring.

(c) At the division's request, the operator shall provide and certify additional information by the specified date.

(d) The operator shall file a form C-141 instead of a form C-129 for a release that includes liquid during venting or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.

(2) Monthly reporting of vented and flared natural gas. For each well or facility at which venting or flaring occurred, the operator shall separately report the volume of vented natural gas and volume of flared natural gas for each month in each category listed below. Beginning October 1, 2021, the operator shall gather data for quarterly reports in a format specified by the division and submit by February 15, 2022 for the fourth quarter and May 15, 2022 for the first quarter. Beginning April 2022, the operator shall submit a form C-115B monthly on or before the 15th day of the second

month following the month in which it vented or flared natural gas. The operator shall specify whether it estimated or measured each reported volume. In filing the initial report, the operator shall provide the methodology (measured or estimated using calculations and industry standard factors) used to report the volumes and shall report changes in the methodology on future forms. The operator shall make and keep records of the measurements and estimates, including records showing how it calculated the estimates, for no less than five years and make such records available for inspection by the division upon request. The categories are:

- (a)** emergency;
- (b)** non-scheduled maintenance or malfunction, including the abnormal operation of equipment;
- (c)** routine repair and maintenance, including blowdown and depressurization;
- (d)** routine downhole maintenance, including operation of workover rigs, swabbing rigs, coiled tubing units and similar specialty equipment;
- (e)** manual liquid unloading;
- (f)** storage tanks;
- (g)** insufficient availability or capacity in a natural gas gathering system during the separation phase of completion operations or production operations;
- (h)** natural gas that is not suitable for transportation or processing because:
 - (i)** N₂, H₂S, or CO₂ concentrations do not meet gathering pipeline quality specifications; or
 - (ii)** O₂ concentrations do not meet gathering pipeline quality specifications except during commissioning of pipelines, equipment, or facilities pursuant to Subparagraph (I) of Paragraph (4) of Subsection D of 19.15.27.8 NMAC, except as otherwise approved by the division;
- (i)** venting as a result of normal operation of pneumatic controllers and pumps, unless the operator vents or flares less than 500,000 cubic feet per year of natural gas;
- (j)** improperly closed or maintained thief hatches;
- (k)** venting or flaring in excess of eight hours that is caused by an emergency, unscheduled maintenance or malfunction of a natural gas gathering system as defined in 19.15.28 NMAC;

(l) venting and flaring from an exploratory well; and

(m) other surface waste as defined in Subparagraph (b) of Paragraph (1) of Subsection W of 19.15.2.7 NMAC that is not described above.

(3) Upon submittal of the C-115B report, the division will compile and publish on the division's website an operator's vented and flared natural gas information for each month on a volumetric and gas capture percentage basis.

(a) To calculate the lost natural gas on a volumetric basis, the operator shall deduct the volume of natural gas sold, used for beneficial use, vented or flared during an emergency, and vented or flared because it was not suitable for transportation or processing due to N₂, H₂S, or CO₂ concentrations, vented as a result of normal operation of pneumatic controllers and pumps if reported pursuant to Subparagraph (i) of Paragraph (2) of Subsection G of 19.15.27.8 NMAC, or vented or flared from an exploratory well with division approval from the natural gas produced.

(b) To calculate the natural gas captured on a percentage basis, the operator shall deduct the volume of lost gas calculated in Subparagraph (a) of Paragraph (3) of Subsection G of 19.15.27.8 NMAC from the total volume of natural gas produced and divide by the total volume of natural gas produced.

(4) Beginning June 2022, the operator shall provide a copy of the C-115B to the New Mexico State Land Office for a well or facility in which the state owns a royalty interest, and the operator shall notify all royalty interest owners of their ability to obtain the information from the division's website at the time the initial C-115B is filed.

(5) Upon the New Mexico environment department's request, the operator shall promptly provide a copy of any form filed pursuant to 19.15.27 NMAC.

[19.15.27.8 NMAC – N, 05/25/2021]

19.15.27.9 STATEWIDE NATURAL GAS CAPTURE REQUIREMENTS:

A. Statewide natural gas capture requirements. Commencing April 1, 2022, the operator shall reduce the annual volume of vented and flared natural gas in order to capture no less than ninety-eight percent of the natural gas produced from its wells in each of two reporting areas, one north and one south of the Township 10 North line, by December 31, 2026. The division shall calculate and publish on the division's website each operator's baseline natural gas capture rate based on the operator's fourth quarter 2021 and first quarter 2022 quarterly reports as per Paragraph (2) of Subsection G of 19.15.27.8 NMAC. In each calendar year between January 1, 2022 and December 31, 2026, the operator shall increase its annual percentage of natural gas captured in each reporting area in which it operates based on the following formula: (baseline loss rate minus two percent) divided by five, except that for 2022 only, an operator's percentage of natural gas captured shall not be less than seventy-five percent of the annual gas

capture percentage increase (2022 baseline loss rate minus two percent divided by five times 0.75), and the balance shall be captured in 2023.

(1) The following table provides examples of the formula based on a range of baseline natural gas capture rates.

Baseline Natural Gas Capture Rate	Minimum Required Annual Natural Gas Capture Percentage Increase
90-98%	0-1.6%
80-89%	>1.6-3.6%
70-79%	>3.6-5.6%
0-69%	>5.6-19.6%

(2) If the operator's baseline capture rate is less than sixty percent, the operator shall submit by the specified date to the division for approval a plan to meet the minimum required annual capture percentage increase.

(3) An operator's acquisition or sale of one or more wells from another operator shall not affect its annual natural gas capture requirements. No later 60 days following the acquisition or sale, the operator may file a written request to the division requesting to modify its gas capture percentage requirements for good cause based on its acquisition or sale. The division may approve, approve with conditions, or deny the request in its sole discretion.

(4) No later than March 30 following the reporting year, an operator that has not met its annual natural gas capture requirement for the previous year shall submit to the division a compliance plan demonstrating its ability to comply with its annual gas capture requirement for the current year. If the division determines, after a reasonable opportunity to meet with the operator, that the compliance plan does not demonstrate the operator's ability to comply with its annual gas capture requirement for the current year the operator's approved APDs for wells that have not been spud shall be suspended pending a division hearing to be held no later than 30 days after the determination. Nothing in this subparagraph shall prevent the division from taking any other action authorized by law for the operator's failure to comply with its annual gas capture requirement, including shutting in wells and assessing civil penalties.

B. Accounting. No later than February 28 of each year beginning in 2023, the operator shall submit a report certifying compliance with its statewide gas capture requirements. The operator shall determine compliance with its statewide gas capture requirements by deducting any ALARM credits approved pursuant to this subsection from the aggregated volume of lost gas calculated for each month during the preceding year pursuant to Subparagraph (a) of Paragraph (3) of Subsection G of 19.15.27.8 NMAC, deducting that aggregated volume of lost gas from the aggregated volume of natural gas produced for each month during the preceding year, and dividing that

volume by the aggregated volume of natural gas produced for each month during the preceding year.

(1) An operator that used a division-approved ALARM technology to monitor for leaks and releases may obtain a credit against the volume of lost natural gas if it discovered the leak or release using the ALARM technology and the operator:

(a) isolated the leak or release within 48 hours following field verification;

(b) repaired the leak or release within 15 days following field verification or another date approved by the division;

(c) timely notified the division by filing a form C-129 or form C-141; and

(d) used ALARM monitoring technology as a routine and on-going aspect of its waste-reduction practices.

(i) For discrete waste-reduction practices such as aerial methane monitoring, the operator must use the technology at least twice per year; and

(ii) for waste-reduction practices such as automated emissions monitoring systems that operate routinely or continuously, the division will determine the required frequency of use.

(e) The division shall publish a list of division-approved ALARM technologies on the division's website.

(2) An operator may file an application with the division for a credit against its volume of lost natural gas that identifies:

(a) the ALARM technology used to discover the leak or release;

(b) the dates on which the leak or release was discovered, field-verified, isolated and repaired;

(c) the method used to measure or estimate the volume of natural gas leaked or released which method shall be consistent with Subsection F of 19.15.27.8 NMAC;

(d) a description and the date of each action taken to isolate and repair the leak or release;

(e) visual documentation or other verification of discovery, isolation and repair of the leak or release;

(f) a certification that the operator did not know or have reason to know of the leak or release before discovery using ALARM technology; and

(g) a description of how the operator used ALARM technology as a routine and on-going aspect of its waste-reduction practices.

(3) For each leak or release reported by an operator that meets the requirements of Paragraphs (3) and (4) of Subsection B of 29.15.28.10 NMAC, the division, in its sole discretion, may approve a credit that the operator can apply against its reported volume of lost natural gas as follows:

(a) a credit of forty percent of the volume of natural gas discovered and isolated within 48 hours of discovery and timely repaired;

(b) an additional credit of twenty percent if the operator used ALARM technology no less than once per calendar quarter as a routine and on-going aspect of its waste-reduction practices.

(4) A division-approved ALARM credit shall:

(a) be used only by the operator who submitted the application pursuant to Paragraph (4) of Subsection B of 29.15.27.10 NMAC;

(b) not be transferred to or used by another operator, including a parent, subsidiary, related entity, or person acquiring the well;

(c) be used only once; and

(d) expire 24 months after division approval.

(5) The division will publish a list of approved ALARM technology.

C. Third-party verification. The division may request that an operator retain a third party to verify any data or information collected or reported pursuant to this Part, make recommendations to correct or improve the collection and reporting of data and information, submit a report of the verification and recommendations to the division by the specified date, and implement the recommendations in the manner approved by the division. If the division and the operator cannot reach agreement on the division's request, the operator may file an application for hearing before the division. The operator, at its own expense, shall retain a third party approved by the division to conduct the activities agreed to by the division and the operator or ordered by the division following a hearing.

D. Natural gas management plan.

(1) After May 25, 2021, the operator shall file a natural gas management plan with each APD for a new or recompleted well. The operator may file a single natural gas management plan for multiple wells drilled or recompleted from a single well pad or that will be connected to a central delivery point. The natural gas management plan

shall describe the actions that the operator will take at each proposed well to meet its statewide natural gas capture requirements and to comply with the requirements of Subsections A through F of 19.15.27.8 NMAC, including for each well:

- (a)** the operator's name and OGRID number;
- (b)** the name, API number, location and footage;
- (c)** the anticipated dates of drilling, completion and first production;
- (d)** a description of operational best practices that will be used to minimize venting during active and planned maintenance; and
- (e)** the anticipated volumes of liquids and gas production and a description of how separation equipment will be sized to optimize gas capture.

(2) Beginning April 1, 2022, an operator that, at the time it submits an APD for a new or recompleted well is, cumulatively for the year, not in compliance with its baseline natural gas capture rate for the applicable reporting area if the APD is submitted on or after April 1, 2022 or its natural gas capture requirement for the previous year if the APD is submitted in 2023 or after shall also include the following information in the natural gas management plan:

- (a)** the anticipated volume of produced natural gas in units of MCFD for the first year of production;
- (b)** the existing natural gas gathering system the operator has contracted or anticipates contracting with to gather the natural gas, including:
 - (i)** the name of the natural gas gathering system operator;
 - (ii)** the name and location of the natural gas gathering system;
 - (iii)** a map of the well location and the anticipated pipeline route connecting the production operations to the existing or planned interconnect of the natural gas gathering system.; and
 - (iv)** the maximum daily capacity of the segment or portion of the natural gas gathering system to which the well will be connected; and
- (c)** the operator's plans for connecting the well to the natural gas gathering system, including:
 - (i)** the anticipated date on which the natural gas gathering system will be available to gather the natural gas produced from the well;

(ii) whether the natural gas gathering system has or will have capacity to gather the anticipated natural gas production volume from the well prior to the date of first production; and

(iii) whether the operator anticipates the operator's existing well(s) connected to the same segment or portion of the natural gas gathering system, referenced in Item (iv) of Subparagraph (b) of Paragraph (2) of Subsection D or 19.15.27.9 NMAC will continue to be able to meet anticipated increases in line pressure caused by the well and the operator's plan to manage production in response to the increased line pressure.

(3) The operator may assert confidentiality for information specified in Paragraph (2) of Subsection D of 19.15.27.9 NMAC pursuant to Section 71-2-8 NMSA 1978.

(4) The operator shall certify that it has determined based on the available information at the time of submitting the natural gas management plan either:

(a) it will be able to connect the well to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the volume of natural gas the operator anticipates the well will produce commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system; or

(b) it will not be able to connect to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the volume of natural gas the operator anticipates the well will produce commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system.

(5) If the operator determines it will not be able to connect a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced on the date of first production from the well, the operator shall either shut-in the well until the operator submits the certification required by Paragraph (4) of Subsection D of 19.15.27.9 NMAC or submit a venting and flaring plan to the division that evaluates and selects one or more of the potential alternative beneficial uses for the natural gas until a natural gas gathering system is available, including:

(a) power generation on lease;

(b) power generation for grid;

(c) compression on lease;

(d) liquids removal on lease;

- (e) reinjection for underground storage;
- (f) reinjection for temporary storage;
- (g) reinjection for enhanced oil recovery;
- (h) fuel cell production; and
- (i) other alternative beneficial uses approved by the division.

(6) If, at any time after the operator submits the natural gas management plan and before the well is spud:

(a) the operator becomes aware that the natural gas gathering system it planned to connect the well to has become unavailable or will not have capacity to transport one hundred percent of the production from the well, no later than 20 days after becoming aware of such information, the operator shall submit for the division's approval a new or revised venting and flaring plan containing the information specified in Paragraph (5) of Subsection D of 19.15.27.9 NMAC; and

(b) the operator becomes aware that it has, cumulatively for the year, become out of compliance with its baseline natural gas capture rate or natural gas capture requirement, no later than 20 days after becoming aware of such information, the operator shall submit for the division's approval a new or revised natural gas management plan for each well it plans to spud during the next 90 days containing the information specified in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and shall file an update for each plan until the operator is back in compliance with its baseline natural gas capture rate or natural gas capture requirement.

(7) The division may deny the APD or conditionally approve the APD if the operator does not make a certification, fails to submit an adequate venting and flaring plan, which includes alternative beneficial uses for the anticipated volume of natural gas produced, or if the division determines that the operator will not have adequate natural gas takeaway capacity at the time a well will be spud.

[19.15.27.9 NMAC – N, 05/25/2021]

PART 28: NATURAL GAS GATHERING SYSTEMS

19.15.28.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.28.1 NMAC – N, 05/25/2021]

19.15.28.2 SCOPE:

19.15.28 NMAC applies to persons engaged in natural gas gathering and processing within New Mexico.

[19.15.28.2 NMAC – N, 05/25/2021]

19.15.28.3 STATUTORY AUTHORITY:

19.15.28 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-6, Section 70-2-11 and Section 70-2-12 NMSA 1978.

[19.15.27.3 NMAC – N, 05/25/2021]

19.15.28.4 DURATION:

Permanent.

[19.15.27.4 NMAC – N, 05/25/2021]

19.15.28.5 EFFECTIVE DATE:

May 25, 2021, unless a later date is cited at the end of a section.

[19.15.28.5 NMAC – N, 05/25/2021]

19.15.28.6 OBJECTIVE:

To regulate the venting and flaring of natural gas from natural gas gathering systems to prevent waste and protect public health and the environment.

[19.15.28.6 NMAC – N, 05/25/2021]

19.15.28.7 DEFINITIONS:

Terms shall have the meaning specified in 19.15.2 NMAC except as specified below.

A. "ALARM" means advanced leak and repair monitoring technology for detecting natural gas leaks or releases that is not required by applicable state or federal law, rule, or regulation and which the division has approved as eligible to earn a credit against the reported volume of lost natural gas pursuant to Paragraph (3) of Subsection B of 19.15.28.10 NMAC.

B. "AVO" means audio, visual and olfactory.

C. "Custody transfer point" means the transfer of natural gas from upstream separation, processing, treatment, or in-field gathering to a pipeline or any other form of transportation occurring at sales metering equipment.

D. "Emergency" means a temporary, infrequent, and unavoidable event in which the loss of natural gas is uncontrollable or necessary to avoid a risk of an immediate and substantial adverse impact on safety, public health or the environment, but does not include an event arising from or related to:

(1) the operator's failure to install appropriate equipment of sufficient capacity to accommodate the anticipated or actual rate and pressure of the natural gas gathering system;

(2) the operator's failure to limit the gathering of natural gas when the volume of natural gas exceeds the capacity of the natural gas gathering system;

(3) scheduled maintenance;

(4) unscheduled maintenance or a malfunction that results in venting or flaring of natural gas by an upstream operator for which the operator fails to comply with Paragraph (2) of Subsection D of 19.15.28.8 NMAC;

(5) the operator's negligence;

(6) recurring equipment failure; 4 or more times within a single reporting area within the preceding 30 days pursuant to Subsection A of 19.15.28.10 NMAC; or

(7) Four or more emergencies within a single reporting area pursuant to Subsection A of 19.15.28.10 NMAC experienced by the operator within the preceding 30 days, unless the division determines the operator could not have reasonably anticipated the current event and it was beyond the operator's control.

E. "Flare" or "Flaring" means the controlled combustion of natural gas in a device designed for that purpose.

F. "Flare stack" means a device equipped with a burner used to flare natural gas.

G. "Gathering pipeline" means a pipeline that gathers natural gas within a natural gas gathering system.

H. "GIS" means geographic information system.

I. "GPS" means global positioning system.

J. "Malfunction" means a sudden, unavoidable failure or breakdown of equipment beyond the reasonable control of the operator that substantially disrupts operations, but does not include a failure or breakdown that is caused entirely or in part by poor maintenance, careless operation, or other preventable equipment failure or breakdown.

K. "Natural gas" means a gaseous mixture of hydrocarbon compounds, primarily composed of methane, and includes both casinghead gas and gas as those terms are defined in 19.15.2 NMAC.

L. "Natural gas gathering system" means the gathering pipelines and associated facilities that compress, dehydrate or treat natural gas after the custody transfer point and ending at the connection point with a natural gas processing plant or transmission or distribution system.

M. "New gathering pipeline" means a gathering pipeline placed into service after May 25, 2021.

N. "Vent" or "Venting" means the release of uncombusted natural gas to the atmosphere.

[19.15.28.7 NMAC – N, 05/25/2021]

19.15.28.8 VENTING AND FLARING OF NATURAL GAS:

A. Venting or flaring of natural gas from a natural gas gathering system that constitutes waste as defined in 19.15.2 NMAC and is prohibited. The operator has a general duty to maximize the gathering of natural gas by minimizing the waste of natural gas through venting and flaring. The operator may vent or flare natural gas only as authorized in Subsection B of 19.15.28.8 NMAC. In all circumstances, the operator shall flare rather than vent natural gas except when flaring is technically infeasible or would pose a risk to safe operations or personnel safety and venting is a safer alternative than flaring.

B. The operator shall not flare or vent natural gas except:

- (1)** during an emergency or malfunction; or
- (2)** during the following activities unless prohibited by applicable state and federal law, rule, or regulation for the emission of hydrocarbons and volatile organic compounds:
 - (a)** repair and maintenance, including blowing down and depressurizing equipment to perform repair or maintenance;
 - (b)** normal operation of a gas-activated pneumatic controller or pump;
 - (c)** normal operation of dehydration units and amine treatment units;
 - (d)** normal operation of compressors, compressor engines, and turbines;

(e) normal operation of valves, flanges, and connectors that are not the result of inadequate equipment design or maintenance;

(f) normal operation of a storage tank or other low-pressure production vessel, but not including venting from a thief hatch that is not properly closed or maintained on an established schedule;

(g) gauging or sampling a storage tank or other low-pressure vessel;

(h) loading out liquids from a storage tank or other low-pressure vessel to a transport vehicle;

(i) normal operations of valves, flanges or connectors that are not the result of inadequate equipment design or maintenance;

(j) blow down to repair a gathering pipeline;

(k) pigging a gathering pipeline;

(l) purging a gathering pipeline; or

(m) commissioning of pipelines, equipment, or facilities only for as long as necessary to purge introduced impurities from the pipeline or equipment.

C. Performance standards.

(1) The operator shall take all reasonable actions to prevent and minimize leaks and releases of natural gas from a natural gas gathering system and shall implement an operations plan to minimize the waste of natural gas for each non-contiguous natural gas gathering system. The plan should include procedures to reduce leaks and releases, such as a routine maintenance program, cathodic protection, corrosion control, liquids management and integrity management. The operator shall file its operations plan with the division:

(a) for a natural gas gathering system placed into service after May 25, 2021, within 60 days following the date the natural gas gathering system is placed into service;

(b) for a natural gas gathering system in place on or before May 25, 2021, within 90 days following May 25, 2021; and

(c) for a natural gas gathering system to which the operator added a new gathering pipeline during the calendar year or changed the operations plan, an updated operations plan no later than March 31 of the following year.

(2) During scheduled maintenance, replacement, or repair of a new or existing natural gas gathering system, the operator shall not vent natural gas during blowdown and shall route natural gas to a portable flare stack which complies with the flare stack standards, inspection, and recordkeeping requirements in Subsection E of 19.15.27.8 NMAC.

(3) During unscheduled maintenance, replacement or repair of a new or existing natural gas gathering system, to the extent that it is technically feasible and would not pose a risk to safe operations or personnel safety, the operator shall not vent natural gas during blowdown and shall route natural gas to a portable flare stack which complies with the flare stack standards, inspection and recordkeeping in Subsection E of 19.15.27.8 NMAC.

(4) The operator shall conduct a weekly AVO inspection of the compressors, dehydrators and treatment facilities associated with a natural gas gathering system to confirm those components are operating properly and there are no leaks or releases except as allowed in Subsection B of 19.15.28.8 NMAC.

(a) During an AVO inspection the operator shall inspect all components, including flare stacks, thief hatches, closed vent systems, pumps, compressors, pressure relief devices, valves, lines, flanges, connectors, and associated piping to identify defects, leaks, and releases by:

- (i)** comprehensive external visual inspection;
- (ii)** listening for pressure and liquid leaks; and
- (iii)** smelling for unusual and strong odors.

(b) The operator shall make and keep a record of an AVO inspection for no less than five years and make such records available for inspection by the division upon request.

(c) Subject to the division's prior written approval, the operator may use a remote or automated monitoring technology to detect leaks and releases in lieu of an AVO inspection.

(5) The operator shall perform an annual monitoring of the entire length of a gathering pipeline using an AVO technique, ALARM technology, aerial visual inspections, or other valid method to detect leaks and releases. The operator shall record and, upon the division's request, report the date and time of the monitoring, the method and technology used. The operator shall retain records of monitoring for at least five years. Personnel conducting inspections shall be knowledgeable on the methods and technology being used.

(6) For facilities constructed after May 25, 2021, facilities shall be designed to minimize waste.

(7) Operators have an obligation to minimize waste and shall resolve emergencies as quickly and safely as is feasible.

D. Reporting to affected upstream operators.

(1) No less than 14 days prior to the date of scheduled maintenance, replacement or repair of a natural gas gathering system, the operator shall provide written notification to each upstream operator whose natural gas is gathered by the system of the date and expected duration that the system will not gather natural gas.

(2) As soon as possible but no more than 12 hours after discovery of an emergency or malfunction, or the need for unscheduled maintenance of a natural gas gathering system, the operator shall provide verbal notification to each upstream operator whose natural gas is gathered by the system of the date and expected duration that the system will not gather natural gas, and shall provide written confirmation of the verbal notification, including the date, time, person, and telephone number to whom verbal notification was given no later than 24 hours after discovery.

(3) The operator shall make and keep a record of each notification for no less than five years and make such records available for inspection by the division upon request.

E. Measurement or estimation of vented and flared natural gas.

(1) The operator shall measure or estimate the volume of natural gas that it vents, flares or beneficially uses regardless of the reason or authorization for such venting or flaring.

(2) The operator shall install equipment to measure the volume of natural gas flared from a natural gas gathering system.

(3) Measuring equipment shall conform to an industry standard such as American Petroleum Institute (API) Manual of Petroleum Measurement Standards (MPMS) Chapter 14.10 Measurement of Flow to Flares.

(4) Measuring equipment shall not be designed or equipped with a manifold that allows the diversion of natural gas around the metering element except for the sole purpose of inspecting and servicing the measuring equipment.

(5) If metering is not practicable due to circumstances such as low flow rate or low pressure venting and flaring, the operator shall estimate the volume of vented or flared natural gas using a methodology that can be independently verified.

F. Reporting of vented or flared natural gas.

(1) Venting or flaring caused by an emergency, a malfunction, or of long duration.

(a) The operator shall notify the division of venting or flaring that exceeds 50 MCF in volume and either results from an emergency or malfunction or lasts eight hours or more cumulatively within any 24-hour period from a single event by filing a form C-129 in lieu of a C-141, except as provided by Subparagraph (d) of Paragraph (1) of Subsection G of 19.15.27.8 NMAC, with the division as follows:

(i) for venting or flaring that equals or exceeds 50 MCF but is less than 500 MCF from a single event, notify the division in writing by filing a form C-129 no later than 15 days following discovery or commencement of venting or flaring; or

(ii) for venting or flaring that equals or exceeds 500 MCF or otherwise qualifies as a major release as defined in 19.15.29.7 NMAC from a single event, notify the division verbally or by e-mail as soon as possible and no later than 24 hours following discovery or commencement of venting or flaring and provide the information required in form C-129. No later than 15 days following the discovery or commencement of venting or flaring, the operator shall file a form C-129 that verifies, updates, or corrects the verbal or e-mail notification; and

(iii) no later than 15 days following the termination of venting or flaring, notify the division by filing a form C-129.

(b) The operator shall provide and certify the accuracy of the following information in the form C-129:

(i) operator's name;

(ii) name and type of facility;

(iii) equipment involved;

(iv) compositional analysis of vented or flared natural gas that is representative of the natural gas gathering system;

(v) date(s) and time(s) that venting or flaring was discovered or commenced and terminated;

(vi) measured or estimated volume of vented or flared natural gas;

(vii) cause and nature of venting or flaring;

(viii) steps taken to limit the duration and magnitude of venting or flaring;
and

(ix) corrective actions taken to eliminate the cause and recurrence of venting or flaring.

(c) At the division's request, the operator shall provide and certify additional information by the specified date.

(d) The operator shall file a form C-141 instead of a form C-129 for a release which includes liquid during venting or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.

(2) Monthly reporting of vented and flared natural gas. For each natural gas gathering system at which venting or flaring occurred, the operator shall separately report the volume of vented natural gas and the volume of flared natural gas for each month in each category listed below. Beginning October 1, 2021, the operator shall gather data for quarterly reports in a format specified by the division and submit by February 15, 2022 for the fourth quarter of 2021 and May 15, 2022 for the first quarter of 2022. Beginning April 2022, the operator shall submit a form C-115B monthly on or before the 15th day of the second month following the month in which it vented or flared natural gas. The operator shall specify whether it estimated or measured each reported volume. In filing the initial report, the operator shall provide the methodology (measured or estimated using calculations and industry standard factors) used to report the volumes on the form, and shall report changes in the methodology on future forms. The operator shall make and keep records of the measurements and estimates, including records showing how it calculated the estimates, for no less than five years and make such records available for inspection by the division upon request. The categories are:

- (a) emergency;
- (b) non-scheduled maintenance or malfunction, including the abnormal operation of equipment;
- (c) routine repair and maintenance, including blowdown and depressurization;
- (d) beneficial use, including pilot and purge gas, fired equipment and engines;
- (e) gathering pipeline blowdown and purging;
- (f) gathering pipeline pigging;
- (g) storage tanks;
- (h) venting as a result of normal operation of pneumatic controllers and pumps;

(i) improperly closed or maintained thief hatches; and

(j) other surface waste as defined in Subparagraph (b) of Paragraph (1) of Subsection W of 19.15.2.7 NMAC that is not described above.

(3) Upon submittal of the C-115B report, the division will compile and publish on the division's website an operator's vented and flared natural gas information for each month on a volumetric and gas capture percentage basis.

(a) To calculate the lost natural gas on a volumetric basis, the operator shall sum the volume of natural gas reported under Subparagraphs (b), (c), (e), (f), (g), (i) and (j) of Paragraph (2) of Subsection F of 19.15.28.8 NMAC.

(b) To calculate the natural gas captured on a percentage basis, the operator shall deduct the volume of lost gas calculated in Subparagraph (a) of Paragraph (3) of Subsection F of 19.15.28.8 NMAC from the total volume of natural gas gathered and divide by the total volume of natural gas gathered.

(4) Upon the New Mexico environment department's request, the operator shall promptly provide a copy of any form filed pursuant to 19.15.28 NMAC.

[19.15.28.8 NMAC – N, 05/25/2021; A, 02/22/2022]

19.15.28.9 LOCATION REQUIREMENTS:

A. The operator shall file with the division a GIS digitally formatted as-built map:

(1) for a new gathering pipeline or natural gas gathering system, no later than 90 days after placing the gathering pipeline or system into service;

(2) for an existing gathering pipeline or natural gas gathering system no later than 90 days after May 25, 2021; and

(3) for an addition to an existing gathering pipeline or natural gas gathering system, no later than 90 days after placing the addition into service.

B. To ensure proper field identification of a gathering pipeline in an emergency, the as-built map shall include a layer which identifies the pipeline size and construction material type.

C. No later than July 1st of each year, the operator shall file with the division an updated GIS digitally formatted as-built map of its gathering pipeline or natural gas gathering system, which shall include a GIS layer that identifies the date, location and volume of vented or flared natural gas of each emergency, malfunction and release reported to the division since 19.15.28 NMAC became applicable to the pipeline or system.

D. The operator may assert confidentiality for the GIS digitally formatted as-built map and GIS layer pursuant to Section 71-2-8 NMSA 1978.

[19.15.28.9 NMAC – N, 05/25/2021]

19.15.28.10 STATEWIDE NATURAL GAS CAPTURE REQUIREMENTS:

A. Statewide natural gas capture requirements. Commencing April 1, 2022, the operator of a natural gas gathering system shall reduce the annual volume of vented and flared natural gas in order to capture no less than ninety-eight percent of the natural gas gathered in each of two reporting areas, one north and one south of the Township 10 North line, by December 31, 2026. The division shall calculate and publish on the division's website each operator's baseline natural gas capture rate based on the operator's fourth quarter 2021 and first quarter 2022 quarterly reports as per Paragraph (2) of Subsection G of 19.15.28.8 NMAC. In each calendar year between January 1, 2022 and December 31, 2026, the operator shall increase its annual percentage of natural gas captured in each reporting area in which it operates based on the following formula: (baseline loss rate minus two percent) divided by five, except that for 2022 only, an operator's percentage of natural gas captured shall not be less than seventy-five percent of the annual gas capture percentage increase (2022 baseline loss rate minus two percent divided by five times 0.75), and the balance shall be captured in 2023.

(1) The following table provides examples of the formula based on a range of baseline natural gas capture rates.

Baseline Natural Gas Capture Rate	Minimum Required Annual Natural Gas Capture Percentage Increase
90-98%	0-1.6%
80-89%	>1.6-3.6%
70-79%	>3.6-5.6%
0-69%	>5.6-19.6%

(2) If the operator's baseline capture rate is less than sixty percent, the operator shall submit by the specified date to the division for approval, a plan to meet the minimum required annual capture percentage increase.

(3) An operator's acquisition or sale of a natural gas gathering system from another operator shall not affect its annual natural gas capture requirements. No later 60 days following the acquisition or sale, the operator may file a written request to the division requesting to modify its annual gas capture percentage requirements for good cause based on its acquisition or sale. The division may approve, approve with conditions, or deny the request in its sole discretion.

(4) Operators that are affiliated shall consolidate their natural gas capture reporting and compliance obligations.

B. Accounting. No later than February 28 of each year beginning in 2023, the operator shall submit a report certifying compliance with its statewide gas capture requirements. The operator shall determine compliance with its statewide gas capture requirements by deducting any ALARM credits approved pursuant to this subsection from the aggregated volume of lost gas calculated for each month during the preceding year pursuant to Subparagraph (a) of Paragraph (3) of Subsection F of 19.15.28.8 NMAC, deducting that aggregated volume of lost gas from the aggregated volume of natural gas gathered for each month during the preceding year, and dividing that volume by the aggregated volume of natural gas gathered for each month during the preceding year.

(1) An operator that used a division-approved ALARM technology to monitor for leaks and releases may obtain a credit against the volume of lost natural gas if it discovered the leak or release using the ALARM technology, and the operator:

(a) isolated the leak or release within 48 hours following field verification;

(b) repaired the leak or release within 15 days following field verification or another date approved by the division;

(c) timely notified the division by filing a form C-129 or form C-141; and

(d) used ALARM monitoring technology as a routine and on-going aspect of its waste-reduction practices.

(i) For discrete waste-reduction practices such as aerial methane monitoring, the operator must use the technology at least twice per year; and

(ii) for waste-reduction practices such as automated emissions monitoring systems that operate routinely or continuously, the division will determine the required frequency of use.

(e) The division shall publish a list of division-approved ALARM technologies on the division's website.

(2) An operator may file an application with the division for a credit against its volume of lost natural gas that identifies:

(a) the ALARM technology used to discover the leak or release;

(b) the dates on which the leak or release was discovered, field-verified, isolated, and repaired;

(c) the method used to measure or estimate the volume of natural gas leaked or released;

(d) a description and the date of each action taken to isolate and repair the leak or release;

(e) visual documentation or other verification of discovery, isolation, and repair of the leak or release;

(f) a certification that the operator did not know or have reason to know of the leak or release before discovery using ALARM technology; and

(g) a description of how the operator used ALARM technology as a routine and on-going aspect of its waste-reduction practices.

(3) For each leak or release reported by an operator that meets the requirements of Paragraphs (3) and (4) of Subsection B of 29.15.28.10 NMAC, the division, in its sole discretion, may approve a credit that the operator can apply against its reported volume of lost natural gas as follows:

(a) a credit of forty percent of the volume of natural gas discovered and isolated within 48 hours of discovery and timely repaired; and

(b) an additional credit of twenty percent if the operator used ALARM technology no less than once per calendar quarter as a routine and on-going aspect of its waste-reduction practices.

(4) A division-approved ALARM credit shall:

(a) be used only by the operator who submitted the application pursuant to Paragraph (2) of Subsection B of 29.15.28.10 NMAC;

(b) not be transferred to or used by another operator, including a parent, subsidiary, related entity or person acquiring the natural gas gathering system;

(c) be used only once; and

(d) expire 24 months after division approval.

(5) The division will publish a list of approved ALARM technology.

C. Third-party verification. The division may request that an operator verify any data or information collected or reported pursuant to this part, make recommendations to correct or improve the collection and reporting of data and information, submit a report of the verification and recommendations to the division by the specified date, and implement the recommendations in the manner approved by the division. If the division

and the operator cannot reach agreement on the division's request, the operator may file an application for hearing before the division. The operator, at its own expense, shall retain a third party approved by the division to conduct the activities agreed to by the division and the operator or ordered by the division following a hearing.

[19.15.28.10 NMAC – N, 05/25/2021; A, 02/22/2022]

PART 29: RELEASES

19.15.29.1 ISSUING AGENCY:

Oil Conservation Commission.

[19.15.29.1 NMAC - Rp, 19.15.29.1 NMAC, 8/14/2018]

19.15.29.2 SCOPE:

19.15.29 NMAC applies to persons engaged in oil and gas development and production within New Mexico.

[19.15.29.2 NMAC - Rp, 19.15.29.2 NMAC, 8/14/2018]

19.15.29.3 STATUTORY AUTHORITY:

19.15.29 NMAC is adopted pursuant to the Oil and Gas Act, Section 70-2-11 NMSA 1978 (1977) and Section 70-2-12 NMSA 1978 (2004).

[19.15.29.3 NMAC - Rp, 19.15.29.3 NMAC, 8/14/2018]

19.15.29.4 DURATION:

Permanent.

[19.15.29.4 NMAC - Rp, 19.15.29.4 NMAC, 8/14/2018]

19.15.29.5 EFFECTIVE DATE:

August 14, 2018, unless a later date is cited at the end of a section.

[19.15.29.5 NMAC - Rp, 19.15.29.5 NMAC, 8/14/2018]

19.15.29.6 OBJECTIVE:

To prohibit releases and require persons who operate or control the release or the location of the release to report the unauthorized release of oil, gases, produced water, condensate or oil field waste including regulated NORM or other oil field related

chemicals, contaminants or mixtures of those chemicals or contaminants that occur during drilling, producing, storing, disposing, injecting, transporting, servicing or processing and to establish procedures for reporting, site assessment, remediation, closure, variance and enforcement.

[19.15.29.6 NMAC - Rp, 19.15.29.6 NMAC, 8/14/2018; A, 8/24/2021]

19.15.29.7 DEFINITIONS:

A. "Major release" means:

- (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more;
- (2) an unauthorized release of a volume that:
 - (a) results in a fire or is the result of a fire;
 - (b) may with reasonable probability reach a watercourse;
 - (c) may with reasonable probability endanger public health; or
 - (d) substantially damages property or the environment;
- (3) an unauthorized release of gases exceeding 500 MCF; or
- (4) a release of a volume that may with reasonable probability be detrimental to fresh water.

B. "Minor release" means an unauthorized release, which is not a major release and is a volume greater than five barrels but less than 25 barrels; or for gases, greater than 50 MCF but less than 500 MCF.

C. "Responsible party" means the operator, as defined in 19.15.2 NMAC. Notwithstanding the foregoing, the division, in its sole discretion, may also consider a person causing the release, or controlling the location of the release as the responsible party.

D. "Wellstream" means the gas, oil, water, suspended constituents, or any combination thereof, which comes from the wellbore.

[19.15.29.7 NMAC - Rp, 19.15.29.7 NMAC, 8/14/2018]

19.15.29.8 RELEASES:

A. Prohibition. Except as provided in 19.15.27 NMAC or 19.15.28 NMAC, major releases and minor releases are prohibited.

B. Requirements. For all releases regardless of volume, the responsible party shall comply with 19.15.29.8 NMAC and shall remediate the release. For major and minor releases, the responsible party shall also comply with 19.15.29.9, 19.15.29.10, 19.15.29.11, 19.15.29.12 and 19.15.29.13 NMAC.

C. Initial response. The responsible party must take the following immediate actions unless the actions could create a safety hazard that would result in injury.

(1) **Source elimination and site security.** The responsible party must take appropriate measures to stop the source of the release and limit access to the site as necessary to protect human health and the environment.

(2) **Containment.** Once the site is secure, the responsible party must contain the materials released by construction of berms or dikes, the use of absorbent pads or other containment actions to limit the area affected by the release and prevent potential fresh water contaminants from migrating to watercourses or areas that could pose a threat to public health and environment. The responsible party must monitor the containment to ensure that it is effectively containing the material and not being degraded by weather or onsite activity.

(3) **Site stabilization.** After containment, the responsible party must recover any free liquids and recoverable materials that can be physically removed from the surface within the containment area. The responsible party must deliver material removed from the site to a division-approved facility.

(4) **Remediation.** The responsible party may commence remediation immediately.

[19.15.29.8 NMAC - Rp, 19.15.29.8 NMAC, 8/14/2018; A, 8/24/2021]

19.15.29.9 RELEASE NOTIFICATION:

A. The responsible party must notify the division on form C-141 of a major or minor release occurring during the drilling, producing, storing, disposing, injecting, transporting, servicing or processing of oil, gases, produced water, condensate or oil field waste including regulated NORM, or other oil field related chemicals, contaminants or mixture of the chemicals or contaminants, in accordance with the requirements of 19.15.29 NMAC.

B. If state, federal or tribal lands are involved, the responsible party must send a copy of the form C-141 to the appropriate land managing agency including the state land office, the BLM or tribal authority, as applicable.

[19.15.29.9 NMAC - Rp, 19.15.29.9 NMAC, 8/14/2018]

19.15.29.10 RELEASE NOTIFICATION REPORTING REQUIREMENTS:

The responsible party must notify the division of releases in 19.15.29.9 NMAC as follows.

A. Reporting a major release.

(1) The responsible party must notify the division's environmental bureau chief and the appropriate division district office verbally or by e-mail within 24 hours of discovery of the release. The notification must provide the information required on form C-141.

(2) The responsible party must also notify the appropriate division district office in writing within 15 days of discovering the release by completing and filing form C-141. The written notification must verify the prior verbal or e-mail notification and include additions or corrections to the information contained in the prior verbal or e-mail notification.

B. Reporting a minor release. The responsible party must notify the appropriate division district office in writing within 15 days of discovery of the release by completing and filing form C-141.

[19.15.29.10 NMAC - Rp, 19.15.29.10 NMAC, 8/14/2018]

19.15.29.11 SITE ASSESSMENT/CHARACTERIZATION:

After the responsible party has removed all free liquids and recoverable materials, the responsible party must assess soils both vertically and horizontally for potential environmental impacts from any major or minor release containing liquids.

A. Characterization requirements. The responsible party must submit information characterizing the release to the appropriate division district office within 90 days of discovery of the release or characterize the release by submitting a final closure report within 90 days of discovery of the release in accordance with Subsection E of 19.15.29.12 NMAC. The responsible party may seek an extension of time to submit characterization information for good cause as determined by the division. The responsible party must submit the following information to the division.

(1) **Site map.** The responsible party must provide a scaled diagram that shows the potentially impacted area, significant surface features including roads and site infrastructure, location of borings, sample points, monitoring wells and subsurface features such as known pipelines to the extent known at the time of submittal including the source of information regarding subsurface features.

(2) Depth to ground water. The responsible party must determine the depth to ground water where the release occurred. If the exact depth to ground water is unknown, the responsible party must provide a reasonable determination of probable ground water depth using data generated by numeric models, cathodic well lithology, water well data, published information or other tools as approved by the appropriate division district office. If the responsible party uses water well data, the responsible party must provide all pertinent well information.

(3) Wellhead protection area. The responsible party must determine the horizontal distance from all known water sources within a half mile of the release including private and domestic water sources. Water sources are wells, springs or other sources of fresh water extraction. Private and domestic water sources are those water sources used by less than five households for domestic or stock purposes.

(4) Distance to nearest significant watercourse. The responsible party must determine the horizontal distance to the nearest significant watercourse as defined in Subsection P of 19.15.17.7 NMAC within a half mile of any horizontal boundary of the release.

(5) Soil/waste characteristics. The responsible party must determine the lateral and vertical extents of soil contamination, as follows.

(a) If the release occurred within a lined containment area, the responsible party must demonstrate liner integrity after affected material is removed and the affected area of the liner is exposed and provide:

(i) certification on form C-141 that the responsible party has visually inspected the liner where the release occurred and the liner remains intact and had the ability to contain the leak in question; and

(ii) at least two business days' notice to the appropriate division district office before conducting the liner inspection.

(b) If the responsible party is unable to demonstrate liner integrity or the release occurred outside of a lined containment area, the responsible party must delineate the release horizontally and vertically using Table I of 19.15.29.12 NMAC constituents or as required by Subparagraph (e) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC based on the type of release. The responsible party shall use one or more of the following soil sampling methods for characterization:

(i) NRCS Field Guide;

(ii) EPA SW-846;

(iii) ASTM Method 4547;

(iv) EPA 600; or

(v) or other division-approved methods.

(c) In addition to Subparagraph (b) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC, if the release occurred outside of a lined containment area and is in an area where depth to ground water is greater than 50 feet and less than or equal to 100 feet, the responsible party must delineate the vertical extent of the release to the greater of 600 mg/kg chloride or background chloride level, if:

(i) the release contains produced water that exceeds 10,000 mg/l of chloride (if the responsible party contends the fluid is less than 10,000 mg/l, the responsible party must provide current sample results to the division); and

(ii) the release is of an unknown quantity or results in greater than 200 barrels of unrecovered produced water.

(d) If the conditions are met in Subparagraph (c) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC, the responsible party must submit at least two soil samples for laboratory analysis from each borehole or sample point (highest observed contamination and deepest depth investigated). Field screening and assessment techniques are acceptable (headspace, titration, electrical conductivity [include algorithm for validation purposes], electromagnetics, etc.), but the sampling procedures must be clearly defined. The responsible party must submit copies of field notes attributable to field sampling and provide copies of the actual laboratory results including chain of custody documentation.

(e) If a known release of other oil field related chemicals occurs that is not included in Table I of 19.15.29.12 NMAC, and does not include oil, gas, produced water or other fluids from the wellstream, the standards for remediation shall be as follows:

(i) if the constituent appears on Table 1 of 40 C.F.R. 261.24(b), then that constituent shall be remediated according to 40 C.F.R. 261.24;

(ii) if the constituent is not identified in Table 1 of 40 C.F.R. 261.24(b), but is identified in the New Mexico environment department's Risk Assessment Guidance for Site Investigations and Remediation Volumes I and II (assessment), the division will determine the appropriate Assessment Volume and remediation shall occur pursuant to the assessment;

(iii) if the constituent is not identified in Items (i) or (ii) of Subparagraph (e) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC, the division shall consult with the responsible party to determine appropriate remediation of the release.

B. Unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12

NMAC, which includes the anticipated timelines for beginning and completing the remediation.

C. If the division determines that more information is needed to understand the character of the release and its potential impact on fresh water, public health and the environment, the division may request the responsible party submit additional information. Should the division request additional information, it must do so in writing to the responsible party within 30 days from receipt of the characterization report or remediation plan with what specific information the division is requesting and reasons why the additional information is needed. The responsible party has 14 days to respond to a written request for additional information. If the responsible party disagrees with the request for additional information, it may consult with the division, or file an application for hearing pursuant to 19.15.4 NMAC within 30 days of the issuance of the request for additional information.

[19.15.29.11 NMAC - Rp, 19.15.29.11 NMAC, 8/14/2018]

19.15.29.12 REMEDIATION AND CLOSURE:

A. The responsible party must remediate all releases regardless of volume.

B. Remediation requirements.

(1) Unless remediation is completed, and a final closure report submitted, within 90 days of discovery of the release, the responsible party must complete division-approved remediation for releases either pursuant to a remediation plan approved pursuant to 19.15.29.12 NMAC or pursuant to an abatement plan in accordance with 19.15.30 NMAC. If the director determines that the release has caused water pollution in excess of the standards and requirements of 19.15.30 NMAC, the director may notify the responsible party that an abatement plan may be required pursuant to 19.15.30 NMAC.

(2) Any remediation under 19.15.29 NMAC should be completed as soon as practicable. Any remediation that exceeds 90 days must follow the division-approved timeline in the remediation plan. The responsible party may request an extension of time to remediate upon a showing of good cause as determined by the division.

C. Remediation plan requirements. The responsible party must take the following action for any major or minor release containing liquids.

(1) The responsible party must submit a detailed description of proposed remediation measures in accordance with the findings of the site assessment/characterization plan that includes:

(a) delineation results, including laboratory analysis;

(b) a scaled sitemap showing release area with horizontal and vertical delineation points;

(c) estimated volume of impacted material to be remediated;

(d) proposed remediation technique; and

(e) proposed timeline for remediation activities.

(2) The responsible party shall restore the impacted surface area of a release occurring on a developed well pad, central tank battery, drilling site, compressor site or other exploration, development, production or storage sites to meet the standards of Table I of 19.15.29.12 NMAC or other applicable remediation standards and restore and reclaim the area pursuant to 19.15.29.13 NMAC. If contamination is located in areas immediately under or around production equipment such as production tanks, wellheads and pipelines where remediation could cause a major facility deconstruction, the remediation, restoration and reclamation may be deferred with division written approval until the equipment is removed during other operations, or when the well or facility is plugged or abandoned, whichever comes first. The deferral may be granted so long as the contamination is fully delineated and does not cause an imminent risk to human health, the environment, or ground water. Final remediation and reclamation shall take place in accordance with 19.15.29.12 and 19.15.29.13 NMAC once the site is no longer being used for oil and gas operations.

(3) The responsible party shall remediate the impacted surface area of a release not occurring on a lined, bermed or otherwise contained exploration, development, production or storage site to meet the standards of Table I of 19.15.29.12 NMAC or other applicable remediation standards and restore and reclaim the area pursuant to 19.15.29.13 NMAC.

(4) If a release occurs within the following areas, the responsible party must treat the release as if it occurred less than 50 feet to ground water in Table I of 19.15.29.12 NMAC:

(a) within

(i) 300 feet of any continuously flowing watercourse or any other significant watercourse, or

(ii) 200 feet of any lakebed, sinkhole or playa lake (measured from the ordinary high-water mark);

(b) within 300 feet from an occupied permanent residence, school, hospital, institution or church;

(c) within

(i) 500 feet of a spring or a private, domestic fresh water well used by less than five households for domestic or stock watering purposes, or

(ii) 1000 feet of any fresh water well or spring;

(d) within incorporated municipal boundaries or within a defined municipal fresh water well field covered under a municipal ordinance adopted pursuant to Section 3-27-3 NMSA 1978 as amended, unless the municipality specifically approves;

(e) within 300 feet of a wetland;

(f) within the area overlying a subsurface mine;

(g) within an unstable area; or

(h) within a 100-year floodplain.

(5) The division has 60 days from receipt of the proposed remediation plan to review and approve, approve with conditions or deny the remediation plan. If 60 days have lapsed without response from the division, then the plan is deemed denied. If the plan is approved with conditions or affirmatively denied, the division shall provide a written summary of deficiencies on which the decision is based. If the responsible party disagrees with any conditions of approval or denial of the plan, it shall consult with the division or file an application for hearing pursuant to 19.15.4 NMAC within 30 days of the denial or issuance of the conditions.

D. Closure requirements. The responsible party must take the following action for any major or minor release containing liquids.

(1) The responsible party must test the remediated areas for contamination with representative five-point composite samples from the walls and base, and individual grab samples from any wet or discolored areas. The samples must be analyzed for the constituents listed in Table I of 19.15.29.12 NMAC or constituents from other applicable remediation standards.

(a) The responsible party must verbally notify the appropriate division district office two business days prior to conducting final sampling. If the division district office does not respond to the notice within the two business days, the responsible party may proceed with final sampling. The responsible party may request a variance from this requirement upon a showing of good cause as determined by the division.

(b) The responsible party may submit a composite and grab sample plan for the division's review and approval separately or with the remediation plan.

(c) Alternately, without division approval, the responsible party may elect to perform a composite and grab sample plan of the remediated area where each composite sample is not representative of more than 200 square feet.

(2) If all composite and grab sample concentrations are less than or equal to the parameters listed in Table I of 19.15.29.12 NMAC or any conditions of approval, then the responsible party may proceed to backfill any excavated areas.

E. Closure reporting. The responsible party must take the following action for any major or minor release containing liquids.

(1) The responsible party must submit to the division a closure report on form C-141, including required attachments, to document all closure activities including sampling results and the details on any backfilling, capping or covering, where applicable. The responsible party must certify that all information in the closure report and attachments is correct and that the responsible party has complied with all applicable closure requirements and conditions specified in division rules or directives. The responsible party must submit closure report along with form C-141 to the division within 90 days of the remediation plan approval. The responsible party may apply for additional time to submit the final closure report upon a showing of good cause as determined by the division. The final report must include:

- (a) a scaled site and sampling diagram;
- (b) photographs of the remediated site prior to backfill;
- (c) laboratory analyses of final sampling; and
- (d) a description of all remedial activities.

(2) The division district office has 60 days to review and approve or deny the closure report. If 60 days have lapsed without response from the division, then the report is deemed denied. If the report is affirmatively denied, the division shall provide a written summary of deficiencies on which the decision is based. If the responsible party disagrees with denial of the closure report, it may consult with the division or file an application for hearing pursuant to 19.15.4 NMAC within 30 days of the denial.

Table I			
Closure Criteria for Soils Impacted by a Release			
Minimum depth below any point within the horizontal boundary of the release to ground	Constituent	Method*	Limit**

water less than 10,000 mg/l TDS			
≤ 50 feet	Chloride***	EPA 300.0 or SM4500 Cl B	600 mg/kg
	TPH	EPA SW-846	100 mg/kg
	(GRO+DRO+MRO)	Method 8015M	
	BTEX	EPA SW-846 Method 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Method 8021B or 8260B	10 mg/kg
51 feet-100 feet	Chloride***	EPA 300.0 or SM4500 Cl B	10,000 mg/kg
	TPH	EPA SW-846 Method 8015M	2,500 mg/kg
	(GRO+DRO+MRO)		
	GRO+DRO	EPA SW-846 Method 8015M	1,000 mg/kg
	BTEX	EPA SW-846 Method 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Method 8021B or 8260B	10 mg/kg
>100 feet	Chloride***	EPA 300.0 or SM4500 Cl B	20,000 mg/kg
	TPH	EPA SW-846 Method 8015M	2,500 mg/kg
	(GRO+DRO+MRO)		
	GRO+DRO	EPA SW-846 Method 8015M	1,000 mg/kg
	BTEX	EPA SW-846 Method 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Method 8021B or 8260B	10 mg/kg

*Or other test methods approved by the division.

**Numerical limits or natural background level, whichever is greater.

***This applies to releases of produced water or other fluids, which may contain chloride.

19.15.29.13 RESTORATION, RECLAMATION AND RE-VEGETATION:

A. The responsible party must substantially restore the impacted surface areas to the condition that existed prior to the release or their final land use. Restoration of the site must include the replacement of removed material and must be replaced to the near original relative positions and contoured to achieve erosion control, long-term stability and preservation of surface water flow patterns.

B. Areas reasonably needed for production operations or for subsequent drilling operations must be compacted, covered, paved or otherwise stabilized and maintained in such a way as to minimize dust and erosion to the extent practical.

C. The responsible party must construct the soil cover to the site's existing grade and prevent ponding of water and erosion of the cover material.

D. Reclamation of areas no longer in use. The responsible party shall reclaim all areas disturbed by the remediation and closure, except areas reasonably needed for production operations or for subsequent drilling operations, as early and as nearly as practical to their original condition or their final land use and maintain those areas to control dust and minimize erosion to the extent practical.

(1) The reclamation must contain a minimum of four feet of non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, or other test methods approved by the division. The soil cover must include a top layer, which is either the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater.

(2) The responsible party must reseed disturbed area in the first favorable growing season following closure of the site.

(3) The division will consider reclamation of all disturbed areas complete when uniform vegetative cover has been established that reflects a life-form ratio of plus or minus fifty percent of pre-disturbance levels and a total percent plant cover of at least seventy percent of pre-disturbance levels, excluding noxious weeds.

(4) For any major or minor release containing liquids, the responsible party must notify the division when reclamation and re-vegetation are complete.

E. The surface restoration, reclamation and re-vegetation obligations imposed by federal or state agencies or tribes on lands managed or owned by those agencies supersede these provisions and govern the obligations of any responsible party subject to those provisions, provided that the other requirements provide equal or better protection of fresh water, human health and the environment.

[19.15.29.13 NMAC - N, 8/14/2018]

19.15.29.14 VARIANCES:

A. A responsible party may file a written request for a variance from any requirement of 19.15.29 NMAC with the appropriate division district office. The variance request must include:

- (1)** a detailed statement explaining the need for a variance; and
- (2)** a detailed written demonstration that the variance will provide equal or better protection of fresh water, public health and the environment.

B. The division district office must approve or deny the variance in writing within 60 days of receipt. If the division district office denies the variance, it must provide the responsible party with the reasons for denial.

C. If the division district office does not approve or deny a request for variance from the requirements of 19.15.29 NMAC within 60 days of the date the request for variance is received by the division district office, then the request for variance is deemed denied and the responsible party may file an application for a hearing pursuant to 19.15.4 NMAC within 30 days of the denial.

D. If the responsible party requests a hearing pursuant to 19.15.4 NMAC within 30 days after receipt of notice, the division must set the matter for hearing with notice to the responsible party and appropriate division district office.

E. In addition to the notice provisions in 19.15.4 NMAC, the responsible party must provide notice of the hearing on the request for variance to the surface owner of the site by certified mail, return receipt requested, at least 20 days prior to the date of the hearing.

F. Variances must receive division approval prior to implementation.

[19.15.29.14 NMAC - N, 8/14/2018]

19.15.29.15 ENFORCEMENT:

A. The responsible party must comply with all the requirements of 19.15.29 NMAC. The division may take enforcement action pursuant to 19.15.5.10 NMAC against any responsible party who does not comply with 19.15.29 NMAC.

B. A responsible party may enter a stipulated final order with the division for any violation of 19.15.29 NMAC, except for 19.15.29.9 NMAC. An agreed compliance order may be entered prior to or after the filing of an application by the division or any other party for an administrative compliance proceeding. Any administrative compliance

order will have the same force and effect as a compliance order issued after an adjudicatory hearing.

C. The director or the director's designee may deny any application or permit, including but not limited to, a permit to drill, deepen or plug back a well if the responsible party is not in compliance with a court order or final order arising from 19.15.29 NMAC.

[19.15.29.15 NMAC - N, 8/14/2018; A, 8/24/2021]

19.15.29.16 TRANSITIONAL PROVISIONS:

A. Responsible parties with current ongoing corrective actions/remediation with approved plans and timelines as of August 14, 2018 do not have to submit revised plans.

B. Responsible parties with ongoing corrective actions/remediation without approved timelines or plans as of August 14, 2018 must submit a characterization plan or corrective action/remediation plan with proposed timeframes within 90 days of August 14, 2018.

[19.15.29.16 NMAC - N, 8/14/2018]

PART 30: REMEDIATION

19.15.30.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.30.1 NMAC - N, 12/1/08]

19.15.30.2 SCOPE:

19.15.30 NMAC applies to persons engaged in oil and gas development and production within New Mexico.

[19.15.30.2 NMAC - N, 12/1/08]

19.15.30.3 STATUTORY AUTHORITY:

19.15.30 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Sections 70-2-6, 70-2-11 and 70-2-12.

[19.15.30.3 NMAC - N, 12/1/08]

19.15.30.4 DURATION:

Permanent.

[19.15.30.4 NMAC - N, 12/1/08]

19.15.30.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.30.5 NMAC - N, 12/1/08]

19.15.30.6 OBJECTIVE:

To abate pollution of subsurface water so that ground water of the state that has a background concentration of 10,000 mg/l or less TDS is either remediated or protected for use as domestic, industrial and agricultural water supply, and to remediate or protect those segments of surface waters that are gaining because of subsurface-water inflow for uses designated in the water quality standards for interstate and intrastate surface waters in New Mexico, 20.6.4 NMAC; and abate surface-water pollution so that surface waters of the state are remediated or protected for designated or attainable uses as defined in the water quality standards for interstate and intrastate surface waters in New Mexico, 20.6.4 NMAC.

[19.15.30.6 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.7 DEFINITIONS:

[RESERVED]

[See 19.15.2.7 NMAC for definitions.]

19.15.30.8 PREVENTION AND ABATEMENT OF WATER POLLUTION:

A. If the background concentration of a water contaminant exceeds the standard or requirement of Subsections A, B or C of 19.15.30.9 NMAC, the responsible person shall abate the pollution to the background concentration.

B. The standards and requirements set forth in of Subsections A, B or C of 19.15.30.9 NMAC are not intended as maximum ranges and concentrations for use, and nothing contained in 19.15.30.9 NMAC limits the use of waters containing higher ranges and concentrations.

[19.15.30.8 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.9 ABATEMENT STANDARDS AND REQUIREMENTS:

A. The responsible person shall abate the vadose zone so that water contaminants in the vadose zone will not with reasonable probability contaminate ground water or surface water, in excess of the standards in Subsections B and C of 19.15.30.9 NMAC, through leaching, percolation or other transport mechanisms, or as the water table elevation fluctuates.

B. The responsible person shall abate ground-water pollution at a place of withdrawal for present or reasonably foreseeable future use, where the TDS concentration is 10,000 mg/l or less, to conform to the following standards:

- (1)** toxic pollutants as defined in 20.6.2.7 NMAC shall not be present; and
- (2)** the standards of 20.6.2.3103 NMAC shall be met.

C. The responsible person shall abate surface-water pollution to conform to the water quality standards for interstate and intrastate surface waters in New Mexico, 20.6.4 NMAC.

D. The division shall not consider subsurface-water and surface-water abatement complete until eight consecutive quarterly samples, or an alternate lesser number of samples the director approves, from the compliance sampling stations the director approved meet the abatement standards in Subsections A, B and C of 19.15.30.9 NMAC. The division shall consider abatement of water contaminants measured in solid-matrix samples of the vadose zone complete after one-time sampling from compliance stations the director approves.

E. Technical infeasibility.

(1) If a responsible person is unable to meet the abatement standards set forth in Subsections A and B of 19.15.30.9 NMAC using commercially accepted abatement technology pursuant to an approved abatement plan, the responsible person may propose that abatement standards compliance is technically infeasible.

(a) The director may consider technical infeasibility proposals involving the use of experimental abatement technology.

(b) The responsible person may demonstrate technical infeasibility by a statistically valid extrapolation of the decrease in concentrations of a water contaminant over the remainder of a 20 year period, such that projected future reductions during that time would be less than 20 percent of the concentration at the time the responsible person proposes technical infeasibility. A statistically valid decrease cannot be demonstrated by fewer than eight consecutive quarters.

(c) The technical infeasibility proposal shall include a substitute abatement standard for those contaminants that is technically feasible. The responsible person

shall meet abatement standards for other water contaminants not demonstrated to be technically infeasible.

(2) The director shall not approve a proposed technical infeasibility demonstration for a water contaminant if its concentration is greater than 200 percent of the abatement standard for the contaminant.

(3) If the director cannot approve any or all portions of a proposed technical infeasibility demonstration because the water contaminant concentration is greater than 300 percent of the abatement standard for each contaminant, the responsible person may further pursue the issue of technical infeasibility by filing a petition with the division seeking approval of alternate abatement standards pursuant to Subsection F of 19.15.30.9 NMAC.

F. Alternative abatement standards.

(1) At any time during or after the stage 2 abatement plan's submission, the responsible person may file a petition seeking approval of alternative abatement standards for the standards set forth in Subsections A and B of 19.15.30.9 NMAC. The division may approve alternative abatement standards if the petitioner demonstrates that:

(a) either compliance with the abatement standards is not feasible, by the maximum use of technology within the responsible person's economic capability; or there is no reasonable relationship between the economic and social costs and benefits, including attainment of the standards set forth in 19.15.30.9 NMAC to be obtained;

(b) the proposed alternative abatement standards are technically achievable and cost-benefit justifiable; and

(c) compliance with the proposed alternative abatement standard will not create a present or future hazard to public health or undue damage to property.

(2) The responsible person shall file a written petition with the division's environmental bureau chief. The petition may include a transport, fate and risk assessment in accordance with accepted methods, and other information as the petitioner deems necessary to support the petition. The petition shall:

(a) state the petitioner's name and address;

(b) state the date of the petition;

(c) describe the facility or activity for which the petitioner seeks the alternate abatement standards;

(d) state the address or description of the property upon which the facility is located;

(e) describe the water body or watercourse the release affected;

(f) identify the abatement standard from which petitioner wishes to vary;

(g) state why the petitioner believes that compliance with 19.15.30 NMAC will impose an unreasonable burden upon the petitioner's activity;

(h) identify the water contaminant for which the petitioner proposes the alternative standard;

(i) state the alternative standard the petitioner proposes;

(j) identify the three-dimensional body of water pollution for which the petitioner seeks approval; and

(k) state the extent to which the abatement standards set forth in 19.15.30.9 NMAC are now, and will in the future be, violated.

(3) The division's environmental bureau chief shall review the petition and, within 60 days after receiving the petition, submit a written recommendation to the director to approve, approve subject to conditions or disapprove any or all of the proposed alternative abatement standards. The recommendation shall include the reasons for the division's environmental bureau chief's recommendation. The division's environmental bureau chief shall submit a copy of the recommendation to the petitioner by certified mail.

(4) If the division's environmental bureau chief recommends approval, or approval subject to conditions, of any or all of the proposed alternative abatement standards, the division shall hold a public hearing on those standards. If the division's environmental bureau chief recommends disapproval of any or all of the proposed alternative abatement standards, the petitioner may submit a request to the director, within 15 days after the recommendation's receipt, for a public hearing on those standards. If the petitioner does not submit a timely request for hearing, the recommended disapproval shall become a final decision of the director and shall not be subject to review.

(5) If the director grants a public hearing, the division shall conduct the hearing in accordance with division hearing procedures.

(6) Based on the record of the public hearing, the division shall approve, approve subject to condition or disapprove any or all of the proposed alternative abatement standards. The division shall notify the petitioner by certified mail of its decision and the reasons for the decision.

[19.15.30.9 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.10 MODIFICATION OF ABATEMENT STANDARDS:

If applicable abatement standards are modified after the division approves the abatement measures, the abatement standards that are in effect at the time that the division approved the abatement measures shall be the abatement standards for the duration of the abatement action, unless the director determines that compliance with those standards may with reasonable probability create a present or future hazard to public health or the environment. In an appeal of the director's determination that additional actions are necessary, the director shall have the burden of proof.

[19.15.30.10 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.11 ABATEMENT PLAN REQUIRED:

A. Unless otherwise provided by 19.15.30 NMAC responsible persons who are abating, or who are required to abate, water pollution in excess of the standards and requirements set forth in 19.15.30.9 NMAC shall do so pursuant to an abatement plan the director approves. When the director has approved an abatement plan, the responsible person's actions leading to and including abatement shall be consistent with the abatement plan's terms and conditions.

B. In the event of a transfer of the ownership, control or possession of a facility for which an abatement plan is required or approved, where the transferor is a responsible person, the transferee also shall be considered a responsible person for the abatement plan's duration, and may jointly share the responsibility to conduct the actions 19.15.30 NMAC requires with other responsible persons.

(1) The transferor shall notify the transferee in writing at least 30 days prior to the transfer that the division has required or approved an abatement plan for the facility, and shall deliver or send by certified mail to the director a copy of the notification together with a certificate or other proof that the transferee has received the notification.

(2) The transferor and transferee may agree to a designated responsible person who shall assume the responsibility to conduct the actions 19.15.30 NMAC requires. The responsible persons shall notify the director in writing if a designated responsible person is agreed upon.

(3) If the director determines that the designated responsible person has failed to conduct the actions 19.15.30 NMAC requires, the director shall notify all responsible persons of this failure in writing and allow them 30 days, or longer for good cause shown, to conduct the required actions before setting a show cause hearing requiring those responsible persons to appear and show cause why they should not be ordered to comply, a penalty should not be assessed, a civil action should not be commenced in district court or the division should not take other appropriate action.

C. If the source of the water pollution to be abated is a facility that operated under a discharge plan, the director may require the responsible person to submit a financial assurance plan that covers the estimated costs to conduct the actions the abatement plan requires. Such a financial assurance plan shall be consistent with financial assurance requirements the division adopts.

[19.15.30.11 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.12 EXEMPTIONS FROM ABATEMENT PLAN REQUIREMENT:

A. Except as provided in Subsection B of 19.15.30.12 NMAC, 19.15.30.11 NMAC and 19.15.30.13 NMAC do not apply to a person who is abating water pollution:

(1) from an underground storage tank, under the authority of the New Mexico environmental improvement board's underground storage tank rules, 20.5 NMAC, or in accordance with the Ground Water Protection Act, NMSA 1978, Section 74-6B-1 *et seq.*;

(2) under the EPA's authority pursuant to either the Federal Comprehensive Environmental Response, Compensation and Liability Act, and amendments, or RCRA;

(3) pursuant to the New Mexico environmental improvement board's hazardous waste management rule, 20.4.1 NMAC;

(4) under the authority of the United States nuclear regulatory commission or the United States department of energy pursuant to the Atomic Energy Act;

(5) under the authority of a ground-water discharge plan the director approved, provided that such abatement is consistent with the requirements and provisions of 19.15.30.8 NMAC, 19.15.30.9 NMAC, Subsections C and D of 19.15.30.13 NMAC, 19.15.30.14 NMAC and 19.15.30.19 NMAC;

(6) under the authority of a letter of understanding, settlement agreement or administrative order on consent or other agreement signed by the director or director's designee prior to March 15, 1997, provided that abatement is being performed in compliance with the terms of the letter of understanding, settlement agreement or administrative order or other agreement on consent; and

(7) on an emergency basis, or while abatement plan approval is pending, or in a manner that will likely result in compliance with the standards and requirements set forth in 19.15.30.9 NMAC within one year after notice is required to be given pursuant to 19.15.29.9 NMAC provided that the division does not object to the abatement action.

B. If the director determines that abatement of water pollution subject to Subsection A of 19.15.30.12 NMAC will not meet the standards of Subsections B and C of 19.15.30.9 NMAC, or that additional action is necessary to protect health, welfare,

environment or property, the director may notify a responsible person, by certified mail, to submit an abatement plan pursuant to 19.15.30.11 NMAC and Subsection A of 19.15.30.14 NMAC. The notification shall state the reasons for the director's determination. In an appeal of the director's determination under Subsection B of 19.15.30.12 NMAC, the director shall have the burden of proof.

[19.15.30.12 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.13 ABATEMENT PLAN PROPOSAL:

A. Except as provided for in 19.15.30.12 NMAC a responsible person shall, within 60 days of receipt of the director's written notice that the division requires an abatement plan, submit an abatement plan proposal to the director for approval. The responsible person may submit stage 1 and stage 2 abatement plan proposals together. For good cause shown, the director may allow for a total of 120 days to prepare and submit the abatement plan proposal.

B. Voluntary abatement.

(1) A person wishing to abate water pollution in excess of the standards and requirements set forth in 19.15.30.9 NMAC may submit a stage 1 abatement plan proposal to the director for approval. Following the director's approval of a final site investigation report prepared pursuant to stage 1 of an abatement plan, a person may submit a stage 2 abatement plan proposal to the director for approval.

(2) Following approval of a stage 1 or stage 2 abatement plan proposal under Paragraph (1) of Subsection B of 19.15.30.13 NMAC the person submitting the approved plan shall be a responsible person under 19.15.30 NMAC for the purpose of performing the approved stage 1 or stage 2 abatement plan. Nothing in 19.15.30 NMAC precludes the director from applying 19.15.29.11 NMAC to a responsible person if applicable.

C. Stage 1 abatement plan. The stage 1 of the abatement plan's purpose is to design and conduct a site investigation that adequately defines site conditions, and provide the data necessary to select and design an effective abatement option. Stage 1 of the abatement plan may include the following information depending on the media affected, and as needed to select and implement an expeditious abatement option:

(1) descriptions of the site, including a site map, and of site history including the nature of the release that caused the water pollution, and a summary of previous investigations;

(2) site investigation work plan that defines:

(a) site geology and hydrogeology; the vertical and horizontal extent and magnitude of vadose-zone and ground-water contamination; subsurface hydraulic

conductivity; transmissivity, storativity and rate and direction of contaminant migration; inventory of water wells inside and within one mile from the perimeter of the three-dimensional body where the standards set forth in Subsection C of 19.15.30.9 NMAC are exceeded; and location and number of wells the pollution actually or potentially affects; and

(b) surface water hydrology, seasonal stream flow characteristics, ground water/surface water relationships, the vertical and horizontal extent and magnitude of contamination and impacts to surface water and stream sediments; the magnitude of contamination and impacts on surface water may be, in part, defined by conducting a biological assessment of fish, benthic macro invertebrates and other wildlife populations; seasonal variations should be accounted for when conducting these assessments;

(3) monitoring program, including sampling stations and frequencies, for the abatement plan's duration that may be modified, after the director's approval, as the responsible person creates additional sampling stations;

(4) quality assurance plan, consistent with the sampling and analytical techniques listed in Subsection B of 20.6.2.3107 NMAC and with 20.6.4.14 NMAC of the water quality standards for interstate and intrastate surface waters in New Mexico, for all work to be conducted pursuant to the abatement plan;

(5) a schedule for stage 1 abatement plan activities, including the submission of summary quarterly progress reports, and the submission, for the director's approval, of a detailed final site investigation report; and

(6) additional information that may be required to design and perform an adequate site investigation.

D. Stage 2 abatement plan.

(1) A responsible person shall submit a stage 2 abatement plan proposal to the director for approval within 60 days, or up to 120 days for good cause shown, after the director's approval of the final site investigation report prepared pursuant to stage 1 of the abatement plan. The responsible person may submit a stage 1 and 2 abatement plan proposal together. Stage 2 of the abatement plan's purpose is to select and design, if necessary, an abatement option that, when implemented, results in attainment of the abatement standards and requirements set forth in 19.15.30.9 NMAC, including post-closure maintenance activities.

(2) Stage 2 of the abatement plan should include, at a minimum, the following information:

(a) a brief description of the current situation at the site;

(b) development and assessment of abatement options;

(c) a description, justification and design, if necessary, of the preferred abatement option;

(d) modification, if necessary, of the monitoring program the director approved pursuant to stage 1 of the abatement plan, including the designation of pre- and post-abatement-completion sampling stations and sampling frequencies to be used to demonstrate compliance with the standards and requirements set forth in 19.15.30.9 NMAC;

(e) site maintenance activities, if needed, the responsible person proposes to perform after abatement activities terminate;

(f) a schedule for the duration of abatement activities, including the submission of summary quarterly progress reports;

(g) a public notification proposal designed to satisfy the requirements of Subsections B and C of 19.15.30.15 NMAC; and

(h) additional information that may be reasonably required to select, describe, justify and design an effective abatement option.

[19.15.30.13 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.14 OTHER REQUIREMENTS:

A. A responsible person shall allow the director's authorized representative upon presentation of proper credentials and with reasonable prior notice to:

(1) enter the facility at reasonable times;

(2) inspect and copy records an abatement plan requires;

(3) inspect treatment works, monitoring and analytical equipment;

(4) sample wastes, ground water, surface water, stream sediment, plants, animals or vadose-zone material including vadose-zone vapor;

(5) use monitoring systems and wells under the responsible person's control in order to collect samples of media listed in Paragraph (4) of Subsection A of 19.15.30.14 NMAC; and

(6) gain access to off-site property the responsible person does not own or control, but is accessible to the responsible person through a third-party access agreement, provided that the agreement allows it.

B. A responsible person shall provide the director, or director's representative, with at least four working days advance notice of sampling to be performed pursuant to an abatement plan, or a well plugging, abandonment or destruction at a facility where the division has required an abatement plan.

C. A responsible person wishing to plug, abandon or destroy a monitoring or water supply well within the perimeter of the three-dimensional body where the standards set forth in Subsection B of 19.15.30.9 NMAC are exceeded, at a facility where the division has required an abatement plan, shall propose such action by certified mail to the director for approval, unless the state engineer's approval is required. The responsible person shall design the proposed action to prevent water pollution that could result from water contaminants migrating through the well or bore hole. The proposed action shall not take place without the director's written approval, unless the responsible person does not receive written approval or disapproval within 30 days after the date the director receives the proposal.

[19.15.30.14 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.15 PUBLIC NOTICE AND PARTICIPATION:

A. Prior to public notice, the applicant shall give written notice, as approved by the division, of stage 1 and stage 2 abatement plans to the following persons:

(1) surface owners of record within one mile of the perimeter of the geographic area where the standards and requirements set forth in 19.15.30.9 NMAC are exceeded;

(2) the county commission where the geographic area where the standards and requirements set forth in 19.15.30.9 NMAC are exceeded is located;

(3) the appropriate city officials if the geographic area where the standards and requirements set forth in 19.15.30.9 NMAC are exceeded is located or is partially located within city limits or within one mile of the city limits;

(4) those persons, the director identifies, who have requested notification, who shall be notified by mail;

(5) the New Mexico trustee for natural resources, and other local, state or federal governmental agencies affected, as the director identifies, which shall be notified by certified mail;

(6) the governor or president of a tribe, pueblo or nation if the geographic area where the standards and requirements set forth in 19.15.30.9 NMAC are exceeded is located or is partially located within tribal boundaries or within one mile of the tribal boundaries, who shall be notified by certified mail;

(7) the director may extend the distance requirements for notice if the director determines the proposed abatement plan has the potential to adversely impact public health or the environment at a distance greater than one mile. The director may require additional notice as needed. The applicant shall furnish a copy and proof of the notice to the division.

B. Within 15 days after the division determines that a stage 1 abatement plan or a stage 2 abatement plan is administratively complete, the responsible person shall issue public notice in a division-approved form in a newspaper of general circulation in the county in which the release occurred, and in a newspaper of general circulation in the state. For the purposes of Subsection B of 19.15.30.15 NMAC, an administratively complete stage 1 abatement plan is a document that satisfies the requirements of Subsection C of 19.15.30.13 NMAC and an administratively complete stage 2 abatement plan is a document that satisfies the requirements of Paragraph (2) of Subsection D of 19.15.30.13 NMAC. The public notice shall include, as approved in advance by the director:

- (1)** the responsible person's name and address;
- (2)** the location of the proposed abatement;
- (3)** a brief description of the source, extent and estimated volume of release; whether the release occurred into the vadose zone, ground water or surface water; and a description of the proposed stage 1 or stage 2 abatement plan;
- (4)** a brief description of the procedures the director followed in making a final determination;
- (5)** a statement that the public may view a copy of the abatement plan at the division's Santa Fe office or at the division's district office for the area in which the release occurred, and a statement describing how the public can access the abatement plan electronically from a division-maintained site if such access is available;
- (6)** a statement that the division will accept the following comments and requests for consideration if the director receives them within 30 days after the date of publication of the public notice:
 - (a)** written comments on the abatement plan; and
 - (b)** for a stage 2 abatement plan, written requests for a public hearing that include reasons why a hearing should be held; and
- (7)** an address and phone number at which interested persons may obtain further information.

C. A person seeking to comment on a stage 1 abatement plan, or to comment or request a public hearing on a stage 2 abatement plan, shall file written comments or hearing requests with the division within 30 days after the date of public notice, or within 30 days after the director receives a proposed significant modification of a stage 2 abatement plan. Requests for a public hearing shall set forth the reasons why a hearing should be held. The division shall hold a public hearing if the director determines that there is significant public interest or that the request has technical merit.

D. The division shall distribute notice of an abatement plan's filing with the next division and commission hearing docket following the plan's receipt.

[19.15.30.15 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.16 DIRECTOR APPROVAL OR NOTICE OF DEFICIENCY OF SUBMITTALS:

A. The director shall, within 60 days after receiving an administratively complete stage 1 abatement plan, a site investigation report, a technical infeasibility demonstration or an abatement completion report approve the document, or notify the responsible person of the document's deficiency, based upon the information available.

B. If the division does not hold a public hearing pursuant to Subsection C of 19.15.30.15 NMAC then the director shall, within 90 days after receiving a stage 2 abatement plan proposal, approve the plan, or notify the responsible person of the plan's deficiency, based upon the information available.

C. If the division holds a public hearing pursuant to Subsection C of 19.15.30.15 NMAC then the director shall, within 60 days after receiving the required information, approve stage 2 of the abatement plan proposal, or notify the responsible person of the plan's deficiency, based upon the information contained in the plan and the information submitted at the hearing.

D. If the director notifies a responsible person of a deficiency in a site investigation report, or in a stage 1 or stage 2 abatement plan proposal, the responsible person shall submit a modified document to cure the deficiencies the director specifies within 30 days after receiving the notice of deficiency. The responsible person is in violation of 19.15.30 NMAC if the responsible person fails to submit a modified document within the required time, or if the responsible person does not in the modified document make a good faith effort to cure the deficiencies the director specified.

E. Provided that the responsible person meets the other requirements of 19.15.30 NMAC and provided further that stage 2 of the abatement plan, if implemented, shall result in the standards and requirements set forth in 19.15.30.9 NMAC being met within a schedule that is reasonable given the site's particular circumstances, the director shall approve the plan.

[19.15.30.16 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.17 INVESTIGATION AND ABATEMENT:

A responsible person who receives the division's approval for stage 1 or stage 2 of an abatement plan shall conduct investigation, abatement, monitoring and reporting activities in compliance with 19.15.30 NMAC and according to the terms and schedules contained in the approved abatement plans.

[19.15.30.17 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.18 ABATEMENT PLAN MODIFICATION:

A. The division may modify an approved abatement plan at the responsible person's written request in accordance with 19.15.30 NMAC with the director's written approval.

B. If data the responsible person submitted pursuant to monitoring requirements specified in the approved abatement plan or other information available to the director indicates that the abatement action is ineffective, or is creating unreasonable injury to or interference with health, welfare, environment or property, the director may require a responsible person to modify an abatement plan within the shortest reasonable time so as to effectively abate water pollution that exceeds the standards and requirements set forth in 19.15.30.9 NMAC, and to abate and prevent unreasonable injury to or interference with health, welfare, environment or property.

[19.15.30.18 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.19 COMPLETION AND TERMINATION:

A. The division shall consider abatement complete when the responsible person meets the standards and requirements set forth in 19.15.30.9 NMAC. At that time, the responsible person shall submit an abatement completion report, documenting compliance with the standards and requirements set forth in 19.15.30.9 NMAC, to the director for approval. The abatement completion report also shall propose changes to long-term monitoring and site maintenance activities, if needed, to be performed after the abatement plan's termination.

B. Provided that the responsible person meets the other requirements of 19.15.30 NMAC and provided further that the responsible person has met the standards and requirements set forth in 19.15.30.9 NMAC, the director shall approve the abatement completion report. When the director approves the abatement completion report, the director shall also notify the responsible person in writing that the abatement plan is terminated.

[19.15.30.19 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.20 DISPUTE RESOLUTION:

In the event of a technical dispute regarding the requirements of 19.15.29 NMAC, 19.15.30.9 NMAC, 19.15.30.12 NMAC, 19.15.30.13 NMAC, 19.15.30.18 NMAC or 19.15.30.19 NMAC, including notices of deficiency, the responsible person may notify the director by certified mail that a dispute has arisen, and the responsible person desires to invoke the dispute resolution provisions of 19.15.30.20 NMAC provided that the responsible person shall send the notification within 30 days after the responsible person receives the director's decision that causes the dispute. Upon the notification, the deadlines affected by the technical dispute shall be extended for a 30 day negotiation period, or for a maximum of 60 days if approved by the director for good cause shown. During this negotiation period, the director or the director's designee and the responsible person shall meet at least once. A mutually agreed upon third party may facilitate the meeting, but the third party shall assume no power or authority granted or delegated to the director by the Oil and Gas Act or by the division or commission. If the dispute remains unresolved after the negotiation period, the director's decision shall be final.

[19.15.30.20 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

19.15.30.21 APPEALS FROM DIRECTOR'S AND DIVISION'S DECISIONS:

A. If the director

- (1)** determines that an abatement plan is required pursuant to 19.15.29.11 NMAC;
- (2)** approves or provides notice of deficiency of a proposed abatement plan, technical infeasibility demonstration or abatement completion report; or
- (3)** modifies or terminates an approved abatement plan

the director shall provide written notice of the action by certified mail to the responsible person and other persons who participated in the action.

B. A person who participated in the action before the director and that the action listed in Subsection A of 19.15.30.21 NMAC adversely affects may file a petition requesting a hearing before a division examiner.

C. The person shall make the petition in writing and file it with the division within 30 days after receiving notice of the director's action. The petition shall specify the portions of the action to which the petitioner objects, certify that the person has mailed or hand-delivered a copy of the petition to the director and to the applicant or permittee if the petitioner is not the applicant or permittee and have attached a copy of the action for which the person seeks review. Unless a person makes a timely petition for hearing, the director's action is final.

D. The hearing before the division shall be conducted in the same manner as other division hearings.

E. The petitioner shall pay the cost of the court reporter for the hearing.

F. A party adversely affected by a division order pursuant to a hearing held by a division examiner, shall have a right to have the matter heard de novo before the commission.

G. The appeal provisions do not relieve the owner, operator or responsible person of their obligations to comply with federal or state laws including regulations or rules.

[19.15.30.21 NMAC - Rp, 19.15.1.19 NMAC, 12/1/08]

PART 31-33: [RESERVED]

PART 34: PRODUCED WATER, DRILLING FLUIDS AND LIQUID OIL FIELD WASTE

19.15.34.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Commission.

[19.15.34.1 NMAC - Rp, 19.15.34.1 NMAC, 3/31/15]

19.15.34.2 SCOPE:

19.15.34 NMAC applies to the transportation, disposal, recycling, re-use or the direct surface or subsurface disposition of produced water in connection with the development or production of oil or gas or both. 19.15.34 NMAC also applies to the transportation of drilling fluids and liquid oil field waste. 19.15.34 NMAC does not authorize any transportation, disposal, recycling, re-use or disposition of produced water that is not directly within the jurisdiction of the division.

[19.15.34.2 NMAC - Rp, 19.15.34.2 NMAC, 3/31/2015; A, 10/13/2020]

19.15.34.3 STATUTORY AUTHORITY:

19.15.34 NMAC is adopted pursuant to the Oil and Gas Act, Paragraph (15) of Subsection B of Section 70-2-12 NMSA 1978, which authorizes the division to regulate the disposition, handling, transport, storage, recycling, treatment and disposal of produced water during, or for re-use in, the exploration, drilling, production, treatment or refinement of oil or gas in a manner that protects public health, the environment and fresh water resources and Paragraph (21) of Subsection B of Section 70-2-12 NMSA 1978 which authorizes the regulation of the disposition of nondomestic wastes from the exploration, development, production or storage of crude oil or natural gas.

[19.15.34.3 NMAC - Rp, 19.15.34.3 NMAC, 3/31/2015; A, 10/13/2020]

19.15.34.4 DURATION:

Permanent.

[19.15.34.4 NMAC - Rp, 19.15.34.4 NMAC, 3/31/15]

19.15.34.5 EFFECTIVE DATE:

March 31, 2015, unless a later date is cited at the end of a section.

[19.15.34.5 NMAC - Rp, 19.15.34.5 NMAC, 3/31/15]

19.15.34.6 OBJECTIVE:

To encourage the recycling or re-use of produced water in a manner that protects public health, the environment and fresh water resources and establish procedures by which persons may transport, recycle, reuse and dispose produced water, drilling fluids and other liquid oil field waste in activities within the jurisdiction of the division.

[19.15.34.6 NMAC - Rp, 19.15.34.6 NMAC, 3/31/2015; A, 10/13/2020]

19.15.34.7 DEFINITIONS:

These definitions apply to 19.15.34.2 NMAC through 19.15.34.21 NMAC. See 19.15.2.7 NMAC for additional definitions.

A. "Recycling facility" is a stationary or portable facility used exclusively for the treatment, re-use or recycling of produced water. A recycling facility does not include oilfield equipment such as separators, heater treaters and scrubbers in which produced water may be used.

B. "Recycling containment" is a storage containment which incorporates a synthetic liner as the primary and secondary containment device and is used solely in conjunction with a recycling facility for the storage, treatment or recycling of produced water only for the purpose of drilling, completion, production or plugging of wells used in connection with the development of oil or gas or both.

C. "Treatment" refers to the reconditioning of produced water to a reusable form and may include mechanical and chemical processes.

[19.15.34.7 NMAC - N, 3/31/2015; A, 10/13/2020]

19.15.34.8 REQUIREMENTS FOR DISPOSITION BY USE, RECYCLING FACILITIES OR DISPOSAL OF PRODUCED WATER:

A. Recycling or re-use of produced water.

(1) No permit or registration is required from the division for the re-use of produced water for drilling, completion, production, pressure maintenance, secondary recovery or enhanced recovery of oil or natural gas or plugging of wells pursuant to 19.15.34 NMAC.

(2) Any other re-use of produced water within the jurisdiction of the division requires prior approval by the division on form C-147. Approval requirements will be determined by the division based upon the proposed use.

(3) Research using produced water is to be encouraged through pilot projects approved by the division.

(4) All produced water for recycling or re-use shall be handled and stored in a manner that protects public health, the environment and fresh water resources.

(5) All operations in which produced water is used shall be conducted in a manner consistent with hydrogen sulfide gas provisions in 19.15.11 NMAC or NORM provisions in 19.15.35 NMAC, as applicable.

(6) All releases from the recycling and re-use of produced water within the jurisdiction of the division shall be handled in accordance with 19.15.29 NMAC. If the release is detrimental to ground or surface waters, the responsible party must send a copy of the form C-141 to the New Mexico environment department, as applicable, in accordance with 19.15.29 NMAC.

(7) Any release, discharge, handling, transport, storage, recycling or treatment for the disposition of treated produced water, including disposition in road construction maintenance, roadway ice or dust control or other construction, or in the application of treated produced water to land, for activities unrelated to the exploration, drilling, production, treatment or refinement of oil or gas is subject to rules adopted by the water quality control commission.

(8) Surface application of produced water or recycled produced water is prohibited on any facility within the jurisdiction of the division.

B. Disposal of produced water. Persons disposing of produced water shall use one of the following disposition methods:

(1) delivery to a produced water disposal well permitted pursuant to 19.15.26 NMAC, a surface waste management facility permitted pursuant to 19.15.36 NMAC or a permanent pit permitted pursuant to 19.15.17 NMAC;

(2) recycling or re-use in accordance with 19.15.34 NMAC; or

(3) for uses regulated by the water quality control commission pursuant to the Water Quality Act, a person shall obtain a permit from the New Mexico environment department before using the produced water, recycled or treated water or treated product or any byproduct of the produced water.

[19.15.34.8 NMAC - Rp, 19.15.34.12 NMAC, 3/31/2015; A, 10/13/2020]

19.15.34.9 RECYCLING FACILITIES:

A. Except where recycling facilities are part of a permitted operation for the drilling, completing, producing or plugging of oil and gas wells, all recycling facilities shall be permitted or registered with the division district office. Division form C-147 shall be used for registration, financial assurance, or for a permit if not associated with the drilling, completing, producing and plugging of oil and gas wells. All operators or owners of the facility shall be named in the form C-147.

B. In addition to the other applicable rule requirements, registration of a recycling facility is required in the following circumstances:

(1) when the recycling facility is an addition to a surface waste management facility permitted under 19.15.36 NMAC;

(2) when the recycling facility is an addition to the secondary recovery of oil and gas, enhanced oil recovery of oil and gas, or pressure maintenance projects permitted under 19.15.26 NMAC;

(3) when the recycling facility is an addition to a produced water disposal well permitted under 19.15.26 NMAC;

(4) when the recycling facility is an addition to pits permitted or below-grade tanks registered in accordance with 19.15.17 NMAC;

(5) when the recycling facility is used with a closed loop system that only delivers fluid for drilling or completion purposes;

(6) when the recycling facility is used with dedicated above ground, unlined, hard-sided tanks used in accordance with the manufacturer's standards that are externally visually inspected weekly when holding fluids and a log is kept of the inspections made available to the division upon request; or

(7) when the recycling facility is used with a recycling containment registered in accordance with 19.15.34 NMAC.

C. Recycling facilities not identified in Subsection B of 19.15.34.9 NMAC are required to be permitted. The appropriate division district office will determine approval requirements based upon the proposed use.

D. Recycling facilities may be located either onsite or offsite of a well drilling location and may serve a number of wells.

E. The operator of a recycling facility shall keep accurate records and shall report monthly to the division the total volume of water received for recycling, with the amount of fresh water received listed separately, and the total volume of water leaving the facility for disposition by use on form C-148.

F. The operator of a recycling facility shall maintain accurate records that identify the sources and disposition of all recycled water that shall be made available for review by the division upon request.

G. Recycling facilities may not be used for the disposal of produced water.

H. The operator shall remove all fluids within 60 days from the date the operator ceases operations. The division district office may grant an extension for the removal of all fluids not to exceed two months.

[19.15.34.9 NMAC - N, 3/31/2015; A, 10/13/2020]

19.15.34.10 RECYCLING CONTAINMENTS:

A. All recycling containments shall be registered on form C-147. All operators or owners shall be named in the form C-147. The C-147 form shall require documentation that the containment will meet the requirements of 19.15.34.11 through 19.15.34.15 NMAC. At the time the C-147 is submitted to the division, a copy shall be provided to the surface owner.

B. Recycling containments may hold produced water for use in connection with drilling, completion, producing or processing oil or gas or both. Such fluids may include fresh water, brackish water, recycled and treated water, fluids added to water to facilitate well drilling or completion, water produced with oil and gas, flowback from operations, water generated by an oil or gas processing facility or other waters that are gathered for well drilling or completion but may not include any hazardous waste.

C. Registered recycling containments may be operated for five years from the date on which the registration is filed with the division. The operator may extend the allowed time on an annual basis thereafter with division approval if, 30 days prior to the registration expiration, the operator files a form C-147 with an attached summary showing all monthly inspections at the containment, including the monitoring of the leak detection system, showing the containment's integrity has not been compromised.

D. Recycling containments may not be used for the disposal of produced water or other oilfield wastes.

[19.15.34.10 NMAC - N, 3/31/15]

19.15.34.11 SITING REQUIREMENTS FOR RECYCLING CONTAINMENTS:

A. An operator shall not locate a recycling containment:

- (1)** where ground water is less than 50 feet below the bottom of the containment;
- (2)** within 300 feet of a continuously flowing watercourse, or 200 feet of any other significant watercourse or lakebed, sinkhole or playa lake (measured from the ordinary high-water mark);
- (3)** within 1000 feet of a permanent residence, school, hospital, institution or church in existence at the time of the initial registration;
- (4)** within 500 feet of a spring or fresh water well used for domestic or stock watering purposes in existence at the time of the initial registration;
- (5)** within incorporated municipal boundaries or within a defined municipal fresh water well field covered by a municipal ordinance adopted pursuant to Section 3-27-3 NMSA 1978, as amended, unless the municipality specifically approves the recycling containment in writing;
- (6)** within 500 feet of a wetland;
- (7)** within an area overlying a subsurface mine;
- (8)** within an unstable area unless the operator demonstrates that it has incorporated engineering measures into the design to ensure that the containment's integrity is not compromised; or
- (9)** within a 100-year floodplain.

B. In the absence of site-specific ground water data, the operator may use data generated by models, cathodic well lithology, published information or other tools as approved by the division district office.

C. An operator shall not locate material excavated during construction:

- (1)** within 100 feet of a continuously flowing watercourse or significant watercourse;
- (2)** within 200 feet from a lakebed, sinkhole or playa lake (measured from the ordinary high-water mark);
- (3)** within 100 feet of a wetland; or

- (4) within a 100-year floodplain.

[19.15.34.11 NMAC - N, 3/31/15]

19.15.34.12 DESIGN AND CONSTRUCTION SPECIFICATIONS FOR A RECYCLING CONTAINMENT:

A. An operator shall design and construct a recycling containment in accordance with the following specifications.

(1) The operator shall design and construct a recycling containment to ensure the confinement of produced water, to prevent releases and to prevent overtopping due to wave action or rainfall.

(2) A recycling containment shall have a properly constructed foundation and interior slopes consisting of a firm, unyielding base, smooth and free of rocks, debris, sharp edges or irregularities to prevent the liner's rupture or tear. Geotextile is required under the liner when needed to reduce localized stress-strain or protuberances that otherwise may compromise the liner's integrity. The operator shall construct the containment in a levee with an inside grade no steeper than two horizontal feet to one vertical foot (2H:1V). The levee shall have an outside grade no steeper than three horizontal feet to one vertical foot (3H:1V). The top of the levee shall be wide enough to install an anchor trench and provide adequate room for inspection and maintenance.

(3) Each recycling containment shall incorporate, at a minimum, a primary (upper) liner and a secondary (lower) liner with a leak detection system appropriate to the site's conditions. The edges of all liners shall be anchored in the bottom of a compacted earth-filled trench. The anchor trench shall be at least 18 inches deep.

(4) All primary (upper) liners in a recycling containment shall be geomembrane liners composed of an impervious, synthetic material that is resistant to ultraviolet light, petroleum hydrocarbons, salts and acidic and alkaline solutions. All primary liners shall be 30-mil flexible PVC, 45-mil LLDPE string reinforced or 60-mil HDPE liners. Secondary liners shall be 30-mil LLDPE string reinforced or equivalent with a hydraulic conductivity no greater than 1×10^{-9} cm/sec. Liner compatibility shall meet or exceed the EPA SW-846 method 9090A or subsequent relevant publications.

(5) The operator of a recycling containment shall minimize liner seams and orient them up and down, not across, a slope of the levee. Factory welded seams shall be used where possible. The operator shall ensure field seams in geosynthetic material are thermally seamed. Prior to field seaming, the operator shall overlap liners four to six inches. The operator shall minimize the number of field seams and corners and irregularly shaped areas. There shall be no horizontal seams within five feet of the slope's toe. Qualified personnel shall perform field welding and testing.

(6) At a point of discharge into or suction from the recycling containment, the operator shall insure that the liner is protected from excessive hydrostatic force or mechanical damage. External discharge or suction lines shall not penetrate the liner.

(7) The operator of a recycling containment shall place a leak detection system between the upper and lower geomembrane liners that shall consist of 200-mil geonet or two feet of compacted soil with a saturated hydraulic conductivity of 1×10^{-5} cm/sec or greater to facilitate drainage. The leak detection system shall consist of a properly designed drainage and collection and removal system placed above the lower geomembrane liner in depressions and sloped to facilitate the earliest possible leak detection.

(8) The operator of a recycling containment shall design the containment to prevent run-on of surface water. The containment shall be surrounded by a berm, ditch or other diversion to prevent run-on of surface water.

B. Stockpiling of topsoil. Prior to constructing containment, the operator shall strip and stockpile the topsoil for use as the final cover or fill at the time of closure.

C. Signs. The operator shall post an upright sign no less than 12 inches by 24 inches with lettering not less than two inches in height in a conspicuous place on the fence surrounding the containment. The operator shall post the sign in a manner and location such that a person can easily read the legend. The sign shall provide the following information: the operator's name, the location of the site by quarter-quarter or unit letter, section, township and range, and emergency telephone numbers.

D. Fencing.

(1) The operator shall fence or enclose a recycling containment in a manner that deters unauthorized wildlife and human access and shall maintain the fences in good repair. The operator shall ensure that all gates associated with the fence are closed and locked when responsible personnel are not onsite.

(2) Recycling containments shall be fenced with a four foot fence that has at least four strands of barbed wire evenly spaced in the interval between one foot and four feet above ground level.

E. Netting. The operator shall ensure that a recycling containment is screened, netted or otherwise protective of wildlife, including migratory birds. The operator shall on a monthly basis inspect for and, within 30 days of discovery, report the discovery of dead migratory birds or other wildlife to the appropriate wildlife agency and to the division district office in order to facilitate assessment and implementation of measures to prevent incidents from reoccurring.

19.15.34.13 OPERATIONAL REQUIREMENTS FOR RECYCLING CONTAINMENTS:

A. The operator shall inspect the recycling containment and associated leak detection systems weekly while it contains fluids. The operator shall maintain a current log of such inspections and make the log available for review by the division upon request.

B. The operator shall maintain and operate a recycling containment in accordance with the following requirements.

(1) The operator shall remove any visible layer of oil from the surface of the recycling containment.

(2) The operator shall maintain at least three feet of freeboard at each containment.

(3) The injection or withdrawal of fluids from the containment shall be accomplished through a header, diverter or other hardware that prevents damage to the liner by erosion, fluid jets or impact from installation and removal of hoses or pipes.

(4) If the containment's primary liner is compromised above the fluid's surface, the operator shall repair the damage or initiate replacement of the primary liner within 48 hours of discovery or seek an extension of time from the division district office.

(5) If the primary liner is compromised below the fluid's surface, the operator shall remove all fluid above the damage or leak within 48 hours of discovery, notify the division district office and repair the damage or replace the primary liner.

(6) The containment shall be operated to prevent the collection of surface water run-on.

(7) The operator shall install, or maintain on site, an oil absorbent boom or other device to contain an unanticipated release.

C. A recycling containment shall be deemed to have ceased operations if less than twenty percent of the total fluid capacity is used every six months following the first withdrawal of produced water for use. The operator must report cessation of operations to the division. The division may grant an extension to this determination of cessation of operations not to exceed six months.

[19.15.34.13 NMAC - N, 3/31/2015; A, 10/13/2020]

19.15.34.14 CLOSURE AND SITE RECLAMATION REQUIREMENTS FOR RECYCLING CONTAINMENTS:

A. Once the operator has ceased operations, the operator shall remove all fluids within 60 days and close the containment within six months from the date the operator ceases operations from the containment for use. The division district office may grant an extension for the removal of all fluids not to exceed two months. The division district office may grant an extension to close the containment not to exceed six months. If the operator wants to use the containment for a purpose other than recycling then the operator must have that use approved or permitted by the division in accordance with the appropriate rules.

B. The operator shall close a recycling containment by first removing all fluids, contents and synthetic liners and transferring these materials to a division approved facility.

C. The operator shall test the soils beneath the containment for contamination with a five-point composite sample which includes stained or wet soils, if any, and that sample shall be analyzed for the constituents listed in Table I below.

(1) If any contaminant concentration is higher than the parameters listed in Table I, the division may require additional delineation upon review of the results and the operator must receive approval before proceeding with closure.

(2) If all contaminant concentrations are less than or equal to the parameters listed in Table I, then the operator can proceed to backfill with non-waste containing, uncontaminated, earthen material.

D. Within 60 days of closure completion, the operator shall submit a closure report on form C-147, including required attachments, to document all closure activities including sampling results and the details on any backfilling, capping or covering, where applicable. The closure report shall certify that all information in the report and attachments is correct and that the operator has complied with all applicable closure requirements and conditions specified in division rules or directives.

E. Once the operator has closed the recycling containment, the operator shall reclaim the containment's location to a safe and stable condition that blends with the surrounding undisturbed area. Topsoils and subsoils shall be replaced to their original relative positions and contoured so as to achieve erosion control, long-term stability and preservation of surface water flow patterns. The disturbed area shall then be reseeded in the first favorable growing season following closure of a recycling containment. The operator shall substantially restore the impacted surface area to the condition that existed prior to the construction of the recycling containment.

F. Reclamation of all disturbed areas no longer in use shall be considered complete when all ground surface disturbing activities at the site have been completed, and a uniform vegetative cover has been established that reflects a life-form ratio of plus or minus fifty percent of pre-disturbance levels and a total percent plant cover of at least seventy percent of pre-disturbance levels, excluding noxious weeds.

G. The re-vegetation and reclamation obligations imposed by federal, state trust land or tribal agencies on lands managed by those agencies shall supersede these provisions and govern the obligations of any operator subject to those provisions, provided that the other requirements provide equal or better protection of fresh water, human health and the environment.

H. The operator shall notify the division when reclamation and re-vegetation are complete.

Table I			
Closure Criteria for Recycling Containments			
Depth below bottom of containment to groundwater less than 10,000 mg/l TDS	Constituent	Method*	Limit**
51 feet - 100 feet	Chloride	EPA 300.0	10,000 mg/kg
	TPH (GRO+DRO+MRO)	EPA SW-846 Method 8015M	2,500 mg/kg
	GRO+DRO	EPA SW-846 Method 8015M	1,000 mg/kg
	BTEX	EPA SW-846 Method 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Method 8021B or 8260B	10 mg/kg
> 100 feet	Chloride	EPA 300.0	20,000 mg/kg
	TPH (GRO+DRO+MRO)	EPA SW-846 Method 8015M	2,500 mg/kg
	GRO+DRO	EPA SW-846 Method 8015M	1,000 mg/kg
	BTEX	EPA SW-846 Method 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Method 8021B or 8260B	10 mg/kg

*Or other test methods approved by the division.

**Numerical limits or natural background level, whichever is greater.

[19.15.34.14 NMAC - N, 3/31/2015; A, 10/13/2020]

19.15.34.15 FINANCIAL ASSURANCE REQUIREMENTS FOR RECYCLING CONTAINMENTS:

A. Financial assurance.

(1) Containment operators without existing financial assurance pursuant to 19.15.8 NMAC shall furnish financial assurance acceptable to the division in the amount of the recycling containment's estimated closure cost or \$25,000, whichever is greater.

(2) Containment operators providing the division with an existing financial assurance pursuant to 19.15.8 NMAC do not require additional financial assurance. These containments are limited to only the wells owned or operated by the owners of the containment. Containments delivering fluids to wells not owned or operated by the owners or operators of the containment must provide financial assurance pursuant to Paragraph (1) of Subsection A of 19.15.34.15 NMAC.

B. Terms of financial assurance. The financial assurance shall be on division-prescribed forms, payable to the state of New Mexico and conditioned upon the proper operation and site closure of the recycling containment as required by New Mexico statutes and division rules. The operator shall notify the division of any material change affecting the financial assurance within 30 days of discovery or notice of such change.

C. Forfeiture of financial assurance. The division shall give the operator 20 days written notice and an opportunity for a hearing prior to forfeiting any financial assurance.

D. Forms of financial assurance. The division may accept the following forms of financial assurance.

(1) Surety bonds. A surety bond shall be executed by the applicant and a corporate surety licensed to do business in the state, and shall not be subject to cancellation.

(2) Letters of credit. A letter of credit shall be issued by a bank organized or authorized to do commercial banking business in the United States, shall be irrevocable for a term of not less than five years unless the applicant shows good cause for a shorter time period and shall provide for automatic renewal for successive, like terms upon expiration unless the issuer has notified the division in writing of non-renewal at least 90 days before its expiration date. The letter of credit shall be payable to the state of New Mexico in part or in full upon receipt from the director or the director's authorized representative of demand for payment accompanied by a notice of forfeiture. Demand may be issued 30 days prior to expiration of the letter of credit if the operator has not provided replacement financial assurance by that time.

(3) Cash accounts. An applicant shall provide financial assurance in the form of a federally insured or equivalently protected cash account or accounts in a financial institution, provided that the operator and the financial institution shall execute as to

each such account a collateral assignment of the account to the division, which shall provide that only the division may authorize withdrawals from the account. In the event of forfeiture, the division may direct payment of all or part of the balance of such cash account (excluding interest accrued on the account) to itself or its designee for the recycling facility's closure.

E. Replacement of financial assurance.

(1) The division may allow an operator to replace existing forms of financial assurance with other forms of financial assurance that provide equal coverage prior to the expiration of the existing financial assurance.

(2) The division shall not release existing financial assurance until the operator has submitted, and the division has approved, an acceptable replacement.

F. Review of adequacy of financial assurance. The division may at any time not less than five years after initial acceptance of financial assurance for a recycling containment, initiate a review of such financial assurance's adequacy. Additionally, whenever the division determines that a recycling containment has not achieved the closure standards specified in 19.15.34.14 NMAC, the division may review the adequacy of the recycling containment's financial assurance, without regard to the date of its last review. Upon determination, after notice to the operator and an opportunity for a hearing, that the financial assurance is not adequate to cover the reasonable and probable cost of a recycling containment's closure and post closure monitoring, the division may require the operator to furnish additional financial assurance.

G. The division shall release a financial assurance upon the operator's or surety's written request if the recycling containment has been closed and the location remediated in accordance with 19.15.34 NMAC or has been covered by another financial assurance approved by the division. The division shall not approve a request for change of operator of a recycling containment until the new operator has the required division approved financial assurance.

H. The division may use funds in the oil and gas reclamation fund to remediate the impacts of a recycling containment if deemed necessary by the division director in the event of an emergency or insufficient financial assurance. In either case, the costs expended by the division may be recovered from the operator pursuant to Section 70-2-38 NMSA 1978. The operator is responsible for all costs of remediation of the recycling containment even if the costs exceed the financial assurance.

[19.15.34.15 NMAC - N, 3/31/15]

19.15.34.16 VARIANCES:

A. An operator may file a written request for a variance from any requirement of these rules with the division district office. The request for variance shall include:

- (1) a detailed statement explaining the need for a variance; and
 - (2) a detailed written demonstration that the variance will provide equal or better protection of fresh water, public health and the environment.
- B.** The division district office shall approve or deny the variance within 60 days of receipt. If the division district office denies the variance, it shall provide the operator with the reasons for denial by certified mail, return receipt requested.
- C.** If a request for variance from the requirements of this rule is not approved or denied within 60 days of the date the request for variance is received by the district office, the operator may seek a hearing pursuant to 19.15.4 NMAC.
- D.** If the operator requests a hearing pursuant to 19.15.4 NMAC within 60 days after receipt of notice, the division shall set the matter for hearing, with notice to the operator and the appropriate division district office.
- E.** The operator shall provide notice of the hearing on the request for variance to the surface owner of the site by certified mail, return receipt requested, at least 20 days prior to the date of hearing.
- F.** Variances must receive division approval prior to implementation.

[19.15.34.16 NMAC - N, 3/31/15]

19.15.34.17 TRANSPORTATION OF PRODUCED WATER, DRILLING FLUIDS AND LIQUID OIL FIELD WASTE:

- A.** A person shall not transport produced water, drilling fluids or liquid oil field waste, including drilling fluids and residual liquids in liquid oil field equipment, except for small samples removed for analysis, by motor vehicle from a lease, central tank battery of other facility without an approved form C-133. The transporter shall maintain a copy of the approved form C-133 in the transporting vehicle.
- B.** A person may apply for authorization to move produced water, drilling fluids or liquid oil field waste by motor vehicle by filing a complete form C-133 with the division's Santa Fe office. Authorization is granted upon the division's approval of form C-133.
- C.** An owner or operator shall not permit produced water, drilling fluids or liquid oil field waste to be removed from its leases or field facilities, except for small samples removed for analysis, by motor vehicle except by a person possessing an approved form C-133. The division shall post a list of currently approved form C-133s, authorization to move liquid waste, on its website. The list of form C-133s posted on the division's website on the first business day of each month shall be deemed notice of valid form C-133s for the remainder of the month.

[19.15.34.17 NMAC - Rp, 19.15.34.8 NMAC, 3/31/15]

19.15.34.18 DENIAL OF FORM C-133:

The division may deny approval of a form C-133 if:

A. the applicant is a corporation or limited liability company, and is not registered with the secretary of state to do business in New Mexico;

B. the applicant is a limited partnership, and is not registered with the New Mexico secretary of state to do business in New Mexico;

C. the applicant does not possess a warrant for transportation under the state registration system the public regulation commission administers, if it is required to have such a permit under the applicable statutes or rules; or

D. the applicant or officer, director or partner in the applicant, or a person with an interest in the applicant exceeding twenty-five percent, is or was within the past five years an officer, director or partner in the applicant, or a person with an interest in the applicant exceeding twenty-five percent in another entity that possesses or has possessed an approved form C-133 that has been cancelled or suspended, has a history of violating division or other state or federal environmental laws; is subject to a commission or division order, issued after notice and hearing, finding such entity to be in violation of an order requiring corrective action; or has a penalty assessment for violation of division or commission rules or orders that is unpaid more than 70 days after issuance of the order assessing the penalty.

[19.15.34.18 NMAC - Rp, 19.15.34.9 NMAC, 3/31/2015; A, 10/13/2020]

19.15.34.19 CANCELLATION OR SUSPENSION OF AUTHORIZATION TO MOVE LIQUID WASTES:

A transporter's vehicular movement or disposition of produced water, drilling fluids or liquid oil field waste in a manner contrary to division rules is ground for denial of approval of form C-133 in addition to those specified in Subsection D of 19.15.34.18 NMAC. It is also cause, after notice and an opportunity for hearing, for the division to cancel or suspend a transporter's authorization to move liquid wastes.

[19.15.34.19 NMAC - Rp, 19.15.34.10 NMAC, 3/31/15]

19.15.34.20 DISPOSITION OF PRODUCED WATER AND OTHER OIL FIELD WASTE:

Except as authorized by 19.15.17 NMAC, 19.15.26.8 NMAC, 19.15.30 NMAC, 19.15.34 NMAC or 19.15.36 NMAC, persons, including transporters, shall not dispose of produced water or other oil field waste:

A. on or below the surface of the ground, in a pit or in a pond, lake, depression or watercourse;

B. in another place or in a manner that may constitute a hazard to fresh water, public health, or the environment; or

C. in a permitted pit or registered or permitted surface waste management facility without permission of the owner or operator of the pit or facility.

[19.15.34.20 NMAC - Rp, 19.15.34.11 NMAC, 3/31/15]

19.15.34.21 ENFORCEMENT:

A. The operator of a recycling facility or recycling containment shall comply with all the requirements of 19.15.34 NMAC.

B. If the division determines that the registration of a recycling facility or recycling containment or that operations at a recycling facility or recycling containment violate the requirements of 19.15.34 NMAC, the division district office shall notify the operator in writing. If the violation threatens contamination of fresh water, public health, or the environment, the notice of violation shall be signed by the director, the operator shall immediately cease all operations at the recycling facility or containment and the director may require the operator to remove all fluids, if any, in the recycling facility or containment by a date determined by the director.

C. The operator shall have 60 days from the date it is notified of a violation to remove the recycling facility or recycling containment in accordance with 19.15.34 NMAC unless the violation is corrected or an agreed compliance order providing for corrective action is entered with the division. The operator may request an immediate stay of the division's order as part of an application for review of the notice of violation filed by the operator.

D. The provisions of 19.15.4 NMAC applicable to adjudicatory proceedings shall apply to these enforcement proceedings unless altered or amended by 19.15.5.10 NMAC or 19.15.34 NMAC.

E. The division may enter into an agreed compliance order prior to or after the filing of an application for an administrative compliance proceeding. An agreed compliance order shall have the same force and effect as a compliance order issued after an adjudicatory hearing.

F. After a notice of violation that threatens contamination of fresh water, public health, or the environment is issued, until the operator obtains an agreed compliance order, performs appropriate corrective action or is granted a stay, the division may not approve any permits for the operator.

[19.15.34.21 NMAC - N, 3/31/15]

PART 35: WASTE DISPOSAL

19.15.35.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.35.1 NMAC - Rp, 19.15.9.1 NMAC, 12/1/08]

19.15.35.2 SCOPE:

19.15.35 NMAC applies to persons engaged in oil and gas exploration, development, production, storage, transportation, treatment and refinement and the oil field service industry within New Mexico.

[19.15.35.2 NMAC - Rp, 19.15.9.2 NMAC, 12/1/08; A, 6/30/16]

19.15.35.3 STATUTORY AUTHORITY:

19.15.35 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Section 70-2-6, Section 70-2-11 and Section 70-2-12, which authorizes the division to regulate the disposition of non-domestic waste resulting from the exploration, development, production or storage of oil or gas; from the oil field service industry; the transportation of oil or gas; the treatment of gas; or the refinement of oil.

[19.15.35.3 NMAC - Rp, 19.15.9.3 NMAC, 12/1/08]

19.15.35.4 DURATION:

Permanent.

[19.15.35.4 NMAC - Rp, 19.15.9.4 NMAC, 12/1/08]

19.15.35.5 EFFECTIVE DATE:

December 1, 2008, unless a later date is cited at the end of a section.

[19.15.35.5 NMAC - Rp, 19.15.9.5 NMAC, 12/1/08]

19.15.35.6 OBJECTIVE:

To establish procedures for the disposal of certain oil field waste at solid waste facilities permitted by the New Mexico environment department and for the disposal of regulated NORM associated with the oil and gas industry.

[19.15.35.6 NMAC - Rp, 19.15.9.6 NMAC, 12/1/08; A, 6/30/16]

19.15.35.7 DEFINITIONS:

A. "Discharge plan" means a plan the operator submits and the division approves pursuant to NMSA 1978, Section 70-2-12(B)(22) and WQCC rules.

B. "EPA clean" means the cleanliness standards established by the EPA in 40 C.F.R. section 261.7(b).

C. "NESHAP" means the National Emission Standards for Hazardous Air Pollutants of the EPA, 40 C.F.R. Part 61.

D. "Solid waste facility" means a facility permitted or authorized as a solid waste facility by the New Mexico environment department pursuant to the Solid Waste Act, NMSA 1978, Sections 74-9-1 *et seq.* and New Mexico environmental improvement board rules to accept industrial solid waste or other special waste.

E. "TCLP" means the testing protocol established by the EPA in 40 C.F.R. Part 261, entitled "Toxicity Characteristic Leaching Procedure" or an alternative hazardous constituent analysis the division has approved.

[19.15.35.7 NMAC - Rp, 19.15.9.712 NMAC, 12/1/08; A, 6/30/16]

19.15.35.8 DISPOSAL OF CERTAIN OIL FIELD WASTE AT SOLID WASTE FACILITIES:

A. A person may dispose of certain oil field waste at a solid waste facility in accordance with 19.15.35.8 NMAC.

B. Procedure.

(1) A person may dispose of oil field waste listed in Paragraph (1) of Subsection C of 19.15.35.8 NMAC at a solid waste facility without the division's prior written authorization.

(2) A person may dispose of oil field waste listed in Paragraph (2) of Subsection C of 19.15.35.8 NMAC at a solid waste facility after testing and the division's prior written authorization. Before the division grants authorization, the applicant for the authorization shall provide copies of test results to the division and to the solid waste facility where the applicant will dispose of the oil field waste. In appropriate cases and so long as a representative sample is tested, the division may authorize disposal of a waste stream listed in Paragraph (2) of Subsection C of 19.15.35.8 NMAC without individual testing of each delivery.

(3) A person may dispose of oil field waste listed in Paragraph (3) of Subsection C of 19.15.35.8 NMAC at a solid waste facility on a case-by-case basis after testing the division may require and the division's prior written authorization. Before the division grants authorization, the applicant for the authorization shall provide copies of test results to the division and to the solid waste facility where it will dispose of the oil field waste.

(4) Simplified procedure for holders of discharge plans. Holders of an approved discharge plan may amend the discharge plan to provide for disposal of oil field waste listed in Paragraph (2) of Subsection C of 19.15.35.8 NMAC and, as applicable, Paragraph (3) of Subsection C of 19.15.35.8 NMAC. If the division approves the amendment to the discharge plan, the holder may dispose of oil field wastes listed in Paragraphs (2) and (3) of Subsection C of 19.15.35.8 NMAC at a solid waste facility without obtaining the division's prior written authorization.

C. The following provisions apply to the types of oil field waste described below as specified.

(1) The person disposing of the oil field waste does not have to test the following oil field waste before disposal:

(a) barrels, drums, five-gallon buckets or one-gallon containers so long as they are empty and EPA-clean;

(b) uncontaminated brush and vegetation arising from clearing operations;

(c) uncontaminated concrete;

(d) uncontaminated construction debris;

(e) non-friable asbestos and asbestos contaminated waste material, so long as the disposal complies with applicable federal regulations and state rules for non-friable asbestos materials and so long as the facility operator removes the asbestos from steel pipes and boilers and, if applicable, recycles the steel;

(f) detergent buckets, so long as the buckets are completely empty;

(g) fiberglass tanks so long as the tank is empty, cut up or shredded and EPA clean;

(h) grease buckets, so long as empty and EPA clean;

(i) uncontaminated ferrous sulfate or elemental sulfur so long as recovery and sale as a raw material is not possible;

(j) metal plate and metal cable;

- (k)** office trash;
- (l)** paper and paper bags, so long as the paper bags are empty;
- (m)** plastic pit liners, so long as the person cleans them well;
- (n)** soiled rags or gloves, which if wet pass the paint filter test prior to disposal; or
- (o)** uncontaminated wood pallets.

(2) The person disposing of the oil field waste shall test the following oil field wastes for the substances indicated prior to disposal:

- (a)** activated alumina for TPH and BTEX;
- (b)** activated carbon for TPH and BTEX;
- (c)** amine filters, which the facility operator air-dries for at least 48 hours before testing, for BTEX;
- (d)** friable asbestos and asbestos-contaminated waste material, which the facility operator removes asbestos from steel pipes and boilers and, if applicable, recycles the steel before disposal, where the disposal otherwise complies with applicable federal regulations and state rules for friable asbestos materials pursuant to NESHAP;
- (e)** cooling tower filters, which the facility operator drains and then air-dries for at least 48 hours before testing, for TCLP/chromium;
- (f)** dehydration filter media, which the facility operator drains and then air-dries for at least 48 hours before testing, for TPH and BTEX;
- (g)** gas condensate filters, which the facility operator drains and then air-dries for at least 48 hours before testing, for BTEX;
- (h)** glycol filters, which the facility operator drains and then air-dries for at least 48 hours before testing, for BTEX;
- (i)** iron sponge, which the facility operator oxidizes completely, for ignitability testing;
- (j)** junked pipes, valves and metal pipe for NORM;

(k) molecular sieves, which the facility operator cools in a non-hydrocarbon inert atmosphere and hydrates in ambient air for at least 24 hours before testing, for TPH and BTEX;

(l) pipe scale and other deposits removed from pipeline and equipment for TPH, TCLP/metals and NORM;

(m) produced water filters, which the facility operator drains and then air-dries for at least 48 hours before testing, for corrosivity;

(n) sandblasting sand for TCLP/metals or, if the division requires, TCLP/total metals; or

(o) waste oil filters, which the facility operator drains thoroughly of oil at least 24 hours before testing and recycles the oil and metal parts, for TCLP/metals.

(3) A person may dispose of the following oil field wastes on a case-by-case basis with the division's approval:

(a) sulfur contaminated soil;

(b) catalysts;

(c) contaminated soil other than petroleum contaminated soil;

(d) petroleum contaminated soil in the event of a director-declared emergency;

(e) contaminated concrete;

(f) demolition debris not otherwise specified in 19.15.35.8 NMAC;

(g) unused dry chemicals; in addition to testing the division requires, the person applying for division approval shall forward a copy of the material safety data sheet to the division and the solid waste facility on each chemical proposed for disposal;

(h) contaminated ferrous sulfate or elemental sulfur;

(i) unused pipe dope;

(j) support balls;

(k) tower packing materials;

(l) contaminated wood pallets;

(m) partial sacks of unused drilling mud; in addition to testing the division requires, the person applying for division approval shall forward a copy of the material safety data sheet to division and the solid waste facility at which the it will dispose of the partial sacks; or

(n) other oil field wastes as applicable.

D. Testing.

(1) The person applying for division approval to dispose of oil field waste in a solid waste facility shall conduct testing required by 19.15.35.8 NMAC according to the Test Methods for Evaluating Solid Waste, EPA No. SW-846 and shall direct questions concerning the standards or a particular testing facility to the division.

(2) The testing facility shall conduct testing according to the test method listed:

(a) TPH: EPA method 418.1 or 8015 (DRO and GRO only) or an alternative, division-approved hydrocarbon analysis;

(b) TCLP: EPA Method 1311 or an alternative hazardous constituent analysis approved by the division;

(c) paint filter test: EPA Method 9095A;

(d) ignitability test: EPA Method 1030;

(e) corrosivity: EPA Method 1110;

(f) reactivity: test procedures and standards the division establishes on a case-by-case basis; and

(g) NORM. 20.3.14 NMAC.

(3) To be eligible for disposal pursuant to 19.15.35.8 NMAC, the concentration of substances the testing facility identifies during testing shall not exceed the following limits:

(a) benzene: 9.99 mg/kg;

(b) BTEX: 499.99 mg/kg (sum of all);

(c) TPH: 1000 mg/kg;

(d) hazardous air pollutants: the standards set forth in NESHAP; and

(e) TCLP:

- (i)** arsenic: 5 mg/l,
- (ii)** barium: 100 mg/l,
- (iii)** cadmium: 1 mg/l,
- (iv)** chromium: 5 mg/l,
- (v)** lead: 5 mg/l,
- (vi)** mercury: 0.2 mg/l,
- (vii)** selenium: 1 mg/l, and
- (viii)** silver: 5 mg/l.

[19.15.35.8 NMAC - Rp, 19.15.9.712 NMAC, 12/1/08; A, 6/30/16]

19.15.35.9 DISPOSAL OF REGULATED NORM:

A person disposing of regulated NORM, as defined at 19.15.2.7 NMAC, is subject to 19.15.35.9 NMAC through 19.15.35.14 NMAC and to New Mexico environmental improvement board rule, 20.3.14 NMAC.

[19.15.35.9 NMAC - Rp, 19.15.9.714 NMAC, 12/1/08]

19.15.35.10 NON-RETRIEVED FLOWLINES AND PIPELINES:

A. The division shall consider a proposal from an operator for leaving flowlines and pipelines (hereinafter "pipeline") that contain regulated NORM in the ground provided the operator performs the abandonment procedures in a manner to protect the environment, public health and fresh waters. Division approval is contingent on the applicant meeting the following requirements as a minimum.

B. An application the applicant submits to the division shall contain the following as a minimum:

(1) the pipeline layout over its entire length on a form C-102 including the legal description of the location of both ends and surface ownership along the pipeline;

(2) results of a radiation survey the applicant conducts at all accessible points and a surface radiation survey along the complete pipeline route in a division-approved form; surveys conducted consistent with division-approved procedures;

(3) the type of material for which the applicant or any predecessor operator used the pipeline;

(4) the procedure the applicant will use for flushing hydrocarbons or produced water from the pipeline;

(5) an explanation as to why it is more beneficial to leave the pipeline in the ground than to retrieve it; and

(6) proof the applicant has sent notice of the proposed abandonment to all surface owners where the pipeline is located; the director may require the applicant to send additional notification as described in 19.15.35.14 NMAC.

C. Upon division approval of the application, the operator shall notify the appropriate division district office at least 24 hours prior to beginning work on the pipeline abandonment.

D. As a condition of completion of the pipeline abandonment, the operator shall permanently cap all accessible points.

E. An operator shall not place additional regulated NORM in a pipeline to be abandoned under 19.15.35.10 NMAC other than that which accumulated in the pipeline under the pipeline's normal operation.

F. An operator may abandon a pipeline that does not exhibit regulated NORM pursuant to required surveys without an application pursuant to 19.15.35.10 NMAC in accordance with the operator's applicable lease agreements.

G. If a pipeline's appurtenance contains regulated NORM, but upon the appurtenance's removal, no accessible point or surface above the pipeline exhibits the presence of regulated NORM, then the applicant shall submit to the division the information regarding the regulated NORM in the appurtenance and a statement concerning that regulated NORM's management. With respect to the pipeline left in the ground, the applicant is subject to the requirements of 19.15.35.10 NMAC with the exception of Paragraph (6) of Subsection B of 19.15.35.10 NMAC.

[19.15.35.10 NMAC - Rp, 19.15.9.714 NMAC, 12/1/08]

19.15.35.11 COMMERCIAL OR CENTRALIZED SURFACE WASTE MANAGEMENT FACILITIES:

A. The division shall consider proposals for the disposal of regulated NORM in commercial or centralized surface waste management facilities, provided the applicant performs the disposal in a manner that protects the environment, public health and fresh waters. Division approval is contingent on the applicant obtaining a permit in accordance with 19.15.36 NMAC for the facility and complying with additional

requirements specifically related to regulated NORM disposal as described in Subsections B through D of 19.15.35.11 NMAC.

B. The division shall set requests for permission to receive and dispose of regulated NORM in commercial or centralized surface waste management facilities for hearing in order for the facility's operator to obtain or modify a permit in accordance with 19.15.36 NMAC. The division shall consider a request to dispose of regulated NORM at a facility previously permitted under 19.15.36 NMAC a major modification to that facility. The facility's operator shall submit a hearing request to the division that contains the following at a minimum:

(1) complete plans for the facility, including the sources of regulated NORM, radiation survey readings, quantities of regulated NORM to be disposed and monitoring proposals;

(2) a copy of this permit for the facility, if the division has issued one;

(3) proof of public notice of the application as required by 19.15.36 NMAC;
and

(4) evidence of issuance of a specific license pursuant to 20.3.14 NMAC, a license pursuant to 20.3.13 NMAC and other authorizations required by law.

C. The division shall establish operating procedures that are protective of the environment, public health and fresh waters in its order.

D. A person desiring to dispose of regulated NORM in an approved commercial or centralized surface waste management facility shall furnish regulated NORM information to the facility's operator sufficient for the operator to submit form C-138 for division approval. The facility operator shall receive division approval prior to receiving the regulated NORM at the disposal facility.

[19.15.35.11 NMAC - Rp, 19.15.9.714 NMAC, 12/1/08]

19.15.35.12 DOWNHOLE DISPOSAL IN WELLS TO BE PLUGGED AND ABANDONED:

A. The division shall consider proposals from an operator for downhole disposal of regulated NORM in wells that are to be plugged and abandoned, provided the operator performs the plugging and abandonment procedures in a manner that protects the environment, public health and fresh waters and in accordance with division rules pertaining to well plugging and abandonment.

B. The applicant shall complete form C-103 and submit it to the division for approval.

(1) In addition to all other information required for C-103 submittal, the form shall specifically state that the applicant will place regulated NORM in the well bore. The abandonment procedure contained in the application shall identify depths at which the operator will place regulated NORM, radiation survey results conducted on the regulated NORM to be disposed, the procedure the operator will use to place the regulated NORM in the well bore and the specific form of regulated NORM the operator will place in the well bore (e.g. scale, pipe, dirt, etc.).

(2) The applicant shall address abnormally pressured zones in the well bore that might result in migration of the regulated NORM after it has been placed in the plugged and abandoned well in the application.

(3) The applicant shall send notice of the submittal of an application to dispose of regulated NORM in a plugged and abandoned well to the surface owner and the mineral lessor. The director may require additional notification as described in 19.15.35.14 NMAC.

C. The operator shall not commence work until the division has approved the application for regulated NORM disposal in a plugged and abandoned well.

D. The operator shall comply with the following requirements when disposing of the regulated NORM in a plugged and abandoned well.

(1) The operator shall follow plugging and abandonment procedures the division routinely requires unless the procedures are specifically superseded at the division's instruction to facilitate the regulated NORM disposal.

(2) The operator shall color-dye the cement plug located directly above the regulated NORM and the surface plug with red iron oxide.

(3) The operator shall dispose of regulated NORM at a depth of at least 100 feet below the lower most known underground source of drinking water zone. There must be evidence that there is cement across the known underground source of drinking water zones.

[19.15.35.12 NMAC - Rp, 19.15.9.714 NMAC, 12/1/08]

19.15.35.13 INJECTION:

A. The division shall consider an operator's proposal for injecting regulated NORM into injection wells provided the operator will perform the injection in a manner that protects the environment, public health and fresh waters and complies with division rules pertaining to injection. Division approval is contingent on the applicant meeting the requirements in Subsection B of 19.15.35.13 NMAC at a minimum.

B. An applicant wishing to dispose of regulated NORM in a disposal well shall comply with the following requirements.

(1) An application submitted to the division for permission to dispose of a regulated NORM in an existing or newly permitted disposal well shall contain the following information at a minimum:

(a) a completed form C-108 with proof of required notification and a statement that regulated NORM will be injected;

(b) a description of regulated NORM to be disposed including its source, radiation levels and quantity; and

(c) a description of the process used on the material to improve injectivity.

(2) An operator shall comply with the following requirements when disposing of regulated NORM in a disposal well.

(a) The operator may only inject regulated NORM from the operator's operations.

(b) Each time the operator injects regulated NORM into the disposal well, the operator shall submit a form C-103 to the division and the appropriate division district office. The operator shall submit the completed form C-103 five working days following the injection, which contains the following information: source of regulated NORM, NORM radiation level, quantity of material injected, description of any process the operator used on the material to improve injectivity, the injection pressure while injecting and dates of injection.

(c) The operator shall report mechanical failures to the appropriate division district office within 24 hours of the failure. The operator shall submit a description of the failure and immediate measures the operator took in response to the failure no later than 15 days following the failure. The operator shall notify the appropriate division district office of proposed repair plans. The operator shall receive division approval of repair plans prior to commencing work and provide notice of commencement to the appropriate division district office so that the division may witness or inspect repairs. The operator shall monitor well repairs to ensure regulated NORM does not escape the well bore or is completely contained in the repair operations.

(d) At the time of the disposal well's abandonment, the operator shall squeeze the injection interval that the operator used for regulated NORM injection with cement or locate a cement plug directly above the injection interval. Cement in either case shall contain red iron oxide.

(e) The injection zone shall be at a depth of at least 100 feet below the lower most known underground drinking water zone.

C. Injection in EOR injection wells. The division shall consider issuing a permit for the disposal of regulated NORM into injection wells within an approved EOR project only after notice and hearing and upon the applicant's minimum demonstration that:

(1) the injection will not reduce the project's efficiency or otherwise cause a reduction in the ultimate recovery of hydrocarbons from the project;

(2) the injection will not cause an increase in the radiation level of regulated NORM produced from the EOR interval in an producing well located either within or offsetting the project area; and

(3) the operations will conform to provisions of Subsection B of 19.15.35.13 NMAC.

D. Injection above fracture pressure.

(1) The division shall consider issuing a permit for the disposal of regulated NORM in a disposal well above fracture pressure only after notice and hearing and upon receiving the following minimum information from the applicant:

(a) a completed form C-108 clearly stating that disposal of regulated NORM at or above fracture pressure is proposed;

(b) information required under Subsection B of 19.15.35.13 NMAC above;

(c) model results predicting the fracture propagation including the expected height, extension, direction and any other evidence sufficient to demonstrate that the fracture will not extend beyond the injection interval or into the confining zones; the application shall include the procedure, the anticipated pressures and the type and pressure rating of equipment that the operator will use; the division may consider the current or potential utilization of zones immediately above and below the zone of interest in the acceptance or rejection of model predictions; and

(d) a contingency plan of the procedures, including containment plans that the operator will employ if a mechanical failure occurs.

(2) The operator shall comply with the following requirements when disposing of regulated NORM in a disposal well above fracture pressure.

(a) The operator shall notify the appropriate division district office 24 hours prior to commencing injection.

(b) Upon completion of the injection, the operator shall squeeze the disposal interval with cement or locate a cement plug directly above the injection interval. In either case the cement in either case shall contain red iron oxide. The operator shall submit a completed form C-103 to the division and the appropriate division district office

within five working days of the injection. If the operator desires to return the well to injection below fracture pressure, the operator shall include those plans in the application.

E. Injection in commercial disposal facilities. The division shall consider issuing a permit for the commercial disposal of regulated NORM by injection only after notice and hearing, and provided the applicant has obtained a specific license pursuant to 20.3.14 NMAC and pursuant to 20.3.13 NMAC. In addition to obtaining these licenses the operator shall also comply with Subparagraph (a) of Paragraph 2 of Subsection B of 19.15.35.13 NMAC.

[19.15.35.13 NMAC - Rp, 19.15.9.714 NMAC, 12/1/08]

19.15.35.14 ADDITIONAL NOTIFICATION:

A. The director may require additional notice for an application under 19.15.35.9 NMAC to 19.15.35.13 NMAC.

B. A notified party seeking to comment or request a public hearing on an application shall file comments or a written hearing request with the division within 20 days after receiving notice. A request for a hearing shall set forth the reasons why the division should hold a hearing.

C. The division shall hold a public hearing as required in 19.15.35.9 NMAC through 19.15.35.13 NMAC or if the director determines there is sufficient cause to hold a public hearing.

[19.15.35.14 NMAC - Rp, 19.15.9.714 NMAC, 12/1/08]

PART 36: SURFACE WASTE MANAGEMENT FACILITIES

19.15.36.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Oil Conservation Division.

[19.15.36.1 NMAC - N, 2/14/2007; A, 12/1/08]

19.15.36.2 SCOPE:

19.15.36 NMAC applies to persons or entities that operate surface waste management facilities as defined in Subsection S of 19.15.2.7 NMAC.

[19.15.36.2 NMAC - N, 2/14/2007; A, 12/1/08; A, 6/30/16]

19.15.36.3 STATUTORY AUTHORITY:

19.15.36 NMAC is adopted pursuant to the Oil and Gas Act, NMSA 1978, Section 70-2-6, Section 70-2-11 and Section 70-2-12, which grants the division jurisdiction and authority over the disposition of wastes resulting from oil and gas operations.

[19.15.36.3 NMAC - N, 2/14/2007; A, 12/1/08]

19.15.36.4 DURATION:

Permanent.

[19.15.36.4 NMAC - N, 2/14/2007]

19.15.36.5 EFFECTIVE DATE:

February 14, 2007, unless a later date is cited at the end of a section.

[19.15.36.5 NMAC - N, 2/14/2007; A, 12/1/08]

19.15.36.6 OBJECTIVE:

To regulate the disposal of oil field waste and the construction, operation, closure and post closure of surface waste management facilities.

[19.15.36.6 NMAC - N, 2/14/2007; A, 6/30/16]

19.15.36.7 DEFINITIONS:

A. Definitions relating to types of surface waste management facilities.

(1) "Centralized facility" means a surface waste management facility:

(a) that is used exclusively by one generator subject to New Mexico's Oil and Gas Conservation Tax Act, NMSA 1978, Section 7-30-1, as amended;

(b) where the generator or operator does not receive compensation for oil field waste management at that facility; and

(c) receives exclusively oil field wastes that are generated from production units or leases the generator, or an affiliate of the generator, operates (for this provision's purposes, an affiliate of a generator is a person who controls, is controlled by or is under common control with the generator).

(2) "Commercial facility" means a surface waste management facility that is not a centralized facility.

(3) "Landfarm" means a discrete area of land designated and used for the remediation of petroleum hydrocarbon-contaminated soils and drill cuttings.

(4) "Landfill" means a discrete area of land or an excavation designed for permanent disposal of exempt or non-hazardous waste.

(5) "Small landfarm" means a centralized landfarm of two acres or less that has a total capacity of 2000 cubic yards or less in a single lift of eight inches or less, remains active for a maximum of three years from the date of its registration and that receives only petroleum hydrocarbon-contaminated soils (excluding drill cuttings) that are exempt or non-hazardous waste.

B. Other definitions.

(1) "Active portion" means that part of a surface waste management facility that has received or is receiving oil field waste and has not been closed.

(2) "Cell" means a confined area engineered for the disposal or treatment of oil field waste.

(3) "Composite liner" means a liner that may consist of multiple layers of geosynthetics and low-permeability soils. The different layers of a composite liner may have different material properties and may be applied at different stages of landfill liner installation.

(4) "Geosynthetic" means the general classification of synthetic materials used in geotechnical applications, including the following classifications:

(a) "geocomposite" means a manufactured material using geotextiles, geogrids or geomembranes, or combinations thereof, in a laminated or composite form;

(b) "geogrid" means a deformed or non-deformed, netlike polymeric material used to provide reinforcement to soil slopes;

(c) "geomembrane" means an impermeable polymeric sheet material that is impervious to liquid and gas as long as it maintains its integrity, and is used as an integral part of an engineered structure designed to limit the movement of liquid or gas in a system;

(d) "geonet" means a type of geogrid that allows planar flow of liquids and serves as a drainage system;

(e) "geosynthetic clay liner (GCL)" means a relatively thin layer of processed clay (typically bentonite) that is either bonded to a geomembrane or fixed between two sheets of geotextile; and

(f) "geotextile" means a sheet material that is less impervious to liquid than a geomembrane but more resistant to penetration damage, and is used as part of an engineered structure or system to serve as a filter to prevent the movement of soil fines into a drainage system, to provide planar flow for drainage, to serve as a cushion to protect geomembranes or to provide structural support.

(5) "Leachate" means the liquid that has passed through or emerged from oil field waste and contains soluble, suspended or miscible materials.

(6) "Landfarm cell" means a bermed area of 10 acres or less within a landfarm.

(7) "Landfarm lift" means an accumulation of soil or drill cuttings predominately contaminated by petroleum hydrocarbons that is placed into a landfarm cell for treatment.

(8) "Lower explosive limit" means the lowest percent by volume of a mixture of explosive gases in air that will propagate a flame at 77 degrees fahrenheit and atmospheric pressure.

(9) "Major modification" means a modification of a surface waste management facility that involves an increase in the land area that the permitted surface waste management facility occupies; a change in the design capacity or nature of the permitted oil field waste stream; addition of a new treatment process; an exception to, waiver of or change to a numerical standard provided in 19.15.36 NMAC; or other modification that the division determines is sufficiently substantial that public notice and public participation in the application process are appropriate.

(10) "Minor modification" means a modification of a surface waste management facility that is not a major modification.

(11) "Operator" means the person who owns the surface waste management facility.

(12) "Poor foundation conditions" are features that indicate that a natural or human-induced event may result in inadequate foundational support for a surface waste management facility's structural components.

(13) "Run-off" means rainwater, leachate or other liquid that drains over land from any part of a surface waste management facility.

(14) "Structural components of a landfill" are liners, leachate collection and removal systems, final covers, run-on/run-off systems and other components used in a landfill's construction or operation that are necessary for protection of fresh water, public health or the environment.

[19.15.36.7 NMAC - Rp, 19.15.9.711 NMAC, 2/14/2007; A, 12/1/08; A, 6/30/16]

19.15.36.8 SURFACE WASTE MANAGEMENT FACILITY PERMITS AND APPLICATION REQUIREMENTS:

A. Permit required. No person shall operate a surface waste management facility (other than a small landfarm registered pursuant to Paragraph (1) of Subsection A of 19.15.36.16 NMAC) except pursuant to and in accordance with the terms and conditions of a division-issued surface waste management facility permit. The applicant for a permit or permit modification, renewal or transfer shall be the operator of the surface waste management facility. The operator is responsible for the actions of the operator's officers, employees, consultants, contractors and subcontractors as they relate to the operation of the surface waste management facility. Any person who is involved in a surface waste management facility's operation shall comply with 19.15.36 NMAC and the permit.

B. Permitting requirements. Except for small landfarms registered pursuant to Paragraph (1) of Subsection A of 19.15.36.16 NMAC, new commercial or centralized facilities prior to commencement of construction, and existing commercial or centralized facilities prior to modification or permit renewal, shall be permitted by the division in accordance with the applicable requirements of Subsection C of 19.15.36.8 NMAC and 19.15.36.11 NMAC.

C. Application requirements for new facilities, major modifications and permit renewals. An applicant or operator shall file an application, form C-137, for a permit for a new surface waste management facility, to modify an existing surface waste management facility or for permit renewal with the environmental bureau in the division's Santa Fe office. The application shall include:

(1) the names and addresses of the applicant and principal officers and owners of twenty-five percent or more of the applicant;

(2) a plat and topographic map showing the surface waste management facility's location in relation to governmental surveys (quarter-quarter section, township and range); highways or roads giving access to the surface waste management facility site; watercourses; fresh water sources, including wells and springs; and inhabited buildings within one-half mile of the site's perimeter based upon the records of the applicable county clerk or clerk's office;

(3) the names and addresses of the surface owners of the real property on which the surface waste management facility is sited and surface owners of the real property within one mile of the site's perimeter;

(4) a description of the surface waste management facility with a diagram indicating the location of fences and cattle guards, and detailed construction/installation diagrams of pits, liners, dikes, piping, sprayers, tanks, roads, fences, gates, berms,

pipelines crossing the surface waste management facility, buildings and chemical storage areas;

(5) engineering designs, certified by a registered professional engineer, including technical data on the design elements of each applicable treatment, remediation and disposal method and detailed designs of surface impoundments;

(6) a plan for management of approved oil field wastes that complies with the applicable requirements contained in 19.15.36.13 NMAC, 19.15.36.14 NMAC, 19.15.36.15 NMAC and 19.15.36.17 NMAC;

(7) an inspection and maintenance plan that complies with the requirements contained in Subsection L of 19.15.36.13 NMAC;

(8) a hydrogen sulfide prevention and contingency plan that complies with those provisions of 19.15.11 NMAC that apply to surface waste management facilities;

(9) a closure and post closure plan, including a responsible third party contractor's cost estimate, sufficient to close the surface waste management facility in a manner that will protect fresh water, public health and the environment, and to comply with the closure and post closure requirements contained in Subsections A through F of 19.15.36.18 NMAC;

(10) a contingency plan that complies with the requirements of Subsection N of 19.15.36.13 NMAC and with NMSA 1978, Sections 12-12-1 through 12-12-30, as amended;

(11) a plan to control run-on water onto the site and run-off water from the site that complies with the requirements of Subsection M of 19.15.36.13 NMAC;

(12) in the case of an application to permit a new or expanded landfill, a leachate management plan that describes the anticipated amount of leachate that will be generated and the leachate's handling, storage, treatment and disposal, including final post closure options;

(13) in the case of an application to permit a new or expanded landfill, a gas safety management plan that complies with the requirements of Subsection O of 19.15.36.13 NMAC;

(14) a best management practice plan to ensure protection of fresh water, public health and the environment;

(15) geological/hydrological data including:

(a) a map showing names and location of streams, springs or other watercourses, and water wells within one mile of the site;

(b) laboratory analyses, performed by an independent commercial laboratory, for major cations and anions; BTEX; RCRA metals; and TDS of ground water samples of the shallowest fresh water aquifer beneath the proposed site;

(c) depth to, formation name, type and thickness of the shallowest fresh water aquifer;

(d) soil types beneath the proposed surface waste management facility, including a lithologic description of soil and rock members from ground surface down to the top of the shallowest fresh water aquifer;

(e) geologic cross-sections;

(f) potentiometric maps for the shallowest fresh water aquifer; and

(g) porosity, permeability, conductivity, compaction ratios and swelling characteristics for the sediments on which the contaminated soils will be placed;

(16) certification by the applicant that information submitted in the application is true, accurate and complete to the best of the applicant's knowledge, after reasonable inquiry; and

(17) other information that the division may require to demonstrate that the surface waste management facility's operation will not adversely impact fresh water, public health or the environment and that the surface waste management facility will comply with division rules and orders.

D. Application requirements for minor modifications. Before making a minor modification, the operator of an existing surface waste management facility shall file a form C-137A with the environmental bureau in the division's Santa Fe office describing the proposed change. Minor modifications are not subject to Subsection C of 19.15.36.8 NMAC. If the division denies the application for a minor modification, the operator may request a hearing pursuant to Subsection B of 19.15.36.10 NMAC.

[19.15.36.8 NMAC - Rp, 19.15.9.711 NMAC, 2/14/2007; A, 12/1/08; A, 6/30/16]

19.15.36.9 APPLICATION PROCESS AND NOTICE REQUIREMENTS FOR NEW SURFACE WASTE MANAGEMENT FACILITIES, MAJOR MODIFICATIONS OR RENEWALS AND ISSUANCE OF A FINAL DECISION:

A. Submittal of application. The applicant shall submit three copies (two paper copies and one electronic copy) of the application to the division's Santa Fe office for consideration of approval. Upon receipt of an application for a new surface waste management facility, or a renewal or major modification of an existing permit, the division shall post a notice on the division's website that lists the type of facility, type of application, county or municipality where the facility is located and name of the

applicant, and provides information on where the application can be viewed and whom to contact to be placed on a mailing list for notice regarding a proposed decision.

B. Division review: Within 90 days after the receipt of an application, the division shall review the application and determine if the application is approvable, approval with conditions or not approvable.

(1) Upon completion of the division's review, if the division determines the application is approvable, the division shall, within 30 days following such determination, prepare a proposed decision, which may include conditions, and mail notice of the proposed approval, together with a copy of the proposed decision, by certified mail, return receipt requested, to the applicant. The division shall post the proposed decision on the division's website.

(2) Upon completion of the division's review, if the division determines the application is not approvable, the division shall, within 60 days of such determination, mail a deficiency letter by certified mail, return receipt requested, to the applicant. The deficiency letter shall identify and address all of the division's concerns regarding the application in specific detail allowing the applicant the opportunity to correct the deficiencies by submitting a revised application.

(3) If the division issues a deficiency letter, the applicant shall have 60 days from the division's issuance of the deficiency letter to submit a revised application. The applicant may request, in writing, additional time to submit a revised application. The division shall grant additional time for good cause. The applicant may notify the division that it will not submit a revised application. Within 10 days of receipt of the notification the division shall deny the application without prejudice. If the applicant fails to timely submit a revised application or notify the division that it will not submit a revised application, the division shall deny the application without prejudice within 10 days after the 60 day time limit for the applicant to respond to the deficiency letter has expired.

(4) If the applicant timely submits a revised application, within 90 days of the receipt of the revised application the division shall review the revised application and determine if the revised application is approvable, approvable with conditions or not approvable. The division shall mail notice of denial or the proposed approval with or without conditions, together with a copy of the decision to deny or the proposed decision to approve with or without conditions, by certified mail, return receipt requested, to the applicant. A denial letter shall identify and address all of the division's reasons for denial of the revised application. The division shall post the decision to deny the application or the proposed decision to approve the application with or without conditions on the division's website.

(5) The process provided in Subsection B of 19.15.36.9 NMAC is not intended to limit informal informational exchanges during the application review period or prior to submission of an application. The process also does not prohibit an applicant from

withdrawing an application and submitting a new application under Subsection A of 19.15.36.9 NMAC.

C. Upon receipt of a proposed decision to approve an application with or without conditions, the applicant shall provide a division-approved notice of the proposed approval by:

(1) giving written notice, by certified mail, return receipt requested, of the division's proposed decision to approve the application with or without conditions to the surface owners within one-half mile of the surface waste facility;

(2) publishing in a newspaper of general circulation in the county or counties where the surface waste management facility is or will be located;

(3) mailing notice by first class mail or e-mail to persons, as identified to the applicant by the division, who have requested notification of applications generally, or of the particular application, and who have provided a legible return address or e-mail address; and

(4) mailing notice by first class or e-mail to affected local, state, federal or tribal governmental agencies, as determined and identified to the applicant by the division.

D. This notice issued pursuant to Subsection C of 19.15.36.9 NMAC shall include:

(1) the applicant's name and address;

(2) the surface waste management facility's location, including a street address if available, and sufficient information to locate the surface waste management facility with reference to surrounding roads and landmarks;

(3) a brief description including the type of facility (*i.e.* landfarm, landfill, treating plant, etc.) of the proposed surface waste management facility;

(4) the depth to, and TDS concentration of, the ground water in the shallowest aquifer beneath the surface waste management facility site;

(5) a statement that the division's proposed decision to approve the application with or without conditions is available on the division's website, or, upon request, from the division clerk, including the division clerk's name, address and telephone number;

(6) a division-approved description of alternatives, exceptions or waivers that may be under consideration in accordance with Subsection F of 19.15.36.18 NMAC or 19.15.36.19 NMAC; and

(7) a statement of the procedures for requesting a hearing on the application pursuant to 19.15.4 NMAC.

E. The applicant shall mail notice that is required to be mailed on or before publication of the notice that is published in a newspaper of general circulation in the county or counties where the surface waste management facility is or will be located.

F. The applicant shall provide the division with proof that the public notice requirements of Subsections C and D of 19.15.36.9 NMAC have been met prior to the division scheduling a hearing pursuant to 19.15.36.10 NMAC or issuing the permit.

G. If after the applicant provides notice as required herein, no requests for hearing are timely filed with the division as provided by 19.15.36.10 NMAC, or any such requests for hearing are filed by persons the division determines lack standing, and the division does not otherwise schedule a hearing pursuant to 19.15.36.10 NMAC, the division's proposed decision to approve the application with or without conditions shall become final and the division shall issue the permit upon the applicant providing financial assurance as provided in 19.15.36.10 NMAC.

[19.15.36.9 NMAC - Rp, 19.15.9.711 NMAC, 2/14/2007; Repealed, 6/30/16; 19.15.36.9 NMAC - N, 6/30/16]

19.15.36.10 COMMENTS AND HEARING ON APPLICATION:

A. A person who wishes to comment or request a hearing shall file comments or request a hearing on the proposed approval of an application with the division clerk within 90 days after the date of the newspaper publication provided in Subsection C of 19.15.36.9 NMAC. A request for a hearing shall be in writing and shall state specifically the reasons why a hearing should be held. The director may deny a request for hearing if the director determines the person requesting the hearing lacks standing.

B. If the division denies an application pursuant to Paragraphs (3) or (4) of Subsection B of 19.15.39.9 NMAC, the applicant may request a hearing within 30 days of the receipt of the notice of denial and the division shall schedule a hearing.

C. In addition to the requests for hearing provided in Subsections A and B of 19.15.36.10 NMAC, the division shall schedule a hearing on the application if:

(1) the division's proposed decision to approve the application includes conditions not expressly required by rule, and the applicant requests a hearing within 90 days of receipt of the notice of proposed approval;

(2) the director determines that there is significant public interest in the application;

(3) the director determines that comments have raised objections that have probable technical merit; or

(4) approval of the application requires that the division make a finding, pursuant to Paragraph (3) of Subsection F of 19.15.2.7 NMAC, whether a water source has a present or reasonably foreseeable beneficial use that contamination would impair.

D. If the division schedules a hearing on an application, the hearing shall be conducted according to 19.15.4 NMAC.

[19.15.36.10 NMAC - Rp, 19.15.9.711 NMAC, 2/14/2007; A, 12/1/08; A, 6/30/16]

19.15.36.11 FINANCIAL ASSURANCE REQUIREMENTS:

A. Centralized facilities. Upon notification by the division that it has approved a permit but prior to the division issuing the permit, an applicant for a new centralized facility permit shall submit acceptable financial assurance in the amount of \$25,000 per centralized facility, or a statewide "blanket" financial assurance in the amount of \$50,000 to cover all of that applicant's centralized facilities, unless such applicant has previously posted a blanket financial assurance for centralized facilities.

B. New commercial facilities or major modifications of existing commercial facilities. Upon notification by the division that it has approved a permit for a new commercial facility or a major modification of an existing commercial facility but prior to the division issuing the permit, the applicant shall submit acceptable financial assurance in the amount of the commercial facility's estimated closure and post closure cost, or \$25,000, whichever is greater. The commercial facility's estimated closure and post closure cost shall be the amount provided in the closure and post closure plan the applicant submitted pursuant to Paragraph (9) of Subsection C of 19.15.36.8 NMAC unless the division determines that such estimate does not reflect a reasonable and probable closure and post closure cost to implement the closure and post closure plan, in which event, the division shall determine the estimated closure and post closure cost and shall include such determination in its proposed decision. If the applicant disagrees with the division's determination of estimated closure and post closure cost, the applicant may request a hearing as provided in 19.15.36.10 NMAC. If the applicant so requests, and no other person files a request for a hearing regarding the proposed decision, the hearing shall be limited to determination of estimated closure and post closure cost.

C. Terms of financial assurance. The financial assurance shall be on division-prescribed forms, or forms otherwise acceptable to the division, payable to the energy, minerals and natural resources department, oil conservation division and conditioned upon the surface waste management facility's proper operation, site closure and post closure operations in compliance with state of New Mexico statutes, division rules, applicable division orders and the surface waste management facility permit terms. The division may require proof that the individual signing for an entity on a financial assurance document or any amendment thereto has the authority to obligate that entity.

D. Forfeiture of financial assurance. The division shall give the operator 20 days' notice and an opportunity for a hearing prior to forfeiting financial assurance. All forfeitures the division demands pursuant to 19.15.36 NMAC shall be made payable to the energy, minerals and natural resources department, oil conservation division upon demand by the division.

E. Forms of financial assurance. The division may accept the following forms of financial assurance.

(1) Surety bonds. A surety bond shall be executed and notarized by the applicant and by a corporate surety licensed by the superintendent of insurance to do business in the state. All surety bonds shall be non-cancelable and payable to the energy, minerals and natural resources department, oil conservation division within 45 days after demand is made by the division. All surety bonds shall be governed by the laws of the state of New Mexico.

(2) Letters of credit. A letter of credit shall be issued by a national or state-chartered banking association, shall be irrevocable for a term of not less than five years and shall provide for automatic renewal for successive, like terms upon expiration, unless the issuer has notified the division in writing of non-renewal at least 120 days before its expiration date. All letters of credit shall be governed by the laws of the state of New Mexico. If a letter of credit is not replaced by an approved financial assurance within 30 days of notice of non-renewal provided to the division, the division may demand and collect a letter of credit.

(3) Cash accounts. An operator may provide financial assurance in the form of a federally insured or equivalently protected cash account or accounts in a financial institution, provided that the operator and the financial institution shall execute as to each such account a collateral assignment of the account to the division, which shall provide that only the division may authorize withdrawals from the account. In the event of forfeiture pursuant to 19.15.36 NMAC, the division may, at any time and from time to time, direct payment of all or part of the balance of such account (excluding interest accrued on the account) to itself or its designee for the surface waste management facility's closure and post closure. Any assignment of cash collateral shall be governed by the laws of the state of New Mexico and shall be on division-prescribed forms.

F. Replacement of financial assurance.

(1) The division may allow an operator to replace existing forms of financial assurance with other forms of financial assurance that provide equivalent coverage.

(2) The division shall not release existing financial assurance until the operator has submitted, and the division has approved, an acceptable replacement.

(3) Any time an operator changes the corporate surety, financial institution or amount of financial assurance, the operator shall file updated financial assurance

documents on division-prescribed forms within 30 days. Notwithstanding the foregoing, if an operator makes other changes to its financial assurance documents, the division may require the operator to file updated financial assurance documents on division-prescribed forms within 45 days after notice to the operator from the division.

G. Review of adequacy of financial assurance. The division may at any time not less than five years after initial acceptance of financial assurance for a commercial facility, or whenever the operator applies for a major modification of the commercial facility's permit, and at least once during every successive five-year period, initiate a review of such financial assurance's adequacy. Additionally, whenever the division determines that a landfarm operator has not achieved the closure standards specified in Paragraph (3) of Subsection G of 19.15.36.15 NMAC, the division may review the adequacy of the landfarm operator's financial assurance, without regard to the date of its last review. Upon determination, after notice to the operator and an opportunity for a hearing, that the financial assurance is not adequate to cover the reasonable and probable cost of a commercial facility's closure and post closure operations, the division may require the operator to furnish additional financial assurance sufficient to cover such reasonable and probable cost.

H. Duty to report. Any operator who files for bankruptcy shall provide notice to the division, through the process provided for under the rules of the United States bankruptcy court, and the New Mexico attorney general.

[19.15.36.11 NMAC - Rp, 19.15.9.711 NMAC, 2/14/2007; A, 6/30/16]

19.15.36.12 PERMIT APPROVAL, DENIAL, REVOCATION, SUSPENSION, MODIFICATION OR TRANSFER:

A. Granting of permit.

(1) The division may issue a permit for an new surface waste management facility or major modification upon finding that an acceptable application has been filed, that the conditions of 19.15.36.9 NMAC and 19.15.36.11 NMAC have been met and that the surface waste management facility or modification can be constructed and operated in compliance with applicable statutes and rules and without endangering fresh water, public health or the environment.

(2) Each permit the division issues for a new surface waste management facility shall remain in effect for 10 years from the date of its issuance. If the division grants a permit for a major modification of a surface waste management facility, the permit for that surface waste management facility shall remain in effect for 10 years from the date the division approves the major modification.

(a) A surface waste management facility permit may be renewed for successive 10-year terms. If the holder of a surface waste management facility permit submits an application for permit renewal at least 120 days before the surface waste

management facility permit expires, and the operator is not in violation of the surface waste management facility permit on the date of its expiration, then the existing surface waste management facility permit for the same activity shall not expire until the division has approved or denied an application for renewal. If the division has not notified the operator of a violation, if the operator is diligently pursuing procedures to contest a violation or if the operator and the division have signed an agreed compliance order providing for remedying the violation, then the surface waste management facility permit shall continue in effect as above provided notwithstanding the surface waste management facility permit violation's existence. A surface waste management facility permit continued under this provision remains fully effective and enforceable.

(b) An application for permit renewal shall include and adequately address the information necessary for evaluation of a new surface waste management facility permit as provided in Subsection C of 19.15.36.8 NMAC. Previously submitted materials may be included by reference provided they are current, readily available to the division and sufficiently identified so that the division may retrieve them.

(c) Upon receipt of a proposed decision to approve a renewal application, the operator shall give public notice in the manner prescribed by 19.15.36.9 NMAC. The division shall grant an application for renewal if the division finds that an acceptable application has been filed, that the conditions of 19.15.36.9 NMAC and 19.15.36.11 NMAC have been met and that the surface waste management facility can be operated in compliance with applicable statutes and rules and without endangering fresh water, public health or the environment.

(3) The division shall review each surface waste management facility permit at least once during the 10-year term, and shall review surface waste management facility permits to which Paragraph (2) of Subsection A of 19.15.36.12 NMAC does not apply at least every five years. The review shall address the operation, compliance history, financial assurance and technical requirements for the surface waste management facility. The division, after notice to the operator and an opportunity for a hearing, may require appropriate modifications of the surface waste management facility permit, including modifications necessary to make the surface waste management facility permit terms and conditions consistent with statutes, rules or judicial decisions.

B. Denial of permit. The division may deny an application for a surface waste management facility permit or modification of a surface waste management facility permit if it finds that the proposed surface waste management facility or modification may be detrimental to fresh water, public health or the environment. The division may also deny an application for a surface waste management facility permit if the applicant, an owner of twenty-five percent or greater interest in the applicant or an affiliate of the applicant has a history of failure to comply with division rules and orders or state or federal environmental laws; is subject to a division or commission order, issued after notice and hearing, finding such entity to be in violation of an order requiring corrective action; or has a penalty assessment for violation of division or commission rules or

orders that is unpaid more than 70 days after issuance of the order assessing the penalty. An affiliate of an applicant, for purposes of Subsection B of 19.15.36.12 NMAC, shall be a person who controls, is controlled by or under is common control with the applicant or a twenty-five percent or greater owner of the applicant.

C. Additional requirements. The division may impose conditions or requirements, in addition to the operational requirements set forth in 19.15.36 NMAC, that it determines are necessary and proper for the protection of fresh water, public health or the environment. The division shall incorporate such additional conditions or requirements into the surface waste management facility permit.

D. Revocation, suspension or modification of a permit. The division may revoke, suspend or impose additional operating conditions or limitations on a surface waste management facility permit at any time, for good cause, after notice to the operator and an opportunity for a hearing. The division may suspend a surface waste management facility permit or impose additional conditions or limitations in an emergency to forestall an imminent threat to fresh water, public health or the environment, subject to the provisions of NMSA 1978, Section 70-2-23, as amended. If the division initiates a major modification it shall provide notice in accordance with 19.15.36.9 NMAC. Suspension of a surface waste management facility permit may be for a fixed period of time or until the operator remedies the violation or potential violation. If the division suspends a surface waste management facility's permit, the surface waste management facility shall not accept oil field waste during the suspension period.

E. Transfer of a permit. The operator shall not transfer a permit without the division's prior written approval. A request for transfer of a permit shall identify officers, directors and owners of twenty-five percent or greater in the transferee. Unless the director otherwise orders, public notice or hearing are not required for the transfer request's approval. If the division denies the transfer request, it shall notify the operator and the proposed transferee of the denial by certified mail, return receipt requested, and either the operator or the proposed transferee may request a hearing with 10 days after receipt of the notice. Until the division approves the transfer and the required financial assurance is in place, the division shall not release the transferor's financial assurance.

[19.15.36.12 NMAC - Rp, 19.15.9.711 NMAC, 2/14/2007; A, 12/1/08; A, 6/30/16]

19.15.36.13 SITING AND OPERATIONAL REQUIREMENTS APPLICABLE TO ALL PERMITTED SURFACE WASTE MANAGEMENT FACILITIES:

Except as otherwise provided in 19.15.36 NMAC.

A. Depth to ground water.

(1) No landfill shall be located where ground water is less than 100 feet below the lowest elevation of the design depth at which the operator will place oil field waste.

(2) No landfarm that accepts soil or drill cuttings with a chloride concentration that exceeds 500 mg/kg shall be located where ground water is less than 100 feet below the lowest elevation at which the operator will place oil field waste. See Subsection A of 19.15.36.15 NMAC for oil field waste acceptance criteria.

(3) No landfarm that accepts soil or drill cuttings with a chloride concentration that is 500 mg/kg or less shall be located where ground water is less than 50 feet below the lowest elevation at which the operator will place oil field waste.

(4) No small landfarm shall be located where ground water is less than 50 feet below the lowest elevation at which the operator will place oil field waste.

(5) No other surface waste management facility shall be located where ground water is less than 50 feet below the lowest elevation at which the operator will place oil field waste.

B. No surface waste management facility shall be located:

- (1)** within 200 feet of a watercourse, lakebed, sinkhole or playa lake;
- (2)** within an existing wellhead protection area or 100-year floodplain;
- (3)** within, or within 500 feet of, a wetland;
- (4)** within the area overlying a subsurface mine;
- (5)** within 500 feet from the nearest permanent residence, school, hospital, institution or church in existence at the time of initial application; or
- (6)** within an unstable area, unless the operator demonstrates that engineering measures have been incorporated into the surface waste management facility design to ensure that the surface waste management facility's integrity will not be compromised.

C. No surface waste management facility shall exceed 500 acres.

D. The operator shall not accept oil field wastes transported by motor vehicle at the surface waste management facility unless the transporter has a form C-133, authorization to move liquid waste, approved by the division.

E. The operator shall not place oil field waste containing free liquids in a landfill or landfarm cell. The operator shall use the paint filter test, as prescribed by the EPA (EPA SW-846, method 9095) to determine conformance of the oil field waste to this criterion.

F. Surface waste management facilities shall accept only exempt or non-hazardous waste, except as provided in Paragraph (3) of Subsection F of 19.15.36.13 NMAC. The

operator shall not accept hazardous waste at a surface waste management facility. The operator shall not accept wastes containing NORM at a surface waste management facility except as provided in 19.15.35 NMAC. The operator shall require the following documentation for accepting oil field wastes, and both the operator and the generator shall maintain and make the documentation available for division inspection.

(1) Exempt oil field wastes. The operator shall require a certification on form C-138, signed by the generator or the generator's authorized agent, that represents and warrants that the oil field wastes are generated from oil and gas exploration and production operations, are exempt waste and are not mixed with non-exempt waste. The operator shall have the option to accept such certifications on a monthly, weekly or per load basis. The operator shall maintain and shall make the certificates available for the division's inspection.

(2) Non-exempt, non-hazardous, oil field wastes. The operator shall require a form C-138, oil field waste document, signed by the generator or its authorized agent. This form shall be accompanied by acceptable documentation to determine that the oil field waste is non-hazardous.

(3) Emergency non-oil field wastes. The operator may accept non-hazardous, non-oil field wastes in an emergency if ordered by the department of public safety. The operator shall complete a form C-138, oil field waste document, describing the waste, and maintain the same, accompanied by the department of public safety order, subject to division inspection.

G. The operator of a commercial facility shall maintain records reflecting the generator, the location of origin, the location of disposal within the commercial facility, the volume and type of oil field waste, the date of disposal and the hauling company for each load or category of oil field waste accepted at the commercial facility. The operator shall maintain such records for a period of not less than five years after the commercial facility's closure, subject to division inspection.

H. Disposal at a commercial facility shall occur only when an attendant is on duty unless loads can be monitored or otherwise isolated for inspection before disposal. The surface waste management facility shall be secured to prevent unauthorized disposal.

I. To protect migratory birds, tanks exceeding eight feet in diameter, and exposed pits and ponds shall be screened, netted or covered. Upon the operator's written application, the division may grant an exception to screening, netting or covering upon the operator's showing that an alternative method will protect migratory birds or that the surface waste management facility is not hazardous to migratory birds. Surface waste management facilities shall be fenced in a manner approved by the division.

J. Surface waste management facilities shall have a sign, readable from a distance of 50 feet and containing the operator's name; surface waste management facility

permit or order number; surface waste management facility location by unit letter, section, township and range; and emergency telephone numbers.

K. The operators shall comply with the spill reporting and corrective action provisions of 19.15.30 NMAC or 19.15.29 NMAC.

L. Each operator shall have an inspection and maintenance plan that includes the following:

(1) monthly inspection of leak detection sumps including sampling if fluids are present with analyses of fluid samples furnished to the division; and maintenance of records of inspection dates, the inspector and the leak detection system's status;

(2) semi-annual inspection and sampling of monitoring wells as required, with analyses of ground water furnished to the division; and maintenance of records of inspection dates, the inspector and ground water monitoring wells' status; and

(3) inspections of the berms and the outside walls of pond levees quarterly and after a major rainfall or windstorm, and maintenance of berms in such a manner as to prevent erosion.

M. Each operator shall have a plan to control run-on water onto the site and run-off water from the site, such that:

(1) the run-on and run-off control system shall prevent flow onto the surface waste management facility's active portion during the peak discharge from a 25-year storm; and

(2) run-off from the surface waste management facility's active portion shall not be allowed to discharge a pollutant to the waters of the state or United States that violates state water quality standards.

N. Contingency plan. Each operator shall have a contingency plan. The operator shall provide the division's environmental bureau with a copy of an amendment to the contingency plan, including amendments required by Paragraph (8) of Subsection N of 19.15.36.13 NMAC; and promptly notify the division's environmental bureau of changes in the emergency coordinator or in the emergency coordinator's contact information. The contingency plan shall be designed to minimize hazards to fresh water, public health or the environment from fires, explosions or an unplanned sudden or non-sudden release of contaminants or oil field waste to air, soil, surface water or ground water. The operator shall carry out the plan's provisions immediately whenever there is a fire, explosion or release of contaminants or oil field waste constituents that could threaten fresh water, public health or the environment; provided that the emergency coordinator may deviate from the plan as necessary in an emergency situation. The contingency plan for emergencies shall:

(1) describe the actions surface waste management facility personnel shall take in response to fires, explosions or releases to air, soil, surface water or ground water of contaminants or oil field waste containing constituents that could threaten fresh water, public health or the environment;

(2) describe arrangements with local police departments, fire departments, hospitals, contractors and state and local emergency response teams to coordinate emergency services;

(3) list the emergency coordinator's name; address; and office, home and mobile phone numbers (where more than one person is listed, one shall be named as the primary emergency coordinator);

(4) include a list, which shall be kept current, of emergency equipment at the surface waste management facility, such as fire extinguishing systems, spill control equipment, communications and alarm systems and decontamination equipment, containing a physical description of each item on the list and a brief outline of its capabilities;

(5) include an evacuation plan for surface waste management facility personnel that describes signals to be used to begin evacuation, evacuation routes and alternate evacuation routes in cases where fire or releases of wastes could block the primary routes;

(6) include an evaluation of expected contaminants, expected media contaminated and procedures for investigation, containment and correction or remediation;

(7) list where copies of the contingency plan will be kept, which shall include the surface waste management facility; local police departments, fire departments and hospitals; and state and local emergency response teams;

(8) indicate when the contingency plan will be amended, which shall be within five working days whenever:

(a) the surface waste management facility permit is revised or modified;

(b) the plan fails in an emergency;

(c) the surface waste management facility changes design, construction, operation, maintenance or other circumstances in a way that increases the potential for fires, explosions or releases of oil field waste constituents that could threaten fresh water, public health or the environment or change the response necessary in an emergency;

(d) the list of emergency coordinators or their contact information changes; or

(e) the list of emergency equipment changes;

(9) describe how the emergency coordinator or the coordinator's designee, whenever there is an imminent or actual emergency situation, will immediately;

(a) activate internal surface waste management facility alarms or communication systems, where applicable, to notify surface waste management facility personnel; and

(b) notify appropriate state and local agencies with designated response roles if their assistance is needed;

(10) describe how the emergency coordinator, whenever there is a release, fire or explosion, will immediately identify the character, exact source, amount and extent of released materials (the emergency coordinator may do this by observation or review of surface waste management facility records or manifests, and, if necessary, by chemical analysis) and describe how the emergency coordinator will concurrently assess possible hazards to fresh water, public health or the environment that may result from the release, fire or explosion (this assessment shall consider both the direct and indirect hazard of the release, fire or explosion);

(11) describe how, if the surface waste management facility stops operations in response to fire, explosion or release, the emergency coordinator will monitor for leaks, pressure buildup, gas generation or rupture in valves, pipes or the equipment, wherever this is appropriate;

(12) describe how the emergency coordinator, immediately after an emergency, will provide for treating, storing or disposing of recovered oil field waste, or other material that results from a release, fire or explosion at a surface waste management facility;

(13) describe how the emergency coordinator will ensure that no oil field waste, which may be incompatible with the released material, is treated, stored or disposed of until cleanup procedures are complete; and

(14) provide that the emergency coordinator may amend the plan during an emergency as necessary to protect fresh water, public health or the environment.

O. Gas safety management plan. Each operator of a surface waste management facility that includes a landfill shall have a gas safety management plan that describes in detail procedures and methods that will be used to prevent landfill-generated gases from interfering or conflicting with the landfill's operation and protect fresh water, public health and the environment. The plan shall address anticipated amounts and types of gases that may be generated, an air monitoring plan that includes the vadose zone and measuring, sampling, analyzing, handling, control and processing methods. The plan shall also include final post closure monitoring and control options.

P. Training program. Each operator shall conduct an annual training program for key personnel that includes general operations, permit conditions, emergencies proper sampling methods and identification of exempt and non-exempt waste and hazardous waste. The operator shall maintain records of such training, subject to division inspection, for five years.

[19.15.36.13 NMAC - Rp, 19.15.9.711 NMAC, 2/14/2007; A, 12/1/08; A, 6/30/16]

19.15.36.14 SPECIFIC REQUIREMENTS APPLICABLE TO LANDFILLS:

A. General operating requirements.

(1) The operator shall confine the landfill's working face to the smallest practical area and compact the oil field waste to the smallest practical volume. The operator shall not use equipment that may damage the integrity of the liner system in direct contact with a geosynthetic liner.

(2) The operator shall prevent unauthorized access by the public and entry by large animals to the landfill's active portion through the use of fences, gates, locks or other means that attain equivalent protection.

(3) The operator shall prevent and extinguish fires.

(4) The operator shall control litter and odors.

(5) The operator shall not excavate a closed cell or allow others to excavate a closed cell except as approved by the division.

(6) The operator shall provide adequate cover for the landfill's active face as needed to control dust, debris, odors or other nuisances, or as otherwise required by the division.

(7) For areas of the landfill that will not receive additional oil field waste for one month or more, but have not reached the final waste elevation, the operator shall provide intermediate cover that shall be:

(a) approved by the division;

(b) stabilized with vegetation; and

(c) inspected and maintained to prevent erosion and manage infiltration or leachate during the oil field waste deposition process.

(8) When the operator has filled a landfill cell, the operator shall close it pursuant to the conditions contained in the surface waste management facility permit and the requirements of Paragraph (2) of Subsection C of 19.15.36.18 NMAC. The

operator shall notify the division's environmental bureau at least three working days prior to a landfill cell's closure.

B. Ground water monitoring program. If fresh ground water exists at a site, the operator shall, unless otherwise approved by the division, establish a ground water monitoring program, approved by the division's environmental bureau, which shall include a ground water monitoring work plan, a sampling and analysis plan, a ground water monitoring system and a plan for reporting ground water monitoring results. The ground water monitoring system shall consist of a sufficient number of wells, installed at appropriate locations and depths, to yield ground water samples from the uppermost aquifer that:

(1) represent the quality of background ground water that leakage from a landfill has not affected; and

(2) represent the quality of ground water passing beneath and down gradient of the surface waste management facility.

C. Landfill design specification. New landfill design systems shall include a base layer and a lower geomembrane liner (e.g., composite liner), a leak detection system, an upper geomembrane liner, a leachate collection and removal system, a leachate collection and removal system protective layer, an oil field waste zone and a top landfill cover.

(1) The base layer shall, at a minimum, consist of two feet of clay soil compacted to a minimum ninety percent standard proctor density (ASTM D-698)(Copyright ASTM International, 100 Barr Harbor Drive, West Conshohocken, PA 19428. This document is available for public viewing at the New Mexico state records center and archives and may not be reproduced, in full or in part. A copy of this publication may be obtained from ASTM International, www.astm.org.) with a hydraulic conductivity of 1×10^{-7} cm/sec or less. In areas where no ground water is present, the operator may propose an alternative base layer design, subject to division approval.

(2) The lower geomembrane liner shall consist of a 30-mil flexible PVC or 60-mil HDPE liner, or an equivalent liner approved by the division.

(3) The operator shall place the leak detection system, which shall consist of two feet of compacted soil with a saturated hydraulic conductivity of 1×10^{-5} cm/sec or greater, between the lower and upper geomembrane liners. The leak detection system shall consist of a drainage and collection system placed no more than six inches above the lower geomembrane liner in depressions and sloped so as to facilitate the earliest possible leak detection at designated collection points. Drainage piping shall be designed to withstand chemical attack from oil field waste and leachate and structural loading and other stresses and disturbances from overlying oil field waste, cover materials, equipment operation, expansion or contraction, and to facilitate clean-out maintenance. The material placed between the pipes and laterals shall be sufficiently

permeable to allow the transport of fluids to the drainage pipe. The slope of the landfill sub-grade and drainage pipes and laterals shall be at least two percent grade; *i.e.*, two feet of vertical drop per 100 horizontal feet. The piping collection network shall be comprised of solid and perforated pipe having a minimum diameter of four inches and a minimum wall thickness of schedule 80. The operator shall seal a solid drainage pipe to convey collected liquids to a corrosion-proof sump or sumps located outside the landfill's perimeter for observation, storage, treatment or disposal. The operator may install alternative designs as approved by the division.

(4) The operator shall place the upper geomembrane liner, which shall consist of a 30-mil flexible PVC or 60-mil HDPE liner, or an equivalent liner approved by the division, over the leak detection system.

(5) The operator shall place the leachate collection and removal system, which shall consist of at least two feet of compacted soil with a saturated hydraulic conductivity of 1×10^{-2} cm/sec or greater, over the upper geomembrane liner to facilitate drainage. The leachate collection and removal system shall consist of a drainage and collection and removal system placed no more than six inches above the upper geomembrane liner in depressions and sloped so as to facilitate the maximum leachate collection. Piping shall be designed to withstand chemical attack from oil field waste or leachate and structural loading and other stresses and disturbances from overlying oil field waste, cover materials, equipment operation, expansion or contraction and to facilitate clean-out maintenance. The material placed between the pipes and laterals shall be sufficiently permeable to allow the transport of fluids to the drainage pipe. The slope of the upper geomembrane liner and drainage lines and laterals shall be at least two percent grade; *i.e.*, two feet of vertical drop per 100 horizontal feet. The piping collection network shall be comprised of solid and perforated pipe having a minimum diameter of four inches and a minimum wall thickness of schedule 80. The operator shall seal a solid drainage pipe to convey collected fluids outside the landfill's perimeter for storage, treatment and disposal. The operator may install alternative designs as approved by the division.

(6) The operator shall place the leachate collection and removal system protection layer, which shall consist of a soil layer at least one foot thick with a saturated hydraulic conductivity of 1×10^{-2} cm/sec or greater, over the leachate collection and removal system.

(7) The operator shall place oil field waste over the leachate collection and removal system protective layer.

(8) The top landfill cover design shall consist of the following layers (top to bottom): a soil erosion layer composed of at least 12 inches of fertile topsoil re-vegetated in accordance with the post closure provisions of Subparagraph (b) of Paragraph (2) of Subsection C of 19.15.36.18 NMAC; a protection or frost protection layer composed of 12 to 30 inches of native soil; a drainage layer composed of at least 12 inches of sand or gravel with a saturated hydraulic conductivity of 1×10^{-2} cm/sec or

greater and a minimum bottom slope of four percent, a hydraulic barrier-layer-geomembrane (minimum of a 30-mil flexible PVC or 60-mil HDPE liner, or an equivalent liner approved by the division); and a gas vent or foundation layer composed of at least 12 inches of sand or gravel above oil field waste with soils compacted to the minimum eighty percent Standard Proctor Density. The operator shall install the top landfill cover within one year of achieving the final landfill cell waste elevation. The operator shall ensure that the final landfill design elevation of the working face of the oil field waste is achieved in a timely manner with the date recorded in a field construction log. The operator shall also record the date of top landfill cover installation to document the timely installation of top landfill covers. The operator shall provide a minimum of three working days' notice to the division in advance of the top landfill cover's installation to allow the division to witness the top landfill cover's installation.

(9) Alternatively, the operator may propose a performance-based landfill design system using geosynthetics or geocomposites, including geogrids, geonets, geosynthetic clay liners, composite liner systems, etc., when supported by EPA's "hydrologic evaluation of landfill performance" (HELP) model or other division-approved model. The operator shall design the landfill to prevent the "bathtub effect". The bathtub effect occurs when a more permeable cover is placed over a less permeable bottom liner or natural subsoil.

(10) External piping, e.g., leachate collection, leak detection and sump removal systems shall be designed for installation of a sidewall riser pipe. Pipes shall not penetrate the liner with the exception of gas vent or collection wells where the operator shall install a flexible clamped pipe riser through the top landfill cover liner that will accommodate oil field waste settling and will prevent tears.

D. Liner specifications and requirements.

(1) General requirements.

(a) Geomembrane liner specifications. Geomembrane liners shall consist of a 30-mil flexible PVC or 60-mil HDPE liner, or an equivalent liner approved by the division. Geomembrane liners shall have a hydraulic conductivity no greater than 1×10^{-9} cm/sec. Geomembrane liners shall be composed of impervious, geosynthetic material that is resistant to petroleum hydrocarbons, salts and acidic and alkaline solutions. Liners shall also be resistant to ultraviolet light, or the operator shall make provisions to protect the material from sunlight. Liner compatibility shall comply with EPA SW-846 method 9090A.

(b) Liners shall be able to withstand projected loading stresses, settling and disturbances from overlying oil field waste, cover materials and equipment operations.

(c) The operator shall construct liners with a minimum of two percent slope to promote positive drainage and to facilitate leachate collection and leak detection.

(2) Additional requirements for geomembranes.

(a) Geomembranes shall be compatible with the oil field waste to be disposed. Geomembranes shall be resistant to chemical attack from the oil field waste or leachate. The operator shall demonstrate this by means of the manufacturer's test reports, laboratory analyses or other division-approved method.

(b) Geosynthetic material the operator installs on a slope greater than twenty-five percent shall be designed to withstand the calculated tensile forces acting upon the material. The design shall consider the maximum friction angle of the geosynthetic with regard to a soil-geosynthetic or geosynthetic-geosynthetic interface and shall ensure that overall slope stability is maintained.

(c) The operator shall thermally seal (hot wedge) field seams in geosynthetic material with a double track weld to create an air pocket for non-destructive air channel testing. In areas where double-track welding cannot be achieved, the operator may propose alternative thermal seaming methods. A stabilized air pressure of 35psi, plus or minus one percent, shall be maintained for at least five minutes. The operator shall overlap liners four to six inches before seaming, and shall orient seams parallel to the line of maximum slope; *i.e.*, oriented along, not across, the slope. The operator shall minimize the number of field seams in corners and irregularly shaped areas. The operator shall use factory seams whenever possible. The operator shall not install horizontal seams within five feet of the slope's toe. Qualified personnel shall perform all field seaming.

E. Requirements for the soil component of composite liners.

(1) The operator shall place and compact the base layer to ninety percent standard proctor density on a prepared sub-grade.

(2) The soil surface upon which the operator installs a geosynthetic shall be free of stones greater than one half inch in any dimension, organic matter, local irregularities, protrusions, loose soil and abrupt changes in grade that could damage the geosynthetic.

(3) The operator shall compact a clay soil component of a composite liner to a minimum of ninety percent standard proctor density, which shall have, unless otherwise approved by the division, a plasticity index greater than ten percent, a liquid limit between twenty-five and fifty percent, a portion of material passing the no. 200 sieve (0.074 mm and less fraction) greater than forty percent by weight; and a clay content greater than eighteen percent by weight.

F. The leachate collection and removal system protective layer and the soil component of the leak detection system shall consist of soil materials that shall be free of organic matter, shall have a portion of material passing the no. 200 sieve no greater than five percent by weight and shall have a uniformity coefficient (Cu) less than 6,

where Cu is defined as D60/D10. Geosynthetic materials or geocomposites including geonets and geotextiles, if used as components of the leachate collection and removal or leak detection system, shall have a hydraulic conductivity, transmissivity and chemical and physical qualities that oil field waste placement, equipment operation or leachate generation will not adversely affect. These geosynthetics or geocomposites, if used in conjunction with the soil protective cover for liners, shall have a hydraulic conductivity designed to ensure that the liner's hydraulic head never exceeds one foot.

G. Landfill gas control systems. If the gas safety management plan or requirements of other federal, state or local agencies require the installation of a gas control system at a landfill, the operator shall submit a plan for division approval, which shall include the following:

(1) the system's design, indicating the location and design of vents, barriers, collection piping and manifolds and other control measures that the operator will install (gas vent or collection wells shall incorporate a clamped and seamed pipe riser design through the top cover liner);

(2) if gas recovery is proposed, the design of the proposed gas recovery system and the system's major on-site components, including storage, transportation, processing, treatment or disposal measures required in the management of generated gases, condensates or other residues;

(3) if gas processing is proposed, a processing plan designed in a manner that does not interfere or conflict with the activities on the site or required control measures or create or cause danger to persons or property;

(4) if gas disposal is proposed, a disposal plan designed:

(a) in a manner that does not interfere or conflict with the activities on the site or with required control measures;

(b) so as not to create or cause danger to persons or property; and

(c) with active forced ventilation, using vents located at least one foot above the landfill surface at each gas vent's location;

(5) physical and chemical characterization of condensates or residues that are generated and a plan for their disposal;

(6) means that the operator will implement to prevent gas' generation and lateral migration such that:

(a) the concentration of the gases the landfill generates does not exceed twenty-five percent of the lower explosive limit for gases in surface waste management facility structures (excluding gas control or recovery system components); and

(b) the concentration of gases does not exceed the lower explosive limit for gases at the surface waste management facility boundary; and

(7) a routine gas monitoring program providing for monitoring at least quarterly; the specific type and frequency of monitoring to be determined based on the following:

(a) soil conditions;

(b) the hydrogeologic and hydraulic conditions surrounding the surface waste management facility; and

(c) the location of surface waste management facility structures and property lines.

H. Landfill gas response. If gas levels exceed the limits specified in Paragraph (6) of Subsection G of 19.15.36.14 NMAC, the operator shall:

(1) immediately take all necessary steps to ensure protection of fresh water, public health and the environment and notify the division;

(2) within seven days of detection, record gas levels detected and a description of the steps taken to protect fresh water, public health and the environment;

(3) within 30 days of detection, submit a remediation plan for gas releases that describes the problem's nature and extent and the proposed remedy; and

(4) within 60 days after division approval, implement the remediation plan and notify the division that the plan has been implemented.

[19.15.36.14 NMAC - N, 2/14/2007; A, 12/1/08; A, 6/30/16]

19.15.36.15 SPECIFIC REQUIREMENTS APPLICABLE TO LANDFARMS:

A. Oil field waste acceptance criteria. Only soils and drill cuttings predominantly contaminated by petroleum hydrocarbons shall be placed in a landfarm. The division may approve placement of tank bottoms in a landfarm if the operator demonstrates that the tank bottoms do not contain economically recoverable petroleum hydrocarbons. Soils and drill cuttings placed in a landfarm shall be sufficiently free of liquid content to pass the paint filter test, and shall not have a chloride concentration exceeding 500 mg/kg if the landfarm is located where ground water is less than 100 feet but at least 50 feet below the lowest elevation at which the operator will place oil field waste or exceeding 1000 mg/kg if the landfarm is located where ground water is 100 feet or more below the lowest elevation at which the operator will place oil field waste. The person tendering oil field waste for treatment at a landfarm shall certify, on form C-138, that representative samples of the oil field waste have been subjected to the paint filter test

and tested for chloride content, and that the samples have been found to conform to these requirements. The landfarm's operator shall not accept oil field waste for landfarm treatment unless accompanied by this certification.

B. Background testing. Prior to beginning operation of a new landfarm or to opening a new cell at an existing landfarm at which the operator has not already established background, the operator shall take, at a minimum, 12 composite background soil samples, with each consisting of 16 discrete samples from areas that previous operations have not impacted at least six inches below the original ground surface, to establish background soil concentrations for the entire surface waste management facility. The operator shall analyze the background soil samples for TPH, as determined by EPA method 418.1 or other EPA method approved by the division; BTEX, as determined by EPA SW-846 method 8021B or 8260B; chlorides; and other constituents listed in Subsections A and B of 20.6.2.3103 NMAC, using approved EPA methods.

C. Operation and oil field waste treatment.

(1) The operator shall berm each landfarm cell to prevent rainwater run-on and run-off.

(2) The operator shall not place contaminated soils received after the effective date of 19.15.36 NMAC within 100 feet of the surface waste management facility's boundary.

(3) The operator shall not place contaminated soils received at a landfarm after the effective date of 19.15.36 NMAC within 20 feet of a pipeline crossing the landfarm.

(4) With 72 hours after receipt, the operator shall spread and disk contaminated soils in eight-inch or less lifts or approximately 1000 cubic yards per acre per eight-inch lift or biopile.

(5) The operator shall ensure that soils are disked biweekly and biopiles are turned at least monthly.

(6) The operator shall add moisture, as necessary, to enhance bioremediation and to control blowing dust.

(7) The application of microbes for the purposes of enhancing bioremediation requires prior division approval.

(8) Pooling of liquids in the landfarm is prohibited. The operator shall remove freestanding water within 24 hours.

(9) The operator shall maintain records of the landfarm's remediation activities in a form readily accessible for division inspection.

(10) The division's environmental bureau may approve other treatment procedures if the operator demonstrates that they provide equivalent protection for fresh water, public health and the environment.

D. Treatment zone monitoring. The operator shall spread contaminated soils on the surface in eight-inch or less lifts or approximately 1000 cubic yards per acre per eight-inch lift. The operator shall conduct treatment zone monitoring to ensure that prior to adding an additional lift the TPH concentration of each lift, as determined by EPA SW-846 method 8015M or EPA method 418.1 or other EPA method approved by the division, does not exceed 2500 mg/kg and that the chloride concentration, as determined by EPA method 300.1, does not exceed 500 mg/kg if the landfarm is located where ground water is less than 100 feet but at least 50 feet below the lowest elevation at which the operator will place oil field waste or 1000 mg/kg if the landfarm is located where ground water is 100 feet or more below the lowest elevation at which the operator will place oil field waste. The operator shall collect and analyze at least one composite soil sample, consisting of four discrete samples, from the treatment zone at least semi-annually using the methods specified below for TPH and chlorides. The maximum thickness of treated soils in a landfarm cell shall not exceed two feet or approximately 3000 cubic yards per acre. When that thickness is reached, the operator shall not place additional oil field waste in the landfarm cell until it has demonstrated by monitoring the treatment zone at least semi-annually that the contaminated soil has been treated to the standards specified in Subsection F of 19.15.36.15 NMAC or the contaminated soils have been removed to a division-approved surface waste management facility.

E. Vadose zone monitoring.

(1) Sampling. The operator shall monitor the vadose zone beneath the treatment zone in each landfarm cell. The operator shall take the vadose zone samples from soils between three and four feet below the cell's original ground surface.

(2) Semi-annual monitoring program. The operator shall collect and analyze a minimum of four randomly selected, independent samples from the vadose zone at least semi-annually using the methods specified below for TPH, BTEX and chlorides and shall compare each result to the higher of the PQL or the background soil concentrations to determine whether a release has occurred.

(3) Five year monitoring program. The operator shall collect and analyze a minimum of four randomly selected, independent samples from the vadose zone, using the methods specified below for the constituents listed in Subsections A and B of 20.6.2.3103 NMAC at least every five years and shall compare each result to the higher of the PQL or the background soil concentrations to determine whether a release has occurred.

(4) Record keeping. The operator shall maintain a copy of the monitoring reports in a form readily accessible for division inspection.

(5) Release response. If vadose zone sampling results show that the concentrations of TPH, BTEX or chlorides exceed the higher of the PQL or the background soil concentrations, then the operator shall notify the division's environmental bureau of the exceedance, and shall immediately collect and analyze a minimum of four randomly selected, independent samples for TPH, BTEX, chlorides and the constituents listed in Subsections A and B of 20.6.2.3103 NMAC. The operator shall submit the results of the re-sampling event and a response action plan for the division's approval within 45 days of the initial notification. The response action plan shall address changes in the landfarm's operation to prevent further contamination and, if necessary, a plan for remediating existing contamination.

F. Treatment zone closure performance standards. After the operator has filled a landfarm cell to the maximum thickness of two feet or approximately 3000 cubic yards per acre, the operator shall continue treatment until the contaminated soil has been remediated to the higher of the background concentrations or the following closure performance standards. The operator shall demonstrate compliance with the closure performance standards by collecting and analyzing a minimum of one composite soil sample, consisting of four discrete samples.

(1) Benzene, as determined by EPA SW-846 method 8021B or 8260B, shall not exceed 0.2 mg/kg.

(2) Total BTEX, as determined by EPA SW-846 method 8021B or 8260B, shall not exceed 50 mg/kg.

(3) The GRO and DRO combined fractions, as determined by EPA SW-846 method 8015M, shall not exceed 500 mg/kg. TPH, as determined by EPA method 418.1 or other EPA method approved by the division, shall not exceed 2500 mg/kg.

(4) Chlorides, as determined by EPA method 300.1, shall not exceed 500 mg/kg if the landfarm is located where ground water is less than 100 feet but at least 50 feet below the lowest elevation at which the operator will place oil field waste or 1000 mg/kg if the landfarm is located where ground water is 100 feet or more below the lowest elevation at which the operator will place oil field waste.

(5) The concentration of constituents listed in Subsections A and B of 20.6.2.3103 NMAC shall be determined by EPA SW-846 methods 6010B or 6020 or other methods approved by the division. If the concentration of those constituents exceed the PQL or background concentration, the operator shall either perform a site specific risk assessment using EPA approved methods and shall propose closure standards based upon individual site conditions that protect fresh water, public health and the environment, which shall be subject to division approval or remove pursuant to Paragraph (2) of Subsection G of 19.15.36.15 NMAC.

G. Disposition of treated soils.

(1) If the operator achieves the closure performance standards specified in Subsection F of 19.15.36.15 NMAC, then the operator may either leave the treated soils in place, or, with prior division approval, dispose or reuse of the treated soils in an alternative manner.

(2) If the operator cannot achieve the closure performance standards specified in Subsection F of 19.15.36.15 NMAC within five years or as extended by the division, then the operator shall remove contaminated soils from the landfarm cell and properly dispose of it at a division-permitted landfill, or reuse or recycle it in a manner approved by the division.

(3) If the operator cannot achieve the closure performance standards specified in Subsection F of 19.15.36.15 NMAC within five years or as extended by the division, then the division may review the adequacy of the operator's financial assurance, as provided in Subsection G of 19.15.36.11 NMAC. In that event, the division may require the operator to modify its financial assurance to provide for the appropriate disposition of contaminated soil in a manner acceptable to the division.

(4) The operator may request approval of an alternative soil closure standard from the division, provided that the operator shall give division-approved public notice of an application for alternative soil closure standards in the manner provided in 19.15.36.9 NMAC. The division may grant the request administratively if no person files an objection thereto within 30 days after publication of notice; otherwise the division shall set the matter for hearing.

H. Environmentally acceptable bioremediation endpoint approach.

(1) A landfarm operator may use an environmentally acceptable bioremediation endpoint approach to landfarm management in lieu of compliance with the requirements of Paragraph (3) of Subsection F of 19.15.36.15 NMAC. The bioremediation endpoint occurs when TPH, as determined by EPA method 418.1 or other EPA method approved by the division, is reduced to a minimal concentration as a result of bioremediation and is dependent upon the bioavailability of residual hydrocarbons. An environmentally acceptable bioremediation endpoint occurs when the TPH concentration has been reduced by at least eighty percent by a combination of physical, biological and chemical processes and the rate of change in the reduction in the TPH concentration is negligible. The environmentally acceptable bioremediation endpoint in soil is determined statistically by the operator's demonstration that the rate of change in the reduction of TPH concentration is negligible.

(2) In addition to the requirements specified in Subsection C of 19.15.36.8 NMAC, an operator who plans to use an environmentally acceptable bioremediation endpoint approach shall submit for the division's review and approval a detailed landfarm operation plan for those landfarm cells exclusively dedicated to the use of the environmentally acceptable bioremediation endpoint approach. At a minimum, the operations plan shall include detailed information on the native soils, procedures to

characterize each lift of contaminated soil, operating procedures and management procedures that the operator shall follow.

(3) In addition to other operational requirements specified in 19.15.36.15 NMAC, the operator using an environmentally acceptable bioremediation endpoint approach shall comply with the following.

(a) Native soil information required. The operator shall submit detailed information on the soil conditions present for each of its landfarm cells immediately prior to the application of the petroleum hydrocarbon-contaminated soils, including: treatment cell size, soil porosity, soil bulk density, soil pH, moisture content, field capacity, organic matter concentration, soil structure, SAR, EC, soil composition, soil temperature, soil nutrient (C:N:P) (calcium, nitrogen and phosphate) concentrations and oxygen content.

(b) Characterization of contaminated soil. The operator shall submit a description of the procedures that it will follow to characterize each lift of contaminated soil or drill cuttings, prior to treating each lift of contaminated soil or drill cuttings, for petroleum hydrocarbon loading factor, TPH, BTEX, chlorides, constituents listed in Subsections A and B of 20.6.2.3103 NMAC, contaminated soil moisture, contaminated soil pH and API gravity of the petroleum hydrocarbons.

(c) Operating procedures. The operator shall submit a description of the procedures, including a schedule, that it shall follow to properly monitor and amend each lift of contaminated soil in order to maximize bioremediation, including tilling procedures and schedule; procedures to limit petroleum hydrocarbon loading to less than five percent; procedures to maintain pH between six and eight; procedures to monitor and apply proper nutrients; procedures to monitor, apply and maintain moisture to sixty to eighty percent of field capacity; and procedures to monitor TPH concentrations.

(d) Management procedures. The operator shall submit a description of the management procedures that it shall follow to properly schedule landfarming operations, including modifications during cold weather, record keeping, sampling and analysis, statistical procedures, routine reporting, determination and reporting of achievement of the environmentally acceptable bioremediation endpoint and closure and post-closure plans.

[19.15.36.15 NMAC - N, 2/14/2007; A, 12/1/08; A, 6/30/16]

19.15.36.16 SMALL LANDFARMS:

Small landfarms as defined in Paragraph (5) of Subsection A of 19.15.36.7 NMAC are exempt from 19.15.36 NMAC except for the requirements specified in 19.15.36.16 NMAC.

A. General requirements.

(1) Registration. Prior to establishment of a new small landfarm, the operator shall file a form C-137 EZ, small landfarm registration, with the environmental bureau in the division's Santa Fe office. If the operator is not the surface estate owner at the proposed site, the operator shall furnish with its form C-137 EZ its certification it has a written agreement with the surface estate owner authorizing the site's use for the proposed small landfarm. The division shall issue the operator a registration number no more than 30 days from receipt of the properly completed form.

(2) Limitation. The operator shall operate only one active small landfarm per governmental section at any time. No small landfarm shall be located more than one mile from the operator's nearest oil or gas well or other production facility.

B. General operating procedures. The operator shall:

(1) comply with the siting requirements of Subsections A and B of 19.15.36.13 NMAC;

(2) accept only exempt or non-hazardous wastes consisting of soils (excluding drill cuttings) generated as a result of accidental releases from production operations, that are predominantly contaminated by petroleum hydrocarbons, do not contain free liquids, would pass the paint filter test and where testing shows chloride concentrations are 500 mg/kg or below;

(3) berm the landfarm to prevent rainwater run-on and run-off; and

(4) post a sign at the site readable from a distance of 50 feet and listing the operator's name; small landfarm registration number; location by unit letter, section, township and range; expiration date; and an emergency contact telephone number.

C. Oil field waste management standards. The operator shall spread and disk contaminated soils in a single eight inch or less lift within 72 hours of receipt. The operator shall conduct treatment zone monitoring to ensure that the TPH concentration, as determined by EPA SW-846 method 8015M or EPA method 418.1 or other EPA method approved by the division, does not exceed 2500 mg/kg and that the chloride concentration, as determined by EPA method 300.1, does not exceed 500 mg/kg. The operator shall treat soils by disking at least once a month and by watering and adding bioremediation enhancing materials when needed.

D. Record-keeping requirements. The operator shall maintain records reflecting the generator, the location of origin, the volume and type of oil field waste, the date of acceptance and the hauling company for each load of oil field waste received. The division shall post on its website each small landfarm's location, operator and registration date. In addition, the operator shall maintain records of the small landfarm's remediation activities in a form readily accessible for division inspection. The operator shall maintain all records for five years following the small landfarm's closure.

E. Small landfarm closure.

(1) Closure performance standards and disposition of soils. If the operator achieves the closure performance standards specified below, then the operator may return the soil to the original generation site, leave the treated soil in place at the small landfarm or, with prior division approval, dispose or reuse the treated soil in an alternative manner. If the operator cannot achieve the closure performance standards within three years from the registration date, then the operator shall remove contaminated soil from the landfarm and properly dispose of it at a permitted landfill, unless the division authorizes a specific alternative disposition. The following standards shall apply:

(a) benzene, as determined by EPA SW-846 method 8021 B or 8260B, shall not exceed 0.2 mg/kg;

(b) Total BTEX, as determined by EPA SW-846 method 8021 B or 8260B, shall not exceed 50 mg/kg;

(c) TPH, as determined by EPA SW-846 method 418.1 or other EPA method approved by the division, shall not exceed 2500 mg/kg; the GRO and DRO combined fraction, as determined by EPA SW-846 method 8015M, shall not exceed 500 mg/kg; and

(d) chlorides, as determined by EPA method 300.1, shall not exceed 500 mg/kg.

(2) Closure requirements. The operator shall:

(a) re-vegetate soils remediated to the closure performance standards if left in place in accordance with Paragraph (6) of Subsection A of 19.15.36.18 NMAC;

(b) remove landfarmed soils that have not or cannot be remediated to the closure performance standards within three years to a division-approved surface waste management facility, and re-vegetate the cell filled in with native soil to the standards in Paragraph (6) of Subsection A of 19.15.36.18 NMAC;

(c) if the operator returns remediated soils to the original site, or with division permission, recycles them, re-vegetate the cell filled in with native soil to the standards in Paragraph (6) of Subsection A of 19.15.36.18 NMAC;

(d) remove berms on the small landfarm and buildings, fences, roads and equipment; and

(e) clean up the site and collect one vadose zone soil sample from three to five feet below the middle of the treatment zone, or in an area where liquids may have

collected due to rainfall events; the vadose zone soil sample shall be collected and analyzed using the methods specified above for TPH, BTEX and chlorides.

F. Final report. The operator shall submit a final closure report on a form C-137 EZ, together with photographs of the closed site, to the environmental bureau in the division's Santa Fe office. The division, after notice to the operator and an opportunity for a hearing if requested, may require additional information, investigation or clean up activities.

[19.15.36.16 NMAC - N, 2/14/2007; A, 12/1/08]

19.15.36.17 SPECIFIC REQUIREMENTS APPLICABLE TO EVAPORATION, STORAGE, TREATMENT AND SKIMMER PONDS:

A. Engineering design plan. An applicant for a surface waste management facility permit or modification requesting inclusion of a skimmer pit; an evaporation, storage or treatment pond; or a below-grade tank shall submit with the surface waste management facility permit application a detailed engineering design plan, certified by a registered profession engineer, including operating and maintenance procedures; a closure plan; and a hydrologic report that provides sufficient information and detail on the site's topography, soils, geology, surface hydrology and ground water hydrology to enable the division to evaluate the actual and potential effects on soils, surface water and ground water. The plan shall include detailed information on dike protection and structural integrity; leak detection, including an adequate fluid collection and removal system; liner specifications and compatibility; freeboard and overtopping prevention; prevention of nuisance and hazardous odors such as H₂S; an emergency response plan, unless the pit is part of a surface waste management facility that has an integrated contingency plan; type of oil field waste stream, including chemical analysis; climatological factors, including freeze-thaw cycles; a monitoring and inspection plan; erosion control; and other pertinent information the division requests.

B. Construction, standards.

(1) In general. The operator shall ensure each pit, pond and below-grade tank is designed, constructed and operated so as to contain liquids and solids in a manner that will protect fresh water, public health and the environment.

(2) Liners required. Each pit or pond shall contain, at a minimum, a primary (upper) liner and a secondary (lower) liner with a leak detection system appropriate to the site's conditions.

(3) Liner specifications. Liners shall consist of a 30-mil flexible PVC or 60-mil HDPE liner, or an equivalent liner approved by the division. Synthetic (geomembrane) liners shall have a hydraulic conductivity no greater than 1×10^{-9} cm/sec. Geomembrane liners shall be composed of an impervious, synthetic material that is resistant to petroleum hydrocarbons, salts and acidic and alkaline solutions. Liner

materials shall be resistant to ultraviolet light, or the operator shall make provisions to protect the material from sunlight. Liner compatibility shall comply with EPA SW-846 method 9090A.

(4) Alternative liner media. The division may approve other liner media if the operator demonstrates to the division's satisfaction that the alternative liner protects fresh water, public health and the environment as effectively as the specified media.

(5) Each pit or pond shall have a properly constructed foundation or firm, unyielding base, smooth and free of rocks, debris, sharp edges or irregularities, in order to prevent rupture or tear of the liner and an adequate anchor trench; and shall be constructed so that the inside grade of the levee is no steeper than 2H:1V. Levees shall have an outside grade no steeper than 3H:1V. The levees' tops shall be wide enough to install an anchor trench and provide adequate room for inspection and maintenance. The operator shall minimize liner seams and orient them up and down, not across a slope. The operator shall use factory seams where possible. The operator shall ensure field seams in geosynthetic material are thermally seamed (hot wedge) with a double track weld to create an air pocket for non-destructive air channel testing. A stabilized air pressure of 35 psi, plus or minus one percent, shall be maintained for at least five minutes. The operator shall overlap liners four to six inches before seaming, and orient seams parallel to the line of maximum slope, i.e., oriented along, not across, the slope. The operator shall minimize the number of field seams in corners and irregularly shaped areas. There shall be no horizontal seams within five feet of the slope's toe. Qualified personnel shall perform field seaming.

(6) At a point of discharge into or suction from the lined pit, the liner shall be protected from excessive hydrostatic force or mechanical damage, and external discharge lines shall not penetrate the liner.

(7) Primary liners shall be constructed of a synthetic material.

(8) A secondary liner may be a synthetic liner or an alternative liner approved by the division. Secondary liners constructed with compacted soil membranes, i.e., natural or processed clay and other soils, shall be at least three feet thick, placed in six-inch lifts and compacted to ninety-five percent of the material's standard proctor density, or equivalent. Compacted soil membranes used in a liner shall undergo permeability testing in conformity with ASTM standards and methods approved by the division before and after construction. Compacted soil membranes shall have a hydraulic conductivity of no greater than 1×10^{-8} cm/sec. The operator shall submit results of pre-construction testing to the division for approval prior to construction.

(9) The operator shall place a leak detection system between the lower and upper geomembrane liners that consists of two feet of compacted soil with a saturated hydraulic conductivity of 1×10^{-5} cm/sec or greater to facilitate drainage. The leak detection system shall consist of a properly designed drainage and collection and removal system placed above the lower geomembrane liner in depressions and sloped

so as to facilitate the earliest possible leak detection. Piping used shall be designed to withstand chemical attack from oil field waste or leachate; structural loading from stresses and disturbances from overlying oil field waste, cover materials, equipment operation or expansion or contraction; and to facilitate clean-out maintenance. The material placed between the pipes and laterals shall be sufficiently permeable to allow the transport of fluids to the drainage pipe. The slope of the interior sub-grade and of drainage lines and laterals shall be at least a two percent grade, i.e., two feet vertical drop per 100 horizontal feet. The piping collection system shall be comprised of solid and perforated pipe having a minimum diameter of four inches and a minimum wall thickness of schedule 80. The operator shall seal a solid sidewall riser pipe to convey collected fluids to a collection, observation and disposal system located outside the perimeter of the pit or pond. The operator may install alternative methods as approved by the division.

(10) The operator shall notify the division at least 72 hours prior to the primary liner's installation so that a division representative may inspect the leak detection system before it is covered.

(11) The operator shall construct pits and ponds in a manner that prevents overtopping due to wave action or rainfall, and maintain a three foot freeboard at all times.

(12) The maximum size of an evaporation or storage pond shall not exceed 10 acre-feet.

C. Operating standards.

(1) The operator shall ensure that only produced fluids or non-hazardous waste are discharged into or stored in a pit or pond; and that no measurable or visible oil layer is allowed to accumulate or remain anywhere on a pit's surface except an approved skimmer pit.

(2) The operator shall monitor leak detection systems pursuant to the approved surface waste management facility permit conditions, maintain monitoring records in a form readily accessible for division inspection and report discovery of liquids in the leak detection system to the division within 24 hours.

(3) Fencing and netting. The operator shall fence or enclose pits or ponds to prevent unauthorized access and maintain fences in good repair. Fences are not required if there is an adequate perimeter fence surrounding the surface waste management facility. The operator shall screen, net, cover or otherwise render non-hazardous to migratory birds tanks exceeding eight feet in diameter and exposed pits and ponds. Upon written application, the division may grant an exception to screening, netting or covering requirements upon the operator's showing that an alternative method will adequately protect migratory birds or that the tank or pit is not hazardous to migratory birds.

(4) The division may approve spray systems to enhance natural evaporation. The operator shall submit engineering designs for spray systems to the division's environmental bureau for approval prior to installation. The operator shall ensure that spray evaporation systems are operated so that spray-borne suspended or dissolved solids remain within the perimeter of the pond's lined portion.

(5) The operator shall use skimmer pits or tanks to separate oil from produced water prior to water discharge into a pond. The operator shall install a trap device in connected ponds to prevent solids and oils from transferring from one pond to another unless approved in the surface waste management facility permit.

D. Below-grade tanks and sumps.

(1) The operator shall construct below-grade tanks with secondary containment and leak detection. The operator shall not allow below-grade tanks to overflow. The operator shall install only below-grade tanks of materials resistant to the tank's particular contents and to damage from sunlight.

(2) The operator shall test sumps' integrity annually, and shall promptly repair or replace a sump that does not demonstrate integrity. The operator may test sumps that can be removed from their emplacements by visual inspection. The operator shall test other sumps by appropriate mechanical means. The operator shall maintain records of sump inspection and testing and make such records available for division inspection.

E. Closure required. The operator shall properly close pits, ponds and below-grade tanks within six months after cessation of use.

[19.15.36.17 NMAC - N, 2/14/2007; A, 6/30/16]

19.15.36.18 CLOSURE AND POST CLOSURE:

A. Surface waste management facility closure by operator.

(1) The operator shall notify the division's environmental bureau at least 60 days prior to cessation of operations at the surface waste management facility and provide a proposed schedule for closure. Upon receipt of such notice and proposed schedule, the division shall review the current closure and post closure plan (post closure is not required for oil treating plants) for adequacy and inspect the surface waste management facility.

(2) The division shall notify the operator within 60 days after the date of cessation of operations specified in the operator's closure notice of modifications of the closure and post closure plan and proposed schedule or additional requirements that it determines are necessary for the protection of fresh water, public health or the environment.

(3) If the division does not notify the operator of additional closure or post closure requirements within 60 days as provided, the operator may proceed with closure in accordance with the approved closure and post closure plan; provided that the director may, for good cause, extend the time for the division's response for an additional period not to exceed 60 days by written notice to the operator.

(4) The operator shall be entitled to a hearing concerning a modification or additional requirement the division seeks to impose if it files an application for a hearing within 10 days after receipt of written notice of the proposed modifications or additional requirements.

(5) Closure shall proceed in accordance with the approved closure and post closure plan and schedule and modifications or additional requirements the division imposes. During closure operations the operator shall maintain the surface waste management facility to protect fresh water, public health and the environment.

(6) Upon completion of closure, the operator shall re-vegetate the site unless the division has approved an alternative site use plan as provided in Subsection F of 19.15.36.18 NMAC. Re-vegetation, except for landfill cells, shall consist of establishment of a vegetative cover equal to seventy percent of the native perennial vegetative cover (un-impacted by overgrazing, fire or other intrusion damaging to native vegetation) or scientifically documented ecological description consisting of at least three native plant species, including at least one grass, but not including noxious weeds, and maintenance of that cover through two successive growing seasons.

B. Release of financial assurance.

(1) When the division determines that closure is complete it shall release the financial assurance, except for the amount needed to maintain monitoring wells for the applicable post closure care period, to perform semi-annual analyses of such monitoring wells and to re-vegetate the site. Prior to the partial release of the financial assurance covering the surface waste management facility, the division shall inspect the site to determine that closure is complete.

(2) After the applicable post closure care period has expired, the division shall release the remainder of the financial assurance if the monitoring wells show no contamination and the re-vegetation in accordance with Paragraph (6) of Subsection A of 19.15.36.18 NMAC is successful. If monitoring wells or other monitoring or leak detection systems reveal contamination during the surface waste management facility's operation or in the applicable post closure care period following the surface waste management facility's closure the division shall not release the financial assurance until the contamination is remediated in accordance with 19.15.30 NMAC and 19.15.29 NMAC, as applicable.

(3) In any event, the division shall not finally release the financial assurance until it determines that the operator has successfully re-vegetated the site in accordance

with Paragraph (6) of Subsection A of 19.15.36.18 NMAC, or, if the division has approved an alternative site use plan, until the landowner has obtained the necessary regulatory approvals and begun implementation of the use.

C. Surface waste management facility and cell closure and post closure standards. The following minimum standards shall apply to closure and post closure of the installations indicated, whether the entire surface waste management facility is being closed or only a part of the surface waste management facility.

(1) Oil treating plant closure. The operator shall ensure that:

(a) tanks and equipment used for oil treatment are cleaned and oil field waste is disposed of at a division-approved surface waste management facility (the operator shall reuse, recycle or remove tanks and equipment from the site within 90 days of closure);

(b) the site is sampled, in accordance with the procedures specified in chapter nine of EPA publication SW-846, test methods for evaluating solid waste, physical/chemical methods, for TPH, BTEX, major cations and anions and RCRA metals, in accordance with a gridded plat of the site containing at least four equal sections that the division has approved; and

(c) sample results are submitted to the environmental bureau in the division's Santa Fe office.

(2) Landfill cell closure.

(a) The operator shall properly close landfill cells, covering the cell with a top cover pursuant to Paragraph (8) of Subsection C of 19.15.36.14 NMAC, with soil contoured to promote drainage of precipitation; side slopes shall not exceed a twenty-five percent grade (four feet horizontal to one foot vertical), such that the final cover of the landfill's top portion has a gradient of two percent to five percent, and the slopes are sufficient to prevent the ponding of water and erosion of the cover material.

(b) The operator shall re-vegetate the area overlying the cell with native grass covering at least seventy percent of the landfill cover and surrounding areas, consisting of at least two grasses and not including noxious weeds or deep rooted shrubs or trees, and maintain that cover through the post closure period.

(3) Landfill post closure. Following landfill closure, the post closure care period for a landfill shall be 30 years.

(a) A post closure care and monitoring plan shall include maintenance of cover integrity, maintenance and operation of a leak detection system and leachate collection and removal system and operation of gas and ground water monitoring systems.

(b) The operator or other responsible entity shall sample existing ground water monitoring wells annually and submit reports of monitoring performance and data collected within 45 days after the end of each calendar year. The operator shall report any exceedance of a ground water standard that it discovers during monitoring pursuant to 19.15.29 NMAC.

(4) Landfarm closure. The operator shall ensure that:

(a) disking and addition of bioremediation enhancing materials continues until soils within the cells are remediated to the standards provided in Subsection F of 19.15.36.15 NMAC, or as otherwise approved by the division;

(b) soils remediated to the foregoing standards and left in place are re-vegetated in accordance with Paragraph (6) of Subsection A of 19.15.36.18 NMAC;

(c) landfarmed soils that have not been or cannot be remediated to the standards in Subsection F of 19.15.36.15 NMAC are removed to a division-approved surface waste management facility and the landfarm remediation area is filled in with native soil and re-vegetated in accordance with Paragraph (6) of Subsection A of 19.15.36.18 NMAC;

(d) if treated soils are removed, the cell is filled in with native soils and re-vegetated in accordance with Paragraph (6) of Subsection A of 19.15.36.18 NMAC;

(e) berms are removed;

(f) buildings, fences, roads and equipment are removed, the site cleaned-up and tests conducted on the soils for contamination;

(g) annual reports of vadose zone and treatment zone sampling are submitted to the division's environmental bureau until the division has approved the surface waste management facility's final closure; and

(h) for an operator who chooses to use the landfarm methods specified in Subsection H of 19.15.36.15 NMAC, that the soil has an ECs of less than or equal to 4.0 mmhos/cm (dS/m) and a SAR of less than or equal to 13.0.

D. Pond and pit closure. The operator shall ensure that:

(1) liquids in the ponds or pits are removed and disposed of in a division-approved surface waste management facility;

(2) liners are disposed of in a division-approved surface waste management facility;

(3) equipment associated with the surface waste management facility is removed;

(4) the site is sampled, in accordance with the procedures specified in chapter nine of EPA publication SW-846, test methods for evaluating solid waste, physical/chemical methods for TPH, BTEX, metals and other inorganics listed in Subsections A and B of 20.6.2.3103 NMAC, in accordance with a gridded plat of the site containing at least four equal sections that the division has approved; and

(5) sample results are submitted to the environmental bureau in the division's Santa Fe office.

E. Landfarm and pond and pit post closure. The post-closure care period for a landfarm or pond or pit shall be three years if the operator has achieved clean closure. During that period the operator or other responsible entity shall regularly inspect and maintain required re-vegetation. If there has been a release to the vadose zone or to ground water, then the operator shall comply with the applicable requirements of 19.15.30 NMAC and 19.15.29 NMAC.

F. Alternatives to re-vegetation. If the landowner contemplates use of the land where a cell or surface waste management facility is located for purposes inconsistent with re-vegetation, the landowner may, with division approval, implement an alternative surface treatment appropriate for the contemplated use, provided that the alternative treatment will effectively prevent erosion. If the division approves an alternative to re-vegetation, it shall not release the portion of the operator's financial assurance reserved for post-closure until the landowner has obtained necessary regulatory approvals and begun implementation of such alternative use.

G. Surface waste management facility closure initiated by the division. Forfeiture of financial assurance.

(1) For good cause, the division may, after notice to the operator and an opportunity for a hearing, order immediate cessation of a surface waste management facility's operation when it appears that cessation is necessary to protect fresh water, public health or the environment, or to assure compliance with statutes or division rules and orders. The division may order closure without first having a hearing in the event of an emergency, subject to Section 70-2-23 NMSA 1978, as amended.

(2) If the operator refuses or is unable to conduct operations at a surface waste management facility in a manner that protects fresh water, public health and the environment; refuses or is unable to conduct or complete an approved closure and post closure plan; is in material breach of the terms and conditions of its surface waste management facility permit; or the operator defaults on the conditions under which the division accepted the surface waste management facility's financial assurance; or if disposal operations have ceased and there has been no significant activity at the

surface waste management facility for six months the division may take the following actions to forfeit all or part of the financial assurance:

(a) send written notice by certified mail, return receipt requested, to the operator and the surety, if any, informing them of the decision to close the surface waste management facility and to forfeit the financial assurance, including the reasons for the forfeiture and the amount to be forfeited, and notifying the operator and surety that a hearing request or other response shall be made within 20 days of receipt of the notice; and

(b) advise the operator and surety of the conditions under which they may avoid the forfeiture; such conditions may include but are not limited to an agreement by the operator or another party to perform closure and post closure operations in accordance with the surface waste management facility permit conditions, the closure and post closure plan (including modifications or additional requirements imposed by the division) and division rules, and satisfactory demonstration that the operator or other party has the ability to perform such agreement.

(3) The division may allow a surety to perform closure and post closure if the surety can demonstrate an ability to timely complete the closure and post closure in accordance with the approved plan.

(4) If the operator and the surety do not respond to a notice of proposed forfeiture within the time provided, or fail to satisfy the specified conditions for non-forfeiture, the division shall proceed, after hearing if the operator or surety has timely requested a hearing, to declare the financial assurance's forfeiture. The division may then proceed to collect the forfeited amount and use the funds to complete the closure and post closure, or, at the division's election, to close the surface waste management facility and collect the forfeited amount as reimbursement.

(a) The division shall deposit amounts collected as a result of forfeiture of financial assurance in the oil and gas reclamation fund.

(b) In the event the amount forfeited and collected is insufficient for closure and post closure, the operator shall be liable for the deficiency. The division may complete or authorize completion of closure and post closure and may recover from the operator reasonably incurred costs of closure and post closure and forfeiture in excess of the amount collected pursuant to the forfeiture.

(c) In the event the amount collected pursuant to the forfeiture was more than the amount necessary to complete closure and post closure, including remediation costs, and forfeiture costs, the division shall return the excess to the operator or surety, as applicable, reserving such amount as may be reasonably necessary for post closure operations and re-vegetation in accordance with Paragraph (6) of Subsection A of 19.15.36.18 NMAC. The division shall return excess of the amount retained over the actual cost of post closure operations and re-vegetation to the operator or surety at the

later of the conclusion of the applicable post closure period or when the site re-vegetation in accordance with Paragraph (6) of Subsection A of 19.15.36.18 NMAC is successful.

(5) If the operator abandons the surface waste management facility or cannot fulfill the conditions and obligations of the surface waste management facility permit or division rules, after notice and an opportunity for hearing, the state of New Mexico, its agencies, officers, employees, agents, contractors and other entities designated by the state shall have all rights of entry into, over and upon the surface waste management facility property, including all necessary and convenient rights of ingress and egress with all materials and equipment to conduct operation, termination and closure of the surface waste management facility, including but not limited to the temporary storage of equipment and materials, the right to borrow or dispose of materials and all other rights necessary for the surface waste management facility's operation, termination and closure in accordance with the surface waste management facility permit and to conduct post closure operations.

[19.15.36.18 NMAC - Rp, 19.15.9.711 NMAC, 2/14/2007; A, 12/1/08; A, 6/30/16]

19.15.36.19 EXCEPTIONS AND WAIVERS:

A. In a surface waste management facility permit application, the applicant may propose alternatives to requirements of 19.15.36 NMAC, and the division may approve such alternatives if it determines that the proposed alternatives will provide equivalent protection of fresh water, public health and the environment.

B. The division may grant exceptions to, or waivers of, or approve alternatives to requirements of 19.15.36 NMAC in an emergency without notice or hearing. The operator requesting an exception or waiver, except in an emergency, shall apply for a surface waste management facility permit modification in accordance with Subsection C of 19.15.36.8 NMAC. If the requested modification is a major modification, the operator shall provide notice of the request in accordance with 19.15.36.9 NMAC.

[19.15.36.19 NMAC - N, 2/14/2007; A, 6/30/16]

19.15.36.20 TRANSITIONAL PROVISIONS:

Existing permitted facilities. Surface waste management facilities in operation prior to the effective date of 19.15.36 NMAC pursuant to division permits or orders may continue to operate in accordance with such permits or orders, subject to the following provisions.

A. Existing surface waste management facilities shall comply with the financial assurance, operational, monitoring, waste acceptance and closure and post closure requirements provided in 19.15.36 NMAC, except as otherwise specifically provided in

the applicable permit or order, or in a specific waiver, exception or agreement that the division has granted in writing to the particular surface waste management facility.

B. The division shall not require financial assurance for a commercial facility permitted prior to the effective date of 19.15.36 NMAC that exceeds \$250,000 until such time as:

(1) the division reviews the commercial facility's permit pursuant to Paragraph (3) of Subsection A of 19.15.36.12 NMAC, at which time the division may require the operator to submit a closure and post closure plan; which shall include a responsible third party contractor's cost estimate to complete closure and post closure of the surface waste management facility pursuant to the requirements of Subsections A through F of 19.15.36.18 NMAC:

(a) if the division determines that such estimate does not reflect a reasonable and probable closure and post closure cost, the division shall determine the estimated closure and post closure cost and shall provide its determination of estimated closure and post closure cost to the operator;

(b) if the operator disagrees with the division's determination of estimated closure and post closure cost, the operator may request a hearing, which shall be conducted according to 19.15.4 NMAC; or

(2) the commercial facility applies for a major modification.

C. Major modification of an existing surface waste management facility and a new landfarm cells constructed at an existing surface waste management facility shall comply with the requirements provided in 19.15.36 NMAC.

[19.15.39.7 NMAC - N, 12/1/2008]

19.15.39.8 SPECIAL PROVISIONS FOR SELECTED AREAS OF SIERRA AND OTERO COUNTIES:

A. The selected areas comprise:

(1) all of Sierra county except the area west of range 8 west NMPM and north of township 18 south, NMPM; and

(2) all of Otero county except the area included in the following townships and ranges:

(a) township 11 south, range 9 1/2 east and range 10 east NMPM;

(b) township 12 south, range 10 east and ranges 13 east through 16 east, NMPM;

(c) township 13 south, ranges 11 east through 16 east, NMPM;

(d) township 14 south, ranges 11 east through 16 east, NMPM;

(e) township 15 south, ranges 11 east through 16 east, NMPM;

(f) township 16 south, ranges 11 east through 15 east, NMPM;

(g) township 17 south, range 11 east (surveyed) and ranges 12 east through 15 east, NMPM;

(h) township 18 south, ranges 11 east through 15 east, NMPM;

(i) township 20 1/2 south, range 20 east, NMPM;

(j) township 21 south, range 19 east and range 20 east, NMPM; and

(k) township 22 south, range 20 east, NMPM; and also excepting also the unsurveyed area bounded as follows:

(i) beginning at the most northerly northeast corner of Otero county, said point lying in the west line of range 13 east (surveyed);

(ii) thence west along the north boundary line of Otero county to the point of intersection of such line with the east line of range 10 east NMPM (surveyed);

(iii) thence south along the east line of range 10 east NMPM (surveyed) to the southeast corner of township 11 south, range 10 east NMPM (surveyed);

(iv) thence west along the south line of township 11 south, range 10 east NMPM (surveyed) to the more southerly northeast corner of township 12 south, range 10 east NMPM (surveyed);

(v) thence south along the east line of range 10 east NMPM (surveyed) to the inward corner of township 13 south, range 10 east NMPM (surveyed) (said inward corner formed by the east line running south from the more northerly northeast corner and the north line running west from the more southerly northeast corner of said township and range);

(vi) thence east along the north line of township 13 south NMPM (surveyed) to the southwest corner of township 12 south, range 13 east, NMPM (surveyed);

(vii) thence north along the west line of range 13 east, NMPM (surveyed) to the point of beginning.

B. The division shall not issue permits under 19.15.17 NMAC for pits located in the selected areas.

C. Produced water injection wells located in the selected areas are subject to the following requirements in addition to those set out in 19.15.25 NMAC and 19.15.34 NMAC.

(1) The division shall issue permits under 19.15.26.8 NMAC only after notice and hearing.

(2) The radius of the area of review shall be the greater of:

(a) one-half mile; or

(b) one and one-third times the radius of the zone of endangering influence, as calculated under EPA regulation 40 C.F.R. section 146.6(a) or by other method acceptable to the division; but in no case shall the radius of the area of review exceed one and one-third miles.

(3) The operator shall demonstrate fresh water aquifers' vertical extent prior to using a new or existing well for injection.

(4) The operator shall isolate fresh water aquifers throughout their vertical extent with at least two cemented casing strings. In addition,

(a) existing wells converted to injection shall have continuous, adequate cement from casing shoe to surface on the smallest diameter casing, and

(b) wells drilled for the purpose of injection shall have cement circulated continuously to surface on all casing strings, except the smallest diameter casing shall have cement to at least 100 feet above the casing shoe of the next larger diameter casing.

(5) The operator shall run cement bond logs acceptable to the division after each casing string is cemented, and file the logs with the appropriate division district office. For existing wells the casing and cementing program shall comply with 19.15.26.9 NMAC.

(6) The operator shall construct produced water transportation lines of corrosion-resistant materials acceptable to the division, and pressure test the water transportation lines to one and one-half times the maximum operating pressure prior to operation, and annually thereafter.

(7) The operator shall place tanks on impermeable pads and surround the tanks with lined berms or other impermeable secondary containment device having a capacity at least equal to one and one-third times the capacity of the largest tank, or, if the tanks are interconnected, of all interconnected tanks.

(8) The operator shall record injection pressures and volumes daily or in a manner acceptable to the division, and make the record available to the division upon request.

(9) The operator shall perform mechanical integrity tests as described in Paragraph (2) of Subsection A of 19.15.26.11 NMAC annually, shall advise the appropriate division district office of the date and time the operator is commencing a mechanical integrity test so that the division may witness the test and shall file the pressure chart with the appropriate division district office.

[19.15.39.8 NMAC - Rp, 19.15.1.21 NMAC, 12/1/2008]

19.15.39.9 SPECIAL PROVISIONS FOR SANTA FE COUNTY AND THE GALISTEO BASIN:

A. Applicability. The operator shall obtain division approval for an exploration and development plan prior to drilling, re-entering or deepening a well located in the Galisteo basin, and shall operate the wells covered by the exploration and development plan in accordance with the exploration and development plan's requirements until the exploration and development plan is specifically replaced by a special pool order. Approval of an exploration and development plan does not relieve an operator from its responsibility to obtain any permit required pursuant to the Oil and Gas Act for its activities conducted under the exploration and development plan. The operator shall renew an approved exploration and development plan every five years. The Galisteo basin includes:

- (1)** the surveyed portions of the following sections in Sandoval county:
 - (a)** township 15 north, range 5 east, sections 13 and 25;
 - (b)** township 15 north, range 6 east, sections 10 through 30 and 32 through 36;
 - (c)** township 14 north, range 6 east, sections 1 through 4, 9 through 15, 22 through 26 and 35 and 36;
 - (d)** township 13 north, range 6 east, sections 1 and 2;
- (2)** the surveyed portions of the following sections in San Miguel county:
 - (a)** township 15 north, range 12 east, sections 19 and 29 through 32;
 - (b)** township 14 north, range 12 east, sections 4 through 10, 13 through 24, and 27 through 33;
 - (c)** township 13 north, range 12 east, sections 4 through 9 and 16 through 21;
- (3)** the surveyed portions of the following sections in Santa Fe county:
 - (a)** township 17 north, range 10 east, sections 35 and 36;
 - (b)** township 17 north, range 11 east, sections 30 through 32;
 - (c)** township 16 north, range 9 east, sections 26, 34 and 35;
 - (d)** township 16 north, range 10 east, sections 1, 2, 10 through 17, 20 through 28 and 33 through 36;

(e) township 16 north, range 11 east, sections 5 through 8, 16 through 21 and 28 through 33;

(f) township 15 north, range 7 east, sections 7 through 9 and 14 through 36;

(g) township 15 north, range 8 east, sections 19 and 22 through 26;

(h) township 15 north, range 9 east, sections 2 through 4, 7 through 10, 14 through 23 and 25 through 36;

(i) township 15 north, range 10 east, sections 1 through 3, 11 through 13, 24, 25, 30 through 32 and 36;

(j) township 15 north, range 11 east, sections 3 through 36;

(k) township 14 north, range 7 east, sections 1 through 19, 21 through 24, 30 and 31;

(l) township 14 north, range 8 east, sections 1 through 10, 12 through 30 and 36;

(m) township 14 north, range 9 east, all sections;

(n) township 14 north, range 10 east, sections 1, 2 5 through 24, 29 and 30;

(o) township 14 north, range 11 east, sections 1 through 28 and 33 through 36;

(p) township 13 north, range 7 east, sections 6 and 7;

(q) township 13 north, range 8 east, sections 1, 12 through 14, 23 through 26, 35 and 36;

(r) township 13 north, range 9 east, all sections;

(s) township 13 north, range 11 east, sections 1 through 4, 9 through 16, 21 through 24, 27, 28, 33 and 34;

(t) township 12 north, range 8 east, sections 1, 2, 11 through 16, 21 and 22;

(u) township 12 north, range 9 east, sections 2 through 11, 13 through 15, 18, 23 and 24;

(v) township 12 north, range 10 east, sections 18 through 20, 29, 30 and 32 through 36;

(w) township 12 north, range 11 east, sections 3, 4, 9, 10, 15, 16, 21, 22, 28, 29 and 31 through 33;

(x) township 11 north, range 10 east, sections 1 through 4;

(4) the un-surveyed area in Santa Fe county bounded by the surveyed portions of township 14 north, range 8 east, sections 1 through 3, 10 and 12 through 15;

(5) the un-surveyed area in Santa Fe county bounded by:

(a) the surveyed portions of:

(i) township 16 north, range 10 east, sections 17, 20, 21, 28, 33 and 34;

(ii) township 15 north, range 10 east, sections 3, 2, 11 through 13, 24, 25 and 36;

(iii) township 14 north, range 10 east, sections 1, 2, 11, 10, 15, 22, 21, 16, 9, 8 and 5;

(iv) township 15 north, range 10 east, sections 32 through 30;

(v) township 15 north, range 9 east, sections 25, 26, 35, 26, 23, 14, 15, 10, 3 and 2;

(vi) township 16, north, range 9 east, sections 35 and 26;

(b) and then from the northeastern corner of the surveyed portion of township 16 north, range 9 east, section 26 to the northwestern corner of the surveyed portion of township 16 north, range 10 east, section 17;

(6) the un-surveyed area in Santa Fe county bounded by the surveyed portions of:

(a) township 14 north, range 11 east, sections 19 through 21, 28 and 33;

(b) township 13 north, range 11 east, sections 4, 9, 16, 21, 28 and 33;

(c) township 12 north, range 11 east, sections 4, 9, 16, 21, 28, 33, 32, 29 and 31;

(d) township 12 north, range 10 east, sections 36 through 32, 29 and 20 through 18;

(e) township 12 north, range 9 east, sections 24, 13, 14, 11 and 2;

- (f) township 13 north, range 9 east, sections 36, 25, 24, 13, 12, 1 and 2;
- (g) township 14 north, range 9 east, sections 35, 36, 25, 30, 29 and 20 through 24;
- (7) the un-surveyed area in Santa Fe county bounded by:
 - (a) the surveyed portions of:
 - (i) township 13 north, range 7 east, sections 7 and 6;
 - (ii) township 14 north, range 7 east, sections 31, 30, 19 through 16 and 21 through 24;
 - (iii) township 14 north, range 8 east, sections 30 through 25 and 36;
 - (iv) township 13 north, range 8 east, sections 1, 12 through 14, 23, 26 and 35;
 - (v) township 12 north, range 8 east, sections 2, 11 and 14 through 16;
 - (vi) township 12 north, range 8 east, sections 21 and 22; and
 - (b) and then from the northwest corner of the surveyed portion of township 12 north, range 8 east, section 16 to the northeast corner of the surveyed portion of township 12 north, range 7 east, and then to the southeast corner of the surveyed portion of township 13 north, range 7 east, section 7.

B. Application for exploration and development plan. An operator applying for approval of an exploration and development plan shall file two copies of the application with the division's Santa Fe office and file a copy of the application with the appropriate division district office or offices. The application shall include:

- (1) the operator's name, address and telephone number, with an e-mail address and facsimile number if available;
- (2) a legal description of the area to be covered by the exploration and development plan including at a minimum the area subject to surface disturbance by the wells or related facilities the operator proposes to install and the operator's good-faith estimate of the productive area, which in no case may be smaller than the applicable spacing unit or units for the proposed wells;
- (3) identification of the target zone or zones;
- (4) a topographic map of the area to be covered by the proposed exploration and development plan and one half mile beyond the boundary of that area;

(5) a map or maps of the area to be covered by the proposed exploration and development plan and one half mile beyond the boundary of that area plotting the following, with global positioning system coordinates to the sixth decimal point for unsurveyed areas:

(a) state, federal, private or tribal surface ownership;

(b) municipal and county boundaries;

(c) farms;

(d) all buildings and infrastructure including but not limited to highways and roads, railroads, pipelines, power lines, antennas, wind turbines, solar farms and mines (surface and subsurface);

(e) watercourses, sinkholes, playas and unstable areas;

(f) municipal fresh water well fields covered under a municipal ordinance adopted pursuant to NMSA 1978, Section 3-27-3, as amended;

(g) water wells and wellhead protection areas;

(h) all existing oil and gas wells regardless of status, including inactive wells, wells that have been plugged and wells that have been plugged and released; and

(i) the location of proposed exploratory wells and related facilities, including but not limited to tank batteries, gathering lines, waste disposal facilities, compressor stations and access roads;

(6) a hydrogeologic and site report that provides sufficient information and detail on the area's topography, soils, geology, surface hydrology and ground water hydrology to enable the division to evaluate the actual and potential effects on soils, surface water and ground water;

(7) proposed plans for:

(a) installing monitor wells to determine depth to water and saturated thickness, obtain baseline water samples and detect releases;

(b) a drilling program describing the air drilling program or mud program to be used;

(c) a mud-logging program, including submission of a copy of the mud log sheet and a description of the mud-logger's daily report, which shall include at a minimum information on the total depth reached, the footage drilled in the preceding 24

hours, oil and gas intervals, fresh water zones and mud parameters including mud weight, chlorides, funnel viscosity and filtrate properties;

(d) addressing wastes generated during the drilling and production processes;

(e) minimizing pad size and consolidating facilities; and

(f) developing the area if the exploratory wells are productive, including the operator's estimate of the number and location of development wells and related facilities;

(8) a written contingency plan for all releases, with no exclusion for de minimus amounts, which shall include:

(a) best management practices for the prevention and detection of releases and procedures for early detection of releases;

(b) instructions for notifying appropriate responders, with a contact list including current names, telephone numbers, e-mail addresses, facsimile numbers and addresses;

(c) identification of applicable equipment, materials and supplies available locally or regionally to respond to releases, with advance arrangements for acquiring the equipment, materials and supplies; and

(d) response plans based on the severity and nature of the release;

(9) if cultural resources listed in either the national register of historic places or the state register of cultural properties, known cemeteries or unmarked human burials are located in the area included in the proposed exploration and development plan or within one half mile of the area included in the exploration and development plan, the information in 4.10.7.9 NMAC including a description of the effects the proposed operations may have on these sites and proposed mitigation measures;

(10) any proposed exceptions to the requirements set out in Subsection B of 19.15.39.10 NMAC and evidence that operating in accordance with the proposed exceptions will prevent waste, protect correlative rights, protect fresh water and protect human health and the environment;

(11) a proposed legal notice complying with Subsection F of 19.15.39.9 NMAC;

(12) other information that the division may require to demonstrate that the exploration and development plan will prevent waste, protect correlative rights, protect fresh water, protect human health and the environment, and will assure the division that operation of the exploration and development plan will comply with division rules and division or commission orders; and

(13) certification by the operator that the information submitted in the application is true, accurate and complete to the best of the operator's knowledge, after reasonable inquiry.

C. Amendments to exploration and development plans. An operator shall obtain an approved amendment to its exploration and development plan prior to expanding the area covered by the plan, increasing the number or changing the locations of proposed wells or related facilities or changing the terms of the proposed exploration and development plan. An operator applying for an amendment to an exploration and development plan shall file two copies of the application with the division's Santa Fe office and file a copy of the application with the appropriate division district office or offices. The application shall:

- (1) describe the proposed amendment or amendments;
- (2) update the information provided in the original application pursuant to Subsection B of 19.15.39.9 NMAC; and
- (3) provide a proposed legal notice complying with Subsection F of 19.15.39.9 NMAC.

D. Renewals of exploration and development plans.

(1) An operator applying for renewal of its exploration and development plan shall file two copies of the application with the division's Santa Fe office and file a copy of the application with the appropriate division district office or offices. The application shall:

- (a) update the information provided pursuant to Subsection B of 19.15.39.9 NMAC; and
- (b) provide a proposed legal notice complying with Subsection F of 19.15.39.9 NMAC.

(2) The operator may combine an application to renew its exploration and development plan with an application to amend the exploration and development plan.

E. Replacement of an exploration and development plan with a special pool order.

(1) An operator who has operated wells under an approved exploration and development plan may apply for approval to replace the exploration and development plan with a special pool order. The operator shall demonstrate to the division's satisfaction that the hydrology, geology and reservoir characteristics within the area that the exploration and development plan covers have been sufficiently defined to protect fresh water, human health and the environment.

(2) A special pool order replacing an approved exploration and development plan shall designate a pool applying to a specific producing formation or formations within the area included in the approved exploration and development plan it replaces.

(3) An operator may drill wells within the horizontal and vertical limits of the pool designated by the special pool order and conduct oil and gas operations within the horizontal limits of that pool without obtaining an approved exploration and development plan that would otherwise be required by 19.15.39.9 NMAC. The operator shall comply with the terms of the special pool order and obtain any permits required for its operations required by law.

(4) A well drilled outside the horizontal limits of the pool designated by the special pool order shall not be classified as a development well for the pool designated by the special pool order pursuant to 19.15.15.8 NMAC and is subject to the requirements of 19.15.39.9 NMAC.

(5) An operator applying for approval to replace the exploration and development plan with a special pool order shall file two copies of the application with the division's Santa Fe office and file a copy of the application with the appropriate division district office or offices. The application shall:

(a) describe provisions to be included in the special pool order to protect fresh water and to protect human health and the environment;

(b) update the information provided pursuant to Subsection B of 19.15.39.9 NMAC; and

(c) provide a proposed legal notice complying with Subsection F of 19.15.39.9 NMAC.

F. Legal notice. Legal notice of an application for a proposed exploration and development plan or an application to amend, renew or replace an existing exploration and development plan shall be written in English and Spanish and shall include:

(1) the operator's name, address and telephone number, and an e-mail address and facsimile number if available;

(2) a legal and a common description of the area that the exploration and development plan covers;

(3) in the case of an application for an exploration or development plan, a summary of the proposed plan including the number and location of proposed exploratory and development wells and related facilities;

(4) in the case of an application to amend an existing exploration and development plan, a summary of the existing exploration and development plan and a summary of the proposed amendment;

(5) in the case of an application to renew an existing exploration and development plan, a summary of the existing exploration and development plan;

(6) in the case of an application to replace an existing exploration and development plan, a summary of the provisions to be included in the special pool order to protect fresh water and protect human health and the environment;

(7) instructions for viewing the application on the division's website or at the appropriate division district office or offices;

(8) instructions for filing written public comments on the application with the division clerk in the division's Santa Fe office;

(9) if the application has been set for hearing, the date, time and location of the public hearing; and

(10) instructions for being placed on a division contact list to receive notice of future applications and legal notices related to the exploration and development plan.

G. Application completeness.

(1) Within 60 days of receiving an application for an exploration and development plan or an application to amend, renew or replace an existing exploration and development plan, the division shall notify the operator in writing of its determination on whether the application is complete. An application is complete if it contains all the information required by 19.15.39.9 NMAC.

(2) If the division determines that the application is complete, the division shall:

(a) notify the operator in writing that the application is complete;

(b) provide the operator with an approved legal notice;

(c) provide the operator with a copy of the current contact list of individuals and entities requesting notice of actions related to the exploration and development plan;

(d) distribute notice of the application with its next division or commission docket;

(e) post the approved legal notice and the application on the division's website, with information that is confidential under NMSA 1978, Section 18-6-11.1 redacted from the application; and

(f) provide a copy of the complete application to the state historic preservation officer with a request for review and comment.

(3) If the division determines that the application is not complete, the division's written notification to the operator shall identify the deficiencies.

(4) The operator may re-submit an application to correct deficiencies, correct errors or add information. The division's receipt of a re-submittal triggers a new 30 day period for the division to notify the operator of the division's determination on completeness.

H. Public notice. Within 20 days of receiving an approved legal notice and the division's determination that an application is complete, the operator shall:

(1) publish the approved legal notice in English and Spanish in a display advertisement in a newspaper of general circulation in the affected county or counties;

(2) mail the approved notice by certified mail, return receipt requested, to:

(a) holders of mineral interests in the area covered by the exploration and development plan and the area within one half mile of the boundary of the exploration and development plan if they have not already agreed to participate in the exploration and development plan;

(b) surface interest owners in the area covered by the exploration and development plan and the area within one half mile of the boundary of the exploration and development plan;

(c) the governor, chairperson or president of each tribe, pueblo and nation located in or partially located in New Mexico;

(d) the governments of counties and municipalities located within or partially located within the area covered by the exploration and development plan or the area within one half mile of the boundary of the exploration and development plan;

(e) the state historic preservation officer; and

(f) the department of game and fish; and

(3) mail the approved notice of hearing by first class mail or transmit the notice of hearing by electronic mail to those individuals and entities on the division's contact list for the exploration and development plan.

I. Public hearings.

(1) The division shall set all applications for approval of exploration and development plans for public hearing, with the public hearing to be set no sooner than 60 days after the operator serves public notice.

(2) The division may hold a public hearing on an application to amend, renew or replace an existing exploration and development plan. The division may approve the amendment, renewal or replacement administratively unless the director determines that the amendment, renewal or replacement is sufficiently substantial that public notice and public participation are appropriate.

(3) If the division acts administratively to deny an application to amend, renew or replace an existing exploration and development plan, or acts administratively to approve an amendment, renewal or replacement of an existing exploration and development plan with conditions or terms, the operator may, within 30 days of receipt of the administrative order, file an application for hearing on the application. The division shall set the application for public hearing.

(4) If the division sets for public hearing an application to amend, renew or replace an existing exploration or development plan, the operator shall submit to the division's Santa Fe office for approval a notice of hearing containing the information required by Subsection F of 19.15.39.9 NMAC and, at least 30 days prior to the hearing date:

(a) publish the approved notice of hearing in a newspaper of general circulation in the county or counties in the area that the exploration and development plan covers and within one half mile of the boundary of the area that the exploration and development plan covers;

(b) mail the approved notice of hearing by to those persons and entities entitled to public notice under Paragraph (2) of Subsection H of 19.15.39.9 NMAC; and

(c) mail the approved notice of hearing by first class mail or transmit the notice of hearing by electronic mail to those individuals and entities on the division's contact list for the exploration and development plan.

J. Plan approvals, conditions, denials, amendments, revocations, renewals, transfers and replacements.

(1) The division may approve an exploration and development plan for a period not to exceed five years. The division may renew an exploration and development plan for additional periods not to exceed five years.

(2) The division may approve an application for an exploration and development plan or an application to amend, renew or replace an existing exploration and development plan if the operator proves that:

(a) the operator is in compliance with Subsection A of 19.15.5.9 NMAC;

(b) the application provides the information required by 19.15.39.9 NMAC;

(c) the operator has provided the notice required by 19.15.39.9 NMAC; and

(d) approval of the application will prevent waste, protect correlative rights, protect fresh water and protect human health and the environment.

(3) The division may impose conditions on its approval of an application for an exploration and development plan or an amendment or renewal of an exploration and development plan if the division determines that the conditions are necessary to prevent waste, protect correlative rights, protect fresh water and protect human health or the environment.

(4) The division may include provisions in a special pool order that replaces an exploration and development plan if the division determines that the provisions are necessary to prevent waste, protect correlative rights, protect fresh water or protect human health and the environment.

(5) After notice to the operator and hearing, the division may revoke approval of an exploration and development plan and require wells that the exploration and development plan covers to be shut-in if the operator is out of compliance with the exploration and development plan or is out of compliance with Subsection A of 19.15.5.9 NMAC.

(6) If an exploration and development plan expires and the operator has not filed an application to renew the exploration and development plan, the operator shall shut-in the wells that the exploration and development plan covers. If the operator has filed an application to renew the exploration and development plan prior to its expiration, the operator may continue to operate wells that the exploration and development plan covers until a final order is issued on the application for renewal.

(7) The exploration and development plan shall remain in effect until revoked, amended or replaced pursuant to 19.15.39.9 NMAC.

(8) In the event another operator becomes operator of record of wells subject to the exploration and development plan, the new operator shall be bound by the terms of the applicable approved exploration and development plan or special pool order.

(9) Approval of an exploration and development plan or an application to amend, renew or replace an exploration and development plan does not relieve an

operator of responsibility for complying with any other applicable federal, state or local statutes, rules or regulations or ordinances.

[19.15.39.9 NMAC - N, 7/16/2009]

19.15.39.10 ADDITIONAL REQUIREMENTS FOR APPLICATIONS TO DRILL, RE-ENTER OR DEEPEN WELLS SUBJECT TO AN EXPLORATION AND DEVELOPMENT PLAN:

A. An application for permit to drill, re-enter or deepen a well that requires an exploration and development plan pursuant to 19.15.39.9 NMAC shall include the following in addition to meeting the requirements set out in 19.15.14 NMAC:

- (1) a permit application pursuant to 19.15.17 NMAC;
- (2) global positioning system coordinates to the sixth decimal point to identify the location of a well to be drilled in an un-surveyed area; and
- (3) any additional information required by the operator's approved exploration and development plan.

B. Unless otherwise specified in an approved exploration and development plan, a permit to drill, re-enter or deepen a well that requires an exploration and development plan shall be subject to the following conditions:

- (1) the operator shall drill the well using a closed loop system that uses above ground steel tanks for the management of drilling or workover fluids without using below-grade tanks or pits;
- (2) the operator shall not use the on-site closure methods identified in Subsection F of 19.15.17.13 NMAC;
- (3) the operator shall run logs from total depth to surface that will determine porosity and water saturation;
- (4) a mud-logger shall be on site during drilling from surface to total depth and shall submit the logs and a written report daily to the supervisor of the appropriate district office;
- (5) the operator shall isolate all fresh water zones and aquifers throughout their vertical extent with at least two cemented casing strings;
- (6) the operator shall circulate cement to surface on all casing strings, except that the smallest diameter casing shall have cement to at least 100 feet above the casing shoe of the next larger diameter casing;

(7) the operator shall run cement bond logs acceptable to the division after each casing string is cemented and file the logs with the appropriate district office; and

(8) the operator of a well awaiting gas pipeline connection shall place that well on approved temporary abandonment status, setting a drillable bridge plug above any open perforations.

[19.15.39.10 NMAC - N, 7/16/2009]

19.15.39.11 SPECIAL PROVISIONS FOR A SELECTED AREA OF THE ROSWELL ARTESIAN BASIN:

A. Designated area. The designated area shall comprise:

- (1) the area within the following townships and ranges in Chaves county:
- (a) township 5 south, ranges 22 and 23 east;
 - (b) township 6 south, ranges 22 east through 24 east;
 - (c) township 7 south, ranges 22 east through 24 east;
 - (d) township 8 south, ranges 21 east through 25 east;
 - (e) township 9 south, ranges 21 east through 25 east;
 - (f) township 9½ south, range 24 east;
 - (g) township 10 south, ranges 21 east through 25 east;
 - (h) township 11 south, ranges 21 east through 26 east;
 - (i) township 12 south, ranges 21 east, 21½ east, and 22 east through 26 east;
 - (j) township 13 south, ranges 21 east through 27 east;
 - (k) township 14 south, ranges 21 east through 27 east;
 - (l) township 15 south, ranges, 21 east through 27 east;
 - (m) township 18 south, range 20 east;
 - (n) township 19 south, range 20 east; and
- (2) the area within the following townships and ranges in Eddy county:

- (a) township 16 south, ranges 21 east and 23 east through 27 east;
- (b) township 17 south, ranges 21 east and 23 east through 27 east;
- (c) township 18 south, ranges 21 east and 23 east through 27 east;
- (d) township 19 south, ranges 21 east and 23 east through 27 east;
- (e) township 20 south, ranges 21 east and 23 east through 27 east;
- (f) township 20½ south, ranges 21 east through 23 east;
- (g) township 21 south, ranges 22 east through 25 east;
- (h) township 22 south, ranges 22 east through 24 east; and
- (i) township 23 south, ranges 22 east and 23 east.

B. Applicability. All well drilling commenced after August 29, 2017 from surface locations within the designated area, or which will penetrate the designated area above the base of the San Andres formation, shall be permitted, drilled and operated in accordance with 19.15.39.11 NMAC.

C. Wells that penetrate the designated area. For wells that will penetrate the designated area defined in Subsection A of 19.15.39.11 NMAC, the operator shall include in the casing program at least the following.

(1) If a conductor pipe is used, it shall be adequately cemented in place to prevent drainage of fluids from the surface to shallow formations.

(2) The operator shall set a surface casing string, at a minimum, 50 feet below the base of the artesian aquifer, provided:

(a) in areas where the artesian aquifer is not present at depth, or if the well will not be drilled through the artesian aquifer, the hole shall be drilled to the first show of hydrocarbons on a mud log, and the surface casing set no more than 50 feet above the first show;

(b) in areas where the artesian aquifer is present, and the well will be drilled through the artesian aquifer, the operator shall determine the depth for setting of the surface casing string with the concurrence of the district supervisor of the division's Artesia district office; the operator, in its proposed casing program, shall identify the criteria utilized to locate the base of the artesian aquifer and the information supporting the criteria;

(c) the operator shall circulate to surface the cement for surface casing covering all aquifers;

(d) if the cement is not circulated to the surface, the operator shall furnish a cement bond log to the division's Artesia district office, and shall not proceed with drilling until the division approves the cementing;

(e) if the operator encounters significant loss of circulation during drilling within an aquifer, the operator shall immediately notify the division's Artesia district office;

(f) if the operator observes significant inflow of fresh water into the mud pit, the operator shall immediately notify the division's Artesia district office.

(3) If the well is equipped with an intermediate casing string, the operator shall circulate cement on the intermediate casing string to the surface. If the well is not equipped with an intermediate casing string, the operator shall circulate cement on the production casing string to the surface. If cement is not circulated to surface on the intermediate casing string or the production casing string, as applicable, the operator shall determine the cement top and report it to the division's Artesia district office.

D. District supervisor discretion. Notwithstanding Subsection C of 19.15.39.11 NMAC, the district supervisor of the division's Artesia district office may:

(1) require a modification of a casing program that provides for an additional water-protection casing string, if the district supervisor finds that the proposed casing program is not reasonably sufficient to prevent fluid movement into or out of the well bore from or to aquifers in the designated area; or

(2) approve a casing program that allows for the setting of the shoe for the water-protection casing string at a different depth than required in Paragraph (2) of Subsection C of 19.15.39.11 NMAC if the district supervisor finds, based on the information and data provided by the operator, that the proposed casing program will adequately protect all fresh water formations the well can reasonably be expected to encounter; and

(3) in either case, attach such conditions of approval as, in the district supervisor's judgment, are reasonably necessary to prevent such fluid movement.

E. Compliance with statewide rules. 19.15.39.11 NMAC shall not be construed to relieve the operator of any well from the obligation to comply with any applicable statewide rules, including, but not limited to 19.15.16.9, 19.15.16.10 and 19.15.16.11 NMAC.

F. Transitional provisions. Any APD for a proposed well within the designated area that was previously approved and suspended by emergency order of the division

shall be reinstated if it meets the requirements of 19.15.39.11 NMAC. Any operator may amend any such APD within one year after the effective date of 19.15.39.11 NMAC to comply with 19.15.39.11 NMAC. If the division reinstates or approves as amended a previously suspended APD, the APD shall continue in force for two years from the date of original approval, plus the number of days that such APD was suspended.

[19.15.35.11 NMAC - N, 8/29/2017]

PART 40: NEW MEXICO LIQUIFIED PETROLEUM GAS STANDARD

19.15.40.1 ISSUING AGENCY:

The Construction Industries Division of the Regulation and Licensing Department.

[19.15.40.1 NMAC - Rp, 19.15.40.1 NMAC, 2/1/2006]

19.15.40.2 SCOPE:

A. All individuals or persons performing work that will involve the use of storage or providing service, for LP Gas and all facilities, equipment, appliances, structures or installations in the state of New Mexico.

B. The provisions of these rules and regulations shall apply to the use and enforcement of the LP and CNG Gas Act, construction industries division rules and regulations, national publications that are law in New Mexico (such as NFPA 58), and codes adopted by the construction industries commission.

C. It also serves to establish administrative procedures for the LP gas bureau, including, but not limited to, licensing and permitting procedures.

[19.15.40.2 NMAC - Rp, 19.15.40.2 NMAC, 2/1/2006]

19.15.40.3 STATUTORY AUTHORITY:

These rules and regulations are adopted pursuant to Section 70, Article 5 NMSA 1978 and Subsection F of Section 60-13-9 NMSA 1978.

[19.15.40.3 NMAC - Rp, 19.15.40.3 NMAC, 2/1/2006]

19.15.40.4 DURATION:

Permanent; until later amended, repealed or replaced.

[19.15.40.4 NMAC - Rp, 19.15.40.4 NMAC, 2/1/2006]

19.15.40.5 EFFECTIVE DATE:

February 1, 2006, unless a later date is cited at the end of a section.

[19.15.40.5 NMAC - Rp, 19.15.40.5 NMAC, 2/1/2006]

19.15.40.6 OBJECTIVE:

The objective of 19.15.40 NMAC is to promote the general welfare of the people of New Mexico by providing for the protection of life and property through standards that, when complied with, will result in safer installations, equipment, facilities, appliances, structures, and service.

[19.15.40.6 NMAC - Rp, 19.15.40.6 NMAC, 2/1/2006]

19.15.40.7 DEFINITIONS:

A. "Accessible" means having access to; may require the removal of a panel, door or similar covering of the item described.

B. "Approved" means acceptable to the authority having jurisdiction.

C. "Authority having jurisdiction" means the New Mexico LP gas bureau.

D. "Bulk plant" means storage facilities for liquid LP gas awaiting transfer.

E. "Bureau" means the liquefied petroleum and compressed gas bureau of the division.

F. "Certified" means "listed" or "labeled".

G. "Certificate of competence" means a written certificate issued by the LP gas bureau to an LP gas installer based on evidence of competence.

H. "Clearance" means the distance between the appliance, chimney, vent chimney or vent connector, or plenum and the nearest surface.

I. "Code" means NFPA 52, NFPA 54, NFPA 57, NFPA 58 and NFPA 1192 and other codebooks adopted as amended by the commission.

J. "Commission" means the construction industries commission.

K. "Compressed natural gases" and "CNG" means mixtures of hydrocarbon gases and vapors consisting principally of methane in gaseous form, which has been compressed for vehicular fuel.

L. "Concealed LP gas piping" means all LP gas piping and fittings which, when in place in the finished building, would require removal of permanent construction to gain access to the piping.

M. "Connector, gas appliance" means a connector, used to convey fuel gas three feet or less in length (six feet or less for gas ranges), between a gas shut off valve and gas appliance in the same room.

N. "Consumer's LP gas system" means any arrangement of LP gas piping, extending from the point of delivery to and including all outlets, appliances and appurtenances, installed under the provisions of the code, which the consumer is responsible to maintain in a serviceable condition, exclusive of piping, tanks, regulators, valves, fittings, etc. owned by the gas company.

O. "Distributing plant" means a facility with the primary purpose of distribution of LP gas, which receives LP gas in tank car, truck transport or truck lots, and distributes such LP gas to end-users by delivery tank truck or through gas piping; such plants have bulk storage of 2,000 gallons water capacity or more, and usually have container-filling and truck-loading facilities on the premises.

P. "Distributing point" means a facility other than a distributing plant which normally receives gas by tank truck and which fills small containers or the engine fuel tank of motor vehicles on the premises. (An LP gas service station is one type of distributing point).

Q. "Division" means the construction industries division of the regulation and licensing department.

R. "Energy efficient water heater" means any LP gas automatic storage water heater that meets or exceeds ASHREA 90-75 standards for energy efficiency.

S. "Fuel gas piping system" means the arrangement of piping, tubing, fittings, connectors, valves and devices designed and intended to supply or control the flow of fuel gas to the appliances.

T. "Gas company" means any LP gas company or LP gas distributor.

U. "Gas supply connection" means the terminal end or connection to which a gas supply connector is attached.

V. "Gas supply connector" means tubing or piping connecting the mobile home to the gas supply source.

W. "Gas vents" means factory-built vent piping and vent fittings listed by an approved testing agency, that are assembled and used in accordance with the terms of their listings, for conveying flue gases to the outside atmosphere.

X. "Heat producing appliance" means all heating and cooking appliances and all fuel burning appliances.

Y. "Heating appliance" means an appliance for comfort heating or for water heating of a manufactured home.

Z. "House piping" means the LP gas piping from the point where it enters the building or foundation, up to and including the outlets.

AA. "Input rating" means the LP gas-burning capacity of an appliance in BTU's per hour as specified by the manufacturer.

BB. "Inspector" means a person hired by the bureau to enforce under administrative direction the laws and safety rules and regulations of the LP gas industry and the enforcement of the codes used in CNG, LNG and LCNG in motor vehicles.

CC. "Labeled" means equipment or materials to which has been attached a label, symbol or other identifying mark of an organization acceptable to the "authority having jurisdiction" and concerned with product evaluation that maintains periodic inspection of production of labeled equipment or materials and by whose labeling the manufacturer indicate compliance with appropriate standards or performance in specified manner.

DD. "Liquefied natural gases", "liquefied compressed natural gases", "LNG" and "LCNG" means a fluid in the liquid state composed predominantly of methane and that can contain minor quantities of ethane, propane, nitrogen, or other components normally found in natural gas.

EE. "Liquefied petroleum gases", "LPG" and "LP gas" means any material that is composed predominantly of any of the following hydrocarbons or mixtures of them: propane, propylene, butane (normal butane or ISO-butane) and butylenes.

FF. "Liquid transfer" means the transfer of LP gas in a liquid form from an approved container into another approved container.

GG. "Liquid withdrawal" means an approved LP gas container designed for the withdrawal of LP gas for utilization in an approved means.

HH. "Listed" means equipment or materials included in a list published by an organization acceptable to the authority having jurisdiction and concerned with product evaluation that maintains periodic inspection of production of listed equipment or materials and whose listing states either that the equipment or material meets appropriate standards or has been tested and found suitable for use in a specified manner.

II. "LP gas installation" means the installation of materials, fixtures, appliances or equipment that utilize LP gas, which is installed by a licensee of the LP gas bureau.

JJ. "Manufactured homes" means a movable or portable housing structure over 32 feet in length or over eight feet in width constructed to be towed on its own chassis and designed to be installed with or without a permanent foundation for human occupancy as a residence and which may include one or more components that can be retracted for towing purposes and subsequently expanded for additional capacity or may be two or more units separately towable but designed to be joined into one integral unit, as well as a single unit. Manufactured homes do not include recreational vehicles or modular or pre-manufactured homes, built to building code standards, designed to be permanently affixed to real property.

KK. "Manufactured home site" means a designated portion of a mobile home park designed for the accommodation of one mobile home and its accessory buildings or structures for the exclusive use of the occupants.

LL. "Manufactured home park" means a parcel (or contiguous parcels) of land which has been so designated and improved so that it contains two or more manufactured home sites available to the general public for the placement thereon of manufactured homes for occupancy.

MM. "Outlet" means a threaded connection or bolted flange in a pipe system to which an LP gas-burning appliance is or may be attached; such outlet must be located in the room or space where the appliance is or may be installed.

NN. "Point of delivery" means the initial junction of the consumer's gas piping with the gas company's piping, at the outlet side of the first regulator, regardless of whether it is a single-stage regulator system or the first stage regulator of a two-stage regulator system.

OO. "Product" or "products" of liquefied petroleum gases, compressed natural gases or liquefied natural gas are considered to be liquefied petroleum gases or compressed natural gases or liquefied natural gases respectively.

PP. "Qualified instructor" means an employee who has passed the required examination and performed for at least one year the work being taught.

QQ. "Readily accessible" means having direct access without the necessity of removing any panel, door or similar obstruction.

RR. "Regulator" means a device for controlling and maintaining a uniform pressure to the manifold of gas equipment.

SS. "Riser" means that portion of the yardline, which protrudes through the grade level of the ground.

TT. "Roof jack" that portion of venting system, including the cap, insulating means, flashing and ceiling plate, located in and above the roof.

UU. "Sealed combustion/direct vent system appliance", "direct vent system appliance" means an appliance which by its inherent design is constructed so that all air supplied for combustion to the combustion system of the appliance, and all products of combustion are completely isolated from the atmosphere of the space in which it is installed, and all flue gases are discharged to the outside.

VV. "Yardline" means a buried line servicing utilities from the on-site utility terminal to the manufactured home.

[19.15.40.7 NMAC - Rp, 19.15.40.7 NMAC, 2/1/2006]

19.15.40.8 RETROACTIVITY:

The provisions of the codes are not intended to prevent the use of any material, method of construction, or installation procedure not specifically prescribed by the codes, provided any such use is preapproved, in writing, by the LP gas bureau. The provisions of the codes are considered necessary to provide a reasonable level of protection from loss of life and property. Unless otherwise stated, the provisions of the codes shall not be applied retroactively to existing facilities, equipment, appliances, structures, or systems that were in compliance with the provisions of the codes in effect at the time of installation, or approved for construction or installation prior to the effective date of the document, except in those cases where it is determined, in writing, by the LP gas bureau that the existing situation involves a distinct hazard to life or adjacent property. Equipment and appliances include stocks in manufacturers' storage, distribution warehouses, and dealers' storage and showrooms in compliance with the provisions of the codes in effect at the time of manufacture.

[19.15.40.8 NMAC - Rp, 19.15.40.8 NMAC, 2/1/2006]

19.15.40.9 EXAMINATION:

No licensee or employee of a licensee shall install or modify any appliance or piping system until he has proved his knowledge of acceptable minimum standards by passing an examination required by the bureau.

A. All personnel whose duties require that they transport or dispense LP gas shall prove by passing an examination, as required by the bureau, that they are familiar with minimum safety standards and practices with regard to handling of LP gas. LP gas may not be dispensed by any person who has not passed the examination by the bureau.

B. An identification card shall be issued to each person who passes the examination required by the LP gas bureau. The identification card shall contain pertinent

information such as examinee's name, address and classification(s) for which examinee is certified, and may also provide space for listing violations of the LP gas Act.

C. No licensee or employee shall perform the work he has examined for until he has received an identification card for that classification from the bureau.

D. An identification card shall only be valid while employed by a licensee. The identification card shall be renewed annually with payment of a reasonable fee to the bureau on the anniversary date of the employer's license. The renewal fee shall be paid with the licensee's renewal for all listed qualifying parties.

E. An identification card holder not employed by a licensee for a period of two years shall retest before being qualified.

[19.15.40.9 NMAC - Rp, 19.15.40.9 NMAC, 2/1/2006]

19.15.40.10 ANNUAL INSPECTIONS:

A. There shall be an annual safety inspection, made by an inspector of the bureau, of each bulk storage plant facility, dispensing station, vehicle fuel dispenser, and cargo container and safety equipment on each vehicular unit used for transportation of LP gas in bulk quantities. Each bulk plant, dispenser, and vehicular unit shall display a current decal showing it has passed the required inspection.

B. Own use non-resale dispensers shall not require annual inspection. These facilities shall be inspected at the time of installation or modification.

[19.15.40.10 NMAC - Rp, 19.15.40.10 NMAC, 2/1/2006]

19.15.40.11 LP GAS PLANS AND SPECIFICATIONS:

A. Before equipment for the transfer of liquid LP gas may be installed, plans and specifications of the proposed installation must be submitted in TRIPLICATE to the bureau for approval. Written approval must be received before the equipment is installed.

B. Plans for proposed location of retail cylinder exchange shall be submitted to the LP gas bureau. Written approval must be received before the equipment is installed.

[19.15.40.11 NMAC - Rp, 19.15.40.11 NMAC, 2/1/2006]

19.15.40.12 INSURANCE:

A. Licensees holding LP gas classifications LP-1, LP-3S, LP-4, LP-5, LP-6, LP-10, CNG-1 and LNG-1 with only vehicles of 3,500 gallons water capacity or less shall have

combined single-limit public liability insurance or a corporate surety bond in at least the minimum of \$500,000.

B. Licensees holding LP gas classification LP-7, LP-8 or LP-9 shall have combined single-limit public liability insurance or a corporate surety bond in at least the minimum amount of \$100,000.

[19.15.40.12 NMAC - Rp, 19.15.40.12 NMAC, 2/1/2006; A, 04/01/2013]

19.15.40.13 LP GAS MISCELLANEOUS:

A. Any accident/incident where LP gas in any form or any application may have been a factor or could become a contributing factor shall be reported immediately to the LP gas bureau. Likewise, any accident/incident where any CNG or LNG- powered vehicle may have been a factor or could become a contributing factor shall be reported immediately to the LP gas bureau.

B. In all cases where a disconnection is made, a notice shall be given to the consumer by the inspector. Such notice shall state that the same has been disconnected by, or on order of, the inspector, together with the reasons therefor. It shall be unlawful for any person other than a licensed installer to reconnect or use any segment of the installation without authorization of an inspector.

C. No delivery of LP gas shall be made into any transportation unit or bulk plant after notice that either the current decal or the license has been suspended or revoked, or the license has expired.

D. The bureau will make available to the industry a compliant form to be used to report any violation of the LP Gas Act, rules and regulations or code. This form shall be submitted to the bureau, at which time the bureau will investigate and furnish a written report back to the complainant with 20 working days, with violations found and action taken.

[19.15.40.13 NMAC - Rp, 19.15.40.13 NMAC, 2/1/2006]

19.15.40.14 PRINTED FORMS, AND FEES:

A. Printed forms as prescribed by the division shall be used for application for license, licenses, receipts, approvals, disapproval's, installation records, inspection reports and any other purposes for which the bureau may consider standardized forms necessary for expediency.

B. An administrative penalty may be assessed to anyone found to be making intentional false reports or for failure to file any written report or form as required by law.

C. Printed forms listed below by number or name are hereby adopted and their use for the purpose stated.

(1) FORM 1. Records of Installation, Test or Modification. \$20.00. To be used to record the following.

(a) Installation of LP gas containers. Containers of 239#WC or less shall be exempt from this requirement.

(b) Installation of piping and appliances. Form 1 shall be prepared at time work is performed and shall be submitted to the LP gas bureau by close of business the following business day.

(2) Retail Cylinder Exchange Installation Registration Form. \$20.00. Fee shall be submitted with required plans for proposed location of retail cylinder exchange installation. Reinspection of cylinder exchange installations \$20.00

(3) LP Gas Installations at Special Events Registration Form. \$15.00. To be used for installations at special events with containers of 239#WC or less.

(4) LP Gas Visual Cargo Tank and Equipment Inspection Form. \$45.00.

(a) (Shall not be assessed more than one time in each 12 month period).

(b) Re-inspection of cargo tank and equipment and additional charge for re-inspection. \$45.00.

(c) Licensee must obtain form prior to inspection of vehicle or placing a new vehicle in service. Bureau inspector will complete form upon inspection. Corrections after inspection will require a correction form and may require re-inspection. To expedite inspections, vehicle licensee will be notified by the LP gas bureau that vehicle annual inspection is due during the first month of the inspection quarter.

(5) Plant/Dispenser Inspection Form. \$45.00.

(a) (Shall not be assessed more than one time in each 12 month period).

(b) Re-inspection of bulk storage and additional charge for re-inspection. \$45.00.

(c) Licensee must obtain form prior to inspection of plant or placing a new dispenser in service. LP gas bureau inspector will complete form upon inspection. Corrections after inspection will require a correction form and may require re-inspection. To expedite inspections, dispenser licensee will be notified by the bureau that dispenser annual inspection is due during the first month of the inspection quarter.

(6) Correction Inspection Form. LP gas bureau inspector will issue form when correction is needed and note the code, statute or rule and regulation section number that was in violation. bureau inspector may lock and seal filler valve until correction is completed. After correction, licensee will sign correction form, attach appropriate new inspection form (listed above), and return forms, seal and filler valve lock to inspector for re-inspection.

(7) Certificate of Insurance. To be submitted by all licensees to the LP gas bureau.

(8) Form 1 first re-inspection fee shall be \$20.00.

(9) Form 1 second re-inspection fee shall be \$75.00.

[19.15.40.14 NMAC - Rp, 19.15.40.14 NMAC, 2/1/2006; A, 7/1/2018]

19.15.40.15 LICENSE CLASSIFICATIONS, SCOPES AND FEES:

License classifications are defined and annual license fees are set as follows.

A. LP-1 wholesale sale or delivery of LP gas \$125.00. A licensee under this classification is authorized to wholesale, transport and/or deliver LP gas in vehicular units into or out of any location except that of an ultimate consumer. This classification will allow delivery to the ultimate consumer whose facilities require a bulkhead.

B. LP-3S retail sale of LP gas \$65.00. A licensee under this classification is authorized to deliver, transfer and transport LP gas in a liquid state to the ultimate consumer, both intrastate and interstate. The company employing the LP-3S licensee must also hold an LP-5 license in order to hold a LP-3S license. A person holding this classification is authorized to perform all work as described in classifications LP-1 and LP-9; and may perform an out of gas leak test for an existing customer of his employer so long as the employer is responsible for delivery of the propane.

C. LP-4 limited installation, service and repair \$125.00. A licensee under this classification is authorized to install, service and repair appliances, equipment, and piping for use with LP gas in residences and commercial buildings except mobile homes (as defined by the Manufactured Housing Act) recreational vehicles and similar units. The scope of the work for the LP piping is from (point of delivery) to the final connection of the appliances. In order to qualify for this classification, a licensee must hold mechanical license classification MM2 or MM98.

D. LP-5 installation, service and repair \$125.00. A licensee under this classification is authorized to install or erect liquid transfer facilities; install or repair piping and equipment attached to cargo containers; and to install, service and repair appliances, equipment and piping for use with LP gas in residences and commercial buildings including mobile homes (as defined by the Manufactured Housing Act), recreational

vehicles and similar units. The scope of the work for the LP gas appliances in this classification does not include the HVAC ductwork or hydronic piping systems connected to any appliance. Those specialties fall under the mechanical license classifications.

E. LP-6 installation, service and repair of mobile units only \$75.00. A licensee under this classification is authorized to install, service and repair LP gas appliances, equipment and piping in manufactured housing, travel trailers, recreational vehicles, campers and similar units.

F. LP-7 wholesale or manufacture of appliances, equipment or containers \$50.00. A licensee under this classification is authorized to wholesale or manufacture appliances, equipment or containers for use with LP gas.

G. LP-8 installation, service and repair of cylinder exchange cabinets \$35.00. A licensee under this classification is authorized to install, service and repair LP gas cylinder exchange cabinets and to deliver portable containers (maximum water capacity 239#).

H. LP-9 station for dispensing LP gas \$35.00. A licensee under this classification is authorized to dispense LP gas into fuel containers on vehicles or to fill and/or deliver portable containers (maximum water capacity 239#).

I. LP-10 LP gas carburetion sales, service and installation, including repair \$35.00. A licensee under this classification is authorized for LP gas carburetion sale, service and installation, including repair.

J. CNG-1 CNG carburetion sale, service and installation \$35.00. A licensee under this classification is authorized for CNG gas carburetion sale, service and installation, including repair.

K. LNG-1 LNG carburetion sale, service and installation \$35.00.

L. Qualifying party identification card \$15.00.

M. Annual renewal fee per qualifying party identification card \$10.00.

N. Licensing examination fee \$25.00.

O. Licensing re-examination fee \$25.00.

P. The total license fee charged any one licensee for a combination of LP gas activities at any one operating location is set at: \$300.00.

[19.15.40.15 NMAC - Rp, 19.15.40.15 NMAC, 2/1/2006; A, 04/01/2013; A, 01/01/2015; A, 7/1/2018]

19.15.40.16 MOTOR FUEL AND PERMANENT MOUNTED TANK REFUELING:

- A.** Stop all internal combustion engines on vehicles to be serviced.
- B.** No smoking or open fires.
- C.** Shut off all pilot lights.
- D.** Remove all passengers from vehicle.
- E.** Do not fill past maximum filling capacities.
- F.** Do not start vehicle until fill connections have separated.
- G.** Do not relight pilots while in dispensing area.

[19.15.40.16 NMAC - Rp, 19.15.40.16 NMAC, 2/1/2006]

19.15.40.17 SELF SERVICE LP GAS DISPENSERS:

A. Self-service dispensers shall be used to dispense LP gas for motor/mobile fuel only. Only ASME constructed motor/mobile fuel type containers that are permanently secured to a vehicle, that incorporate an eighty percent stop fill device and ASME constructed stack type containers permanently secured to a vehicle shall be filled. The filling of farm carts, moveable fuel storage tenders and DOT cylinders is prohibited. The filling of hot air balloon fuel cells approved by the federal aviation administration will be allowed.

B. All self-service LP Gas dispensers shall comply with the currently adopted version of NFPA 58, sections: **Vehicle fuel dispenser and dispensing stations and installation of vehicle fuel dispensers.**

C. The main liquid valve(s) opening and closing devices shall be installed so that the valve(s) are in the closed position when the transfer operation is not in use.

D. Self-service LP Gas dispensers shall be equipped with a device(s) for emergency shutdown of LP gas and power, from a location remote from the dispensing and storage areas. The device(s) shall operate to activate the valve(s) installed so as to shut off the power and gas supply to the dispenser(s). The emergency shutdown device(s) shall be distinctly marked for easy recognition.

E. In the event the self service dispenser is located in an area remote from the storage container, an excess flow, or approved shearing device, shall be installed in the piping where it emerges from the ground under the cabinet and be installed so as to ensure that shearing of the piping will occur on the downstream side of the excess flow or shearing device.

F. All hoses used for transfer operation on self service dispensers shall incorporate an approved breakaway (pull -away) device and shall be installed in accordance with the manufacturer's instructions.

G. Appropriate step by step operating instructions shall be posted at or on each dispenser, and shall be readily visible to the operator during transfer operations. The instructions shall describe each action necessary to operate the dispenser.

[19.15.40.17 NMAC - Rp, 19.15.40.17 NMAC, 2/1/2006]

19.15.40.18 PIPING AND APPLIANCES WITHIN BUILDINGS:

A. All piping and LP appliances must meet current NFPA 54 and NFPA 58 requirements, with the exception that anodeless flexible risers may be used at the tank and at the house.

B. LP Gas piping or appliances in attics, under floor area, or below grade must be adequately ventilated. Ventilation openings shall be a minimum of 36 square inches.

C. Gas utilization equipment located in confined spaces shall be provided with two permanent openings, one commencing within 12 inches of the top, and one commencing within 12 inches of the bottom of the enclosure.

[19.15.40.18 NMAC - Rp, 19.15.40.18 NMAC, 2/1/2006]

19.15.40.19 MOVEMENT OF LP GAS CONTAINERS AT COMMERCIAL INDUSTRIAL SITES OR SCHOOLS:

A. At commercial sites, industrial sites or schools no person shall move an LP gas container(s) without written permission from the owner, unless such movement is required on an emergency basis to prevent loss of life or property or the spread of fire or as required to eliminate a safety hazard.

B. This regulation shall not govern situations where it is ordered by any police or fire officials in their performance of their official duties.

C. If an emergency move is made, the LP gas bureau shall be notified by telephone within 12 hours of said move and a written explanation shall be mailed to the LP gas bureau within 24 hours of said move as evidenced by the postmark.

D. Movement of LP gas containers may be made by persons other than the owner ten days after giving written request to the owner, as evidenced by return receipt at his last known address.

E. Containers moved shall be set securely on a stable base as to prevent danger or damage to the container and/or appurtenances by slipping, falling or rollover. All openings shall be secured so as to prevent release of gas in either liquid or vapor form.

[19.15.40.19 NMAC - Rp, 19.15.40.21 NMAC, 2/1/2006]

19.15.40.20 CONTAINERS AND INSTALLATIONS:

A. Safe installation. No LP gas container shall be filled or LP gas system used that does not meet the requirements of NFPA 58, NFPA 54 or this document.

B. Filling of Containers. Transfer of LP Gas to or from any LP Gas container shall be only by the owner or upon the owners authorization.

C. Chart 1 (all services except cargo tanks). ASME 1949 and earlier and U-68 and U-69 Codes are approved for all LP gas service, except cargo tank, regardless of installation date, with the following working pressures and relief valve settings, when using propane grade 5 or higher.

Working Pressure	100	125	150	175	200	225	250	251+
Approved	No	No	No	No	Yes	Yes	Yes	Yes
Relief Valve Setting (%)	100	137	165	192	220	247	275	110%
	to	to	to	to	to	to	to	to
	125	156	187	218	250	281	317	125%

D. Chart 2 (bulk service). API-ASME Code, ASME U-201, 1950 and 1952 or later ASME Codes are approved for bulk plant use*, and for all other container use if manufactured after June 30, 1959, in accordance with ASME Code, at the time of manufacture with the following working pressures and relief settings, when using propane of grade 5 or higher. ***Cargo containers shall have a minimum working pressure of 250 PSI.**

Working Pressure	100	125	150	175	200	225	250	251+
Approved	No	No	No	No	No	No	Yes	Yes
Relief Valve Setting (%)	100	220	88%					
	to	to	to					
	125	250	100%					

E. Chart 3 (domestic tank service). API-ASME Code, ASME U-200, U-201, 1950 and 1952 or later ASME Codes, if installed in New Mexico before June 30, 1959, may be moved from one place to another within the state, but not brought into the state, are

approved for domestic tank service with the following working pressures and relief settings, when using propane of grade 5 or higher.

Working Pressure	100	125	150	175	200	225	250	251+
Approved	No	No	No	No	No	No	Yes	Yes
Relief Valve Setting (%)	110	132	154	176	198	220	88%	
	to	to	to	to	to	to	to	
	125	150	175	200	225	250	100%	

F. Container protection. Where physical damage to LP gas containers, or systems of which they are a part, from vehicles is a possibility, precautions shall be taken against such damage.

(1) Container protection shall be crash post or other protection acceptable to the LP gas bureau.

(2) When crash post are used they shall be a minimum of two and seven-eighths inch outside diameter, with three feet above ground, two feet below ground, embedded in concrete, filled with concrete, and spaced four feet apart. The spacing may be extended to eight feet between post if a minimum two-inch welded top rail is installed; excepting all dispensing system installations which shall comply with all requirements described in the currently adopted NFPA 58.

G. Container markings. All LP gas tanks owned by LP gas dealers must be marked with the name and phone number of the LP gas dealer. This regulation does not apply to customer owned tanks.

H. Container screening. Screens for all LP gas above ground containers shall be installed in the following manner.

(1) Screening material shall be non-combustible if container is screened on three sides. If solid screening is used, each wall up to 20 feet in length shall be provided with at least one opening, with an additional opening for each 20 feet of length or fraction thereof. Each opening shall have a minimum size of 50 square inches, the bottom of which shall not be more than six inches above the ground.

(2) If the screen encloses two sides or no more than fifty percent a wood fence may be used.

(3) The screen shall enclose no more than three sides of the container.

(4) There shall be a minimum clearance of three feet from the container to the screen.

(5) The screen shall not exceed the height of the container by more than one foot.

(6) Covers or tops shall not be installed over containers.

(7) All tanks on school grounds, church grounds, playgrounds, etc. shall be fenced. Any request for exemption to, or deviation from, the fencing requirement shall be made in writing to the bureau. If, upon investigation of a particular proposed tank installation, the inspector and bureau chief determine it is not necessary, a fence shall not be required.

[19.15.40.20 NMAC - Rp, 19.15.40.22 NMAC, 2/1/2006; A, 7/1/2018]

19.15.40.21 LP GAS CYLINDER EXCHANGE INSTALLATIONS:

A. A cylinder exchange installation registration form and approved plans shall be required prior to installation.

B. Installation shall meet the requirements of NFPA 58.

C. Cylinder exchange cabinets shall be approved, and meet the requirements of NFPA 58; excepting cylinder exchange cabinet installations shall comply with Subsection D if installed greater than five feet from a building or approved in writing by the LP gas bureau chief.

D. Protection against vehicle impact shall be crash post or other protection acceptable to the LP gas bureau.

(1) Crash post shall be installed as required elsewhere in this document.

(2) A minimum six inch high concrete raised sidewalks or six inch high wheel stops can be used.

(a) The minimum distance from the raised sidewalks or wheel stops to the cabinet shall be 48 inches.

(b) The wheel stops shall be anchored and secured with at least five-eighths inch by 18 inch steel rods.

E. Cylinder exchange installations in excess of 720 lb propane stored shall be provided with at least one approved portable fire extinguisher having a minimum capacity of 18 lb dry chemical with B:C rating.

[19.15.40.21 NMAC - N, 2/1/2006; A, 7/1/2018]

19.15.40.22 LP GAS INSTALLATIONS AT SPECIAL EVENTS:

A. Containers: All containers must be located outside the booth, the building, or the enclosure. All containers must be secured in a position (usually in an upright position) so that vapor only will be present at the vapor service valve. The secured container's device, such as a chain, must be able to support the weight of the container plus the container's contents. All containers must be approved LP gas container. Any DOT cylinder for LP gas must be marked with the re-qualification date(s) if the container is more than 12 years old. All containers must be leak-free. Any LP gas container showing excessive rust, corrosion, pitting, or denting shall not be used. The bottom of each container shall be checked for these conditions. All portable DOT cylinders must have a fixed "warning" label that includes information on the potential hazards of LP gas. Outlets for all unused containers shall be capped or plugged. The vapor service valve must be sealed when the container is not in use. (Example: A p.o.l. plug installed in the open vapor outlet.) A quick-closing coupling approved for use on LP gas containers may be used in lieu of the sealing cap or plug. When a container's water capacity is greater than 239 pounds (nominal 100 lb.) An LP gas permit must be obtained before using such container.

B. Hoses: The only hoses that shall be used are those approved for use with LP gas. The hose end couplings must be installed as recommended by the hose manufacturer. (Unacceptable: an automotive screw-type clamp installed on the end of the hose.) All hoses must be leak-free. All hoses must be kept out of the way of foot and vehicular traffic.

C. Appliances: All appliances used in food booths must have an accessible shut-off valve near the appliance that can be easily closed in case of an emergency. Only appliances that are leak-free and approved for the use of LP gas shall be used.

D. Filling of containers: The filling of LP gas containers on site shall be done in a designated area separated from the general public or at times when the visitation of the general public is minimal. Nylon jackets, cigarette lighters, strikers, and/or matches are not allowed in the filling area.

E. Leak test: A leak test shall be performed each day before the food booth is opened for business, any time a cylinder is exchanged, and any time the LP gas system is modified. Soap (without ammonia) mixed with water or a combustion gas hand-held electronic leak detector can be used for detection of leaks. The entire system must be free of leaks.

[19.15.40.22 NMAC - Rp, 19.15.40.23 NMAC, 2/1/2006]

19.15.40.23 MANUFACTURED HOMES:

A. Exterior gas piping.

(1) Location of containers, containers and underground piping.

(a) Containers, appurtenances and underground piping shall be installed in accordance with the currently adopted edition of NFPA 54 and NFPA 58.

(b) Underground gas piping shall not be installed under any manufactured home or any attachments to the manufactured home. This is an exception to NFPA 54.

(2) All gas piping beneath a manufactured home shall be adequately supported by galvanized, or equivalently protective metal straps or hangers at least every four feet, except, where adequate support and protection is provided by structural members.

(3) Gas shut-off valves shall not be placed beneath a manufactured home.

(4) Any extensions or alterations made to the gas piping system for the purpose of establishing the supply inlet for connection to the riser may not reduce or restrict the gas piping size from that of the original inlet.

(5) There shall be only one point of crossover between the section of a multi wide manufactured home, which must be readily accessible from the outside.

(6) Unless otherwise approved by the bureau the connector used for the cross-over on multi- wide manufactured homes when gas is supplied to more than one section, must be made by a listed "quick disconnect" device which shall be designed to provide a positive seal of the supply side of the gas system when such device is separated. Refer to Exhibit #1.

(7) The crossover connection shall be of the same size as the piping with which it directly connects.

(8) The gas inlet on the manufactured home shall protrude no more than six inches from the manufactured home. The inlet shall be rigidly anchored or strapped to a structural member within six inches of the point where it enters beneath the manufactured home.

(9) Bond of gas piping.

(a) Gas piping shall not be used as an electrical ground.

(b) Gas piping shall be bonded. Metallic gas piping shall be considered bonded if it is connected to the terminal on the chassis of the manufactured home by clamps, solderless connectors or by suitable ground-type straps.

(10) Location of riser: The gas riser shall be located within 12 inches of the manufactured home.

(11) Site connector. Each manufactured home utilizing gas shall be connected to the manufactured home site outlet by an approved mobile home connector not more than 36 inches in length. If encased flexible polyethylene pipe is used, a flexible connector shall not be required. The above ground portion of the polyethylene flexible riser shall not exceed 36 inches in length and be installed so as to maintain flexibility and compensate for expansion and contraction.

(12) Mechanical protection. All gas outlet risers, regulators, meters, valves or other exposed equipment shall be protected from mechanical damage by vehicles or other causes. Meters shall not be supported by gas service piping. Regulators may be supported by the rigid extended piping of the manufactured home.

(13) Maximum pressure permitted. Gas supplied into the manufactured home shall not exceed 1/2 pounds per square inch gauge or 14 inches water column.

(14) Gas pipe sizing. Gas piping systems shall be sized so that the pressure drop to any appliance inlet connection from any gas supply connections, when all appliances are in operation at maximum capacity, is no more than 0.5 inch water column. Conformance may be determined on the basis of test, or the gas piping system may be sized in accordance with the current National Fuel Gas Code, NFPA 54.

B. Interior gas piping.

(1) Interior gas piping shall be installed in accordance with the currently adopted edition of NFPA 54 and NFPA 58.

(2) Gas -fired appliances. Each gas-fired appliance must have a listed shut-off valve located within three feet of the appliance and located in the same room as the gas appliance.

(3) Appliance connectors. Appliance connectors shall not exceed three feet in length, except for range connectors, which shall not exceed six feet in length.

(4) Inspection testing and purging. Inspection testing and purging shall comply with the currently adopted edition of NFPA 54.

C. Heat producing appliances. Every heat-producing appliance used in manufactured homes shall be listed or certified by an approved nationally recognized testing agency for this application.

(1) Fuel conversion. Fuel burning appliances shall not be converted from one fuel to another unless converted in accordance with the terms of its listing.

(2) Venting. Fuel burning, heating and refrigeration appliances shall be of the vented type and vented to the outside. In no case shall the vent of a gas-burning appliance terminate underneath the manufactured home.

(a) Fuel burning heat-producing appliances, except ranges, gas dryers and ovens, shall have complete separation of the combustion system from the atmosphere of the manufactured home. Combustion air inlets and flue gas outlets shall be listed or certified as components of the appliance.

(b) Vents, roof jacks and special fittings supplied as component parts of an appliance shall be installed in conformity with the terms of their listing. A single wall metal vent shall not be used unless it is a component part of a listed appliance.

(c) Vent terminations shall not be less than three feet from any motor driven air intake that opens into habitable areas.

(d) Every joint of any vent or vent connector shall be secure, rigid, and tight, in alignment and have approved design and workmanship. Vent connectors shall be firmly attached to draft hood outlets or flue collars by sheet metal screws or other approved means, or the vent connectors using listed TYPE B or TYPE L gas vent materials shall be securely assembled using the method shown in the manufacturer's instructions.

(3) Gas clothes dryers.

(a) Clothes dryers shall not be installed in a room intended to be used for sleeping purposes.

(b) Clothes dryers shall be exhausted to the outside air by a moisture lint exhaust duct and terminating fitting listed or certified as components of the appliance.

(c) A clothes dryer moisture lint exhaust duct shall not be connected to any furnace duct, gas vent or chimney.

(d) The moisture lint exhaust duct shall not terminate beneath the manufactured home.

(e) Moisture lint exhaust ducts shall not be connected with sheet metal screws or other fastening devices, which extend into the duct.

(4) Installation. The installation of each heat producing appliance shall conform to the terms of its listing as specified on the appliance and in the manufacturer's instructions. The installer shall leave the manufacturer's instructions attached to the appliance. Every appliance shall be secured in place to avoid displacement and movement from vibration and road shock.

(a) Instructions. Instruction operating instructions shall be provided with the appliance.

(b) Marking. Information on clearances, input ratings, lighting and shutdown shall be attached to the appliances with the same permanence as the nameplate, and so located that it is easily readable when the appliance is properly installed. Each fuel-burning appliance shall bear a permanent marking designating the type(s) of fuel for which it is listed.

(c) Accessibility. Every appliance shall be accessible for inspection, service, repair and replacement without removing permanent construction. Sufficient room shall be available to enable the operator to observe the burner, control and ignition means while starting the appliance.

(5) Location. Heat producing appliances shall be so located that no doors, drapes or other such material can be placed or swung closer to the front of the appliance than the clearances specified on the labeled appliances.

(6) Clearances. Clearances between heat producing appliances and adjacent surfaces shall not be less than specified in the terms of their listing. Clearance spaces shall be framed in or guarded to prevent creation of storage space within the clearance specified.

D. Cross ventilation.

(1) All manufactured homes shall have one square foot of unrestricted venting area for every 150 square feet of enclosed floor space. Vents shall be uniformly distributed on the two

(2) opposite long-walls. At least one vent shall be located within four feet of each end wall.

Vents shall be constructed and installed to exclude entry of vermin and water.

(3) This section shall not apply retroactive to existing installations that were in compliance with the codes in effect at the time of installation or approved prior to the effective date of this document.

E. Manufactured home parks.

(1) Fuel gas equipment and installation. Fuel gas equipment and installations installed within a building in a manufactured home park shall comply with the current standard for the Installation of Gas Appliances and Gas Piping (NFPA 54), or the current standard for the Storage and Handling of Liquefied Petroleum Gases (NFPA 58).

(2) Manufactured home park gas systems. Gas equipment and installations within a manufactured home park shall be designed and constructed in accordance with the applicable codes adopted by the authority having jurisdiction.

(a) Required gas supply. The minimum hourly volume of gas required at each manufactured home lot outlet or any section of the mobile home park has piping system shall be calculated as shown on Chart IV.

CHART IV-Demand Factors for use in Calculating Gas Piping Systems in Manufactured Home Parks.

No Of Manufactured Home Sites	BTU Per Hour Per Mfg. Home Site
1	125,000
2	117,000
3	104,000
4	96,000
5	92,000
6	87,000
7	83,000
8	81,000
9	79,000
10	77,000
11 to 20	66,000
21 to 30	62,000
31 to 40	58,000
41 to 60	55,000
Over 60	50,000

(b) Lot shut-off valve. On systems supplied from a central container, each manufactured home lot shall have an approved gas shut-off valve installed upstream of the mobile home lot gas outlet and located on the outlet riser at a height of not less than four inches above grade. Such valve shall not be located under any manufactured home. Whenever the manufactured home lot outlet is not in use, the outlet shall be equipped with an approved cap or plug to prevent accidental discharge of gas.

[19.15.40.23 NMAC - Rp, 19.15.40.24 NMAC, 2/1/2006]

19.15.40.24 STANDARDS:

This rule adopts by reference the following standards, as amended herein:

- A.** 2021 national fuel gas code, referred to as NFPA 54;
- B.** 2020 liquefied petroleum gas code, referred to as NFPA 58;
- C.** 2021 standard on recreational vehicles, referred to as NFPA 1192;

D. 2010 vehicle gaseous fuel systems code, referred to as NFPA 52.

[7/1/97; 19.15.104.4 NMAC - Rn, 19 NMAC 15.104.4, 05/29/09]

19.15.104.5 EFFECTIVE DATE:

July 1, 1997

[7/1/97; 19.15.104.5 NMAC - Rn, 19 NMAC 15.104.5, 05/29/09]

19.15.104.6 OBJECTIVE:

This part establishes the specifications and test methods for petroleum products sold or offered for sale in New Mexico that are not addressed by the American society for testing and materials (ASTM) or society of automotive engineers (SAE). Establishes modifications and exceptions to ASTM and SAE standard specifications and test methods for petroleum products.

[7/1/97; 19.15.104.6 NMAC - Rn, 19 NMAC 15.104.6, 05/29/09]

19.15.104.7 DEFINITIONS:

A. "Director" means the director of the New Mexico department of agriculture.

B. "Lead substitute" means any substance blended with unleaded gasoline and proportioned to provide the valve seat protection provided by at least 0.05 gram lead per U.S. gallon.

[7/1/97; 19.15.104.7 NMAC - Rn, 19 NMAC 15.104.7, 05/29/09]

19.15.104.8 [RESERVED]**19.15.104.9 MODIFICATIONS TO ASTM STANDARD SPECIFICATION FOR AUTOMOTIVE SPARK-IGNITION ENGINE FUEL:**

A. Applications for temporary exceptions to vapor pressure and vapor liquid ratio specifications may be made to the director. The director may grant exemptions at his sole discretion, when said applications contain evidence satisfactory to the director that outlets marketing gasoline in New Mexico cannot feasibly be supplied from bulk terminals furnishing specified volatility level gasoline or that customary sources of supply have been temporarily interrupted by product shortage and alternate sources furnishing specified volatility level gasoline are not available.

B. Minimum levels of lead substitutes shall be as follows:

- (1) Phosphorus - 0.005 grams per U.S. gallon.
- (2) Sodium - 0.012 grams per U.S. gallon.
- (3) Manganese - 0.032 grams per U.S. gallon.

C. Test methods for the determination of the above quantities which do not have ASTM or SAE methods shall be as follows: Sodium - NMDA Method 93-1 (atomic absorption).

D. The director may determine a minimum variance between posted octane and octane determined by near infra-red spectrophotometry at which enforcement actions will be taken. Enforcement actions may be taken when it is determined by the petroleum standards laboratory that the variance between the (R+M)/2 octane as determined by near infra-red spectrophotometry and the posted octane number exceeds two (2) octane units.

E. A vapor pressure increase not exceeding one pound per square inch shall be allowed for gasoline-alcohol blends in excess of one (1) volume percent alcohol.

F. Vapor pressure and vapor liquid ratio seasonal specification may be extended for a maximum period of fifteen (15) days, if the director determines an extension is needed, to allow for the disbursement of old stocks.

G. Brake fluid: The specifications, test methods and apparatus for brake fluid shall be those established in the federal *motor vehicle safety standard DOT MVSS-116*.

[7/1/97; 19.15.104.9 NMAC - Rn, 19 NMAC 15.104.9, 05/29/09; A, 08/16/10]

19.15.105.9 DISPENSER LABELING:

When any petroleum product is sold from a retail dispenser, the dispenser shall bear on all faces and located as near the customer readout as possible, the following:

A. A label stating the grade or type of the product in letters not less than one (1) inch in height in appropriate stroke, and in contrasting color to its associated background.

B. On gasoline-alcohol blends in excess of one (1) volume percent alcohol, a label with letters not less than one-half (1/2) inch in height in appropriate stroke, and in contrasting color to its associated background, stating the type of alcohol used for blending.

C. On gasoline blended with lead substitute additives, a label with letters not less than one-half (1/2) inch in height and in appropriate stroke, in contrasting color to its associated background, stating the fuel contains a lead substitute. The active ingredient of the lead substitute must either be a part of the label or be available at the location of the dispenser.

D. An octane posting label on any gasoline dispenser. In no case shall the posted value be greater than the actual $(R+M)/2$ octane.

[7/1/97; 19.15.105.9 NMAC - Rn, 19 NMAC 15.105.9, 05/29/09]

19.15.107.8 [RESERVED]

19.15.107.9 ASSESSING PENALTIES:

The assessment of administrative penalties will be used as an intermediate step between stop sale/stop use orders and court action, or when stop sale/stop use orders are not appropriate or have proven to be ineffective in resolving a problem, and not as a daily punitive enforcement tool. When a duly authorized agent of the director finds, in his judgment, that a person has violated a provision of law or rules adopted pursuant to law, he shall notify the person in writing that the department intends to assess a penalty in accordance with the provisions of this rule. Such penalty may be in addition to or in lieu of administrative actions, such as stop sale orders or stop use orders. The department also reserves the right to file criminal charges according to the provisions of the laws administered by the department.

A. The inspector shall notify his division director, through his immediate supervisor, of the proposed penalty. The division director shall review the facts in the case, and may request additional information. If the division director determines there should be no penalty assessed, the alleged violator shall be notified in writing.

B. If the division director, after careful review and consideration, determines there should be a penalty assessed, he shall make recommendation to the director as to the amount and nature of the penalty. The director shall review the facts in the case, and may request additional information. If the director determines there should be no penalty, the alleged violator shall be notified in writing by the division director. If the director determines a penalty is warranted by the facts in the case, he shall notify the alleged violator of the amount and nature of the penalty. In making his determination as to the nature and amount of penalty, the director shall be guided by Sections 10, 11, 12, 13, and 16 of this part.

[7/1/97; 19.15.107.9 NMAC - Rn, 19 NMAC 15.107.9, 05/29/09]

19.15.107.10 CAUSE OF VIOLATION:

A. LINE 1, APPLICABLE TABLE (Classes of Violations, Section 13): Lack of Knowledge - When the person who has committed the violation was not aware of the statutory requirements, the penalty shall be determined from Line 1, Section 16.

B. LINE 2, APPLICABLE TABLE (Classes of Violations, Section 13): Negligence - When the violation is due to negligence, the penalty shall be determined from Line 2, Section 16.

C. LINE 3, APPLICABLE TABLE (Classes of Violations, Section 13): Willful - When a person has willfully committed a violation, or has committed the same violation three or more times within a twelve (12) month period of time, all violations after the second violation will be construed to be willful and the penalty shall be determined from Line 3, Section 16.

[7/1/97; 19.15.107.10 NMAC - Rn, 19 NMAC 15.107.10, 05/29/09]

19.15.107.11 GRAVITY OF VIOLATION:

A. Factors: Any one of the following factors may be considered in determining the gravity of a violation.

- (1) Potential monetary consequences.
- (2) Potential for personal injury.
- (3) Potential for property damage.
- (4) Degree of inconvenience or deception to a buyer or prospective buyer.
- (5) Degree of disregard for the law.

B. COLUMN A, APPLICABLE TABLE (Classes of Violations, Section 13): Minimal Gravity - When the violation has a minimal gravity, the penalty shall be determined from Column A, Section 16.

C. COLUMN B, APPLICABLE TABLE (Classes of Violations, Section 13): Moderate Gravity - When the violation has a moderate gravity, the penalty shall be determined from Column B, Section 16.

D. COLUMN C, APPLICABLE TABLE (Classes of Violations, Section 13): Great Gravity - When the violation has a great gravity, the penalty shall be determined from Column C, Section 16.

[7/1/97; 19.15.107.11 NMAC - Rn, 19 NMAC 15.107.11, 05/29/09]

19.15.107.12 FREQUENCY OF VIOLATION:

The more frequently a person commits the same violation, the greater the penalty shall be, as provided by the tables in Section 16.

A. When a person commits the same violation more than three (3) times in twelve (12) months, double the penalty for the third violation shall be assessed.

B. The period of time in determining frequency of violations shall be twelve (12) months. If a person has not committed the same offense in twelve (12) months, the next offense shall be considered as a first offense.

C. A person who has committed the same offense three (3) times in five (5) years shall not be protected by the twelve (12) month limitation and shall be subject to the penalty for the third offense.

[7/1/97; 19.15.107.12 NMAC - Rn, 19 NMAC 15.107.12, 05/29/09]

19.15.107.13 CLASSES OF VIOLATIONS:

A. Table I will apply to the following violations: PPSA Section(s) 57-19-29, (57-19-30 A, B), (57-19-31 B), (57-19-32 A, B, C) 57-19-33.

B. Table II will apply to the following violations: PPSA Section(s) 57-19-29, (57-19-30 A, B), (57-19-32 A, B, C) 57-19-33.

C. Table III will apply to the following violations: PPSA Section(s) 57-19-29, (57-19-30 A), 57-19-33.

[7/1/97; A, 8/1/00; 19.15.107.13 NMAC - Rn, 19 NMAC 15.107.13, 05/29/09]

19.15.107.14 APPEALS:

A. Any person accused of a violation for which a penalty has been assessed may request a hearing before the director to contest the amount of the penalty or whether the violation occurred or both.

B. A request for a hearing before the director must be in writing and must be submitted within fifteen (15) days of notification of penalty.

C. In the event the alleged violator does not feel the department followed the correct procedures in arriving at a decision in his/her case, the individual may ask the district court to review the administrative proceedings and penalty in the manner and to the extent provided by the laws of New Mexico. If the penalty is not set aside or abated, the original penalty is due and payable as provided in Section 16.

[7/1/97; 19.15.107.14 NMAC - Rn, 19 NMAC 15.107.14, 05/29/09]

19.15.107.15 PAYMENT OF PENALTY:

If no hearing is requested, the penalty is due and payable within thirty (30) days of the issuance of notice of the violation. Failure to pay will be considered an additional offense and the penalty originally applied will be doubled.

[7/1/97; 19.15.107.15 NMAC - Rn, 19 NMAC 15.107.15, 05/29/09]

PART 108: BONDING AND REGISTRATION OF SERVICE TECHNICIANS AND SERVICE ESTABLISHMENTS FOR COMMERCIAL WEIGHING OR MEASURING DEVICES

19.15.108.1 ISSUING AGENCY:

New Mexico State University, New Mexico Department of Agriculture.

MSC 3189, P. O. Box 30005, Las Cruces, New Mexico 88003-8005 Telephone, (575) 646-3007.

[7/1/1997; 19.15.108.1 NMAC - Rn, 19 NMAC 15.108.1, A 1/31/2007; A, 5/29/2009]

19.15.108.2 SCOPE:

All parties involved in the servicing or use of commercial weighing or measuring devices.

[7/1/1997; 19.15.108.2 NMAC - Rn, 19 NMAC 15.108.2, 01/31/2007]

19.15.108.3 STATUTORY AUTHORITY:

Granted to the board of regents of New Mexico state university under the Petroleum Products Standards Act, Chapter 57, Article 19, Sections 25 through 38, New Mexico Statutes Annotated 1978.

[7/1/1997; 3/1/1998; 19.15.108.3 NMAC - Rn, 19 NMAC 15.108.3, 01/31/2007; A, 11/01/2018]

19.15.108.4 DURATION:

Permanent

[7/1/1997; 19.15.108.4 NMAC - Rn, 19 NMAC 15.108.4, 01/31/2007]

19.15.108.5 EFFECTIVE DATE:

July 1, 1997

[7/1/1997; 19.15.108.5 NMAC - Rn, 19 NMAC 15.108.5, 01/31/2007]

19.15.108.6 OBJECTIVE:

This part provides for the bonding and registration of service technicians and service establishments for commercial weighing or measuring devices.

[7/1/1997; 19.15.108.6 NMAC - Rn, 19 NMAC 15.108.6, 01/31/2007]

19.15.108.7 DEFINITIONS:

A. "Commercial weighing or measuring device" means any device used or employed in establishing the quantity, weight, count, or size of products involving a monetary transaction or in computing any basic charge or payment for services rendered on the basis of weight or measure.

B. "Department" means the New Mexico department of agriculture.

C. "Director" means the director of the New Mexico department of agriculture.

D. "Full service establishment" means any person, firm, or company which for the purpose of direct or indirect benefit installs, services, repairs, or reconditions commercial weighing or measuring devices. (bond required)

E. "Limited service establishment" means any person, firm, or company which installs, services, repairs, or reconditions commercial weighing or measuring devices solely under its ownership. (no bond required)

F. "Service technician" means any individual employed by a full or limited service establishment who installs, services, repairs, or reconditions commercial weighing or measuring devices.

[7/1/1997; 19.15.108.7 NMAC - Rn, 19 NMAC 15.108.7, 01/31/2007; A, 11/01/2018]

19.15.108.8 [RESERVED]

19.15.108.9 REGISTRATION:

A. Prior to installing, servicing, repairing or reconditioning any commercial weighing or measuring device in the state of New Mexico, a service establishment and each service technician employed by, or who is a part of, the service establishment shall be registered with the department. Application for registration shall be on a form supplied by the department with said form duly signed and witnessed. By applying for registration, the principal officer of the service establishment certifies that each service technician employed by the service establishment is fully competent to install, service, repair or recondition the class of devices for which registration is applied; has in their possession or available for use the required certified test standards and all necessary testing equipment, and required reference materials; and has full knowledge of all applicable laws, rules, and regulations. At the request of the department, an applicant shall submit appropriate evidence of qualifications.

B. This part shall not preclude or limit the right and privilege of any individual to install, service, repair, or recondition a commercial device owned by him or his employer. However, without registration, such individual is not permitted to remove an official out-of-order tag or place a device into commercial service.

[7/1/97; 19.15.108.9 NMAC - Rn & A, 19 NMAC 15.108.9, 01/31/2007; A, 11/01/2018]

19.15.108.10 ANNUAL REGISTRATION FEES:

A complete registration will include payment of applicable fees for the registrant and all service technicians as established by an external policy memorandum.

[7/1/1997; 19.15.108.10 NMAC - Rn & A, 19 NMAC 15.108.10, 01/31/2007]

19.15.108.11 BOND REQUIRED:

With the application for full service registration, each service establishment shall furnish a one thousand dollar (\$1,000) surety bond payable to the state of New Mexico, or other proof of financial responsibility as may be prescribed by the director, for faithful performance of duty. A bond or other proof of financial responsibility shall apply to each registered service technician employed by the registered service establishment. The bond or other proof of financial responsibility shall be in a form prescribed by the director.

[7/1/1997; 19.15.108.11 NMAC - Rn, 19 NMAC 15.108.11, 01/31/2007]

19.15.108.12 REGISTRATION CERTIFICATE:

Upon receipt and acceptance of a properly executed application, the required bond (full service only) and calibration certificate, a "registration certificate" shall be issued for a period not to exceed one year. Registration certificates are non-transferable.

[7/1/1997; 19.15.108.12 NMAC - Rn, 19 NMAC 15.108.12, 01/31/2007; A, 11/01/2018]

19.15.108.13 AUTHORITY AND RESPONSIBILITIES OF A REGISTRANT:

A. A registered service technician or registered service establishment shall have the authority to:

- (1)** remove official tested and approved, out-of-order, and not sealed - not legal for trade stickers or tags;
- (2)** break seals on adjustment mechanisms;
- (3)** place into commercial service a device that has been officially rejected;
- (4)** place into commercial service a new or used device.

B. Prior to placing a device into commercial service, it shall be the responsibility of the registered service technician to:

- (1)** install, service, repair or recondition a commercial device in such a manner that the device will comply with applicable requirements set forth in *National Institute of Standards and Technology (NIST) handbook 44*, as revised, and the Petroleum Products Standards Act and associated rules;
- (2)** remove from a commercial device being installed, serviced, repaired, or reconditioned all existing tested and approved, out-of-order or not sealed - not legal for trade stickers or tags;
- (3)** seal all adjustment mechanisms with an appropriate seal;
- (4)** affix to a commercial device installed, serviced, repaired, or reconditioned, a clearly visible tag or sticker containing the registered service establishment name or registration number and date on which installation, service, repair or recondition was performed.

[7/1/1997; 19.15.108.13 NMAC - Rn & A, 19 NMAC 15.108.13, 01/31/2007; A, 11/01/2018]

19.15.108.14 PLACE-IN-SERVICE REPORT:

A. Within five calendar days after a new or used device is installed, or a device that has been officially rejected has been repaired, the original of the properly executed place-in-service report shall be sent to the department. The duplicate copy of the report shall be retained by the registered service establishment and the triplicate copy of the report shall be given to the owner or operator of the device.

B. A place-in-service report for the types of devices specified below shall be accompanied by the registered service establishment's test report which shows that the device was tested and performing within applicable tolerances at the time the device was placed into service:

(1) For meters (liquid measuring devices) with a capacity of more than 20 gallons or 75 liters per minute, a test report shall be required which shows that a volumetric prover of sufficient capacity was used to receive a test draft as specified in *NIST handbook 44* for the device under test.

(2) For devices other than those described above, test reports may be required by the director if it is determined at his discretion that reports are in the best interest of all concerned.

[7/1/1997; 19.15.108.14 NMAC - Rn & A, 19 NMAC 15.108.14, 01/31/2007; A, 11/01/2018]

19.15.108.15 STANDARDS AND TESTING EQUIPMENT:

A. A service technician or service establishment must possess or have available sufficient certified test standards to test in accordance with *NIST handbook 44* requirements the class of devices for which registration is applied. Prior to registration, and at least annually thereafter, all standards and testing equipment used by the registered service technician or registered service establishment shall be examined by the department or another approved laboratory and a calibration certificate issued for all standards and testing equipment found to be acceptable. A copy of the calibration certificate for all standards and testing equipment used by the registered service technician or registered service establishment shall accompany the registration application.

B. A registered service technician or registered service establishment shall not use in installing, servicing, repairing, or reconditioning a commercial device any standards or testing equipment that has not been certified.

[7/1/1997; 19.15.108.15 NMAC - Rn & A, 19 NMAC 15.108.15, 01/31/2007; A, 11/01/2018]

19.15.108.16 REVOCATION OF REGISTRATION CERTIFICATE:

The director may suspend or revoke a registration certificate in accordance with the procedures set forth in New Mexico department of agriculture administrative procedures and remedies for enforcement actions internal policy.

[7/1/1997; 19.15.108.16 NMAC - Rn, 19 NMAC 15.108.16, 01/31/2007]

19.15.108.17 LIST OF REGISTERED SERVICE ESTABLISHMENTS:

The department shall maintain and supply upon request a list of the registered service establishments.

[7/1/1997; 19.15.108.17 NMAC - Rn, 19 NMAC 15.108.17, 01/31/2007]

PART 109: NOT SEALED NOT LEGAL FOR TRADE

19.15.109.1 ISSUING AGENCY:

New Mexico State University, New Mexico Department of Agriculture.

MSC 3189, P. O. Box 30005, Las Cruces, New Mexico 88003-8005, Telephone: (575) 646-3007.

[7/1/97; 19.15.109.1 NMAC - Rn & A, 19 NMAC 15.109.1, 05/29/09]

19.15.109.2 SCOPE:

All parties involved in the servicing or use of commercial weighing or measuring devices.

[7/1/97; 19.15.109.2 NMAC - Rn, 19 NMAC 15.109.2, 05/29/09]

19.15.109.3 STATUTORY AUTHORITY:

Granted to the board of regents of New Mexico state university under the Petroleum Products Standards Act, Chapter 57, Article 19, Sections 25 through 37, New Mexico Statutes Annotated 1978.

[7/1/97; A, 3/1/98; 19.15.109.3 NMAC - Rn, 19 NMAC 15.109.3, 05/29/09]

19.15.109.4 DURATION:

Permanent.

[7/1/97; 19.15.109.4 NMAC - Rn, 19 NMAC 15.109.4, 05/29/09]

19.15.109.5 EFFECTIVE DATE:

July 1, 1997

[7/1/97; 19.15.109.5 NMAC - Rn, 19 NMAC 15.109.5, 05/29/09]

19.15.109.6 OBJECTIVE:

This part establishes the conditions and circumstances under which a weighing or measuring device may be marked "NOT SEALED - NOT LEGAL FOR TRADE."

[7/1/97; 19.15.109.6 NMAC - Rn, 19 NMAC 15.109.6, 05/29/09]

19.15.109.7 DEFINITIONS:

- A. "Department" means the New Mexico department of agriculture.
- B. "Director" means the director of the New Mexico department of agriculture.
- C. "Registered service establishment" means any person, firm, or company registered with the department for the purpose of installing, servicing, repairing or reconditioning commercial weighing or measuring devices.

[7/1/97; 19.15.109.7 NMAC - Rn, 19 NMAC 15.109.7, 05/29/09]

19.15.109.8 [RESERVED]

19.15.109.9 CONDITIONS:

Any weighing or measuring device not used for commercial purposes in the state of New Mexico, may be marked "NOT SEALED - NOT LEGAL FOR TRADE" if:

- A. the owner of the device declares in writing that the device is not used for commercial purpose;
- B. the director determines that a device is not being used for commercial purpose through abandonment, location or condition; or
- C. the director determines that a device cannot be used commercially because of its construction or design.

[7/1/97; 19.15.109.9 NMAC - Rn, 19 NMAC 15.109.9, 05/29/09]

19.15.109.10 PROHIBITED USE:

- A. Any device marked or tagged as "NOT SEALED - NOT LEGAL FOR TRADE" pursuant to this part, shall not be used for commercial purpose nor shall the tag or mark be removed until it has been properly placed in service by the department or a registered service establishment.
- B. Such inspection by the department will be at the request of the device owner and may require the payment of a fee based on current fee schedules.

[7/1/97; 19.15.109.10 NMAC - Rn, 19 NMAC 15.109.10, 05/29/09]

CHAPTER 16: SOLAR ENERGY [RESERVED]

CHAPTER 17: WEATHER MODIFICATION

PART 1: GENERAL PROVISIONS [RESERVED]

PART 2: WEATHER CONTROL AND PRECIPITATION ENHANCEMENT

19.17.2.1 ISSUING AGENCY:

New Mexico Interstate Stream Commission.

[19.17.2.1 NMAC - N, 01-15-2005]

19.17.2.2 SCOPE:

This rule governs the licensing and application process for weather control operations, research, and development pursuant to the New Mexico Weather Control Act.

[19.17.2.2 NMAC - N, 01-15-2005]

19.17.2.3 STATUTORY AUTHORITY:

Section 75-3-1 et seq., NMSA 1978, as amended by House Bill 78, 2003 Legislative Session.

[19.17.2.3 NMAC - N, 01-15-2005]

19.17.2.4 DURATION:

Permanent.

[19.17.2.4 NMAC - N, 01-15-2005]

19.17.2.5 EFFECTIVE DATE:

January 15, 2005, unless a later date is cited at the end of a section.

[19.17.2.5 NMAC - N, 01-15-2005]

19.17.2.6 OBJECTIVE:

The objective of this rule is to provide a consistent licensing and application process for weather control activities, establish additional rules and procedures that govern proceedings before the commission, and to insure the expeditious and orderly handling of all administrative matters consistent with all requirements of state, tribal and federal law.

[19.17.2.6 NMAC - N, 01-15-2005]

19.17.2.7 DEFINITIONS:

Unless defined below or in a specific section, all other words used in these regulations shall be given their customary and accepted meanings.

A. "Applicant" means any individual, firm, partnership, association, company, corporation, business or public trust, federal agency, state agency, the state or any political subdivision thereof, municipalities and any other duly constituted legal entity that applies for a license.

B. "Application" means an application for a license submitted by an applicant to the commission.

C. "Apparatus" means any device used with the intention of producing artificial changes in the composition, motions and resulting behavior of the atmosphere.

D. "Commission" means the New Mexico interstate stream commission.

E. "Hearing participant" means an applicant, any person or entity filing a protest of an application or the commission's staff.

F. "License" means a specific written authorization issued by the commission to an operator that has met specified qualifications authorizing such operator to engage in operations pursuant to a specified project scope in the state of New Mexico.

G. "Operation" means the performance of any weather control activity undertaken for the purpose of producing or attempting to produce any form or modifying effect upon the weather in the state. An operation does not include:

(1) research, development and experimental weather control activities by state or federal agencies or institutions of higher learning, expected to last no longer than six (6) months;

(2) laboratory research and experiments;

(3) activities engaged in for purposes other than producing or attempting to produce any form of modifying effect upon the weather;

(4) emergency activities conducted by public entities for the purposes of fire control; and

(5) religious or cultural ceremonies, rites or acts that do not utilize artificial methods to alter weather phenomena.

H. "Operations area" means the area in which an operation is conducted to produce or attempt to produce the desired effects within the target area.

I. "Operations director" means the person, identified in a valid license, who has the knowledge, experience and qualifications necessary to design, manage, evaluate and take overall responsibility for an operation.

J. "Operator" means any individual, firm, partnership, association, company, corporation, business or public trust, federal agency, state agency, the state or any political subdivision thereof, municipalities and any other duly constituted legal entity, as identified in a license.

K. "Research and development" means the exploration, field experimentation and extension of investigative findings and theories of a scientific or technical nature for purposes that may lead to practical application for experimental or demonstration purpose, including the experimental production and testing of models, agents, apparatus and processes.

L. "Sponsor" means any person who enters into an agreement with an operator to support weather control activities.

M. "Suspension criteria" means criteria developed for a specific operation to avoid weather control during undesirable periods. Examples include excess snow pack accumulation, excess rainfall forecasts and national weather service forecasts of severe weather.

N. "Target area" means the surface area within which the effects of an operation are expected.

O. "Weather control" means changing or attempting to change by artificial methods, the composition, motions and resulting behavior of the atmosphere.

P. "Weather control committee" means a three-member panel comprised of commission members or commission staff as designated by the commission.

Q. "Weather control hypothesis" means a statement of expectations, which systematically describes certain assumptions and predicts an outcome in terms of operation effects, given specifics such as seeding mode and a project location and duration.

[19.17.2.7 NMAC - N, 01-15-2005]

19.17.2.8 VIOLATIONS AND PENALTIES:

As provided by Sections 75-3-15, NMSA 1978, any person violating any of the provisions of the Weather Control Act or this rule shall be guilty of a misdemeanor and a continuing violation shall be punishable as a separate offense for each day during which a violation occurs.

[19.17.2.8 NMAC - N, 01-15-2005]

19.17.2.9 CERTAIN LIABILITIES NOT IMPOSED OR RIGHTS AFFECTED:

Nothing in the Weather Control Act or this rule shall be construed to impose or accept any liability or responsibility on the part of New Mexico or any state officials, agents or employees for any weather control activities of any private person or group, or to affect in any way any contractual, tortuous or other legal or equitable rights, duties or liabilities between any private persons or groups.

[19.17.2.9 NMAC - N, 01-15-2005]

19.17.2.10 COMMISSION AS OPERATOR:

The commission may administer or carry on operations, subject to this rule, by its own officials, agents or employees.

[19.17.2.10 NMAC - N, 01-15-2005]

19.17.2.11 WEATHER CONTROL COMMITTEE:

In the performance of the functions authorized in the Weather Control Act, the commission may establish a weather control committee to advise and make recommendations to the commission concerning licenses and other matters as provided in this rule. Members of the commission or its staff may serve on this committee. The commission shall appoint one member of the committee chairman or chairwoman (chair). In the event that the commission does not establish a weather control committee, all duties of the weather control committee specified in this rule shall be borne by the commission.

[19.17.2.11 NMAC - N, 01-15-2005]

19.17.2.12 OTHER JURISDICTIONS:

Operations conducted in the state which are intended to affect the weather in a target area in another state are prohibited except upon full compliance with the laws of that state as well as the provisions of the Weather Control Act and this rule.

[19.17.2.12 NMAC - N, 01-15-2005]

19.17.2.13 LICENSE REQUIRED:

Any person desiring to engage in operations in the state of New Mexico shall be required to make application for and receive a license prior to commencing operations.

[19.17.2.13 NMAC - N, 01-15-2005]

19.17.2.14 LICENSE APPLICATION PROCEDURES AND REQUIREMENTS:

In order to apply for a license an applicant must complete the part A application demonstrating professional qualifications for conducting operations and must complete part B of the application presenting a detailed project scope of the operation to be conducted.

A. Part A of the application includes the following requirements:

(1) an application fee of one hundred dollars (\$100.00) with the completed application form;

(2) designation of an operations director having the minimum professional and education requirements of two (2) years of supervisory experience with weather control projects and one of the following four (4) additional requirements:

(a) a masters of science degree in meteorology or related field; or

(b) a bachelor's degree in meteorology, plus two (2) additional years of recent experience in weather control field operations within the last five (5) years; or

(c) a bachelor's degree in engineering, mathematics or applicable physical or natural sciences including at least twenty-five (25) semester hours of meteorological course work plus two (2) additional years of experience in weather control field operations within the last five (5) years; or

(d) a bachelor's degree in meteorology and a manager certification by the weather modification association;

(3) a resume of the operations director and a resume from each individual who will significantly participate in the operation; each resume shall demonstrate sufficient knowledge and competence in the field of meteorology and cloud physics; if the operator is an organization, any individual and individuals who significantly participate in the operation shall meet the requirements of this subparagraph;

(4) proof of financial responsibility (see 19.17.2.15 NMAC).

B. Part B of the application shall include identification of the following:

(1) the name and address of the applicant;

(2) name and address of the operations director;

(3) the sponsor(s) on whose behalf(s) the operation is to be conducted;

(4) the operations area and the target area;

(5) the weather control hypothesis, and a detailed operational plan for implementing the hypothesis;

(6) the intended effect of the operation;

(7) the materials and apparatus to be used in conducting the operation;

(8) suspension criteria;

(9) the period of operation, including starting and ending date (the operation need not be continuous);

(10) a plan, acceptable to the commission, for quantitatively and critically assessing the effects of the proposed operation;

(11) a completed notice of intention for license; a completed notice of intention shall accompany each application and shall be filed on a form furnished by the commission; and

(12) any additional information as the commission or the weather control committee may deem appropriate.

C. Part A and Part B of the application shall be submitted at least one hundred twenty (120) days prior to the proposed commencement date of the operation for which the license is being sought, to allow time to publish the notice of intention, hold a hearing in the event the application is protested or if the applicant requests a hearing after the commission's staff recommends license denial, review the operation information presented, and allow action by the commission prior to the proposed commencement date of the operation. The commission may waive the one hundred twenty (120) day period in part or whole for good cause and at the sole discretion of the commission.

D. A license is neither assignable nor transferable.

E. Any operation for which a license is granted shall be conducted under the personal direction of the operations director listed on the license.

F. The applicant shall notify the commission's staff in writing within fifteen (15) days of any substantive changes to any of the information submitted in the application.

[19.17.2.14 NMAC - N, 01-15-2005]

19.17.2.15 FINANCIAL RESPONSIBILITY REQUIREMENT UNDER LICENSE:

All applicants shall have on file, prior to license issuance, proof of ability to respond to damages for liability that might reasonably be attached to or result from any operations. This proof shall be in the form of a surety bond in the amount of one million dollars (\$1,000,000) minimum for each license to be issued or such other proof of financial responsibility as the commission or the weather control committee may require.

[19.17.2.15 NMAC - N, 01-15-2005]

19.17.2.16 PRELIMINARY RECOMMENDATION BY COMMISSION STAFF:

Within thirty (30) days of receipt of a completed application, commission staff shall evaluate the application for the purpose of making a recommendation to the weather control committee. The applicant shall be notified in writing of the commission staff's recommendation.

A. Recommendation of approval:

(1) Commission staff may recommend approval of the application only if the operation meets all requirements of this rule, is in conformity with all applicable provisions of New Mexico law and promotes the public welfare.

(2) If the commission staff recommends approval, it shall publish a notice of intention pursuant to 19.17.2.17 NMAC.

B. Recommendation of denial:

(1) The commission's staff shall recommend a denial of the application if the application does not meet the criteria for approval set forth in the Weather Control Act and this rule.

(2) If the commission's staff determines that it will recommend denial of the application to the commission, the staff shall notify the applicant within ten (10) days of such determination by mail. The applicant has fifteen (15) days from the date of mailing to request further consideration by the weather control committee pursuant to 19.17.2.18 NMAC. An applicant's failure to request further consideration under this paragraph shall be deemed as intention to abandon the application.

[19.17.2.16 NMAC - N, 01-15-2005]

19.17.2.17 PUBLICATION OF NOTICE OF INTENTION FOR LICENSE:

The commission staff shall publish the notice of intention once a week for two (2) consecutive weeks in a newspaper or newspapers having general circulation in each county or counties of the proposed operations area and target area. The applicant may either pay publication costs directly to the publisher or may pay such costs to the commission in advance of publication.

[19.17.2.17 NMAC - N, 01-15-2005]

19.17.2.18 FURTHER CONSIDERATION BY THE WEATHER CONTROL COMMITTEE:

A. The weather control committee shall consider the merits of an application and otherwise determine if the requirements of the Weather Control Act and this rule have been met and may hold a hearing on such application at its discretion or in the event of either:

(1) written protest of the application by at least five (5) interested parties received in the offices of the commission (address in Paragraph (2) of Subsection A of 19.17.2.18 NMAC herein) within ten (10) days after last publication of the notice of intention; or

(2) written request by the applicant in accordance with Paragraph (2) of Subsection B of 19.17.2.16 NMAC; commission address for mailing of written protests of any application: Attn: Weather Control Committee, New Mexico Interstate Stream Commission, Post Office Box 25102 Santa Fe, New Mexico 87504-5102.

B. All hearings may be held before the weather control committee, at the commission's sole discretion.

C. Notice of hearing. At least twenty (20) days prior to a hearing by the weather control committee or the commission on an application, the commission's staff shall notify in writing all hearing participants of the hearing date and location. If an applicant requests a hearing after a recommendation of denial by commission staff, the applicant shall first publish the notice of intention in accordance with 19.17.2.17 NMAC of this rule.

D. Hearing is optional. At the discretion of the weather control committee, it may elect to provide a weather control committee recommendation in accordance with Subsection H of 19.17.2.19 NMAC of this rule without a hearing.

[19.17.2.18 NMAC - N, 01-15-2005]

19.17.2.19 HEARING PROCEDURES:

A. Weather control committee chair. The chair of the weather control committee shall preside over hearings on any contested application. The chair, with advice and consent from the other weather control committee members, shall have the power to regulate the hearing; to perform all acts and take all measures necessary to conduct such hearing, including the authority to administer oaths and affirmations; to explain the events and requirements of the hearing process to all hearing participants; to hear all relevant issues during the hearing; to request and receive a proper administrative record and to otherwise regulate the conduct and course of the hearing. The chair may limit testimony to those matters reasonably noticed by the application or by any letter of protest filed pursuant to Paragraph (1) of Subsection A of 19.17.2.18 NMAC of this rule.

B. Pre-hearing discovery. No pre-hearing discovery shall be required by or from any hearing participant. At least ten (10) days prior to the hearing, the weather control committee shall make available to any hearing participant any application to be considered at the hearing, and any protest thereof, previously filed with the commission.

C. Location of hearings. The weather control committee shall hold all hearings in Santa Fe, unless the weather control committee decides in its sole discretion that a hearing should be held elsewhere to facilitate participation.

D. Testimony and evidence. During a hearing, evidence shall be presented only by (1) the applicant, (2) any person filing a letter of protest filed pursuant to Paragraph (1) of Subsection A of 19.17.2.18 NMAC of this rule, and (3) the commission's staff. No

other person or entity may give evidence or argument. Any person or entity giving evidence or argument must provide the commission and all other hearing participants with a copy of any document or exhibit submitted as evidence. The New Mexico rules of evidence are not binding on presentation of evidence. The hearing shall be taped or transcribed.

E. Administrative notice. The weather control committee may take administrative notice of all judicially cognizable facts (i.e., all facts that may be noticed by a judge), and of generally recognized technical or scientific facts, published reports of governmental and state agencies and studies and conclusions within the commission's specialized knowledge.

F. Continuance/postponement. At the discretion of the chair, a scheduled hearing may be continued with notice, prior the hearing or may be recessed during the hearing and reconvened at a later date. Any statement of continuance or recess shall be made a part of the record. A hearing participant may request postponement or continuance of a hearing for good cause shown subject to approval by the chair. Grounds for postponement or continuance may include, but are not limited to, the unavailability of witnesses, unfair hardship by a hearing participant or economic use of commission resources.

G. Weather control committee recommendations. Within thirty (30) days after the weather control committee either completes its hearing deliberations or elects not to hold a hearing pursuant to Subsection D of 19.17.2.18 NMAC, it shall deliver to the commission a recommended decision including findings of fact and conclusions of law. The commission's staff shall serve a copy on each hearing participant by U.S. first-class mail, postage prepaid within ten (10) days of issuance thereof.

H. Final decision. At the next regularly scheduled commission meeting occurring at least fifteen (15) days after the weather control committee serves its recommended decision on the hearing participants, the commission shall consider the recommended decision on the hearing participants, the commission shall consider the recommended decision and issue a final decision or remand to the weather control committee for further administrative proceedings.

I. Administrative record. The administrative record shall include or otherwise reflect, at a minimum, all filings with the commission, all staff recommendations, all evidence received or considered, offers of proof and objections and rulings thereon, any recommended decision including findings of fact and conclusions of law submitted by the weather control committee, the transcript or tape of the oral proceedings as well as any decision, opinion or report by the commission.

[19.17.2.19 NMAC - N, 01-15-2005]

19.17.2.20 EXPIRATION AND RENEWAL OF LICENSE:

Each license shall expire twelve (12) months after the issuance date thereof. Such license may, upon application, be renewed if the operator fulfills all the necessary qualifications and requirements stated in this rule. The application for renewal shall be accompanied by the application fee and by any appropriate modifications to the application. A license shall not be renewed if the applicant no longer qualifies for such license, if the license is no longer in compliance with applicable state, tribal or federal law, if renewal of the license does not promote the public welfare or if the applicant has violated any provisions of the Weather Control Act or this rule. Thirty (30) days after the applicant requests a renewal and submits any changes to the application, the weather control committee shall recommend to the commission whether to renew a license. If there are any significant changes to the application, the weather control committee shall first give notice and opportunity for hearing as provided in Paragraph (2) of Subsection A of 19.17.2.16 NMAC of this rule before renewing any license.

[19.17.2.20 NMAC - N, 01-15-2005]

19.17.2.21 LICENSE SUSPENSION, MODIFICATION OR REVOCATION:

A. The commission may suspend or revoke or refuse to renew a license for any one or any combination of the following causes:

- (1) incompetence;
- (2) dishonest practice;
- (3) false or fraudulent representation in obtaining a license under this rule;
- (4) failure to comply with any of the provisions of the Weather Control Act, this rule or applicable state, tribal or federal law; or
- (5) aiding other persons who fail to comply with any of the provisions of the Weather Control Act, this rule or applicable state, tribal or federal law.

B. When it appears to the weather control committee that a threat to life or property exists or is imminent, or the commission or its staff has been notified of a probable impending emergency or the operation fails to maintain compliance with this rule, the weather control committee may summarily order the operator to immediately suspend, terminate or modify all operations within the area affected by such operations.

(1) Notification of suspension, modification or termination of an operation shall be given in the most expeditious manner under the circumstances.

(2) Regardless of the manner of initial notification, it is to be followed within two (2) business days by facsimile or a certified letter of particulars addressed to the licensed holder stating the time and place for holding a hearing on the question of taking permanent action to modify or cancel the license.

(3) In the event that the weather control committee summarily suspends or modifies a license, it shall issue a report to the commission for its consideration at its next regularly scheduled meeting. The commission may hold an informal hearing on the matter to allow any person who would qualify as a hearing participant a reasonable opportunity to be heard on this issue.

(4) Whether or not the commission reinstates operations, and when such reinstatement may take place, will depend, among other things, upon the conditions that develop within the operations area and target area and if the requirements of the Weather Control Act, this rule, applicable state, trial and federal law and the commission are met.

(5) The commission or the weather control committee may initiate any necessary actions in a court of competent jurisdiction in the event that the operator fails to adhere to any order under this section.

C. Each license issued will include suspension criteria regarding operations that shall be applied to protect life and property.

D. Failure of the operator to notify the commission's staff of an existing or impending or reasonably foreseeable emergency threat to life or property is grounds for cancellation of the license and immediate termination of the operation.

[19.17.2.21 NMAC - N, 01-15-2005]

19.17.2.22 OPERATION RECORDS:

The operator shall maintain the following records during an operation and provide them to the commission pursuant to 19.17.2.23 NMAC of this rule:

A. Daily log: Each operator must maintain a daily log of weather control activities for each unit of equipment and apparatus used during an operation. The log shall include at a minimum:

- (1) date of weather control activity;
- (2) each aircraft flight track and location of each item or apparatus used during each mission; use of maps is required;
- (3) local time when weather control activity began and ended; for non-continuous activities, the start and end of a total sequence of activity is acceptable;
- (4) amount of time each apparatus is in operational use;
- (5) type of weather control agent/material used in each apparatus;

(6) rate of dispersal and dispersal location of each seeding agent/material during actual use of each apparatus; the information is to be provided both in the form of maps and in computer-readable form for possible subsequent analysis;

(7) total amount of seeding agent/material used; if more than one agent/material is used, list totals for each type of agent separately;

(8) local time when any type of monitoring (e.g., radar) was operational and computer readable archives of monitoring date;

(9) type(s), estimated moisture content and size of cloud(s) modified (i.e., stratiform, isolated cumuliform, organized cumuliform, etc.);

(10) narrative indicating such operational problems as equipment failure, personnel problems, weather conditions, etc.; and

(11) monthly totals from the daily logs listing the following:

(a) days during the month in which operation(s) were conducted;

(b) time of operation(s);

(c) amount of each kind of seeding agent/material used;

(d) average rate of dispersal of each kind of seeding agent/material used;

(e) time of operation of any monitoring equipment; and

(f) days of each type of cloud treated.

B. Weather records. Each operator must obtain and retain copies of all daily precipitation total records available from the national weather service stations in the operations area and target area and from any other reliable sources.

C. Participants. Each operator must keep a current listing of names and addresses of all participants in any operation for which the commission issues the operator a license.

[19.17.2.22 NMAC - N, 01-15-2005]

19.17.2.23 OPERATOR REPORTS:

At a minimum, the operator shall maintain and provide the following reports to the commission's staff:

A. Tri-monthly report. Every ninety (90) days after the commencement of an operation, the operator shall submit a report to the commission that shall consist of:

- (1) a summary of the records prepared under 19.2.7.22 NMAC of this rule;
- (2) a copy of the roster of all participants associated with the operation which was prepared according to Section 22 of this rule; and
- (3) a narrative account of the manner and extent in which the operation did or did not conform to the intended effect as described in Subsection B of 19.17.2.14 NMAC of this rule.

B. Summary report. A summary report on observed results of each operation must be submitted ninety (90) days after conclusion of the operation. These summary reports shall consist of all information required in Subsection A of 19.17.2.23 NMAC, plus a narrative evaluation and quantitative analysis of the operation and its effects on the operations area in form and content acceptable to the commission staff.

C. Reports to sponsors. The operator shall file with the commission a copy of all reports made by the operator to sponsors.

D. Federal reporting. The operator is responsible for complying with all applicable federal reporting requirements as set forth in Public Law 92-205, 15 U.S.C. 330b, as amended, including reporting to the national oceanic and atmospheric administration. The commission's staff maintains a copy of the reporting form required by federal law.

[19.17.2.23 NMAC - N, 01-15-2005]

19.17.2.24 RELEASE OF INFORMATION TO PUBLIC:

All operational information for an operation shall be filed with the commission before such information is released to the public. Scientific and other information concerning an operation shall also be filed with the commission as it becomes available and before being released to the public.

[19.17.2.24 NMAC - N, 01-15-2005]

19.17.2.25 MONITORING:

When an operator conducts an operation in an area where the United States government or its agent is conducting weather control research, then said operator shall submit to monitoring by the United States government or its agent.

[19.17.2.25 NMAC - N, 01-15-2005]

19.17.2.26 LIABILITY:

Except as provided in 19.17.2.8 NMAC and 19.17.2.9 NMAC of this rule, nothing in this rule shall present any person adversely affected by an operation or any research and development activity from recovery damages otherwise available under applicable law.

[19.17.2.26 NMAC - N, 01-15-2005]

19.17.2.27 SUITS TO RECOVER FEES:

The commission shall have power to commence suit for the recovery of any fees due under the provisions of this rule. All fees collected under the provisions of this rule shall inure to the commission.

[19.17.2.27 NMAC - N, 01-15-2005]

19.17.2.28 LIBERAL CONSTRUCTION:

This rule shall be liberally construed to carry out its purpose.

[19.17.2.28 NMAC - N, 01-15-2005]

CHAPTER 18-19: [RESERVED]

CHAPTER 20: FOREST MANAGEMENT

PART 1: GENERAL PROVISIONS [RESERVED]

PART 2: TREE HARVESTING AND FOREST REGENERATION [REPEALED]

[This part was repealed on April 10, 2018]

PART 3: RESTRICTIONS FOR FIRE PREVENTION

19.20.3.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Forestry Division.

[12/31/96; Recompiled 12/31/01]

19.20.3.2 SCOPE:

This Part applies to all persons, associations, corporations, units of government and other legal entities, on non-federal and non-municipal lands within the state.

[11/14/79, 12/19/89, 12/31/96; Recompiled 12/31/01]

19.20.3.3 STATUTORY AUTHORITY:

This part is adopted pursuant to the authority granted to the energy, minerals and natural resources department (department) in Section 9-1-5 NMSA 1978 and the forestry division (division) pursuant to Section 68-2-16 and other Sections of the Forest Conservation Act, Section 68-2-1 to 68-2-25 NMSA 1978.

[11/14/79, 12/19/89, 12/31/96; Recompiled 12/31/01]

19.20.3.4 DURATION:

Permanent unless a later date is cited at the end of a section or paragraph.

[12/31/96; Recompiled 12/31/01]

19.20.3.5 EFFECTIVE DATE:

December 31, 1996 [unless a later date is cited at the end of a section.]

[12/31/96; Recompiled 12/31/01]

19.20.3.6 OBJECTIVE:

Whenever warranted by climatic conditions, drought, fire danger, fire frequency, fire behavior or other factors affecting danger of forest fire, the division will initiate actions to prevent forest fires by notifying the public of the fire danger and imposing restrictions governing the use of fire, equipment or personal access to lands when the danger level poses a threat to public safety, life, property and the natural resources of the state. The state forester is the designated representative of the department secretary for the purposes of issuing orders imposing restrictions in order to prevent forest fires and rescinding orders as conditions warrant.

[11/14/79, 12/19/89, 12/31/96; Recompiled 12/31/01]

19.20.3.7 DEFINITIONS:

A. "Areas" means geographic locations in New Mexico where similarities in weather, topography and vegetation exist.

B. "Campfire" means a fire started for cooking, warmth or light outside of a structure.

C. "Closure" means a limitation to access to a given area as well as limiting the use of fire.

D. "Fire danger" means a classification of fire danger as determined by the National Wildfire Danger Rating System. The classes are low, moderate, high, very high and extreme.

E. "Forest fire" means a fire burning uncontrolled on lands covered wholly or in part in timber, brush, grass, grain or other inflammable vegetation.

F. "Human-caused fire" means any fire caused directly or indirectly by a person(s).

G. "Open burning" means burning of crop land, fields, rangeland, debris burning, slash piles, prescribed burning or weed burning.

H. "Open fire" means the use of any cooking, heating or ignition device using natural or artificial fuel that has either an open flame or requires that the heat source be placed physically within the device (e.g., charcoal, cigarette, fireworks).

I. "Order" means a declaration by the state forester of a restriction to prevent or suppress forest fires.

J. "Preparedness" means the state of being ready or prepared for use or action.

K. "Prevention" means all activities concerned with minimizing the incidence of uncontrolled human-caused fires.

L. "Restriction" means a limitation on the use of fire, equipment or other usage of or entry into an area.

M. "Smoking" means the use of a lighted cigarette, cigar, pipe, etc.

N. "Suppression" means all the work of extinguishing or confining a forest fire.

O. "Uncontrolled fire" means any fire which threatens or destroys life, property or natural resources.

[11/14/79, 12/19/89, 12/31/96; Recompiled 12/31/01]

19.20.3.8 RESTRICTIONS:

Whenever warranted by climatic conditions, drought, fire danger, fire frequency, fire behavior or other factors affecting danger of forest fire, the state forester may order restrictions or closures which place limitations on the use of fire or order the immediate extinguishment of fires to help reduce the potential of forest fires as follows:

A. Smoking, Campfires, Open Fires or Equipment Usage: Restrictions on smoking, campfires or open fires may be imposed in specifically defined areas. Use of logging

equipment or other equipment increasing the risk of forest fire may also be limited to specified hours of operation on state and private land.

(1) Smoking may be restricted to designated areas, within structures or within vehicles equipped with ashtrays while on paved or surfaced roads. Open fires or campfires may be restricted to developed campgrounds or in areas designated in writing by the landowner and chimneys of wood burning stoves must be equipped with approved spark arresters; access to land is not limited.

(2) Use of logging equipment may be limited to specified hours of operation by the division.

(3) The state forester may allow exceptions to these restrictions with written notification.

B. Closure: Closures will be imposed in specifically defined areas when widespread drought conditions, extreme fire danger, fire frequency, fire behavior and other factors exist within an area of the state that pose a threat to public safety, life, property and the natural resources of the state. All open fires, open burning and operation of equipment (i.e., chainsaws, cutting torches, welders, etc.) are prohibited without the prior written approval of the state forester. Access to private lands is limited to landowners and persons with the landowners written permission.

[11/14/79, 12/19/89, 12/31/96; Recompiled 12/31/01]

19.20.3.9 IMPLEMENTATION:

Implementation of restrictions or closures will be coordinated between fire management agencies within areas of the state where fire restrictions become necessary to protect public safety, life, property and natural resources from forest fires. The division will provide notice to the public when restrictions are imposed, changed or rescinded.

[12/31/96; Recompiled 12/31/01]

19.20.3.10 PENALTIES:

Violation of this Part is a misdemeanor punishable by a fine of not more than one thousand dollars (\$1,000.00) or by imprisonment in the county jail not to exceed one year or both for each and every violation pursuant to Section 68-2-17 NMSA 1978.

[12/19/89, 12/31/96; Recompiled 12/31/01]

PART 4: COMMERCIAL TIMBER HARVESTING REQUIREMENTS

19.20.4.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Forestry Division.

[19.20.4.1 NMAC - N, 1/1/2002]

19.20.4.2 SCOPE:

This part applies to persons, partnerships, associations, corporations, and other entities engaged in harvests of commercial forest species on non-municipal or non-federal lands after the effective date except for those harvests permitted in accordance with 19.20.2 NMAC.

[19.20.4.2 NMAC - N, 1/1/2002]

19.20.4.3 STATUTORY AUTHORITY:

This part is adopted pursuant to the authority granted the Energy, Minerals and Natural Resources Department in NMSA 1978, Section 9-1-5 and in the Forest Conservation Act, NMSA 1978, Sections 68-2-1 to 68-2-25.

[19.20.4.3 NMAC - N, 1/1/2002]

19.20.4.4 DURATION:

Permanent.

[19.20.4.4 NMAC - N, 1/1/2002]

19.20.4.5 EFFECTIVE DATE:

January 1, 2002, unless a later date is cited at the end of a section.

[19.20.4.5 NMAC - N, 1/1/2002; A, 6/29/2007]

19.20.4.6 OBJECTIVE:

19.20.4 NMAC's objective is to require appropriate harvesting practices of commercial forest species be conducted in a manner that supports forest practices that assist in forest fire prevention and suppression and the control of forest pests, and maintain and enhance forest health to ensure the continued economic benefits of forests and forest resources to New Mexico.

[19.20.4.6 NMAC - N, 1/1/2002; A, 6/29/2007]

19.20.4.7 DEFINITIONS:

A. "Act" means the Forest Conservation Act, NMSA 1978, Sections 68-2-1 to 68-2-25.

B. "Alternate practice" means a forest practice standard used in place of a specific requirement in the forest harvest practices standards, 19.20.4.9 NMAC. The applicant may request to use an alternate practice in the harvest permit application or at a later time. The alternate practice is not effective until the division provides written approval.

C. "Applicant" means the owner.

D. "Basal area" means the cross sectional area of the stem at diameter at breast height or at diameter at root collar of all trees in a stand, generally expressed as square units per unit area (e.g. square feet per acre).

E. "Cessation of harvest activities" means absence of harvesting within a cutting unit for six consecutive days.

F. "Closed road" means a road constructed for the harvest that will be closed upon the harvest's completion.

G. "Commercial forest species" means:

<u>SCIENTIFIC NAME</u>	<u>COMMON NAME</u>
Abies concolor	white fir
Abies lasiocarpa	subalpine fir
Abies lasiocarpa var. arizonica	corkbark fir
Cupressus arizonica	Arizona cypress
Juniperus coahuilensis or erythrocarpa	redberry juniper/rose-fruited juniper
Juniperus deppeana	alligator juniper
Juniperus monosperma	one seed juniper
Juniperus osteosperma	Utah juniper
Juniperus pinchotii	Pinchot juniper/redberry juniper
Juniperus scopulorum	Rocky Mountain juniper
Picea engelmannii	Engelmann spruce
Picea pungens	Colorado blue spruce
Pinus aristata	bristlecone pine
Pinus arizonica	Arizona pine
Pinus cembroides	Mexican piñon
Pinus discolor	border piñon
Pinus edulis	piñon
Pinus engelmannii	Apache pine
Pinus flexilis	limber pine
Pinus leiophylla	Chihuahuan pine
Pinus monophylla	singleleaf piñon

Pinus ponderosa	ponderosa pine
Pinus strobiformis	southwestern white pine
Populus tremuloides	quaking aspen
Pseudotsuga menziesii	Douglas-fir
Quercus spp.	oak species when in tree form or when harvested with other commercial forest species

H. "Construction project" includes clearing of right of ways for utilities, pipelines, fences or roads, except for roads facilitating harvesting of commercial forest species; clearing for construction of residences or businesses with an approved building permit; or clearing related to the development of other regulated industries such as mining or landfills.

I. "Continuing violation" means that a permittee or responsible person or entity has received a notice of deficient condition and has failed to take corrective action.

J. "Contract harvester" means a person or entity, other than the owner or the owner's direct employees, harvesting commercial forest species.

K. "Contractor" means a person or entity that the applicant or permittee has reached an agreement with to harvest or purchase commercial forest species.

L. "Cutting unit" means an area within the forest harvest practice plan not exceeding 300 forested acres. The designation of each unit is based on the topography of the area to be harvested, the number of persons to be engaged in the harvest, transportation, climate and other relevant factors. The applicant shall divide an area larger than 300 forested acres into two or more cutting units, unless the division determines that a larger area is appropriate because of the topography, equipment or the harvest's objectives and number of persons to be participating in harvest activities.

M. "Damaged trees" means trees over three feet in height not intended for harvest that, as a result of the harvest, are damaged or knocked down to the extent that mortality or serious deterioration is likely to occur or partially pushed over so as to result in permanent lean or visible damage to the root system.

N. "Deficient condition" means a harvest activity not in conformance with the act, 19.20.4 NMAC or a harvest permit. It also means the failure to have statements of understanding for each person or entity conducting major harvest activities.

O. "Diameter at breast height" means the tree's outside bark diameter measured at four and one half feet above the forest floor on the tree's uphill side. For the purposes of determining breast height, the forest floor includes the duff layer that may be present, but does not include unincorporated woody debris that may rise above the ground line.

P. "Diameter at root collar" means the diameter of the tree's trunk measured outside the bark at ground level.

Q. "District forester" means the supervisory forester of one of the six district offices located in Bernalillo, Capitan, Chama, Cimarron, Las Vegas and Socorro.

R. "Division" means the New Mexico energy, minerals and natural resources department, forestry division or forestry division personnel.

S. "Erosion control measure" means a method of reducing soil erosion including seeding, using mulch or slash for ground cover, reducing slope of roads and skid trails, installing water bars, crowning roads, outsloping roads, dipping roads with lateral relief ditches, culverts and avoidance of excessive slopes.

T. "Evidence of ownership" means a deed or other document, recorded with the county clerk in the county where the commercial forest species are located, containing a property description included in the harvest permit application evidencing ownership of the land surface or the right to control the land including harvesting commercial forest species, or a timber deed including the commercial forest species subject to the harvest permit application. Evidence of ownership does not include commercial forest species purchased through a contract, purchase agreement or similar document that indicates that the commercial forest species' ownership will transfer after the trees are harvested.

U. "Excessive slope" means a slope of more than 40 percent over a ground distance of 80 yards or more.

V. "Felling equipment" means equipment used to sever the tree stem from its stump such as chainsaws, feller-bunchers and harvesters.

W. "Firewood" means any part or portion of a tree that has been cut and removed from its original location and is to be used for heating or cooking in an open pit, grill, fireplace or stove. Firewood does not mean wood that is used in biomass facilities to create electricity or thermal heat or wood that is used to create ethanol.

X. "Forest" means an area of at least one acre with at least 10 percent tree crown cover.

Y. "Gully erosion" means erosion caused by water accumulating in narrow channels and removing the soil from the channel to depths of one foot or more and that carries sediment downstream.

Z. "Harvest or harvesting" means activities related to removing a commercial forest species or its products from the property where the activities are occurring, including: constructing haul roads and skid trails; cutting and severing, pushing over, plucking, chipping or masticating standing trees; skidding or removing trees to landings; transporting the tree or wood products from the cutting site or landing; installing erosion

control measures; or supervising or directing such activities. Harvest or harvesting does not mean digging commercial forest species that are planted and cultivated for balled and burlap stock, landscaping or live Christmas trees; or removal by any means during maintenance, renovation or removal of a windbreak.

AA. "Harvest permit" means the harvest permit application, the forest harvest practice plan and the harvest permit approval letter.

BB. "Intermittent watercourse" means a stream or reach of stream, as shown on a United States geological survey 1:24000 scale topographic map or as otherwise identified on the property by the division or the owner, that contains water only at certain times of the year, such as when it receives flow from springs, melting snow or precipitation.

CC. "Lake" means an inland body of freshwater, but does not include stock ponds or windmills.

DD. "Landowner" means a person or entity, or the person or entity's agent, owning or having a right to control the surface of the land where the commercial forest species to be harvested are located.

EE. "Lateral yarding distance" means the maximum distance perpendicular to each side of a cable within which a log can be attached for yarding.

FF. "Leave trees" means those trees to be left in the cutting unit after the harvest is completed.

GG. "Long butting" means the cutting of a portion of the main stem that does not meet the utilization standards provided in Subsection H of 19.20.4.9 NMAC.

HH. "Lop and scatter" means a hand method of removing the upward-extending branches from tops of felled trees to keep slash low to the ground, to increase the decomposition rate, to lower the fire hazard or as a pretreatment prior to burning.

II. "Major harvest activity" means felling trees; skidding or yarding; and construction of roads, skid trails and landings.

JJ. "Mineral soil" means the portion of the soil immediately below the litter and duff layers.

KK. "Multiple cutting unit permit" means a harvest permit for an area with two or more designated cutting units.

LL. "Municipal lands" means the territory a municipality has incorporated or annexed pursuant to NMSA 1978, Sections 3-2-1 *et seq.*, Sections 3-3-1 *et seq.* or Sections 3-7-1 *et seq.*

MM. "Noxious weed" means a plant species that is not indigenous to New Mexico and that has been targeted pursuant to the Noxious Weed Management Act, NMSA 1978, Section 76-7D-1 *et seq.* for management or control because of its negative impact on the economy or the environment.

NN. "Owner" means the landowner, unless there is a timber deed owner who owns the commercial forest species that are the subject of the harvest permit application. Then the timber deed owner is the owner.

OO. "Perennial watercourse" means a stream or river, or reach of a stream or river, as shown on a United States geological survey 1:24000 scale topographic map or as otherwise identified on the property where the harvest will occur by the division or the owner, that contains water continuously throughout the years in all years; its upper surface, generally, is lower than the water table of the region adjoining the stream or river.

PP. "Permittee" means an owner to whom the division issues a harvest permit.

QQ. "Personal delivery" means delivery to the individual personally; or if the individual is absent, delivery to a person residing at the individual's usual residence who is over the age of 15 years.

RR. "Public road" means a highway or road open for public motor vehicle access including federal highways, state highways, state roads, county roads and United States forest service roads.

SS. "Pre-commercial thinning" means thinning that is made as an investment in the future growth of a stand of trees where the owner does not sell or exchange for service the utilized trees.

TT. "Responsible person or entity" means a person, partnership, corporation, association or other entity, other than the owner, required to sign a statement of understanding or, when Subsection A of 19.20.4.8 NMAC does not require a harvest permit, that have an active role in major harvest activities or a management role that may impact the harvest.

UU. "Rill erosion" means erosion that cuts a number of small channels less than one foot in depth into the soil by water moving over and concentrating in low places in the soil surface.

VV. "Rub tree" means a tree used as a pivot in cable yarding or on skid trails to protect the remaining trees during extraction.

WW. "Silviculture" means the theory and practice of controlling forest establishment, composition, growth or harvesting.

XX. "Skid trail" means a path built for log skidding or caused by skidding equipment's use.

YY. "Slash" means branches, boughs or pieces of a tree's main stem severed or damaged as a result of the harvest.

ZZ. "State forester" means the director of the energy, minerals and natural resources department, forestry division or the state forester's designee.

AAA. "Statement of understanding" means the statement that persons, partnerships, corporations, associations or other entities that have an active role in major harvest activities or a management role that may impact the harvest shall sign verifying that they are aware that they must comply with the act, 19.20.4 NMAC and the harvest permit. A supervisor of a business entity conducting harvest activities may sign a statement of understanding accepting responsibility for the entity's employees performing major harvest activities.

BBB. "Streamside management area" means the area near a lake, perennial or intermittent watercourse or a wetland designated for special protection in the forest harvest practice plan.

CCC. "Timber deed owner" means the owner of a timber deed recorded with the county clerk in the county where the commercial forest species are located. It does not include a person, corporation, partnership or other entity that has agreed to purchase commercial forest species through a contract, purchase agreement or similar document with title to be transferred after the trees are harvested.

DDD. "Tree" means a woody perennial plant usually having a single main stem generally with few or no branches on its lower part; however, species such Gambel oak (*quercus gambelii*) and one seed juniper (*juniperus monosperma*) may be multi-stemmed and species such as fir (*abies*), spruce (*picea*) and juniper (*juniperus*) may have many branches on the stem's lower part.

EEE. "Utilization" means the removal of trees, tree stems or portions of trees from areas within the harvest permit boundaries.

FFF. "Water bar" means a drainage structure such as a ditch, mounded earth or staked log installed across the entire width of a road or skid trail at an approximate 30-degree downslope angle that diverts water runoff into adjacent undisturbed areas.

GGG. "Wetland" means an area that is inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and under normal

circumstances does support, a prevalence of vegetation typically adapted for life in saturated soil conditions in New Mexico.

HHH. "Working days" means Monday through Friday, excluding state holidays.

[19.20.4.7 NMAC - N, 1/1/2002; A, 6/29/2007; A, 9/14/2007]

19.20.4.8 HARVEST PERMITS:

A. ACTIVITIES REQUIRING HARVEST PERMITS: An owner shall obtain a harvest permit before harvest activities, except those listed in Subsection B of 19.20.4.8 NMAC, are conducted in the following circumstances:

(1) harvests in an area of 25 acres or more of forest, or a combination of areas totaling 25 acres or more of forest in a calendar year if the harvest sites are on the same or adjacent property; or

(2) harvests in an area of less than 25 acres of forest in one calendar year if:

(a) the owner has been convicted of a criminal violation associated with harvest activities within the previous three years; or

(b) the owner is contracting with or employing a person or entity on the harvest that has been convicted of a criminal violation associated with harvest activities within the previous three years.

B. ACTIVITIES NOT REQUIRING HARVEST PERMITS: Owners are not required to obtain a harvest permit for:

(1) cutting firewood for personal use;

(2) cutting firewood for sale in compliance with 19.20.4.9 NMAC on up to 75 acres of forest in a calendar year or a combination of areas totaling up to 75 acres or more of forest in a calendar year if the harvest sites are on the same or adjacent property;

(3) cutting Christmas trees;

(4) pre-commercial thinning conducted in compliance with 19.20.4.9 NMAC;

(5) harvest activities related to construction projects such as pipeline or powerline installation or maintenance, construction pursuant to a building permit, fence building or construction of roads unrelated to harvest activities;

(6) clearing for defensible space within 100 feet of a building;

(7) harvests for wildland urban interface projects or hazardous fuel reduction projects if conducted pursuant to a contract with the energy, minerals and natural resources department that requires compliance with 19.20.4.9 NMAC;

(8) harvests conducted under a division funded or administered landowner assistance program in compliance with 19.20.4.9 NMAC; or

(9) rangeland or meadow restoration performed according to a conservation plan reviewed by a soil and water conservation district and conducted in compliance with 19.20.4.9 NMAC where the owner does not sell or exchange for services the trees that are harvested during the restoration or the resulting wood products.

C. APPLICATION FOR HARVEST PERMIT:

(1) An owner shall file an application for a harvest permit in the district office in the district where the harvest will take place for approval at least 30 calendar days before the proposed harvest is to start. The owner may begin harvest activities when the division issues the harvest permit and the permittee or responsible person or entity gives appropriate notification.

(2) The harvest permit application shall include the following, if applicable:

(a) the owner's name;

(b) a legal description of the land where the harvest will occur;

(c) sale name;

(d) evidence of ownership;

(e) the owner's mailing address (if the commercial forest species to be harvested are owned under a timber deed, the harvest permit application shall include names and mailing addresses of both the timber deed owner and the landowner);

(f) the owner's e-mail address, if available (if the commercial forest species to be harvested are owned under a timber deed, the harvest permit application shall include e-mail addresses of both the timber deed owner and the landowner);

(g) the names, mailing addresses and, if available, e-mail addresses of persons or entities that will directly manage the harvest;

(h) the time schedule for harvesting (*i.e.* beginning and ending dates);

(i) if the commercial forest species to be harvested are owned under a timber deed, the timber deed owner shall consult with the landowner about the land management goals and objectives included in the forest harvest practice plan; the

landowner shall approve roads constructed for the harvest that will not be closed at the end of the harvest;

- (j) statements of understanding;
- (k) a forest harvest practice plan; and
- (l) the owner's signature and the date of application.

D. FOREST HARVEST PRACTICE PLAN: The forest harvest practice plan shall include the following information:

(1) Harvest Description: The harvest description shall include the following:

(a) a description of the current stand condition including types of tree species, any insect and disease occurrence and the stocking level (e.g., an estimate of trees per acre or square feet of basal area and average diameter at breast height or diameter at root collar, or green tons per acre, as applicable);

(b) the owner's land management goals and harvest objectives such as forest management, forest production, wildlife habitat, dwarf mistletoe control, improved forage for wildlife or livestock or type conversion; the division shall consider a forest harvest practice plan inadequate unless it contains a silviculturally sound method of achieving the described land management goals and objectives that complies with the act and 19.20.4 NMAC;

(c) the harvest permit boundaries and cutting units to be established as shown on a United States geological survey topographic map with a scale no larger than 1:24000 (e.g., 7.5 minute quadrangle);

(d) the access route to and from the harvest permit area to a public road;

(e) identification of excessive slopes located within the cutting unit;

(f) identification of lakes, perennial or intermittent watercourses or wetlands located within the cutting unit on a United States geological survey topographic map with a scale no larger than 1:24000;

(g) a description of the proposed harvest method such as seed tree, shelterwood, single tree or group selection or patchcut;

(h) a description of the equipment the permittee or responsible person or entity will use during the harvest such as chainsaw, feller-buncher, skidder, delimber, plucker, forwarder or chipper;

(i) the residual stand condition including types of tree species and an estimate of trees per acre and the trees' average diameter at breast height, or, if applicable, diameter at root collar; if the harvest method is a patchcut a description of the size of the area to be harvested, by length and width, and the adjacent stand's height; and

(j) a description of the regeneration method such as natural regeneration, natural seeding or vegetative reproduction, or artificial regeneration, planting, reasonably calculated to ensure adequate forest regeneration if forest regeneration is the land management objective; if artificial regeneration is to be used the description shall include: when the planting will occur, the tree species to be planted, the seed source of the seedlings, the number of seedlings to be planted per acre, the method of seedling protection and site preparation.

(2) Erosion Management: Description of the erosion management measures that the permittee or responsible person or entity will take to comply with Subsection D of 19.20.4.9 NMAC.

(3) Skid Trails: Description of how the permittee or responsible person or entity will treat skid trails and landings to control erosion and comply with Subsection E of 19.20.4.9 NMAC.

(4) Roads: Description of road location, road erosion control measures and post-harvest maintenance or closure. The description shall contain sufficient detail to indicate compliance with Subsection F of 19.20.4.9 NMAC. If a road will be closed after harvest, the description shall identify the closure method and erosion control measures.

(5) Streamside Management Area: Description of the streamside management area designating the area to be included and describing the measures that the permittee or responsible person or entity will take to comply with Subsection G of 19.20.4.9 NMAC. If an existing road is located within a streamside management area, the applicant shall include a description of the road's location.

(6) Slash Treatment: Description of the means of treating slash, such as lop and scattering or pile burning, to comply with Subsection I of 19.20.4.9 NMAC.

(7) Fire: Description of the precautions the permittee or responsible persons or entities will take during the harvest and the modifications to harvesting operations they will take during periods of high, very high and extreme fire danger. Description of how the permittee or responsible person or entity will react to a fire caused by harvest activities including the equipment that the permittee or responsible person or entity will locate on the harvest site and use if a fire starts and notice to local fire departments and the division. Additionally, if the permittee or responsible persons or entities will burn slash, a description of whether they will broadcast or pile burn the slash and the precautions that they will take when the burning occurs. Precautions shall include

obtaining necessary permits for burning and notifying the local governments and fire departments prior to burning.

(8) Excessive Slopes: Description of how the permittee or responsible person or entity will meet forest harvest practices standards on excessive slopes.

E. HARVEST PERMIT ISSUANCE OR DENIAL:

(1) Within 30 calendar days after receipt of the harvest permit application, the division shall either:

(a) issue a harvest permit approval letter including such conditions or recommendations as the division may deem necessary provided the harvest permit application contains the information required by Subsections C and D of 19.20.4.8 NMAC, the applicant has submitted the statements of understanding and the planned harvest is expected to comply with the act and 19.20.4 NMAC; or

(b) deny the harvest permit application in writing for the following reasons:

(i) the harvest permit application does not contain the information required by Subsections C and D of 19.20.4.8 NMAC;

(ii) the applicant is not the owner or the holder of a power of attorney or other authority sufficient to make decisions affecting the commercial forest species subject to the harvest permit application;

(iii) a material misrepresentation or false statement is included in the harvest permit application;

(iv) the proposed harvest would not comply with the act or 19.20.4 NMAC; or

(v) the applicant or contractor currently has a continuing violation.

(2) If the division denies the harvest permit application, the applicant may provide additional information to complete the harvest permit application or revise the harvest permit application to comply with the forest harvest practices standards. The applicant shall submit the additional information or revisions for reconsideration. If the division finds that the additional information or revisions correct the defects in the harvest permit application it shall issue the harvest permit. The division shall either issue the harvest permit or uphold the denial of the harvest permit application within 30 calendar days after receiving the additional information or revisions.

(3) When the division issues a harvest permit to a timber deed owner, the division shall provide a copy of the harvest permit to the landowner by first class mail or personal delivery.

F. STATEMENTS OF UNDERSTANDING:

(1) A person, partnership, corporation, association or other entity that has an active role in major harvest activities or a management role that may impact the harvest shall sign a statement of understanding in a form provided and developed by the division. This includes the owner, the owner's direct employees, consultants involved in the harvest, contract harvesters and other contractors or subcontractors.

(2) Anyone who must sign the harvest permit application or a statement of understanding shall comply with the act, 19.20.4 NMAC and the harvest permit. A supervisor of a business entity may sign a statement of understanding for the business entity's employees if the supervisor accepts responsibility for the employees' actions. Failure to keep statements of understanding current with the participation of new personnel or entities may result in violations or permit revocation.

(3) The statement of understanding shall be a division-provided form that includes:

(a) information identifying the person signing the statement such as name; birth date; social security, federal tax identification number or driver's license number; address and telephone number and, if applicable, the person's authority to sign for a partnership, corporation, association or other entity; the person's own employees; or the partnership, corporation, association or other entity's employees;

(b) the signature of the person signing the statement and date; and

(c) a statement that the person is aware that the person must comply with the act, 19.20.4 NMAC and the harvest permit and shall be accountable as provided for in 19.20.4 NMAC for such compliance and acknowledges that the person has read and understands the requirements of 19.20.4 NMAC and the harvest permit; if a person is signing on behalf of partnership, corporation, association or other entity, a statement that the entity is aware that it must comply with the act, 19.20.4 NMAC and the harvest permit and shall be accountable as provided for in 19.20.4 NMAC for such compliance; if a person is signing on behalf of the person's employees or a partnership, corporation, association or other entity's employees, a statement that the person is aware that the person is accepting responsibility for the person's own employees or the entity's employees and shall be accountable for the employees' compliance with 19.20.4 NMAC and the harvest permit.

G. PERMIT REVISIONS:

(1) The division may order revision of a harvest permit if it appears, after inspection, that the land management goals and objectives are not being met, if deficient conditions are occurring or if there are mistakes in the harvest permit.

(2) The owner may request revision of the harvest permit if there are mistakes in the harvest permit, ownership will change or other conditions make changes appropriate. The owner shall revise the permit during the harvest as needed to keep it current with operations.

(3) The owner may request the division revise the harvest permit to include additional acreage if the acreage is located in an area that is adjacent to or in close proximity to the area included in the current harvest permit, the land management goals and objectives and the proposed harvest operation are similar to those in the current harvest permit, the cover type is the same as the cover type in the current harvest permit and the same roads will be used to access the harvest area.

(4) The division shall approve or deny the owner's request for revision of the harvest permit within 30 calendar days after the request's receipt.

H. HARVEST PERMIT EXTENSIONS: When unforeseen circumstances beyond the permittee's control prevent completion of the harvest or a portion of the harvest activities as required by 19.20.4 NMAC within the time limits provided in the harvest permit, the division may, upon the permittee's written request, grant in writing additional time for completion of the harvest not to exceed one year. The division may grant no more than three such extensions.

I. NOTIFICATIONS: A permittee or responsible person or entity shall inform the division prior to or, in no case later than 48 hours following the event, either by telephone, in person or in writing of the following actions taken under the harvest permit:

(1) commencement or completion of major harvest activities in a cutting unit;
or

(2) when a unit is complete and the permittee is requesting the unit be closed.

[19.20.4.8 NMAC - N, 1/1/2002; A, 6/29/2007]

19.20.4.9 FOREST HARVEST PRACTICES STANDARDS:

A. APPLICABILITY: The forest harvest practices standards apply to harvests of commercial forest species, regardless of the acreage, except for activities listed in Subsection B of 19.20.4.8 NMAC that do not specifically require compliance with 19.20.4.9 NMAC.

B. MULTIPLE CUTTING UNITS: Unless the division provides written approval, the owner, permittee or responsible person or entity shall not commence harvesting under a multiple cutting unit harvest permit in a third cutting unit unless they have completed forest harvest practices standards, except for burning of slash piles, on at least one of the previous two active units.

C. MARKING:

(1) The division may require the permittee to mark the cutting unit boundary with flagging or tree marking paint if needed to meet the forest harvest practice plan's requirements.

(2) The division may require the permittee to mark leave trees or the trees to be cut with tree marking paint if needed to meet the land management goals and objectives in the forest harvest practice plan, particularly if the harvest method is group or single tree selection.

D. EROSION MANAGEMENT:

(1) The owner, permittee or responsible person or entity shall implement erosion control measures to minimize channelized flow erosion such as rill and gully erosion.

(2) Erosion Control Measures:

(a) Time Limit: The owner, permittee or responsible person or entity shall install erosion control measures as soon as practical but no later than 30 calendar days after the cessation of major harvest activities within the cutting unit.

(b) Placement: The owner, permittee or responsible person or entity shall place water bars or other erosion control measures on closed roads and skid trails with mineral soil exposed by harvest activities. The owner, permittee or responsible person or entity shall place water bars at the locations or intervals and at the height and width necessary to minimize erosion considering grade, sidehill drainage, soil texture and structure, vegetation and other pertinent factors.

PERCENT GRADE MINIMUM INTERVALS FOR WATER BARS

PERCENT GRADE	MINIMUM INTERVAL
0.0 -- 4.9	150 feet
5.0 -- 9.9	130 feet
10.0 -- 14.9	75 feet
15.0 -- 40.0	50 feet

The division may require additional water bars if the minimum intervals will not sufficiently minimize erosion. The division may require fewer water bars if a combination of soil properties, depth of duff layer or amount of slash or other cover will minimize erosion.

(3) Seeding:

(a) Time Limit: After cessation of major harvest activities within a cutting unit and at the time best calculated to produce maximum germination, but in no event later than 180 calendar days following the cessation of major harvest activities within a cutting unit, the owner, permittee or responsible person or entity shall seed closed roads, skid trails, landings and areas of mineral soil exposed by harvest activities within the cutting unit, unless the division has approved other erosion control measures. Appropriate site preparation shall take place prior to seeding. For example, soil preparation would be needed prior to seeding a hard packed road that is to be closed upon completion of harvesting.

(b) Seed Mix: The owner or permittee shall obtain the division's prior approval for the seed mix to be used. The seed mix shall be suitable for the land management goals and objectives specified in the forest harvest practice plan and shall not introduce noxious weeds. The owner or permittee shall provide proof of the purchase date, the seed mix viability and germination rate. The owner or permittee may use the certification tag from the bag if it provides the required information.

E. SKID TRAILS AND LANDINGS:

(1) Skid Trails:

(a) The owner, permittee or responsible person or entity shall not locate skid trails on excessive slopes unless the owner or permittee shows that it is technically or economically infeasible to remove the felled trees by other means.

(b) Skidding shall not destroy a stream channel or bank or reduce the stream channel's capacity to carry water.

(c) Skidding is not allowed within watercourses. Skidding shall not take place across perennial watercourses unless the owner or permittee shows that it is technically and economically infeasible to remove felled trees by other means. If the division approves skidding across a perennial watercourse, the owner, permittee or responsible person or entity shall limit skidding to designated crossings. Crossings shall be at a right angle to the main channel and the approach to the crossing shall be at a minimal grade. The owner, permittee or responsible person or entity shall divert drainage at a distance from the stream that provides filtering of sediment.

(d) The owner, permittee or responsible person or entity should plan skid trails in advance to minimize damage to the residual stand, soil compaction and erosion.

(e) The owner, permittee or responsible person or entity should flag skid trails so skidder operators can easily follow them.

(f) The owner, permittee or responsible person or entity should keep skid trails as narrow as possible.

(2) Landings: The owner, permittee or responsible person or entity:

(a) shall provide adequate drainage for the landing and ensure that runoff does not discharge directly into a watercourse; and

(b) should plan landings in advance.

F. ROADS:

(1) The owner, permittee or responsible person or entity shall:

(a) design, construct and maintain roads used or constructed for a harvest of commercial forest species to minimize erosion and impact on soils and vegetation in areas adjacent to the road;

(b) construct and maintain roads to drain properly and not cause gully erosion; the division may require the owner, permittee or responsible person or entity to take action if rill erosion is frequent and the depth exceeds three inches;

(c) outslope or ditch roads on the uphill side and provide appropriate surface drainage by using adequate cross drains, ditches, drivable dips, culverts, water bars, diversion ditches or other structures demonstrated to be equally effective;

(d) construct and maintain roads so the stream channel or bank is not destroyed and the stream channel's capacity to carry water is not diminished; and

(e) design road widths excluding any portion not intended for travel to sufficiently carry the anticipated traffic load with reasonable safety, but not to exceed 24 feet.

(2) Road location, design and construction shall address:

(a) building the fewest roads necessary for the harvest;

(b) locating the road to fit the topography to minimize alteration of natural features;

(c) avoiding road construction along or within narrow canyons;

(d) building roads on locations away from streams such as benches, ridge tops and the tops of slopes unless there is no feasible alternative;

(e) the stability of slopes where roads are cut;

(f) avoiding slopes of 60 percent or greater; and

(g) keeping the road grade to a minimum, usually less than 10 percent.

(3) Road construction: The owner, permittee or responsible person or entity shall:

(a) not use organic debris as a fill material;

(b) prior to construction, remove and utilize or treat as slash trees or portions of trees within the road corridor;

(c) not windrow trees or portions of trees within the road corridor, unless used as filter strip and are less than three feet in height;

(d) remove debris in stream channels that is added during construction (natural materials may be used as part of a sediment control structure);

(e) deposit organic debris and surplus soil and rock where runoff will not be carried into a lake or watercourse;

(f) size culverts, if used, to handle a minimum 25-year flood event; in determining the appropriate size consider debris potential and the potential for increased runoff from a reduction in vegetation resulting from the harvest; and install them to prevent blockage and erosion of fill materials at the outlet;

(g) install bridges where drainage structures cannot carry the water flow; and

(h) divert road drainage at a distance from the stream that provides filtering of sediment such as through the use of cross drains.

(4) The owner, permittee or responsible person or entity shall close roads intended for closure when the cutting unit closes unless needed for other cutting units. Upon closure, the owner, permittee or responsible person or entity shall treat the road to control erosion and remove stream-crossing structures.

G. REQUIREMENTS FOR STREAMSIDE MANAGEMENT AREAS:

(1) Streamside management areas shall include the area within 50 feet of the ordinary high water mark of a lake or wetland or within 50 feet of both high water marks for a perennial or intermittent watercourse. When a preexisting road is within 50 feet of the ordinary high water mark the streamside management area ends at the road's edge nearest to the watercourse. The owner, permittee or responsible person or entity shall minimize disturbance in the streamside management area.

(2) The owner, permittee or responsible person or entity shall not harvest within 50 feet of the ordinary high water mark of a lake or watercourse or within 50 feet of both high water marks of a perennial or intermittent watercourse, unless the division has approved an alternate practice pursuant to 19.20.4.10 NMAC for activities such as riparian restoration or hazardous fuel reduction.

(3) Within streamside management areas, the owner, permittee or responsible person or entity:

(a) shall not locate landings;

(b) shall design and flag skid trails in advance to minimize disturbance;

(c) shall not construct new roads unless the permittee or owner shows that it is technically or economically infeasible to construct the road elsewhere or that the damage to the environment would be greater if the road was constructed elsewhere; if the division approves construction of a new road within a streamside management area, in addition to other requirements in Subsection F of 19.20.4.9 NMAC, the owner, permittee or responsible person or entity shall limit stream crossings to those that are essential with crossings at a right angle to the main channel and the approach to the crossing at a minimal grade; and

(d) should use directional felling.

H. TREE UTILIZATION:

(1) Unless contract or market conditions require different utilization standards that are included in the harvest permit, the owner, permittee or responsible person or entity shall utilize

(a) commercial forest species to a minimum six-inch top diameter (inside bark) except that harvesting for other than lumber production shall utilize trees to a minimum four-inch top diameter (outside bark); and

(b) the tree's main stem as stated above in Paragraph (1) of Subsection H of 19.2.4.9 NMAC when the net scale of the severed log or section of the main stem is more than 50 percent of the total gross volume using the Scribner Decimal C log scale table.

(2) Long Butting: Long butting is prohibited except when resulting from removal of defects up to the limit of Paragraph (1) of Subsection H of 19.20.4.9 NMAC.

(3) Stump Height: Stump height shall be half the diameter of the tree where severed or 12 inches, whichever is less, on the uphill side except when immovable objects such as rocks or other trees prevent operation of felling equipment. The owner,

permittee or responsible person or entity shall ensure that stumps less than eight inches in diameter shall have a flat, horizontal top surface.

I. SLASH:

(1) The owner, permittee or responsible person or entity shall treat slash and damaged trees in a cutting unit, unless piled, to stand no higher than three feet above ground level, unless chipped or within one quarter of a mile of a structure. Chipped slash shall not exceed two inches in depth. The owner, permittee or responsible person or entity shall treat slash within one quarter of a mile of a structure to stand no higher than two feet above ground level.

(2) The owner, permittee or responsible person or entity shall:

(a) construct slash piles for safe and efficient burning; to be free of mineral soil and to cause no more than minimal soil sterilization; and

(b) locate slash piles to avoid damage to the residual stand.

(3) The owner, permittee or responsible person or entity shall treat slash, unless piled, no later than 30 calendar days from the movement of harvest operations out of the subject cutting unit into another cutting unit under a multiple cutting unit permit, or no later than 30 calendar days following the cessation of major harvest activities within the cutting unit, whichever occurs first. In any event, the time shall not exceed 365 calendar days from the start of harvesting within the cutting unit. The owner, permittee or responsible person or entity may allow piled slash to cure, but shall burn it no later than the end of the next winter burning season following the cessation of major harvest activities within that cutting unit. If weather conditions prevent piled slash from being burned by the end of the next winter burning season, the owner or permittee may request an extension of time.

(4) For the purpose of creating a fuel break along public roads, the owner, permittee or responsible person or entity shall eliminate slash greater than two feet in length or larger than one inch in diameter at the large end and within 50 feet of either side of the center line of a public road by chipping, burning, removal or equivalent means within 365 calendar days of cessation of major harvest activities within the cutting unit.

(5) Unless incorporated into a sediment control structure, slash is not allowed within the ordinary high water mark of an intermittent or perennial watercourse, lake or wetland.

J. COARSE WOODY DEBRIS RETENTION AND RECRUITMENT: Where available, the owner, permittee or responsible person or entity shall retain one to five scattered down logs per acre in a variety of stages of decomposition, with preference for down logs that have a diameter at breast height of 15 inches or greater and a length of

15 feet or greater. If scattered down logs are not available but unmerchantable trees have been harvested, the owner, permittee or responsible person or entity may scatter one to five unmerchantable trees per acre, with preference for logs that have a diameter at breast height of 15 inches or greater and a length of 15 feet or greater.

K. LOG DECKS: The owner, permittee or responsible person or entity shall remove log decks no later than 365 calendar days from the start of harvesting within the cutting unit.

L. CABLE YARDING: The following requirements apply to cable yarding:

(1) The yarding system shall have lateral yarding capabilities, using a carriage that can maintain a fixed position on the skyline during lateral pulls and shall keep one end of the log suspended above the ground during in-haul.

(2) The owner, permittee or responsible person or entity shall use uphill yarding unless the yarder cannot be located on a ridge top, bench or on top of a slope. If the owner, permittee or responsible person or entity must use downhill yarding, they shall suspend the leading end of the log above the ground.

(3) The applicant shall include corridor design in the harvest permit application and the owner, permittee or responsible person or entity shall mark actual corridors on the ground prior to clearing and felling. Cable corridors shall not be closer than an average of 75 feet, center to center, at a point one-half way to the end of the corridor where radial corridors are required; and an average of 140 feet where parallel corridors are used. No more than four cable corridors shall radiate from a single yarder position.

(4) The owner, permittee or responsible person or entity shall initially cut cable corridors to a maximum 12-foot width, prior to felling in the cutting unit, to allow passage of the carriage and turn of logs. Corridors shall not exceed 20 feet in width after yarding is completed and the owner, permittee or responsible person or entity has removed the rub trees.

(5) The owner, permittee or responsible person or entity shall fell harvested trees except corridor trees along the contour or diagonally to the slope to facilitate yarding and reduce damage to the residual trees.

(6) When topography and ground conditions permit, the owner, permittee or responsible person or entity shall pull logs endwise from where they are felled. Lateral yarding distance shall be limited to no more than 75 feet.

M. DAMAGE: The owner, permittee or responsible person or entity shall remove trees damaged by harvest activities or treat them as slash. If the damaged trees were intended to be leave trees then the harvest is not in compliance with the harvest permit. If a leave tree is damaged the division may require that the owner, permittee or

responsible person or entity leave additional trees as leave trees or require other means of regeneration.

N. TRASH AND LITTER: The owner, permittee or responsible person or entity shall remove all human-made trash and litter resulting from harvest and transportation activities from the harvest area and properly dispose of it.

O. SPILLS: The owner, permittee or responsible person or entity shall comply with 20.6.2.1203 NMAC with respect to discharge of oil or other water contaminant, in such quantity as may with reasonable probability injure or be detrimental to human health, animal or plant life or property, or unreasonably interfere with the public welfare or property use. The owner, permittee or responsible person or entity shall not service trucks, graders, dozers, felling equipment or other equipment where spills may contaminate soils, wetlands, lakes or watercourses.

P. MARKING OF LOG BUTTS:

(1) The owner, permittee or responsible person or entity shall mark one to five logs per load, if being transported in log form, or mark the load with a sign readable from 30 feet if the wood product is transported in another form such as chips, with the following information in the color of paint assigned to the district where the harvesting is occurring:

(a) if a harvest permit is required, with the two letter designator assigned by the district and the sequential load number (*i.e.* JV 011); or

(b) if a harvest permit is not required, with the landowner's first and last initials or the initial's of the ranch or property name and the abbreviation of the county in which the harvest is occurring (*i.e.*, if the landowner is Bill Smith and the harvest is occurring in San Miguel county the mark would be BS/SM).

(2) The following colors are assigned to the districts:

(a) Bernalillo - orange

(b) Capitan - red

(c) Chama - black

(d) Cimarron - blue

(e) Las Vegas - green

(f) Socorro – white.

Q. FIRE EQUIPMENT:

(1) The owner, permittee or responsible person or entity shall:

(a) have a long handled shovel; pulaski, McLeod or combi-tool; and a five-pound capacity ABC dry chemical fire extinguisher available at the harvest location when harvesting is occurring;

(b) ensure that each skidder, feller-buncher, delimber, dozer, log truck, etc. is equipped with a long handled shovel and a five-pound capacity ABC dry chemical fire extinguisher; and

(c) ensure each passenger vehicle, light truck or medium truck up to 40,000 GVW is equipped with a long handled shovel and a two and one half pound capacity ABC dry chemical fire extinguisher.

(2) The owner, permittee or responsible person or entity shall ensure that the tools and fire extinguishers are in good working condition.

[19.20.4.9 NMAC - N, 1/1/2002; A, 6/29/2007]

19.20.4.10 ALTERNATE PRACTICES:

An applicant or permittee may request to use an alternate practice in place of a specific requirement in the forest harvest practices standards, 19.20.4.9 NMAC, so long as equivalent or better protection regarding fire, insect and disease control and erosion control measures is provided. The request to use an alternate practice shall describe the mitigation measures that the applicant or permittee will take so that the division can determine that the proposal offers equivalent or better protection. The division shall make the decision to grant or deny the use of an alternate practice within 30 calendar days after the request's receipt. The division's written approval or disapproval shall state the reasons why the division granted or denied the request. The division shall not allow the applicant or permittee to use an alternate practice if it is known to result in violation of other applicable state laws. The permittee may appeal the denial of a request to use an alternate practice to the state forester pursuant to Subsection A of 19.20.4.13 NMAC.

[19.20.4.10 NMAC - N, 1/1/2002; A, 6/29/2007]

19.20.4.11 WEATHER CLOSURES:

The division may temporarily close roads built for harvest activities, close streamside management areas or suspend harvesting when adverse weather conditions exist such as flooding, heavy rain or snowmelt.

[19.20.4.11 NMAC - N, 1/1/2002]

19.20.4.12 VIOLATIONS:

A. NOTICE OF DEFICIENT CONDITION: The division may issue a notice of deficient condition for violation of the act, 19.20.4 NMAC or a harvest permit. The division may issue a notice of deficient condition for violations that harm the forest or forest resources and will require the permittee or responsible person or entity to cease the violation and take corrective action to repair the deficient condition.

(1) The division may serve upon the permittee or responsible person or entity a notice of deficient condition if:

(a) there is a violation of the act, 19.20.4 NMAC or a harvest permit; or

(b) the violation or activity creates harm or the potential for harm to the forest or forest resource.

(2) The notice of deficient condition shall set forth:

(a) the specific nature of the violation charged or harm to the forest or forest resources;

(b) the specific course of action needed to correct such violation;

(c) the date such correction shall be completed; and

(d) the recipient's right to a hearing to review the notice of deficient condition.

(3) The division shall serve the notice of deficient condition upon the permittee or responsible person or entity by personal delivery or certified mail return receipt requested. If the notice is not served upon the permittee the division shall provide a copy to the permittee by first class mail or personal service.

B. REVOCATION OF A HARVEST PERMIT:

(1) The state forester may revoke a harvest permit for the following:

(a) refusal to allow the division to enter and inspect a permitted area;

(b) failure to timely complete corrective action after receiving a notice of deficient condition;

(c) discovery that any of the reasons for harvest permit application denial exists; or

(d) failure to keep statements of understanding current.

(2) To proceed with revocation of a harvest permit the division shall schedule a revocation hearing and provide written notice of intent to revoke to the permittee by

personal delivery or certified mail return receipt requested at least 10 working days before the date set for the hearing. The written notice of the intent to revoke shall include the hearing's date, time and location.

(a) The hearing shall be held before the state forester.

(b) The division shall provide evidence as to the reasons to revoke the harvest permit and the permittee may provide evidence as to the reasons not to revoke the harvest permit.

(c) Oral testimony at the hearing shall be made under oath. The division shall make a tape or stenographic record of the hearing.

(d) If the state forester finds that a preponderance of the evidence supports revocation, the state forester shall revoke the harvest permit.

(e) The state forester shall issue a written final decision within 10 working days after the close of the hearing or deadline for the submission of additional materials following the hearing.

[19.20.4.12 NMAC - N, 1/1/2002; A, 6/29/2007]

19.20.4.13 ADMINISTRATIVE REVIEW:

A. DENIAL OF PERMITS, REQUEST TO USE ALTERNATE PRACTICES OR PERMIT REVISIONS:

(1) To request review of the denial of a harvest permit application, use of alternate practices or a harvest permit revision, an applicant or permittee shall submit a written request for review, which includes the reasons for requesting review, to the state forester within 15 calendar days after the issuance and provide written notice to the district office that denied the harvest permit application, use of alternate practices or harvest permit revision. If the applicant submitted additional information or revisions to the harvest permit application pursuant to Paragraph (2) of Subsection E of 19.20.4.8 NMAC the time period starts with the last denial.

(2) The applicant or permittee and the district office shall submit written statements to the state forester within 10 working days after the applicant or permittee submits the request for review.

(3) The state forester shall base the review decision on the written statements unless the applicant or permittee or the district office requests the opportunity to call witnesses or make oral arguments within 10 working days after the applicant or permittee submits the request for review. A request for a hearing shall explain the need for witness testimony or oral argument. If the applicant or permittee or the district office asks to make oral arguments or call witnesses, the state forester may set a hearing to

be held within 10 working days after receiving that request and provide notice of the hearing date, time and location to the applicant or permittee and the district office. Oral testimony shall be made under oath. The division shall make a tape or stenographic record of oral argument or witness testimony.

(4) The state forester shall issue a written final decision, including findings of fact and conclusions of law, within 10 working days after the date for submission of written statements, or a hearing, if any, and send copies to the applicant or permittee and the district office.

B. NOTICE OF DEFICIENT CONDITION:

(1) To request review of the issuance of a notice of deficient condition the permittee or responsible person or entity shall submit a written request for a hearing, which specifically states the reasons for the review, to the district forester within 10 working days after the notice's receipt. If the district forester issued the notice of deficient condition, then the district forester from another district shall conduct the hearing.

(a) The district forester shall consult with the permittee or responsible person or entity to set a hearing to be held within three working days after the request's receipt.

(b) The district forester shall issue a written decision within five working days after the hearing.

(c) The permittee or responsible person or entity may appeal the district forester's decision to the state forester by submitting a written request for review to the state forester within 10 working days after the decision and providing written notice to the district forester.

(2) The permittee or responsible person or entity and the district forester shall submit written statements to the state forester within 10 working days after the permittee or responsible person or entity submits the request for review.

(a) The state forester shall base the review decision on the written statements unless the permittee or responsible person or entity or the district forester requests the opportunity to call witnesses or make oral arguments within 10 working days after the permittee or responsible person or entity submits the request for review. A request for a hearing shall explain the need for witness testimony or oral argument.

(b) If the permittee or responsible person or entity or the district forester asks to make oral arguments or call witnesses, the state forester may set a hearing to be held within 10 working days after receiving that request and provide notice of the hearing date, time and location to the permittee, responsible person or entity and the district forester. Oral testimony shall be made under oath. The division shall make a tape or stenographic record of oral argument or witness testimony.

(c) The state forester shall issue a written final decision, including findings of fact and conclusions of law, within 10 working days after the date for submission of written statements, or a hearing, if any, and send copies to the permittee, responsible person or entity and the district forester.

[19.20.4.13 NMAC - N, 1/1/2002; A, 6/29/2007]

19.20.4.14 FIRE RESTRICTIONS:

Whenever the state forester declares restrictions on use of lands or use of fire within an area permitted under 19.20.4 NMAC, the restrictions shall apply to harvesting. If these restrictions require that harvesting stop, it shall not be considered a cessation of harvesting pursuant to 19.20.4 NMAC.

[19.20.4.14 NMAC - N, 1/1/2002; A, 6/29/2007]

19.20.4.15 CRIMINAL PENALTIES:

A. Following the procedures in 19.20.4.12 NMAC does not limit the division in its ability or authority to issue citations or otherwise enforce the possible criminal penalties for violating the act, 19.20.4 NMAC or a harvest permit.

B. Violation of the act, 19.20.4 NMAC or a harvest permit is a misdemeanor punishable by a fine of not more than \$1000 or by imprisonment in the county jail not to exceed one year or both for each violation, NMSA 1978, Section 68-2-17.

[19.20.4.15 NMAC - N, 1/1/2002; A, 6/29/2007]

PART 5 PRESCRIBED BURN MANAGER CERTIFICATION PROGRAM

19.20.5.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Forestry Division.

[19.20.5.1 NMAC – N, 6/13/2023]

19.20.5.2 SCOPE:

19.20.5 NMAC applies to applicants for prescribed burn manager certification and individuals who are certified as prescribed burn managers pursuant to the Prescribed Burning Act, Sections 68-5-1 to 68-5-8 NMSA 1978.

[19.20.5.2 NMAC – N, 6/13/2023]

19.20.5.3 STATUTORY AUTHORITY:

19.20.5 NMAC is adopted pursuant to the Prescribed Burning Act, Section 68-5-7 NMSA 1978 and Subsection E of Section 9-1-5 NMSA 1978.

[19.20.5.3 – N, 6/13/2023]

19.20.5.4 DURATION:

Permanent.

[19.20.5.4 NMAC - N, 6/13/2023]

19.20.5.5 EFFECTIVE DATE:

June 13, 2023, unless a later date is cited at the end of a section.

[19.20.5.5 NMAC – N, 6/13/2023]

19.20.5.6 OBJECTIVE:

To create a prescribed burn manager certification program for private lands in New Mexico.

[19.20.5.6 NMAC – N, 6/13/2023]

19.20.5.7 DEFINITIONS:

For additional definitions refer to Section 68-5-2 NMSA 1978.

A. "Act" means the Prescribed Burning Act, Sections 68-5-1 to 68-5-8 NMSA 1978.

B. "Broadcast burning" means an activity where fire is applied generally to most or all of an area with well-defined boundaries.

C. "Broadcast burn manager" means the person acting as the prescribed burn manager with responsibility for ensuring all local and state required permits are secured, ensuring the burn plan is written and sufficient for the prescribed burn, coordinating fire resources and equipment, monitoring weather conditions and notifications and directing the implementation of the broadcast burn.

D. "Committee" means a committee established pursuant to 19.20.5.13 NMAC to review applications for prescribed burn manager certification; provide oversight of the development and updating of training modules, refresher courses and recertification; and cross-walk the training modules with other training and experiences.

E. "Council" means the New Mexico prescribed fire council.

F. "Course" means an online or in-person learning experience taught by the cooperative extension service, division, contractor or other persons.

G. "Curriculum" means the minimum topics to be covered in a course.

H. "National wildfire coordinating group (NWCG)" means the organization of member agencies and organizations that provides national leadership to establish interagency wildland fire operations standards including qualification requirements for prescribed burning on federal lands.

I. "Nine-element course" means training that covers legal requirements, safety, weather, fire behavior, smoke management, prescribed burn techniques, public relations, planning and contingencies as specified in Subsection A of Section 68-5-7 NMSA 1978.

J. "Pile burn manager" means the person acting as the prescribed burn manager with responsibility for ensuring all local and state required permitting is secured, coordinating fire resources and equipment, monitoring weather conditions and notifications and directing the implementation of the pile burn. Specifically, it means a burn of piles conducted with sufficient moisture or other limiting factor such as bare mineral soil to prevent the spread of fire between piles.

K. "Fire management" means all activities for the management of wildland fires to meet land management objectives. Fire management includes the entire scope of activities from planning, prevention, fuels or vegetation modification, prescribed fire, hazard mitigation, fire response, rehabilitation, monitoring and evaluation.

L. "Proficiency workbook" means a tool to provide an observable, measurable and standardized means to evaluate and document proficiency for the distinct attributes of a pile or broadcast burn manager. Each proficiency workbook shall be approved by the division, made available in all its offices and on its website and will have evaluation elements with accompanying signatures for demonstrating proficiency.

[19.20.5.7 NMAC – N, 6/13/2023]

19.20.5.8 LEVELS OF PRESCRIBED BURN MANAGER CERTIFICATION:

The two levels of certification for prescribed burn managers from lowest to highest shall be:

A. certified pile burn manager; and

B. certified broadcast burn manager.

[19.20.5.8 NMAC – N, 6/13/2023]

19.20.5.9 REQUIREMENTS FOR PILE BURN MANAGER CERTIFICATION:

A. Individuals shall successfully complete the following requirements before applying for pile burn manager certification, unless receiving waivers or reciprocity pursuant to Subsections B or C of 19.20.5.9 NMAC. Individuals shall successfully complete the requirement in Paragraph (2) of Subsection A of 19.20.5.9 NMAC, before applying for pile burn manager certification if receiving a partial waiver pursuant to Subsection D of 19.20.5.9 NMAC.

(1) Prior to beginning the proficiency requirement in Paragraph (3) of Subsection A of 19.20.5.9 NMAC, individuals may complete the NWCG S-110 basic wildland fire orientation (15 minutes online) or other substitute orientation approved by the division. Any supplemental materials, such as videos the division may develop, or substitute orientation, will be made available and posted on the division's website.

(2) Individuals shall complete (passing score of seventy percent or better) the nine-element course, which may be an online or in-person training course.

(3) Individuals shall successfully complete the proficiency requirement, which consists of burning experience in the role of pile burn manager, which shall include demonstration of general knowledge of fire behavior, weather, holding, fire techniques, control lines, smoke management, firing devices, tools and equipment. Successful demonstration of those elements shall be documented in a division approved proficiency workbook. The burning experience must be documented in the proficiency workbook by

(a) a pile burn manager certified pursuant to 19.20.5.9 NMAC;

(b) division personnel; or

(c) an individual with at least NWCG prescribed burn boss type 3 qualifications.

B. Upon satisfactory review of their qualification documents by the committee, the division may grant pile burn manager certification by waiver to individuals with the following qualifications:

(1) NWCG qualifications for single resource boss or above that are current or have lapsed within the past five years; or

(2) a nationally recognized structural firefighter I in accordance with national fire protection association (NFPA) 1001 with wildland fire training or experience that includes at least S-190 wildland fire behavior or NFPA equivalencies; and

(3) completion (passing score of seventy percent or better) of the following modules from the nine-element course specified in Subsection A of 19.20.5.11 NMAC: legal requirements, smoke management and permitting.

C. Reciprocity.

(1) The division may conduct a review of another state's certified prescribed burn manager program and post a list of states that the division grants reciprocity for pile burn manager certification on the division's website. Applicants from a state for which the division has granted reciprocity shall provide proof of a current certification in a reciprocity state. Applicants from a state for which the division has granted reciprocity shall complete (passing score of seventy percent or better) the following modules from the nine-element course specified in Subsection A of 19.20.5.11 NMAC: legal requirements, smoke management and permitting.

(2) The committee shall determine whether an applicant who is not certified in a state on the reciprocity list qualifies for reciprocity based on proof of certification in that other state and successful completion of course work, field experience, proficiency requirements or other requirements that state requires for certification. An applicant for reciprocity of pile burn manager certification issued in another state not on the reciprocity list shall

(a) complete (passing score of seventy percent or better) the nine-element course;

(b) provide proof of certification in the other state; and

(c) provide proof of successful completion of the course work, field experience, proficiency requirements or other requirements that state requires for certification.

D. An individual who has prior prescribed burn manager experience, but who is not certified in another state as a prescribed burn manager, who does not possess NWCG qualifications for single resource boss or above that are current or have lapsed within the past five years or who is not qualified as a nationally recognized structural firefighter I in accordance with national fire protection association (NFPA) 1001 with wildland fire training or experience that includes at least S-190 wildland fire behavior or NFPA equivalencies, may apply for a waiver of the proficiency requirement in Paragraph (3) of Subsection A of 19.20.5.9 NMAC.

(1) An applicant shall provide a letter or other written documentation from a pile or broadcast burn manager certified pursuant to 19.20.5 NMAC, an individual with at least NWCG prescribed burn boss type 3 qualifications or a certified prescribed burn manager from another state on the division reciprocity list attesting they have observed the applicant conducting pile burns as a pile burn manager and the applicant has

satisfactorily conducted pile burns as a pile burn manager and demonstrated the proficiency requirement in Paragraph (3) of Subsection A of 19.20.5.9 NMAC.

(2) The committee shall review the documentation of the applicant's prescribed burn manager experience to determine if the applicant meets the proficiency requirement in Paragraph (3) of Subsection A of 19.20.5.9 NMAC. If the committee determines the applicant's prior experience meets the proficiency requirement in Paragraph (3) of Subsection A of 19.20.5.9 NMAC, the division shall waive the proficiency requirement in Paragraph (3) of Subsection A of 19.20.5.9 NMAC and the requirements in Paragraph (1) of Subsection A of 19.20.5.9 NMAC. Applicants seeking a partial waiver under Subsection D of 19.20.5.9 NMAC shall complete (passing score of seventy percent or better) the nine-element course.

E. The renewal of pile burn manager certification is required every five years with completion of a division approved refresher course (not to exceed eight hours) that is available online. Certified pile burn managers shall provide documentation they have taken the refresher course to the division. If they fail to take the refresher course or to provide proof to the division, the division shall suspend their certification and provide written notification.

F. To obtain recertification after the division has suspended their certification, individuals shall take a refresher course and conduct at least one day of supervised burning by a pile or broadcast burn manager certified pursuant to 19.20.5 NMAC, division personnel or an individual with at least NWCG prescribed burn boss type 3 qualifications. Individuals seeking recertification shall provide documentation the individual has completed both requirements to the division.

[19.20.5.9 NMAC – N, 6/13/2023]

19.20.5.10 REQUIREMENTS FOR BROADCAST BURN MANAGER CERTIFICATION:

A. Individuals shall successfully complete the following requirements before applying for broadcast burn manager certification, unless receiving waivers or reciprocity pursuant Subsections B or C of 19.20.5.10 NMAC.

(1) Individuals, including those who have completed the training for pile burn manager certification, shall successfully complete the following prior to beginning the proficiency requirements in Paragraph (3) of Subsection A of 19.20.5.10 NMAC:

(a) NWCG S-190 wildland fire behavior (eight hours) or a division approved substitute course;

(b) NWCG S-290 intermediate fire behavior (32 hours) or a division approved substitute course; and

(c) burn plan writing course approved by the division.

(2) Individuals shall complete (passing score of seventy percent or better) the nine-element course. Individuals who have previously completed the training for pile burn manager certification do not need to retake the nine-element course.

(3) Individuals shall successfully complete the proficiency requirement, which consists of burning experience in the role of broadcast burn manager, running a firing operation, managing smoke and managing a holding operation. Documentation of burning experience shall be in a division approved proficiency workbook. Documentation of burning experience in the specified roles shall also include demonstration of intermediate knowledge of fire behavior, weather, burn plan review, firing techniques, firing devices, holding, control lines, smoke management, tools and equipment and procedures in the event of an escape. Successful demonstration of those elements shall be documented in the applicant's proficiency workbook by

(a) a broadcast burn manager who is certified pursuant to 19.20.5 NMAC;

(b) division personnel; or

(c) an individual with at least NWCG prescribed burn boss type 2 qualifications.

B. The division may grant broadcast burn manager certification by waiver to individuals who possess NWCG burn boss type 1 or 2 qualifications with completion (passing score of seventy percent or better) of the following modules from the nine-element course: legal requirements, smoke management and permitting.

C. Reciprocity.

(1) The division may conduct a review of another state's certified broadcast burn manager program and post a list of states with reciprocity for broadcast burn certification on the division's website. Applicants from a state for which the division has granted reciprocity shall provide proof of a current certification in a reciprocity state in satisfaction of the certification requirements of 19.20.5.10 NMAC. Applicants from a state for which the division has granted reciprocity shall complete (passing score of seventy percent or better) the following modules from the nine-element course specified in Subsection A of 19.20.5.11 NMAC: legal requirements, smoke management and permitting.

(2) The committee shall determine whether an applicant who is certified in a state not on the reciprocity list qualifies for reciprocity based on proof of certification in that other state and successful completion of course work, field experience, proficiency requirements or other requirements that state requires for certification. The applicant for reciprocity of broadcast burn manager certification issued in another state not on the reciprocity list shall

(a) complete (passing score of seventy percent or better) the nine-element course;

(b) provide proof of certification in the other state; and

(c) provide proof of successful completion of the course work, field experience, proficiency requirements or other requirements that state requires for certification.

D. The renewal of broadcast burn manager certification is required every five years with completion of a division approved refresher course (not to exceed eight hours) that is available online. Certified broadcast burn managers shall provide documentation they have taken the refresher course to the division. If they fail to take the refresher course or provide documentation to the division, the division shall suspend their certification and provide written notification.

E. To obtain recertification of broadcast burn manager certification after the division has suspended their certification, individuals shall complete the refresher course and demonstrate one day of field proficiency experience with documentation provided by a broadcast burn manager who is certified pursuant to 19.20.5 NMAC, division personnel or an individual with at least NWCG prescribed burn boss type 2 qualifications. Individuals seeking recertification shall provide documentation the individual has completed both requirements to the division.

[19.20.5.10 NMAC – N, 6/13/2023]

19.20.5.11 DEVELOPMENT OF TRAINING AND BURN PLAN WRITING AND REFRESHER CURRICULUMS AND COURSES:

A. Training modules approved by the division shall be provided by New Mexico state university, cooperative extension service to address at a minimum the first nine elements:

- (1) legal requirements;
- (2) safety;
- (3) weather;
- (4) fire behavior;
- (5) smoke management;
- (6) prescribed burn techniques;
- (7) public relations;

- (8) planning;
- (9) contingencies; and
- (10) other information specific to burning in New Mexico as determined necessary or appropriate.

B. The division shall develop the burn plan writing curriculum and course or may substitute an equivalent NWCG course.

C. The division shall develop the pile burn manager certification refresher curriculum and course.

D. The division shall develop the broadcast burn manager certification refresher curriculum and course.

E. The division shall make available information about any division approved substitute courses on the division's website and in its offices.

F. The division shall post notice of prescribed burning opportunities on the division website and may provide other notifications such as posting in division offices. Organizations or entities may provide prescribed burning opportunities and may post opportunities by any means.

[19.20.5.11 NMAC – N, 6/13/2023]

19.20.5.12 APPLICATION FOR CERTIFICATION:

A. The division shall develop application forms for certification, which shall include the applicant's name, address, phone number, e-mail address, prescribed burning experience and training and the certification for which the individual is applying, and to document completion of certification requirements.

B. Applicants shall submit applications with proficiency workbooks, training certificates, letters of experience records and any other relevant materials to the division.

C. Review of applications for certification.

(1) Applicants shall submit completed documentation of courses and field experience to the division.

(2) The division shall provide the committee with applications to review.

(3) The committee shall document its decision to approve or deny certification and the documentation shall be available to the applicant upon request.

D. The division shall issue the certification to the applicant or notify the applicant in writing of the denial and specify the reasons for denial.

E. Applicants may appeal a certification denial in writing to the state forester within 30 days of the denial. Applicant shall provide a written response stating why the application should not have been denied. The state forester shall review the application and denial and the applicant's appeal and either provide a written decision upholding the denial or issue the requested certification.

[19.20.5.12 NMAC – N, 6/13/2023]

19.20.5.13 ESTABLISHMENT OF COMMITTEE:

A. The division shall establish a committee to review applications for prescribed burn manager certification and provide oversight of the development and updating of training modules, refresher courses and recertification and cross-walk the training modules with other training and experiences.

B. Members of the committee shall include one division employee appointed by the state forester, one non-governmental organization representative and one council member representative. Ad-hoc members may be added at the request of the committee or the state forester.

C. Terms for the non-governmental organization and council member shall be for two years.

D. Minimum qualifications to serve on the committee as a non-governmental organization representative or council member representative include two years' experience planning and implementing prescribed burns.

E. Committee members may be nominated by submitting a letter with a description of qualifications to the state forester. The division shall post notice when nominations for committee members are being taken on the division's website.

F. The state forester shall select and appoint the committee members and shall have the authority to remove committee members prior to the end of their terms or replace the division employee appointed to the committee at the state forester's sole discretion.

[19.20.5.13 NMAC – N, 6/13/2023]

19.20.5.14 FEES:

[RESERVED]

CHAPTER 21: ENDANGERED PLANTS

PART 1: GENERAL PROVISIONS [RESERVED]

PART 2: ENDANGERED PLANT SPECIES LIST AND COLLECTION PERMITS

19.21.2.1 ISSUING AGENCY:

Energy, Minerals and Natural Resources Department, Forestry Division.

[10/29/1985, 12/23/1991, 8/31/1995; 19.21.2.1 NMAC - Rn & A, 19 NMAC 21.2.1, 11/30/2006]

19.21.2.2 SCOPE:

All persons who take, possess, transport, export from the state, process, sell or offer for sale or shipment an endangered plant species.

[8/31/1995; 19.21.2.2 NMAC - Rn, 19 NMAC 21.2.2, 11/30/2006; A, 7/28/2020]

19.21.2.3 STATUTORY AUTHORITY:

Section 75-6-1 NMSA 1978 directs the energy, minerals and natural resources department to investigate all plant species in the state to develop information relating to population, distribution, habitat needs, limiting factors and other biological and ecological data, and to determine conservation measures and requirements necessary for survival. The department shall establish a list of endangered plant species based upon the investigations. It also authorizes the department to prohibit the taking, possession, transportation, exportation from the state, processing, sale or offer for sale or shipment of listed plants or plant materials, except for permitted scientific purposes or propagation and transplantation activities that enhance the survival of endangered species.

[10/29/1985, 12/23/1991, 8/31/1995; 19.21.2.3 NMAC - Rn & A, 19 NMAC 21.2.3, 11/30/2006; A, 7/28/2020]

19.21.2.4 DURATION:

Permanent.

[8/31/1995; 19.21.2.4 NMAC - Rn, 19 NMAC 21.2.4, 11/30/2006]

19.21.2.5 EFFECTIVE DATE:

August 31, 1995, unless a later date is cited at the end of a section.

[10/29/1985, 12/23/1991, 8/31/1995; 19.21.2.5 NMAC - Rn & A, 19 NMAC 21.2.5, 11/30/2006]

19.21.2.6 OBJECTIVE:

To establish rules to implement Section 75-6-1 NMSA 1978 including establishing a list of endangered plant species.

[8/31/1995; 19.21.2.6 NMAC - Rn & A, 19 NMAC 21.2.6, 11/30/2006; A, 7/28/2020]

19.21.2.7 DEFINITIONS:

A. "Agricultural practice" means grazing and grazing management practices such as feeding, herding or gathering; ditch clearing or burning; planting; applying herbicides to cultivated fields; harvesting; mowing of hay fields or pastures; burning pastures or fields or cultivating, plowing or disking fields or similar activities; road maintenance; and the maintenance, repair or replacement of fences, dirt tanks (earthen impoundments), water tanks and troughs, wells and windmills, pumps or solar panels powering wells, loading chutes, corrals, erosion control structures and water pipelines.

B. "Applicant" means the person applying for a permit required by 19.21.2 NMAC to take endangered plants for scientific study, propagation or collection of voucher specimens or to take an endangered plant(s) where taking is incidental and not the purpose of carrying out an otherwise lawful activity. If a governmental entity is issuing a permit, lease, license, authorization, right-of-way, easement or similar document that allows a person to conduct the lawful activity (drilling, fence installation, pipeline construction, etc.), the applicant for an incidental take permit shall be the person conducting the lawful activity not the governmental entity.

C. "Department" means the energy, minerals and natural resources department.

D. "Endangered plant" means a plant that is a member of the species listed in 19.21.2.9 NMAC.

E. "Harm" means direct physical injury or damage to a plant that results in reduced viability of the plant, including reproductive potential and future health and growth.

F. "Permittee" means the person issued a permit by the state forester or a person required to have a permit pursuant to 19.21.2 NMAC. The permittee shall be the person responsible for the scientific study, propagation or collection of voucher specimens of endangered plants or the person undertaking a lawful activity where taking of an endangered plant(s) is incidental and not the purpose of carrying out the otherwise lawful activity. If a governmental entity is issuing a permit, lease, license, authorization, right-of-way, easement or similar document that allows a person to conduct the lawful activity (drilling, fence installation, pipeline construction, etc.), the permittee for an

incidental take permit shall be the person conducting the lawful activity not the governmental entity.

G. "Person" means an individual or entity including partnerships, corporations, associations or joint ventures and its officers, agents or employees; the state or a political subdivision of the state and its officers, agents or employees; or an agency, department or instrumentality of the United States and its officers, agents or employees.

H. "Population site" means an area of occurrence of a particular species.

I. "Specimen" means the physical parts or a plant in its entirety taken from a population site for the purpose of scientific study.

J. "State forester" means the director of the department's forestry division and the department secretary's designated representative for the purposes of administering the department's authorities and responsibilities under Section 75-6-1 NMSA 1978 including endangered plant investigations and issuance of scientific study, propagation, collection of voucher specimen or incidental take permits.

K. "Taking" means to remove, harm, kill, destroy, possess, transport, export, sell, or offer for sale any of the plants, or parts thereof, listed in 19.21.2.9 NMAC, from the places in the state of New Mexico where they naturally grow including federally owned land, private land, state owned land or land owned by political subdivisions of the state, but not tribal trust or restricted fee land or individual trust allotments. Taking does not include the

(1) incidental removal, harm, killing or destruction of endangered plants resulting from agricultural practices; or

(2) removal, harm, killing, destruction, possession or transport of endangered plants by tribal members for religious purposes.

L. "Tribal member" means a member of an Indian nation, tribe or pueblo.

M. "Voucher specimen" means an identifiable and representative specimen taken by a botanical collector from a population site for the purpose of documenting that site as occupied habitat. It shall be accompanied by pertinent information on location, habitat, collector, date taken and any other notes the collector can present concerning the population site.

[10/29/1985, 12/23/1991, 8/31/1995; 19.21.2.7 NMAC - Rn & A, 19 NMAC 21.2.7, 11/30/2006; A, 7/28/2020; A, 4/25/2023]

19.21.2.8 CRITERIA FOR INCLUSION ON THE ENDANGERED PLANT SPECIES LIST:

The following are the criteria for listing a plant as a state endangered plant:

A. the taxon is listed as threatened or endangered under the provisions of the Federal Endangered Species Act (16 U.S.C. Sections 1531 *et seq.*), or is considered proposed under the tenets of the Act; or

B. the taxon is a rare plant across its range within the state, and of such limited distribution and population size that unregulated taking could adversely impact it and jeopardize its survival in New Mexico.

[10/29/1985, 8/31/1995; 19.21.2.8 NMAC - Rn, 19 NMAC 21.2.8, 11/30/2006; A, 7/28/2020]

19.21.2.9 LIST OF NEW MEXICO STATE ENDANGERED PLANT SPECIES:

The following list of plants constitutes the New Mexico state endangered plant species list. Listed are the plant's scientific name, its common name and the criterion for inclusion by the subsection in 19.21.2.8 NMAC:

Agalinis calycina (Leoncita false-foxglove)	Subsection B of 19.21.2.8 NMAC
Aliciella formosa (Aztec gilia)	Subsection B of 19.21.2.8 NMAC
Allium gooddingii (Goodding's onion)	Subsection B of 19.21.2.8 NMAC
Amsonia tharpia (Tharp's bluestar)	Subsection B of 19.21.2.8 NMAC
Argemone pinnatisecta (Sacramento prickly-poppy)	Subsection A of 19.21.2.8 NMAC
Asplenium scolopendrium var. americanum (American Hart's-tongue fern)	Subsection A of 19.21.2.8 NMAC
Astragalus humillimus (Mancos milkvetch)	Subsection A of 19.21.2.8 NMAC
Peniocereus greggii (night-blooming cereus)	Subsection B of 19.21.2.8 NMAC
Castilleja ornata (Swale paintbrush)	Subsection B of 19.21.2.8 NMAC
Castilleja tomentosa (Tomentose paintbrush)	Subsection B of 19.21.2.8 NMAC
Cirsium vinaceum (Sacramento Mountains thistle)	Subsection A of 19.21.2.8 NMAC
Cirsium wrightii (Wright's marsh thistle)	Subsection B of 19.21.2.8 NMAC
Cleome multicaulis (slender spiderflower)	Subsection B of 19.21.2.8 NMAC
Coryphantha robustispina ssp. scheeri (Scheer's pincushion cactus)	Subsection B of 19.21.2.8 NMAC
Cylindropuntia viridiflora (Santa Fe cholla)	Subsection B of 19.21.2.8 NMAC
Cymopterus spellenbergii (Spellenberg's springparsley)	Subsection B of 19.21.2.8 NMAC
Cypripedium parviflorum var. pubescens (golden lady's slipper)	Subsection B of 19.21.2.8 NMAC
Echinocereus fendleri var. kuenzleri (Kuenzler's hedgehog cactus)	Subsection A of 19.21.2.8 NMAC
Erigeron hessii (Hess' fleabane)	Subsection B of 19.21.2.8 NMAC

Erigeron rhizomatus (Zuni fleabane)	Subsection A of 19.21.2.8 NMAC
Eriogonum gypsophilum (gypsum wild buckwheat)	Subsection A of 19.21.2.8 NMAC
Escobaria duncanii (Duncan's pincushion cactus)	Subsection B of 19.21.2.8 NMAC
Escobaria organensis (Organ Mountain pincushion cactus)	Subsection B of 19.21.2.8 NMAC
Escobaria sneedii var. leei (Lee's pincushion cactus)	Subsection A of 19.21.2.8 NMAC
Escobaria sneedii var. sneedii (Sneed's pincushion cactus)	Subsection A of 19.21.2.8 NMAC
Escobaria villardii (Villard's pincushion cactus)	Subsection B of 19.21.2.8 NMAC
Hedeoma todsenii (Todsens pennyroyal)	Subsection A of 19.21.2.8 NMAC
Helianthus paradoxus (Pecos sunflower)	Subsection A of 19.21.2.8 NMAC
Hexalectris colemanii (Coleman's coralroot)	Subsection B of 19.21.2.8 NMAC
Hexalectris nitida (shining coralroot)	Subsection B of 19.21.2.8 NMAC
Hexalectris arizonica (crested coralroot)	Subsection B of 19.21.2.8 NMAC
Ipomopsis sancti-spiritus (Holy Ghost ipomopsis)	Subsection A of 19.21.2.8 NMAC
Lepidospartum burgessii (gypsum scalebroom)	Subsection B of 19.21.2.8 NMAC
Lilium philadelphicum (wood lily)	Subsection B of 19.21.2.8 NMAC
Linum allredii (Allred's flax)	Subsection B of 19.21.2.8 NMAC
Opuntia arenaria (sand prickly pear)	Subsection B of 19.21.2.8 NMAC
Pediocactus knowltonii (Knowlton's cactus)	Subsection A of 19.21.2.8 NMAC
Pediomelum pentaphyllum (Chihuahua scurfpea)	Subsection B of 19.21.2.8 NMAC
Penstemon metcalfei (Metcalf's beardtongue)	Subsection B of 19.21.2.8 NMAC
Polygala rimulicola var. mescaleorum (San Andres milkwort)	Subsection B of 19.21.2.8 NMAC
Puccinellia parishii (Parish's alkali grass)	Subsection B of 19.21.2.8 NMAC
Sclerocactus cloverae (Clover's cactus)	Subsection B of 19.21.2.8 NMAC
Sclerocactus mesae-verdae (Mesa Verde cactus)	Subsection A of 19.21.2.8 NMAC
Scrophularia macrantha (Mimbres figwort)	Subsection B of 19.21.2.8 NMAC
Spiranthes magnicamporum (lady tresses orchid)	Subsection B of 19.21.2.8 NMAC
Townsendia gypsophila (gypsum Townsend's aster)	Subsection B of 19.21.2.8 NMAC

[10/29/1985, 12/23/1991, 8/31/1995; 19.21.2.9 NMAC - Rn & A, 19 NMAC 21.2.9, 11/30/2006; A, 1/15/2019; A, 7/28/2020; A, 4/25/2023]

19.21.2.10 PROTECTION:

The taking of endangered plants, other than pursuant to a permit issued by the state forester, is prohibited.

[19.21.2.10 NMAC – N, 4/25/2023]

19.21.2.11 INCIDENTAL TAKE PERMIT:

The state forester may issue, issue with conditions or deny requests for an incidental take permit to allow a permittee to take endangered plants so long as taking is incidental to and not the purpose of carrying out an otherwise lawful activity. Such requests shall be subject to the following requirements.

A. The state forester may issue an incidental take permit only if the applicant submits a completed application on a form designated by the state forester that contains the following:

(1) the impact on the species that will likely result from the taking including the number of endangered plants to be taken;

(2) information and analysis that establishes that such taking will not appreciably reduce the likelihood of the survival and recovery of the species in the wild including range wide and local species status, number of endangered plants in the activity area, number of endangered plants in the activity area taken, number of endangered plants in the activity area avoided, direct and indirect effects on the species and population resulting from the activity, disturbance frequency and intensity, cumulative effects resulting from the activity and interrelated effects affecting the species' survival and any supporting documentation;

(3) the best management practices and mitigation activities the applicant will use to avoid, minimize and mitigate the impacts to the species from such a taking during the implementation of the proposed activity (e.g., fencing off areas with endangered plants during construction period, saving topsoil layer and returning to site after construction, dust mitigation, seed collection, adjusting or reducing project footprint, biological monitoring on site during construction); and

(4) signed commitment that applicant will implement the best management practices and mitigation activities and submit a written report upon completion of the practices and activities.

B. An application must also include

(1) the applicant's name, address, phone number, email address and, if applicable, name and title of the applicant's authorized representative;

(2) the location of the proposed activity with a map, location coordinates (if available) and size (acreage) of proposed activity;

- (3) description of the proposed activity;
- (4) property ownership; and
- (5) a signed certification by the applicant that states that the applicant assumes complete responsibility for any resulting impacts on endangered plants or the occupied habitat of such plants caused by the activity.

C. An incidental take permit application for an endangered plant also listed under federal law must be accompanied by United States department of the interior, fish and wildlife service consultation response or biological opinion if federal law requires the response or biological opinion.

D. The state forester may authorize or require transplantation of endangered plants as a condition of an incidental take permit if the applicant demonstrates the need for transplantation or the state forester otherwise determines it is necessary. Where transplantation is proposed, in addition to the information required by Subsection A of 19.21.2.11 NMAC, the applicant shall:

- (1) explain the need for transplantation;
- (2) identify the number of plants to be transplanted;
- (3) explain the transplantation method/protocol to be employed;
- (4) identify the site to which the plants will be taken for transplantation and describe the long-term protections provided at the site;
- (5) identify the timeline for the proposed transplantation;
- (6) describe the monitoring plan for transplantation; and
- (7) include the name and qualifications of the person carrying out the transplantation.

E. If the state forester denies an application for an incidental take permit or issues an incidental take permit with conditions, the state forester shall provide the reasons for the denial or conditions in writing.

F. A permittee may not transfer an incidental take permit without the state forester's written approval.

G. The state forester's issuance of an incidental permit is not authorization to conduct the proposed activity; the incidental take permit only authorizes the incidental take. If the permittee does not own the land where the activity will occur, the permittee shall also possess or obtain the landowner's authorization for the incidental take if the

landowner requires. A permittee shall comply with other applicable federal, state or local laws; possess or obtain permits, licenses or other authorizations other entities require; and if not the owner of the land where the activity will occur, possess or obtain the landowner's authorization to conduct the activity or use the land for the activity.

H. The division does not require a person conducting an activity to survey to determine the existence of endangered plant(s), but this does not relieve the applicant to conduct surveys that may be required by federal, other state or local agencies.

I. Emergency response. The following are exempt from the requirement to obtain an incidental take permit: law enforcement or emergency responses or other federal, state or local agency civil actions, whether or not undertaken by or in coordination with the division, that are necessary to prevent or respond to immediate threats to public health, safety or environment, including firefighting and flood management or controlling, containing and capturing releases of hazardous or harmful materials. If the division is not involved in the emergency response, it should be notified of the response as soon as practicable. Any known endangered plant(s) within the area of emergency response should be monitored to the extent practicable so that any adverse effects can be avoided or mitigated.

[19.21.2.11 NMAC – N, 4/25/2023]

19.21.2.12 PERMITS FOR SCIENTIFIC STUDY OR PROPAGATION:

A. The state forester may also issue permits to take specimens for the purpose of conducting scientific studies that enhance understanding of the distribution of an endangered plant species, or will generate new knowledge in the genetic, anatomical, chemical, morphological, life history or in other relevant areas of research enhancing the understanding of the conditions required for survival of an endangered plant species; or for propagation activities that will enhance the survival of endangered plant species. If the state forester denies an application for a permit or issues a permit with conditions, the state forester shall provide the reasons for the denial or conditions in writing.

B. The state forester may deny applications for scientific study or propagation permits in locations where endangered plant survival is especially precarious.

C. Each person applying for a scientific study or propagation permit must demonstrate sufficient expertise to carry out the permitted activities in a competent manner. The following information may be used to support the request for a permit: education in botany or related area, field experience, collection numbers, accessions into a recognized herbarium, publications and recommendations from recognized authorities.

D. The permittee's or permittee's representative's signature on the permit acknowledges willingness to comply with all applicable laws, rules or regulations and permit conditions.

E. A state permit to take endangered plants for scientific study or propagation is not required for federal employees working within the lands of their jurisdiction, nor for activities on tribal trust or restricted fee lands or individual trust allotments.

F. A permittee may not transfer a scientific study or propagation permit without the state forester's written approval.

[19.21.2.12 NMAC – Rn & A, 19.21.2.10 NMAC, 4/25/2023]

19.21.2.13 GENERAL PROVISIONS FOR SCIENTIFIC STUDY OR PROPAGATION:

A. When a permittee takes specimens pursuant to a scientific study permit, the permittee shall deposit at least one voucher specimen at either the university of New Mexico herbarium or New Mexico state university herbarium. When possible, the permittee shall take specimens in such a way as to not reduce the population (e.g., take a single stem from an herbaceous perennial, leaving the root intact, or other methods appropriate to the particular species).

B. The permittee or permittee's representative shall carry a copy of the scientific study or propagation permit at all times during the collection and transportation of endangered plants.

C. A scientific study or propagation permit for an endangered plant that is also listed under federal law must be accompanied by the United States department of the interior, fish and wildlife service recovery permit.

D. A scientific study or propagation permit does not extend to the permittee the privilege to trespass or enter on lands without the owner's permission. The permittee should contact the appropriate management agency or landowner before beginning studies or taking specimens on lands the permittee does not own or manage.

[19.21.2.13 NMAC – Rn & A, 19.21.2.11 NMAC, 4/25/2023]

19.21.2.14 VOUCHER SPECIMENS:

A. The state forester may issue a permit to take endangered plant voucher specimens during botanical inventories and environmental surveys for the purposes of species verification and documentation of population sites.

B. Taking specimens for the sole purpose of exchange with other herbaria is prohibited.

C. The collection of voucher specimens shall make no long-term detrimental effect on the population. The permittee may take a maximum of three specimens, if the population is sufficient. If the population is very small and the taking of a single individual is detrimental, then the state forester may condition the permit so that the permittee may take only a fragment of an individual for voucher purposes.

D. The permittee shall deposit at least one specimen of the three taken from each locality at the university of New Mexico herbarium or New Mexico state university herbarium. The permittee may send duplicates to the western New Mexico university herbarium, government agency collections within New Mexico or herbaria in other states that are formally listed in index herbariorum. The label affixed to each specimen shall contain information on collection location, description of the habitat, collector's name, date of collection and estimated size of the population.

E. To assist in the identification and preservation of endangered plant species in New Mexico, permittees shall report all permitted collections of voucher specimens to the state forester by December 31 of each year. The report shall contain the voucher specimen label information and the place or places of deposition of specimens.

[19.21.2.14 NMAC – Rn, 19.21.2.12 NMAC, 4/25/2023]

19.21.2.15 PERMIT APPROVAL:

The state forester shall only issue a permit if the application meets the applicable requirements in 19.21.2.11, 19.21.2.12, 19.21.2.13 or 19.21.2.14 NMAC for approval of an incidental take permit, scientific study, propagation or collection of voucher specimen permit. The state forester may not approve an application for a permit if an applicant (a) has taken an endangered plant outside the scope of a prior permit's provisions or without a permit, (b) otherwise failed to comply with a prior permit, (c) provided false information on a permit application or (d) attempted to transfer a prior permit without the state forester's written approval or allow someone else to use a prior permit.

[19.21.2.15 NMAC – Rn & A, 19.21.2.13 NMAC, 4/25/2023]

19.21.2.16 PERMIT AMENDMENT:

A permittee shall submit a written application to the state forester to request an amendment to a permit. The application shall describe the amendment requested and explain why the amendment is needed.

[19.21.2.16 NMAC – N, 4/25/2023]

19.21.2.17 PERMIT REVOCATION:

A. The state forester may revoke a permit for actions or events including taking of endangered plants outside the scope of the permit's provisions or without a permit, failure to comply with the permit, discovery that any of the reasons that would have

resulted in the state forester not approving a permit application exist, failure to deposit a voucher specimen in a designated New Mexico herbarium as required by Subsection A of 19.21.2.13 NMAC for a scientific study permit or by Subsection D of 19.21.2.14 NMAC for voucher specimen permits, taking specimens under a permit for commercial use, providing false information on the permit application, attempting to transfer the permit without the state forester's prior written approval or allowing someone else to use the permit.

B. The state forester shall provide 30 days' prior written notice of the permit revocation to the permittee unless such notice will result in long-term detrimental effect on the endangered plant population's survival. If such notice will result in long-term detrimental effect on the endangered plant population's survival, the state forester shall provide at least 48 hours written notice.

[19.21.2.17 NMAC – Rn & A, 19.21.2.14 NMAC, 4/25/2023]

19.21.2.18 PERMIT TERM:

The permit term shall be for the scope of the activity or five years, whichever is less. If the activity is not completed within five years, the permittee shall apply for a new permit. The scope of the activity does not include subsequent maintenance, repair or replacement, which are considered separate activities.

[19.21.2.18 NMAC – N, 4/25/2023]

19.21.2.19 PENALTIES:

A. Pursuant to Section 75-6-1 NMSA 1978, violation of 19.21.2 NMAC is a misdemeanor punishable by a fine of not less than \$300, nor more than \$1,000 or imprisonment for a term of not more than 120 days or both. Each individual endangered plant taken without a valid permit issued by the state forester is a violation of 19.21.2.10 NMAC; each individual incidence or occurrence is a violation of other provisions in 19.21.2 NMAC (e.g., failing to obtain a required permit, providing false information on a permit application, failing to comply with a permit condition).

B. Any law enforcement officer may seize any endangered plants taken, possessed, transported, exported, processed, sold or offered for sale or shipped in violation of 19.21.2 NMAC.

[19.21.2.19 NMAC – Rn & A, 19.21.2.15, 4/25/2023]

19.21.2.20 TRANSITION:

The prohibition on removing, harming, killing or destroying endangered plants without a permit issued by the state forester shall not apply to ground-disturbing activities for which a person received a permit or similar authorization from a federal, state or local

government agency prior to April 25, 2023 so long as the ground disturbance commences by October 22, 2023.

[19.21.2.20 NMAC – N, 4/25/2023]

CHAPTER 22-24: [RESERVED]

CHAPTER 25: ADMINISTRATION AND USE OF WATER - GENERAL PROVISIONS

PART 1: GENERAL PROVISIONS [RESERVED]

PART 2: HEARINGS UNIT PROCEDURES

19.25.2.1 ISSUING AGENCY:

Office of the State Engineer ("OSE").

[19.25.2.1 NMAC - Rp, 19 NMAC 25.2.1, 8-30-2013]

19.25.2.2 SCOPE:

This rule governs the conduct and procedures of hearings before the state engineer conducted pursuant to NMSA 1978, Sections 72-2-16, 72-2-17, and 72-2-18. This rule shall not govern public rulemaking proceedings held pursuant to NMSA 1978, Section 72-2-8, expedited proceedings under NMSA 1978, Section 72-2-9.1, or appeals from a district water master to the state engineer in accordance with NMSA 1978, Section 72-3-3.

[19.25.2.2 NMAC - Rp, 19 NMAC 25.2.2, 8-30-2013]

19.25.2.3 STATUTORY AUTHORITY:

NMSA 1978, Section 72-2-8 (authorizing state engineer to adopt regulations prescribing administrative procedures), Section 72-2-12 (authorizing state engineer to promulgate rules in connection with hearings and to appoint hearing examiners), Section 72-2-16 (granting state engineer authority to conduct hearings prior to appeal), Section 72-2-17 (establishing certain requirements for hearings) and Section 72-12-18 (granting state engineer authority to issue compliance orders).

[19.25.2.3 NMAC - Rp, 19 NMAC 25.2.3, 8-30-2013]

19.25.2.4 DURATION:

Permanent.

[19.25.2.4 NMAC - Rp, 19 NMAC 25.2.4, 8-30-2013]

19.25.2.5 EFFECTIVE DATE:

August 30, 2013, unless a later date is cited at the end of a section.

[19.25.2.5 NMAC - Rp, 19 NMAC 25.2.5, 8-30-2013]

19.25.2.6 OBJECTIVE:

The objective of this rule is to establish procedures that govern hearings before the state engineer and the hearings unit and to ensure the expeditious and orderly handling of all administrative and enforcement matters consistent with the requirements of due process.

[19.25.2.6 NMAC - Rp, 19 NMAC 25.2.6, 8-30-2013]

19.25.2.7 DEFINITIONS:

Unless otherwise defined below, terms used in this rule have the same meaning as set forth in NMSA 1978, Chapter 72. The use of a masculine pronoun to refer to individuals is for grammatical convenience and is intended to be gender neutral.

A. "Administrative litigation unit" or "ALU" means that division of the OSE designated to provide legal counsel to and legal representation of the water rights division ("WRD") in administrative hearings and to represent the state engineer in judicial proceedings.

B. "Aggrieved applicant" means an applicant whose unprotested application has been acted on by the WRD without hearing, and who disagrees with the action or decision and files a timely request for a hearing on the merits of the application.

C. "Applicant" means a person who has filed an application involving the beneficial use of water with the OSE.

D. "Alternative dispute resolution ("ADR") officer" means that person appointed or designated by the state engineer to facilitate settlement or alternative resolutions of disputed matters pending before the hearing unit.

E. "Compliance order" means a written administrative directive issued on the authority of the state engineer pursuant to NMSA 1978, Section 72-2-18 that states the specific nature of an alleged violation of a state engineer-issued permit, license or order, or any statute, regulation, or court order subject to administration by the state engineer; and that requires compliance by the respondent within a specified time period.

F. "Docket" means the hearings unit's record containing the date of entry of a case, its numerical designation, and the calendar of those cases awaiting action through the hearing process.

G. "Ex parte communication" means a communication regarding substantive issues between a party to a matter pending before the hearings unit and the hearing examiner or state engineer, without all other parties being present or having received prior notice of such communication.

H. "Hearing" means a formal proceeding or hearing before the state engineer or his hearing examiner. This rule governs the following three types of hearings:

(1) **"compliance hearing"** that provides a person named in a compliance order an opportunity to respond to or contest the alleged violation of law or order;

(2) **"aggrieved application hearing"** that provides an aggrieved applicant an opportunity to be heard on the merits of the application; or

(3) **"protested application hearing"** that provides an applicant whose application has been protested and any protestant an opportunity to be heard on the merits of the application, including whether it will be detrimental to the objector's water right or otherwise result in impairment to existing water rights, be contrary to the conservation of water within the state, or detrimental to the public welfare of the state.

I. "Hearing examiner" means that person appointed or designated by the state engineer to conduct hearings with respect to matters properly before the state engineer. Hearing examiners report directly to the state engineer and are assigned to the hearings unit. For purposes of this rule, references to a hearing examiner shall apply to the state engineer when he presides at hearing.

J. "Hearings unit" means the division of the OSE comprising the hearing examiners, alternative dispute resolution officers and the hearings unit administrator.

K. "Hearings unit administrator" means that person designated by the state engineer to direct, provide and perform administrative duties in support of the hearing process and serve as the official custodian of the hearings unit files and official record of proceedings.

L. "Party" means an applicant, respondent, or protestant who has paid any required hearing fees and appears and participates in a hearing. The WRD shall be a party to every proceeding. A party other than an individual must be represented by an attorney licensed in the state of New Mexico.

M. "Person" means an individual, firm, corporation, or other entity, or a political subdivision of the state or its agencies, instrumentalities and institutions.

N. "Pro se party" means an individual who appears on his or her own behalf and participates in a hearing without legal representation by an attorney.

O. "Protestant" means a person who files a timely written protest to an application in the form and manner required by the WRD.

P. "Respondent" means a person named in a compliance order.

Q. "Water rights division" or "WRD" means the OSE division designated by the state engineer to process applications and administer water rights pursuant to the permits and licenses issued by and declarations filed with the state engineer and water rights as adjudicated by decree pursuant to NMSA 1978, Section 72-4-19.

[19.25.2.7 NMAC - Rp, 19 NMAC 25.2.7, 8-30-2013]

19.25.2.8 LIBERAL CONSTRUCTION:

This rule shall be liberally construed to carry out its purpose.

[19.25.2.8 NMAC - Rp, 19 NMAC 25.2.8, 8-30-2013]

19.25.2.9 DOCKETING AND STANDING:

A. WRD transmittals. WRD shall transmit timely for hearing by aggrieved applicants and any timely protests to an application to the ALU for filing with the hearings unit through a request to docket the matter for hearing.

B. Timeliness. An aggrievement by the applicant to initial action taken by the WRD on an application and any protest to an application must be timely filed.

(1) Aggrieved applications. An aggrieved applicant must file a request for a hearing within 30 days of the date of receipt, by certified mail, of WRD's action on an application. If no request for hearing is filed with the WRD within 30 days, the state engineer's findings, decision or action taken through the WRD shall be conclusive.

(2) Protests to applications. Protests to an application must be filed on or after the date of the first publication of notice of application and before the close of business on the tenth day after the last date of publication. Only persons filing a timely protest may participate at hearing with the applicant and ALU. Motions to intervene are disallowed and shall be rejected by the hearings unit.

C. Request to docket a hearing. The ALU will file a request to docket a proceeding within a reasonable amount of time of its receipt of a request for hearing transmitted by the WRD. The ALU pleading shall:

(1) request that the hearings unit administrator issue a notice of scheduling conference that identifies a hearing examiner, and sets the date for the scheduling conference;

(2) state the grounds, if any, to extend or delay the hearing, including but not limited to, prior pending hearings, or ongoing settlement negotiations among parties to the hearing;

(3) include background documents to the hearings unit administrator such as a copy of the application, publication materials, written protests accepted by the WRD, and other relevant information that the ALU determines may be useful for docketing a proceeding; and

(4) provide a list of parties entitled to notice of the proceedings.

D. Compliance orders. A respondent named in a compliance order may request a hearing on the alleged violations, pursuant to the procedures set forth in 19.25.2.23 NMAC.

E. Special procedure for standing of protestant upon docketing. The standing of protestants may be challenged by the applicant, WRD, or the hearing examiner at any point once an application has been docketed by the hearings unit: Upon such challenge, the protestant shall be required:

(1) if alleging impairment to the protestant's water right, to provide evidence of a valid existing water right, including but not limited to, the protestant's OSE water right file number(s) or if there is no OSE file number, then a description of the affected water right(s) that specifies the place and purpose of use, amount of water placed to beneficial use, point of diversion and the water source (aquifer or stream) by name, and priority date; or

(2) if alleging conservation or public welfare issues, to provide evidence that the protestant will be substantially and specifically affected by the granting of the application.

[19.25.2.9 NMAC - N, 8-30-2013]

19.25.2.10 HEARING UNIT DOCKET AND FEES:

A. Docketing procedures. The hearings unit shall maintain a docket of matters to be heard and a hearing calendar. Upon receipt of a docketing request from the ALU, the hearings unit administrator shall assign a hearing examiner and a docket number. The hearings unit administrator or the hearing examiner shall issue a notice that:

(1) shall advise the parties of the docketing of the matter, the hearing number and caption, and procedural requirements concerning filing and service of documents with the hearings unit, including electronic service and posting of documents;

(2) shall set a deadline for the applicant and all protestants to pay any required hearing fee;

(3) may set a deadline for all protestants to identify in writing, by OSE file number or other description, all water rights under the protestant's ownership or control that may be adversely affected by the application, including a description of the affected water right(s) that specifies the place and purpose of use, amount of water placed to beneficial use, point of diversion and the water source (aquifer or stream) by name, and priority date, together with a statement explaining how the protestant will be substantially and specifically affected by the granting of the application;

(4) may set a date and time for a scheduling conference to be held, no earlier than 10 business days after the deadline for payment of fees and identification of affected water rights;

(5) may direct one or more parties to file and serve on all other parties a proposed date for scheduling conference and a proposed pre-hearing order that includes proposed procedural dates for discovery, motions and hearing, identifies all issues the party proposes to address at hearing, and sets forth the party's position on each known or anticipated issue; and

(6) may include a draft form of scheduling order and hearing instructions for parties.

B. Hearing fees. Pursuant to NMSA 1978, Section 72-2-6(J), the state engineer shall require a nonrefundable payment of twenty-five dollars (\$25.00) from an applicant and from each protestant.

C. Copying and other fees. The hearings unit may impose fees for copying papers, testimony, or records as are reasonable, in accordance with Section 72-2-6 and based on charges set by the state records center for similar types of copies. The hearing examiner shall order that costs associated with the issuance of any subpoena, as further described by this rule, be borne by the requesting party.

D. Failure to comply with fee or docketing requirements. If an applicant fails to make the payment as required, the hearing examiner shall deny the application and dismiss the docket. If a protestant fails to make the payment as required, the protest shall be dismissed by the hearing examiner. Failure to comply with any other docketing requirement may result in dismissal of an application or a party from the proceedings, the exclusion of information or issues at hearing, or other limitation as determined by the hearing examiner.

E. Inactive dockets. If a matter docketed for hearing has been inactive for six months, the hearing examiner may place the case on the hearings unit's inactive docket, and the hearings unit administrator shall maintain a separate docket list for inactive cases. If a matter placed on the inactive docket has not had any activity for six months thereafter, the hearing examiner, after notice to the parties, may deny the application. In no event shall any matter remain on the inactive docket for more than 12 months without an order so specifying from the hearing examiner.

[19.25.2.10 NMAC - Rp, 19 NMAC 25.2.13, 8-30-2013]

19.25.2.11 REPRESENTATION OF PARTIES:

Parties may be represented by an attorney or may appear pro se, as described below, in hearings before the state engineer or designated hearing examiner. All communications by parties with the hearings unit shall be made through a party's attorney or a person appearing pro se, unless otherwise provided for by the hearing examiner.

A. Attorneys. An attorney representing a party shall enter his appearance in the record. Withdrawal or substitution of counsel shall be by notice to the parties and hearings unit, and all issues relating to withdrawal or substitution of counsel shall be resolved in a form and manner at the discretion of the hearing examiner.

B. Pro se appearance. An individual may appear as a pro se party. Parties appearing pro se shall be responsible for familiarizing themselves with this rule, the rules of civil procedure for the district courts of New Mexico, the rules of evidence governing non-jury trials for the district courts of New Mexico, the instructions for parties in administrative proceedings, and all other rules of the OSE.

C. Applicants, respondents and protestants other than a pro se party. A party that is not an individual shall be represented by an attorney.

D. Ex parte communications prohibited. There shall be no ex parte communications with the hearing examiner or the state engineer in any pending proceeding on any substantive issue unless notice is given and an opportunity afforded all parties to participate or respond. Any continued ex parte communications after a single state engineer order to cease will result in dismissal of the offending party. Routine procedural questions may be addressed to the hearings unit administrator.

[19.25.2.11 NMAC - Rp, 19 NMAC 25.2.19, 8-30-2013]

19.25.2.12 HEARINGS UNIT FILING REQUIREMENTS:

A. Filing of documents and number of copies. Written communications shall contain the name, address, and telephone number of the communicator and an appropriate reference to hearings unit files by docket and OSE file number(s) pertaining

to the subject of the communication. All motions and other pleadings shall be filed with the administrator of the hearings unit in triplicate, consisting of the original plus two copies. Motions requesting an order from the hearing examiner shall be accompanied by a proposed order and stamped, addressed envelopes for service by the hearings unit administrator of such order on all parties.

B. Rejection of documents. A document that does not reference the hearings unit's docket number and OSE file number in the caption of the document, or that is not in substantial compliance with this rule, may be rejected by the hearings unit administrator or hearing examiner. No motion or pleading requesting discovery shall be filed with the hearings unit prior to the matter being docketed by the hearings unit.

C. Date of filing. A pleading or document is considered filed on the date stamped by the hearings unit administrator, unless the pleading or document is subsequently rejected. Any pleading or document received after regular business hours will be stamped and considered filed on the next regular business day.

D. Facsimile and electronic filing. In the discretion of the hearings unit administrator, a pleading or document, not to exceed 10 pages, may be filed by facsimile transmission, subject to any additional filing requirements that may be required by the hearings unit administrator. Such facsimile transmissions must be received before 4 p.m., mountain standard or daylight time. When feasible, the hearing examiner may order pleadings and other documents to be filed electronically if electronic filing procedures by the hearings unit have been established.

E. Service. Except as otherwise provided by this rule or by order of the hearing examiner, a party shall serve upon all parties to the proceeding all pleadings and documents that are filed with the hearings unit. Service shall be made by delivering or mailing a copy to the party's counsel and to any individual party appearing pro se. Proof of service shall be made by a certificate of service, which shall include a list of all parties served. Upon agreement, service among parties may be by electronic means.

F. Notification of change of address or other information. Each party shall provide the hearings unit administrator and other parties with a current mailing address, telephone number, and facsimile information. A party shall be deemed to have received notice of all pleadings and notices mailed or sent by facsimile to the address or facsimile number of record. If a party fails to provide a current mailing address, and pleadings or notices sent to the address of record are returned by a postal service as undeliverable, the hearing examiner shall dismiss that party.

G. Amendments and withdrawal. Requests to amend or withdraw a pleading shall be made by motion or application subject to response by the WRD or other parties, and if granted shall be subject to such conditions as the hearing examiner may deem appropriate. Amendments to any pleading shall not broaden the scope of the issues originally filed unless allowed by the hearing examiner, and shall be subject to such additional notice or other responses as ordered by the hearing examiner.

H. Computation of time. The time within which an act is to be done as provided in any rule or order, when expressed in days, shall be computed by excluding the day of the act or event from which the time begins to run and including the last, except that if the last day be Saturday, Sunday, or a legal holiday, the act may be done in the next succeeding business day.

I. Extensions of time. Except as otherwise provided by law, the time by which any person is required or allowed to act under any statute, rule, or order may be extended by the hearing examiner for good cause, upon a motion made before the expiration of the period prescribed or previously extended. The filing of the motion does not toll the running of the time period prescribed.

[19.25.2.12 NMAC - N, 8-30-2013]

19.25.2.13 AUTHORITY AND DUTIES OF THE HEARING EXAMINER:

A. Powers of hearing examiner. In the absence of any limiting order, a hearing examiner appointed to hear any particular case shall have the power to regulate the proceedings before him and to perform all acts and take all measures necessary to conduct such hearing, including the following powers:

- (1)** to explain the events and requirements of the hearing process, including the use of electronic service, notice and posting on the OSE website;
- (2)** to establish a procedural schedule for the administrative proceedings and to modify procedural orders on his own motion or on motion of a party when necessary or appropriate;
- (3)** to schedule and conduct conferences and preliminary hearings when necessary or appropriate to: identify substantive issues for hearing, set a discovery schedule and hearing date, establish an official service list, address other preliminary matters, encourage settlement, and rule on preliminary motions;
- (4)** to order parties to hold appropriate settlement conferences before or during any hearing, provided that the hearing examiner shall not take part in any settlement conference unless all parties agree to his participation;
- (5)** to dismiss parties or actions;
- (6)** to apply the procedures of this rule and to grant such waivers to those procedures as he deems necessary or appropriate;
- (7)** to issue subpoenas to produce materials and to require persons to appear;
- (8)** to provide for appropriate methods of discovery;

(9) to administer oaths and affirmations;

(10) to ensure that all relevant issues relating to impairment, conservation of water within the state and the public welfare of the state are considered during the evidentiary hearing and to request, receive and make part of the record all evidence (testimony and exhibits) determined necessary to decide the issues and rule upon all objections and motions;

(11) to regulate the conduct and course of the hearing consistent with due process, including the scheduling, recessing, reconvening, and adjournment thereof;

(12) to cause a complete record of the proceedings to be made in accordance with the requirement of NMSA 1978, Section 72-2-17(C);

(13) to make a report and recommendation to the state engineer based upon the record of the proceedings; and

(14) to take such other action as may be necessary and appropriate to the discharge of these duties, consistent with the statutory authority or other authorities under which the state engineer functions and with the rules and policies of the OSE.

B. Limitation of authority. The state engineer may limit the authority of the hearing examiner to the specific consideration of enumerated issues or the performance of certain acts, such as presiding as directed at hearing, pursuant to a limiting order.

C. Subpoenas. In accordance with NMSA 1978, Section 72-2-14, the hearing examiner has the authority to issue subpoenas and to require the production of evidence in any proceeding before the state engineer, including all hearings, conferences and discovery proceedings. If a subpoena is issued, the return of service shall be filed with the hearings unit promptly after service, and shall include a certificate or affidavit attesting to service.

D. Substitution of parties. Substitution of parties may be permitted upon motion and for good cause, at the hearing examiner's discretion.

[19.25.2.13 NMAC - Rp, 19 NMAC 25.2.10, 8-30-2013]

19.25.2.14 DISQUALIFICATION:

Any party may file a motion to disqualify a hearing examiner for lack of impartiality. A motion to disqualify a hearing examiner must be filed no later than 10 days after the initial scheduling conference and shall state with specificity the grounds for disqualification. A hearing examiner shall excuse himself in a proceeding in which the hearing examiner's impartiality might reasonably be questioned, including but not limited to instances of personal bias or prejudice concerning a party or a party's attorney or

disputed evidentiary facts; or other bias or prejudice which would cause the hearing examiner to not render an impartial decision.

[19.25.2.14 NMAC - Rp, 19 NMAC 25.2.12, 8-30-2013]

19.25.2.15 SCHEDULING AND CONDUCT OF PRE-HEARING MATTERS:

The hearing examiner may establish conferences at regular times and places and at intervals sufficiently frequent for the orderly management of the proceedings. These may include scheduling conferences, status reviews, settlement conferences, motions hearings, pre-hearing conferences, and all other matters relevant to the achievement of a productive and efficient decision making process.

A. Procedural schedule. The hearing examiner shall issue a procedural order that contains a statement of the issues to be heard and sets a procedural schedule. In the absence of a specific finding and order from the hearing examiner, all discovery and motions shall be completed within 150 days from the date of the initial scheduling conference, and the final hearing shall be held within 180 days from the date of the scheduling conference. The hearing examiner may periodically conduct status reviews of the progress of the proceedings, and may issue procedural orders modifying the procedural schedule as necessary or appropriate.

B. Pre-hearing and status conferences. The hearing examiner may conduct pre-hearing or other status conferences to simplify issues for hearing; rule on or otherwise consider outstanding motions or other pleadings; address stipulations, and admissions of fact and documents; address limitations on the number of witnesses or time allocated to particular witnesses or issues at hearing, order of witness presentation and scheduling of testimony and amount of time anticipated for direct and cross examinations; and any other relevant matters that may aid in the hearing process. The orders and rulings resulting from the pre-hearing conference shall control the subsequent course of the proceedings and final hearing, unless otherwise ordered by the hearing examiner.

C. Alternative dispute resolution. The hearing examiner may order any or all parties to participate in an OSE-facilitated ADR process or to attend a settlement conference to assist in reaching a settlement at the earliest possible stage, resolve disputed facts or issues, expedite the hearing process, and conserve resources.

D. Motions hearings. The hearing examiner may rule on a motion, other than for summary judgment, based on the pleadings or may schedule a hearing on the motion, at the hearing examiner's discretion.

E. Summary judgment motions. Motions for summary judgment that are dispositive of any administrative or enforcement matter shall not be granted without a hearing. The hearing examiner shall submit a report and recommendation as to the

dispositive motion to the state engineer for final decision in accordance with 19.25.2.28 and 29 NMAC.

F. Attendance at scheduled proceedings. All parties shall attend scheduled hearings, conferences or other proceedings fully prepared to discuss all matters noticed and to address any outstanding motions or pleadings. Without good cause shown, the failure of a party to attend or be prepared to discuss those matters set to be heard shall constitute a waiver of any objection to any agreement reached or to any order or ruling made as a result of the proceeding, and may be grounds for adverse action by the hearing examiner on the pleading of the party failing to appear.

G. Scheduling of site visits. The hearing examiner may schedule site visits, subject to notice to the parties and the opportunity for parties to attend.

[19.25.2.15 NMAC - Rp, 19 NMAC 25.2.14 & 15, 8-30-2013]

19.25.2.16 PROCEDURAL REQUIREMENTS AND DEADLINES:

A. Applicability of Rules of Civil Procedure. Conduct and procedure with respect to discovery and prehearing matters before the hearing unit shall be generally consistent with the New Mexico Rules of Civil Procedure for the District Courts, except as otherwise set forth in this rule or as otherwise permitted by the hearing examiner.

B. Specificity of motions. All motions, except those made orally during a hearing, shall be in writing, specify the grounds for the motion, state the relief sought, and state whether the motion is opposed or unopposed. An opposed motion shall state that consent of the other parties to the motion was sought and not obtained, or the reason such consent was not sought. An unopposed motion shall state that concurrence of all other parties was obtained. The moving party shall submit a proposed order approved by all parties for the hearing examiner's consideration.

C. Deadline for response and reply to motions. Any party upon whom an opposed motion is served shall have 15 days to file a response. A non-moving party failing to file a timely response may be deemed to have waived any objection to the granting of the motion. The moving party may file a reply within 15 days after a response to a motion.

D. Prefiled testimony and exhibits. The hearing examiner may require advance filing of certain exhibits (subject to objections), including but not limited to copies of the application, notice, expert reports or written testimony, locational photographs or maps, and any other exhibits which may aid in an efficient hearing process. Where a proceeding involves complex and technical issues to be presented through multiple witnesses, the hearing examiner may require the filing of written testimony by witnesses in advance of the hearing.

[19.25.2.16 NMAC - Rp, 19 NMAC 25.2.9, 8-30-2013]

19.25.2.17 DISCOVERY:

No discovery shall be had on the state engineer, a hearing examiner, or ADR officer in proceedings before the hearings unit. The hearings unit favors prompt and complete disclosure and exchange of information and encourages informal arrangements among the parties for this exchange.

A. Types of discovery. Discovery shall include all depositions, written interrogatories, requests for production of documents, and requests for admissions. Parties shall have the right to take the testimony of any witnesses by deposition and may seek a subpoena for the attendance of witnesses and the production of documents or records. Parties shall make a good-faith effort to obtain public records through the relevant agency's open records process prior to requesting production of such documents from other parties.

B. Filing and service, and limitations. Discovery requests and responses, or objections thereto, and deposition transcripts, shall not be routinely filed with the hearings unit; provided however that the party making a discovery request shall file a certificate of service with the hearings unit. Interrogatories, requests for production or inspection of documents, requests for admissions and other written discovery requests shall be served upon the party to which such discovery is directed and all other parties requesting such service. Any given discovery request shall be limited to no more than a total of 50 interrogatories, requests for production of documents, and requests for admissions, including subparts, which shall be separately counted toward the limit of 50. Parties desiring copies of the written discovery materials of other parties may request copies from either party, subject to the requesting party's agreement to pay the reasonable costs of reproduction.

C. Responses, objections and supplementation. Written answers or responses to discovery requests shall be served within 30 days of service of the discovery requests, unless otherwise directed by the hearing examiner or agreed to by the parties. Written answers or responses to discovery requests shall be verified by the person providing the answer or response. Objections shall identify the request objected to and shall state with particularity the factual and legal basis for the objections, and the response to the request shall be deferred until a determination has been made on such objections. A party who has responded to a request for discovery shall reasonably and promptly amend or supplement a previous response if he subsequently obtains information which would have been responsive if the information had been available at the time the response was served.

D. Motions to compel. Parties are expected to engage in discovery in good faith for the purpose of fair and efficient presentation of evidence at hearing, and they are expected to make every good faith effort to resolve discovery disputes informally. A party may move for an order compelling discovery only if the movant has made a good faith effort to resolve the dispute and was unable to do so. Any motion for an order compelling discovery shall document the good faith efforts taken by the movant to

resolve the dispute, and shall include copies or complete restatements of the discovery requests or notices to which the movant seeks compelled responses, along with copies of any responses or objections to the subject discovery requests or notices, and any other pertinent materials.

E. Order for protection of parties, or witnesses. The hearing examiner may issue such orders for the protection of parties or witnesses from annoyances, embarrassment, or oppression as may be just and proper under the circumstances. If the hearing examiner determines that a party has not acted in good faith in propounding, undertaking, responding to, or otherwise participating in the discovery process, the order may include, but is not limited to, the exclusion of evidence, limitation of issues, or dismissal of a party.

[19.25.2.17 NMAC - Rp, 19 NMAC 25.2.9, 8-30-2013]

19.25.2.18 STIPULATIONS AND SETTLEMENTS:

Parties to a proceeding shall make a reasonable effort to stipulate to facts to be relied upon in a hearing or on appeal. Stipulations of fact or of resolutions of specific issues shall be in writing and signed or approved by all stipulating parties, and shall be filed with the hearings unit administrator, unless entered into within five days of any final hearing, whereupon the stipulation shall be presented at hearing. Objections to a stipulation shall be in writing, unless the stipulation is presented at hearing, whereupon any objections shall be presented at hearing. Settlements of all or a portion of the issues pending may be presented in writing before hearing or in writing or orally at hearing, and shall include the parties' procedural recommendation for disposition of the pending matter. The state engineer shall review and either accept, modify or reject any stipulation or settlement. If the state engineer modifies the stipulation or settlement, the parties shall have the opportunity to accept such modification or to void the stipulation. If the state engineer rejects any stipulation or settlement, the hearing shall proceed or be reconvened to take evidence on the merits of the pending matters, which may include the resolution of issues as presented in the stipulation or settlement.

[19.25.2.18 NMAC - N, 8-30-2013]

19.25.2.19 CONTINUANCE AND POSTPONEMENT:

A. Continuance of hearing. A scheduled hearing or conference may be continued with notice prior to the hearing or conference, or it may be recessed during the hearing or conference and reconvened at a later date. Grounds for continuance may include, but are not limited to: mandatory deference to the resolution of prior pending applications; limitations with regard to OSE resources available to investigate or evaluate the application and claims of the parties; and settlement of some or all issues among any or all parties.

B. Postponement of evidentiary hearing. A party may request postponement of the scheduled hearing, subject to determination by the hearing examiner. Grounds for postponement may include, but are not limited to, ongoing settlement negotiations, the unavailability of an expert witness, or the inability of a party to complete technical reports and exhibits. Repeated requests for postponement will not be viewed favorably unless good cause is presented.

[19.25.2.19 NMAC - Rp, 19 NMAC 25.2.25, 8-30-2013]

19.25.2.20 DISMISSAL OR WITHDRAWAL OF PARTY OR ACTION:

A. Dismissal of party or action for failure to participate. If the hearing examiner determines that the applicant has failed to meet his or her obligation to go forward with the application by timely participation in the administrative hearings process, the hearing examiner shall deny a protested application or shall reinstate the action by the WRD on an aggrieved application, and shall dismiss the hearing. If the hearing examiner determines that a protestant has failed to meet his burden of timely participation in the administrative hearings process, the hearing examiner shall dismiss the protestant. In the event that all protestants are dismissed, the hearing examiner may remand the application to the WRD for further action.

B. Withdrawal of request for hearing from aggrieved WRD decision. An aggrieved applicant may file a motion to withdraw the request for a hearing with the hearings unit and shall serve the motion on the ALU attorney of record. If granted, the hearing examiner shall reinstate the original decision or action of WRD. Upon motion by the applicant or the WRD, the hearing examiner may order that the application be withdrawn or remanded to WRD for other action, including but not limited to modification of the original WRD decision or action. The hearing examiner shall not grant the withdrawal of an aggrieved application once a hearing on the merits has concluded.

C. Withdrawal of protested application. A protested application may be withdrawn by the applicant by pleading filed with the hearings unit and served on the ALU attorney of record and all protestants, prior to hearing. The hearing examiner may require that upon withdrawal of a protested application, the applicant shall not file the same or substantially similar application for a specified period of time. Once the hearings unit has concluded a hearing on the merits a protested application may not be withdrawn.

[19.25.2.20 NMAC - Rp, 19 NMAC 25.2.32, 8-30-2013]

19.25.2.21 LOCATION OF HEARINGS:

All hearings shall be held in Santa Fe, New Mexico, unless otherwise ordered by the hearing examiner. Scheduling, status, and pre-hearing conferences and motions hearings shall be held in Santa Fe, New Mexico. At the discretion of the hearing examiner, any conference or hearing may be held telephonically.

19.25.2.22 CONDUCT OF HEARINGS ON AGGRIEVED AND PROTESTED APPLICATIONS:

Evidentiary hearings on the merits of a pending matter are formal, recorded proceedings at which the testimony of witnesses is taken under oath and exhibits are presented for consideration of the hearing examiner for admission as evidence in the record. The course of the hearing shall generally proceed as follows, unless otherwise directed by the hearing examiner:

A. Entry of appearances. The parties shall enter their appearances at the beginning of the hearing and shall be made through counsel of record, or individually by any pro se party.

B. Preliminary matters. The hearing examiner will address preliminary matters, including outstanding motions, the presentation and admission of exhibits deemed admitted pursuant to the scheduling order, stipulations, and other items not previously ruled on as deemed appropriate.

C. Opening statements. At the discretion of the hearing examiner, the parties may present brief opening statements summarizing their positions concerning the issues in dispute, prior to the presentation of any witnesses.

D. Order of witnesses. Unless otherwise directed by the hearing examiner, evidence will be presented in the order of applicant's direct case, including witnesses and exhibits, in support of its position; protestant(s)' responsive case, including witnesses and exhibits, in support of their position and in rebuttal to applicant's position and evidence; the WRD's presentation of its direct and rebuttal case, including direct witnesses and exhibits and rebuttal witnesses and exhibits; and applicant's rebuttal case. Surrebuttal shall only be allowed at the discretion of the hearing examiner.

E. Cross-examination. The parties shall have a reasonable opportunity to cross-examine the witnesses of opposing parties. Cross-examination shall be limited to matters addressed on direct examination of the witness or matters contained in exhibits prepared by the witness, unless otherwise permitted by the hearing examiner. The hearing examiner may limit repetitious cross-examination.

F. Supplementation of testimony. Testimony of a witness may, at the discretion of the hearing examiner and subject to cross examination and objection, be supplemented with graphics or computerized presentations, provided that the presenting party has given advance notice of its intent to do so, the projected images presented are disclosed as proposed exhibits pursuant to the scheduling order, and the proposed exhibit number or identifiers are clearly marked and visible on each graphic presentation.

G. Closing statements. Closing statements may be allowed at the discretion of the hearing examiner.

H. Conduct of participants. All parties, witnesses, counsel, staff, spectators and other persons shall conduct themselves in a respectful and orderly manner. Disruptions of any kind at hearings shall not be permitted. Any disregard of the rulings of the hearing examiner on matters of order and procedure by any person may be noted on the record and the hearing examiner may take appropriate action pursuant to Chapter 72 of the New Mexico Statutes Annotated, the Rules of Civil Procedure for District Courts and the Rules of Professional Conduct. The hearing examiner may adjourn, recess, or continue any hearing if the behavior of any person interferes with the proper and orderly conduct of a hearing, and for any other cause or circumstance that may prevent the proper conduct of a hearing.

[19.25.2.22 NMAC - N, 8-30-2013]

19.25.2.23 COMPLIANCE ORDERS AND ENFORCEMENT HEARINGS:

A. Compliance order. A compliance order shall consist of a written statement that identifies the subject water right or docket number and describes the following with specificity:

- (1) acts or omissions with which the respondent is charged;
- (2) citation of the statute, rule, order, or other authority that the respondent is alleged to have violated, or any other grounds for the compliance order;
- (3) directive as to whether the alleged violation must cease immediately, or a specific time period in which a respondent must come into compliance.

B. Service. The WRD shall cause the compliance order to be served upon the respondent by certified mail, return receipt requested.

C. Evidence of compliance. The respondent shall have 10 days to contact the water master by telephone, email, or in writing to demonstrate that the alleged violation has ceased or that the respondent has come into compliance. Upon confirmation of compliance from the water master, WRD shall request dismissal of the docket.

D. Request for hearing. If the respondent desires a hearing or otherwise contests a compliance order, the respondent shall submit a written request for hearing to the state engineer within 30 days of receipt of a compliance order.

E. Failure to request hearing. If a written request for hearing is not submitted by the respondent within 30 days after receipt of a compliance order, the order shall be final, enforceable and non-appealable.

F. Procedures for compliance hearings. The hearings unit shall establish regular hearing dates in Santa Fe for compliance orders. Requested hearings shall be held no less than 15 and no more than 60 days from the date the request is filed. The conduct of hearings on compliance orders shall be established in accordance with the general procedures and requirements set forth in this rule. The hearing examiner shall issue a written decision within five business days after the scheduled hearing date.

G. Waiver of appearance at hearing. The respondent may waive the right to appear at hearing and make oral arguments or present testimony, and instead may submit the matter to the hearing examiner for decision on written submissions and documentary evidence. All such waivers shall be made in writing and shall be final and binding upon the respondent. Upon receipt of a written waiver, the hearing examiner shall render a decision within five business days on the basis of the submissions.

H. Failure to appear or participate at hearing. Failure to appear or participate at hearing shall constitute a waiver of the respondent's right to a hearing and to contest the merits of the compliance order. The hearing examiner may dismiss the request for hearing. Upon dismissal for failure to appear or participate, the compliance order shall be final, enforceable and non-appealable. The respondent may appeal the order of dismissal pursuant to NMSA 1978, Section 72-7-1.

[19.25.2.23 NMAC - N, 8-30-2013]

19.25.2.24 EVIDENCE:

A. General. Each party is responsible for presenting evidence on the record. The New Mexico Rules of Evidence as applied in the district courts of the state shall generally apply. At the discretion of the hearing examiner, evidence not otherwise admissible under those rules of evidence may be admitted when necessary to ascertain relevant facts. Irrelevant, immaterial, or unduly repetitious evidence shall be excluded upon the determination of the hearing examiner.

B. Oral and written testimony under oath. All testimony received by the hearing examiner in formal hearings shall be made under oath, except matters officially noticed or entered into by stipulation. All witnesses must be present at the hearing unless a witness' presence at hearing is waived by the hearing examiner upon notice to and without objection from the parties. Written testimony shall be introduced as an exhibit and shall be on pages containing line and page numbers, and shall identify the witness and party for whom the witness is testifying, and the hearing caption and docket number. Written testimony shall be accompanied by a statement by the witness attesting to or verifying the contents and substance of the written testimony. Where written testimony has been filed in advance of the hearing, such testimony shall be adopted by the witness at hearing, subject to any necessary or appropriate corrections or amendments, and shall have the same force and effect as though it were stated orally by the witness and need not be repeated. The witness shall be subject to cross-examination on both oral and written testimony. Expert witnesses providing oral

testimony shall also provide a detailed summary of their testimony in exhibit form, in the form of a written report or pre-filed testimony, in accordance with the scheduling order.

C. Stipulation as to facts and issues. The parties may, by stipulation in writing filed with the hearings unit or entered in the record at hearing, agree upon facts or issues involved in the controversy, which stipulation shall be binding upon the parties entering into the stipulation and may be regarded and used by the hearing examiner as evidence at the hearing. The hearing examiner may require proof or evidence of the facts stipulated to, notwithstanding the stipulation of the parties.

D. Exhibits. Documentary factual or legal information may be received in evidence in the form of accurate copies or duplicates of the original. The original plus two copies of any document or exhibit shall be filed with the hearings unit pursuant to the requirements of the scheduling order. A copy of the document or exhibit, including any expert report that forms the basis of a witness' testimony or is anticipated to be sponsored by a witness, must be served by the submitting party upon the other parties to the proceeding prior to hearing, in accordance with the scheduling order. To the extent practicable all exhibits, including those to be introduced on cross-examination, shall be marked before the start of hearing. All exhibits shall be marked numerically in the order of introduction by the moving party. Documentary and other physical evidence may be authenticated or identified by any reasonable means that shows that the evidence is what the proponent claims it to be. Upon admission by the hearing examiner of an exhibit, it shall be entered into the record. A party shall make reasonable efforts to limit the amount of voluminous evidence when preparing and offering exhibits. Where an exhibit is an excerpt, summary or abstract of a larger document or set of materials, other parties shall be given reasonable opportunity in advance of the hearing to examine the underlying source of the exhibit and the excerpt, abstract, or summary.

E. Administrative notice. Requests to take administrative notice of OSE files are discouraged. In lieu of requesting that administrative notice be taken of documents, parties are encouraged to submit those documents or portions of documents in the form of exhibits in accordance with the scheduling order. The hearing examiner may take administrative notice of matters of which the district courts of this state may take judicial notice. In addition, administrative notice may be taken of generally recognized technical or scientific facts, published reports of governmental and state agencies, site visits conducted by the hearing examiner with notice to parties, and studies and conclusions within the state engineer's specialized knowledge. In addition, the hearing examiner may take administrative notice on the record of the results of the hearings unit previous experience in similar situations and general information concerning a subject within the OSE's or hearings unit's expert knowledge. When a party requests that the hearing examiner take administrative notice of a fact, the noticed fact and its source shall be stated at the earliest possible time before or during the hearing and other parties, upon timely request, shall be provided an opportunity to show why notice should not be taken.

F. Additional evidence. At any stage of the proceeding the hearing examiner may require the production of further evidence upon any issue. Such evidence may, at the

discretion of the hearing examiner, be in writing or presented orally. All parties will be given an opportunity to rebut or otherwise respond to such evidence submitted and cross-examine the witness under oath.

G. Objections. Any evidence offered in whatever form shall be subject to appropriate and timely objection. The evidence to be admitted at hearing shall be material and relevant to the issue. When objection is made to the admissibility of evidence, such evidence may be received subject to later ruling by the hearing examiner. The hearing examiner has discretion, with or without objection, to exclude inadmissible, incompetent, cumulative, or irrelevant evidence or order the presentation of such evidence discontinued. Parties objecting to the introduction of evidence shall briefly state the grounds of objection at the time such evidence is offered. Formal exceptions to rulings are not necessary and need not be taken.

H. Offers of proof. An offer of proof for the record may be made and shall consist of a statement of the substance of the evidence to which objection has been sustained. The hearing examiner may require offers of proof to be submitted in writing in question and answer form.

I. Rebuttal evidence. Rebuttal evidence is evidence that tends to explain, counteract, repel, or disprove evidence submitted by another party or by staff. Evidence that is merely cumulative or could have been more properly offered in the case in chief is not proper rebuttal evidence. The hearing examiner may permit or require rebuttal evidence to be submitted in prepared form in accordance with this rule prior to its introduction.

[19.25.2.24 NMAC - Rp, 19 NMAC 25.2.21 & 22, 8-30-2013]

19.25.2.25 BURDEN AND STANDARD OF PROOF:

The burden of proof in a proceeding on a pending application is on the applicant to demonstrate that unappropriated waters are available for appropriation where a new appropriation is sought, and that the application will not impair or be detrimental to existing water rights, is not contrary to conservation of water within the state and is not detrimental to the public welfare of the state. In a compliance order hearing the burden of proof is on the WRD. The standard of proof for hearings unit proceedings shall be based on a preponderance of the evidence.

[19.25.2.25 NMAC - N, 8-30-2013]

19.25.2.26 RECORDING AND TRANSCRIPTION:

All hearings shall be recorded or transcribed by the hearings unit. In accordance with NMSA 1978, Section 72-2-17(B)(5), the oral proceedings may be transcribed upon the request of any party. Parties requesting that proceedings be transcribed shall arrange for the appearance by a stenographer and shall pay the cost of the transcription directly

to the preparer of the transcript. In the event that the proceedings are transcribed upon the hearing examiner's own request, the parties may obtain copies of the transcript upon payment of any applicable fees. Copies of recorded proceedings may be obtained by the parties upon payment of applicable fees charged by the hearings unit.

[19.25.2.26 NMAC - Rp, 19 NMAC 25.2.18, 8-30-2013]

19.25.2.27 PROPOSED FINDINGS OF FACT AND RECOMMENDATIONS:

At the conclusion of the hearing, the hearing examiner may request that the parties submit proposed findings of fact, conclusions of law, and recommendations that will become part of the administrative record. At the hearing examiner's discretion, proposed findings of fact, conclusions of law, and recommendations may be accompanied by supporting legal memoranda from the parties.

[19.25.2.27 NMAC - Rp, 19 NMAC 25.2.29, 8-30-2013]

19.25.2.28 HEARING EXAMINER'S REPORT AND RECOMMENDATIONS:

After completion of an evidentiary or summary judgment hearing on the merits, the hearing examiner shall prepare and submit a report and recommendation to the state engineer for final decision.

[19.25.2.28 NMAC - Rp, 19 NMAC 25.2.30, 8-30-2013]

19.25.2.29 FINAL DECISION:

Upon filing of the hearing examiner's report and recommendation, the state engineer shall issue a written final decision.

A. Record evidence. The state engineer shall base the final decision upon the record, including the hearing examiner's report and recommendation. Evidence upon which the state engineer may base the final decision includes the following:

- (1) any records, investigation reports, stipulations, and other relevant documents in the state engineer's possession that is offered and made a part of the record of the proceeding;
- (2) sworn testimony of witnesses and exhibits entered into the record by the hearing examiner; and
- (3) any facts that have been administratively noticed.

B. Entry of decision. After submission and consideration of the hearing examiner's report and recommendation, the state engineer shall enter the final decision or shall

order the hearing examiner to reopen the record of proceedings in order to take further evidence or testimony.

C. Notice of decision. The state engineer's decision shall be mailed to all parties, or to their counsel of record if legally represented, by certified mail, return receipt requested, within 10 days after entry of the decision.

D. Finality. A decision of the state engineer is final after 30 days, unless an appeal has been timely filed in accordance with NMSA 1978, Sections 72-2-16 and 72-7-1. The state engineer shall not seek enforcement of a compliance order until it is final, except where an emergency exists or the public health or safety necessitates.

[19.25.2.29 NMAC - Rp, 19 NMAC 25.2.31, 8-30-2013]

19.25.2.30 RECONSIDERATION:

A party may file a written request for reconsideration with the state engineer within 10 days of receipt of a final decision, and shall serve such request on all parties to the proceeding. A request for reconsideration shall state the factual and or legal basis for reconsideration of the state engineer's decision, and shall contain appropriate citations to the record. The filing of a request for reconsideration does not operate to toll or otherwise delay the time for filing an appeal as set forth in NMSA 1978, Section 72-7-1. If the state engineer takes no action on a request for rehearing within 10 days of its filing, it shall be deemed denied. If the state engineer grants a request for reconsideration, the state engineer shall issue an order vacating the final decision.

[19.25.2.30 NMAC - N, 8-30-2013]

19.25.2.31 APPEAL FROM FINAL DECISION:

After hearing, appeal of the state engineer's decision may be taken by a party to a district court of the state, pursuant to NMSA 1978, Section 72-7-1, and other applicable laws of the state.

A. Time for filing notice of appeal. Any applicant or other party dissatisfied with the decision of the state engineer shall serve a notice of appeal within 30 days after receipt by certified mail of notice of the state engineer's decision, in accordance with the requirements of NMSA 1978, Section 72-7-1. The filing of a request for reconsideration by any party shall not operate to toll or otherwise delay the time for filing an appeal as set forth by statute.

B. Transmittal of record. Upon being served with a notice of appeal, the hearings unit administrator shall provide counsel for the state engineer a certified copy of the administrative hearing record for transmittal to and filing with the district court in accordance with NMSA 1978, Section 72-7-2.

[19.25.2.31 NMAC - N, 8-30-2013]

19.25.2.32 ADMINISTRATIVE RECORD:

In accordance with NMSA 1978, Section 72-2-17(C), the administrative record shall include, at a minimum, all pleadings, motions, and intermediate rulings; evidence admitted at hearing; matters or items administratively noticed; questions and offers of proof, and objections and rulings thereon; any proposed findings submitted; the transcript or recordings of the administrative hearing; and any decision, opinion, or report by the state engineer or hearing examiner who conducted the hearing.

[19.25.2.32 NMAC - Rp, 19 NMAC 25.2.28, 8-30-2013]

19.25.2.33 DECISION OF DISTRICT COURT:

The decision of the district court shall be binding on the state engineer upon the expiration of the deadline for appeal from the district court's decision if an appeal has not been taken in accordance with statutes and the procedural rules of the New Mexico supreme court. The state engineer shall take such action as is necessary or required in accordance with such decision, and shall include a copy of the decision from the court in the OSE files.

[19.25.2.33 NMAC - N, 8-30-2013]

PART 3: MAPS AND PLANS

19.25.3.1 ISSUING AGENCY:

Office of State Engineer.

[Recompiled 12/31/01]

19.25.3.2 SCOPE:

[RESERVED]

[Recompiled 12/31/01]

19.25.3.3 STATUTORY AUTHORITY:

Adopted pursuant to the authority of Sections 72-2-8, 72-2-12 and 72-13-4, New Mexico Statutes Annotated, 1978 Compilation.

[Recompiled 12/31/01]

19.25.3.4 DURATION:

[RESERVED]

[Recompiled 12/31/01]

19.25.3.5 EFFECTIVE DATE:

Filed November 1, 1966.

[Recompiled 12/31/01]

19.25.3.6 OBJECTIVE:

This rule is formulated for the purpose of carrying out the provisions of the statutes governing underground waters and describing the present extent of all declared underground water basins in New Mexico.

[RESERVED]

[Recompiled 12/31/01]

19.25.3.7 DEFINITIONS:

[RESERVED]

[Recompiled 12/31/01]

19.25.3.8 MAP QUALITY:

All maps made from actual field surveys shall be original tracings, accurately and neatly prepared on good quality tracing material. As all tracings are part of the permanent record, they must be prepared with permanent waterproof India drawing ink or the equivalent. This requirement also applies to all signatures, dates and acknowledgments appearing on the sheets. Sheets which fail to comply with these provisions will not be accepted.

[SE-66-1 Article 5-1, Recompiled 12/31/01]

19.25.3.9 SCALE AND SIZE:

A. Maps for all basins except the Mimbres and Animas shall be seventeen (17) inches wide and twenty-three (23) inches long on the trim lines with margins of one (1) inch on the top, one-half (1/2) inch on the right side and bottom, and one and a half (1 1/2) inches on the left or long side for binding purposes. The map shall have a scale of one (1) inch equals four hundred (400) feet, unless otherwise specified by the state engineer. See page 36 [now 19.25.3.16 NMAC] for sample plat. If more than one sheet

is required, they shall be properly numbered in sequence (Example - Sheet 1 of 3 sheets).

B. Mimbres and Animas basins: Maps for the Mimbres and Animas basins shall be fourteen (14) inches wide and seventeen (17) inches long on trim lines with margins of one-half (1/2) inch on the top, right side and bottom, and one and a half (1 1/2) inches on the left or long side for binding purposes. The map shall have a scale of one (1) inch equals five hundred (500) feet.

[SE-66-1 Article 5-2 and 5-2.1, Recompiled 12/31/01]

19.25.3.10 DECLINATION AND DATE:

Maps shall be plotted to the true meridian and all bearings shown shall be true bearings. The direction of north shall be indicated on the map. Magnetic declination should be shown if used in making the field survey. The date that the field survey is made shall be shown on the final maps.

[SE-66-1 Article 5-3, Recompiled 12/31/01]

19.25.3.11 LEGAL DESCRIPTION AND LEGEND:

The map shall show the legal subdivisions, accurate locations of the well or wells, reservoirs, if any, main canals, streams, highways and other important physical features. The source of water shall be designated by the appropriate symbol hereinafter given, placed in the corners and around the perimeter as needed to clearly delineate the area, with one-eighth (1/8) inch tick marks indicating the boundaries of the irrigated area. When the acreage is irrigated by more than one source, the symbols used shall so indicate.

<u>Source of Supply</u>	<u>Symbol</u>
Artesian ground water	1/8 inch open circle
Shallow ground water	1/8 inch open square
Surface water	Letter S
Artificial water	1/8 inch open diamond

[SE-66-1 Article 5-4, Recompiled 12/31/01]

19.25.3.12 LOCATION OF WELL AND DESCRIPTION OF ACREAGE:

The location of the well or wells from which water is diverted shall be accurately determined and plotted on the map. The course and distance or coordinate distances

from a known legal subdivision corner shall be shown. A one-eighth (1/8) inch solid circle shall represent an artesian well and a one-eighth (1/8) inch solid square shall represent a shallow ground water well. Sections and subdivisions thereof in which the well and the lands lie shall be accurately indicated and the number of acres irrigated within the subdivisions shall be shown. When a part of a ten (10) acre subdivision is irrigated, the acreage within the ten (10) acre subdivision must be accurately shown. The ownership of lands and file numbers pertinent to the filing shall be shown on the map.

[SE-66-1 Article 5-5, Recompiled 12/31/01]

19.25.3.13 RESERVOIRS AND DITCHES:

The location, area and capacity of any reservoirs shall be shown on the map. The main ditches shall be shown and the direction of flow shall be indicated.

[SE-66-1 Article 5-6, Recompiled 12/31/01]

19.25.3.14 ADDITIONAL REQUIREMENTS:

The tracing shall include the following statement and certificate: Plat of underground water project to accompany land surveyor's permit report to:

(Appropriate the underground waters of the state of New Mexico, change place or purpose of use, etc.)

Permit No. _____, _____ Permittee.

The areas where the water has been beneficially applied under the provisions of the permit are described (to the

nearest ten (10)-acre subdivision where necessary) as follows:

SUBDIVISION OWNER*	SECTION	TOWNSHIP	RANGE	ACRES	
_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____

* Omit if permittee named above is sole owner. NOTE: If all or part of the lands received water from more than one source, detail such sources by file no., legal subdivisions, and acreages so affected. This may be done by adding other columns to above table in which to designate file numbers of sources supplying water, or by preparing separate tabulations of the acreages irrigated from each source.

[SE-66-1 Article 5-7, Recompiled 12/31/01]

19.25.3.15 CERTIFICATE:

The land surveyor or professional engineer and land surveyor making or directing the survey shall place upon the map (or the first sheet if more than one) his certificate. His license number together with an impression of his seal shall also appear. The certificate shall read as follows:

CERTIFICATE

I, _____, hereby certify that I am the _____ who prepared the above map and statement from field notes of actual surveys conducted on _____, 19__, by me or under my direction, and that the same are true and correct to the best of my knowledge and belief.

<u>Form to be Completed and Filed</u>	<u>Filing Fee</u>
Declaration of Right	\$1.00
Application to Appropriate/Requiring Publication and Notice	\$5.00
Application to Appropriate/Other/	\$1.00
Application for Supplemental Well	\$5.00
Application to Repair or Deepen Well	\$1.00
Application to Change Location of Well	\$5.00
Application to Change Place and/or Purpose of Use	\$5.00
Application to Change Location of Well and Place and/or Purpose of Use	\$5.00
Application to Combine Water Rights	\$5.00
Application for Extension of Time	\$5.00
Application for Well Driller's License	\$20.00
Application to Amend Well Driller's License	\$5.00
Application for Well Driller's License, Renewal	\$10.00

[SE-66-1 Article 6-1, Recompiled 12/31/01]

19.25.5.9 FEES FOR OTHER SERVICES:

For reviewing plans for the development of ground water from a well or wells that have not been put to beneficial use prior to the time a basin is declared or extended.

Fee for each proposed well in plan	\$5.00
------------------------------------	--------

For issuing any license to appropriate, for each permit therein	\$5.00
---	--------

One (1) Dollar for issuing any miscellaneous water right document. For such other work as may be required of this office, such reasonable fees as, in the judgment of the state engineer, the character and extent of the work shall justify.

[SE-66-1 Article 6-2, Recompiled 12/31/01]

PART 6-7: [RESERVED]

PART 8: GROUND WATER STORAGE AND RECOVERY ACT

19.25.8.1 ISSUING AGENCY:

Office of the State Engineer.

[19.25.8.1 NMAC - N, 01-31-2001]

19.25.8.2 SCOPE:

These regulations govern the application process, the hydrologic, technical and financial capability report requirements, and the permit terms and conditions for projects authorized under the Ground Water Storage and Recovery Act (the "Act"), NMSA 1978, 72-5A-1 through 72-5A-17 (1999 Supp.). These regulations shall not be construed to limit or otherwise alter the jurisdiction, power, or authority of the state engineer.

[19.25.8.2 NMAC - N, 01-31-2001]

19.25.8.3 STATUTORY AUTHORITY:

NMSA 1978, 72-5A-6(D) (1999)

[19.25.8.3 NMAC - N, 01-31-2001]

19.25.8.4 DURATION:

Permanent

[19.25.8.4 NMAC - N, 01-31-2001]

19.25.8.5 EFFECTIVE DATE:

January 31, 2001.

[19.25.8.5 NMAC - N, 01-31-2001]

19.25.8.6 OBJECTIVE:

The objective of these regulations is to govern the proceedings before the state engineer to ensure the expeditious and orderly handling of applications and administration matters related to the Act.

[19.25.8.6 NMAC - N, 01-31-2001]

19.25.8.7 DEFINITIONS:

Unless defined below or in a specific section, all other words used in these regulations shall be given their customary and accepted meanings.

A. Area of hydrologic effect: The underground area where the water is stored and located, hydrologically connected surface waters, adjacent ground water areas in which water rights exist that may be impaired, the land surface above the underground areas, and any additional land surface used for seepage or infiltration.

B. Capability Report: The short name for the Hydrologic, Technical, and Financial Capability Report (detailed in Appendix A) to accompany an application for Underground Storage and Recovery.

C. Project: A permitted, engineered facility specifically designed, constructed, and operated to add measured volumes of water by injection or infiltration to an aquifer or system of aquifers, to store the water underground, and to recover the stored water for beneficial use.

D. Stored Water: The water that has been stored underground for the purpose of recovery.

[19.25.8.7 NMAC - N, 01-31-2001]

19.25.8.8 LIBERAL CONSTRUCTION:

These regulations shall be liberally construed to carry out the provisions of the Act.

[19.25.8.8 NMAC - N, 01-31-2001]

19.25.8.9 PURPOSE OF THE ACT:

In 1999, the New Mexico Legislature enacted the Act to allow governmental entities to store surplus supplies of water underground and to withdraw the recoverable amount at a later date for use by the governmental entity. In adopting the Act, the Legislature found that:

A. Conjunctive use and administration of both surface and ground waters are essential to the effective and efficient use of the state's limited water supplies; and

B. Ground water recharge, storage, and recovery have the potential to:

(1) Offer savings in the cost of capital investment, operation and maintenance, and flood control, and may improve water and environmental quality.

(2) Reduce the rate at which ground water levels will decline and may prevent oversteering or dewatering aquifer systems.

(3) Promote conservation of water within the state.

(4) Serve the public welfare of the state.

(5) Lead to more effective use of the state's water resources.

[19.25.8.9 NMAC - N, 01-31-2001]

19.25.8.10 AUTHORIZED APPLICANTS:

Only governmental entities defined as Indian nations, tribes, or pueblos, or state political subdivisions, including municipalities, counties, acequias, irrigation districts, or conservancy districts may apply for a permit.

[19.25.8.10 NMAC - N, 01-31-2001]

19.25.8.11 AUTHORIZED PROJECTS:

These regulations cover artificial recharge, underground storage, and water recovery projects. These regulations do not cover the incidental recharge to an aquifer (such as from septic tanks or unlined ditches).

[19.25.8.11 NMAC - N, 01-31-2001]

19.25.8.12 PERMIT REQUIRED:

A governmental entity may only construct or operate an artificial recharge, storage, and recovery project in the state of New Mexico after receiving a permit from the state engineer. One permit shall be granted for each project.

[19.25.8.12 NMAC - N, 01-31-2001]

19.25.8.13 PRE-APPLICATION MEETING AND PROJECT PROPOSAL:

Prior to submission of an application, every applicant is required to attend a pre-application meeting with representatives of the state engineer. At the pre-application meeting, the applicant shall provide a written project proposal that summarizes the project goals and objectives and describes the method(s) to be used to achieve the project goals. The following information, unless considered inappropriate by the state engineer and the applicant, is to be included in the project proposal and discussed at the pre-application meeting:

A. The mapped location of the proposed project and related facilities which shows existing and planned features of the site

B. Description of the purpose and scope of the proposed project

C. Description of the estimated area of hydrologic effect of the project

D. Description of the purpose and scope of the pilot/demonstration project

E. Description of the estimated area of hydrologic effect of the pilot/demonstration project

F. Description of the proposed method of recharge (i.e. aquifer storage and recovery wells, injection wells, and infiltration basins)

G. Topographic map which shows the location of surface water bodies (natural and man-made), canals and ditches, wells, other recharge and recovery sites, and areas within the estimated area of hydrologic effect where there is potential for impairment to water rights or harm to land owners

H. Relevant information on hazardous waste or other contamination sites, potential environmental impacts, and plans for mitigating any harmful effects

I. Information on existing wells, springs, seeps, and wetlands and a description of the methods that will be used to analyze possible impairment and harm from the artificial recharge, storage, and recovery project

J. Source water characterization including flow rate, total volume, reliability of deliveries, chemical composition, and conveyance methods

K. Water characterization of the ambient water in the aquifer in which the recharged water will be stored

L. Scope of work for proposed hydrologic investigations to include: the installation of monitoring wells, infiltration testing, methodologies for obtaining aquifer parameters, ground water level and quality monitoring plans, surface water (including springs and base flow) flow and quality measurements, subsidence measurements, and ground water and/or surface water modeling

M. Discussion of the proposed method to calculate the amount of recoverable water in storage

N. Discussion of the proposed method of recovery

O. Hydrogeologic information:

- (1) Depth to ground water and elevation of ground water (or potentiometric surface of ground water) in the area of hydrologic effect
- (2) Perched ground water conditions
- (3) Ground water flow direction
- (4) A description of the aquifer selected for storage, including its areal extent and any associated confining or semi-confining layer(s)
- (5) Rock and soil types in the vicinity of the site
- (6) Subsurface lithology and mineralogy/geochemistry in the vicinity of the site
- (7) Aquifer test parameters
- (8) Ground water quality data and the methods used to estimate their values
- (9) Wells within the estimated area of hydrologic effect
- (10) Subsidence data

P. Planned duration of the project and its facilities

Q. Secondary uses associated with the facility, if applicable, such as recreation, water quality treatment, or wetlands

R. Relevant information on past and present land use

S. Demonstration that the applicant has a valid water right and will meet all relevant state and federal rules and regulations

T. A file stamped copy of the Notice of Intent to Discharge (per Section 1201 of the New Mexico Water Quality Control Commission Regulations) filed with the New Mexico Environment Department.

[19.25.8.13 NMAC - N, 01-31-2001]

19.25.8.14 APPLICATION FOR PERMIT:

The application procedure for an Underground Storage and Recovery Permit is a two-step process.

A. Pilot/Demonstration Project: The applicant shall file a complete description of the pilot/demonstration project on a form prescribed by the state engineer, a capability report for the pilot/demonstration project, and a preliminary description of the full-scale

project (the preliminary description should attempt to estimate the area of hydrologic effect and the scope and purpose of the full-scale project as closely as possible). After making the initial filing, the applicant shall proceed to meet the requirements set forth in sections 15 through 22 of these regulations for the pilot/demonstration project. The information required for a pilot/demonstration project capability report is the same as that for a full-scale project. However, during the course of developing the capability report for a pilot/demonstration project it may become apparent that not all the necessary information is available. In this case, an abbreviated capability report may be submitted. In cases where data does not exist or is lacking, the applicant must indicate how they plan on collecting the necessary data during the pilot/demonstration project. The data required for the pilot/demonstration project are dependent on the duration, volume, purpose, operation, and the geologic and hydrologic complexity of the project.

B. Full-Scale Project: Upon completion of a successful pilot/demonstration project, the permittee shall prepare a complete description of the full-scale project on a form prescribed by the state. The description shall be accompanied by the findings from the pilot/demonstration project and a capability report for the full-scale project that is based on the information gathered during the pilot/demonstration project. After filing their application for a full-scale project, the applicant shall proceed to meet the requirements set forth in sections 15 through 22 of these regulations for the full-scale project. However, the applicant shall not have to publish a legal notice for the full-scale project if the state engineer determines that the legal notice published after the filing of the pilot/demonstration project application reasonably informed the public of the final proposed full-scale project. A revised notice shall be published if the state engineer determines that the scope of the full-scale project has significantly changed since the publication of the original notice.

C. Filing Fee: A complete application shall be filed with the proper filing fee of five thousand dollars (\$5000.00), payable at the time the application is filed, plus five dollars (\$5.00) per acre-foot of the annual capacity of the full-scale artificial recharge, storage, and recovery project, payable upon the filing of the full-scale project. The total application fee shall not exceed fifty thousand dollars (\$50,000).

[19.25.8.14 NMAC - N, 01-31-2001]

19.25.8.15 PILOT OR DEMONSTRATION PROJECT:

A pilot or demonstration project is a prerequisite of a full-scale project.

A. Definitions:

(1) Demonstration project: A demonstration project is considered a full-scale test of a project, in part or in whole, for a limited period of time. An example of a demonstration project is testing a full-size aquifer storage and recovery well.

(2) Pilot Project: A pilot project is considered a scale model test of a full-scale project.

B. The purposes of a pilot/demonstration project are to determine if a full-scale, long-term project is hydrologically feasible and to collect and evaluate the operational, hydrologic, and geologic data needed to support an application for permit for a full-scale project. The source water used in a pilot/demonstration project should be from the same source proposed for the full-scale project.

C. A pilot/demonstration project will enable a governmental entity to collect and evaluate technical information to determine the feasibility of a full-scale, long-term project. A pilot/demonstration project permit will allow a governmental entity to store small amounts of water for a limited period of time in order to generate the data necessary for a full-scale project. A pilot/demonstration project permit will be limited to a volume and duration determined acceptable by the state engineer. The water stored under a pilot project is considered recoverable.

D. If an applicant has completed a pilot/demonstration type project prior to the enactment of the Act, and the state engineer is satisfied that the applicant's project fulfills the essential purposes of the state engineer prescribed pilot/demonstration project, then the state engineer will accept the applicant's pilot/demonstration type project and its results in support of a full-scale project.

[19.25.8.15 NMAC - N, 01-31-2001]

19.25.8.16 CAPABILITY REPORT:

The hydrologic, technical, and financial capability report shall include the following information:

- A. Executive Summary
- B. Project Objectives
- C. Evidence of Technical Capability
- D. Evidence of Financial Capability
- E. Evidence of Hydrologic Feasibility
- F. Area of Hydrologic Effect of Proposed Artificial Recharge, Storage, and Recovery Project
- G. Hydrogeologic Characterization of the Area of Hydrologic Effect

H. Evaluation of Impairment to Water Rights and Harm to Owners of Land Within the Area of Hydrologic Effect

I. Validity of the Source Water Right

J. Site Description

K. Facility Description

L. Facility Design

M. Facility Operation and Maintenance

N. Hydrogeographic Characterization of the Area of Hydrologic Effect

O. Effects Created by a Underground Storage and Recovery Project

P. Water Level Monitoring Plan

Q. Description of Water Quality Monitoring and Treatment Plans Required by a State or Federal Agency or Department

R. Contingency Plan

S. All other relevant information detailed in Appendix A

[19.25.8.16 NMAC - N, 01-31-2001]

19.25.8.17 INITIAL REVIEW OF APPLICATION:

After receipt of an application, the state engineer will conduct an initial review of the application. If the state engineer determines that an application is incomplete, defective as to form, is not in compliance with these regulations, or if he determines that it may be necessary to limit the duration of the permit (see Section 26), he shall return the application to the applicant. The applicant shall provide all information required by the state engineer. An application that is determined by the state engineer to be complete, in compliance with these regulations, and in recognition that any issued permit may be limited in duration, will be accepted for filing. The state engineer will advise the applicant in writing when an application has been accepted for filing.

[19.25.8.17 NMAC - N, 01-31-2001]

19.25.8.18 NOTICE--PUBLICATION:

Within thirty (30) days after receipt of a letter from the state engineer informing the applicant that their application has been accepted for filing, the applicant shall submit a notice for publication to the state engineer for review.

A. The notice shall set forth the contents of the application in a form containing the following information:

- (1) The name and address of the applicant;
- (2) The legal and common descriptions (per NMSA 1978, Section 14-11-10.1) of the location of the proposed project facilities and the area of hydrologic effect;
- (3) A brief description of the pilot/demonstration project.
- (4) A brief description of the proposed full-scale project, as appropriate, including the capacities;
- (5) The requirements for a protest, as set forth in Section 20 hereafter;
- (6) Disclosure that protests to the application shall be filed within ten (10) days after the date of the last publication of the notice; and
- (7) The day of the last publication (to be on the notice when published);
- (8) All other relevant information required by the state engineer.

B. The state engineer will review the notice and return it to the applicant within thirty (30) days of receipt with all corrections and additions noted. After making all changes to the notice required by the state engineer, the applicant shall publish the notice once a week for three (3) consecutive weeks in a newspaper of general circulation in the county or counties in which persons reside who could reasonably be expected to be affected by the project. The cost of the publication shall be borne by the applicant.

[19.25.8.18 NMAC - N, 01-31-2001]

19.25.8.19 PUBLICATION – EXPENSE:

The completeness and accuracy of the notice for publication is the responsibility of the applicant. If the published notice contains substantive errors, a revised notice shall be published at the expense of the applicant.

[19.25.8.19 NMAC - N, 01-31-2001]

19.25.8.20 PROTESTS:

A person may protest such an application by filing a protest alleging how the granting of the application will substantially and specifically affect the protestant and that it will impair the protestant's water right and/or be contrary to the conservation of water within the state and/or be detrimental to the public welfare of the state. The state or any of its branches, agencies, departments, boards, instrumentalities or institutions, and all political subdivisions of the state and their agencies, instrumentalities and institutions shall have standing to file a protest. A protest shall be in writing and filed with the state engineer, Post Office Box 25102, Santa Fe, New Mexico 87504-5102. The protest shall state the name and mailing address of the protestant, identify the grounds for the protest, and contain the signature of the protestant or an authorized representative. The state engineer will provide the applicant with a copy of all filed protests to encourage the parties to reach a resolution. The applicant will provide each protestant with a copy of its pilot/demonstration project permit so that the protestant(s) may develop independent information during the pilot/demonstration project. The applicant will further provide each protestant with a copy of its full-scale project application at the time the application is filed with the state engineer.

[19.25.8.20 NMAC - N, 01-31-2001]

19.25.8.21 HANDLING OF PROTESTS - HEARING:

If any protests remain at the time the applicant has filed for its full-scale project, a hearing shall be conducted pursuant to the state engineer Hearing Procedures (19 NMAC 25.2). The state engineer will notify the applicant and protestant(s) in writing of the date of the prehearing conference.

[19.25.8.21 NMAC - N, 01-31-2001]

19.25.8.22 BURDEN OF PROOF:

Prior to the state engineer approving an application for Underground Storage and Recovery, the applicant must meet its burden of proof. The applicant has the burden of proving:

- A. the applicant has the technical and financial capability to construct and operate the project;
- B. the project is hydrologically feasible;
- C. the project will not impair existing water rights or the state's interstate obligations;
- D. the project will not be contrary to the conservation of water within the state;
- E. the project will not be detrimental to the public welfare of the state;

F. the applicant has a valid water right for the recharge water quantified by one of the following legal processes:

- (1) a water rights adjudication;
- (2) a consent decree;
- (3) an act of congress, including a negotiated settlement ratified by congress;
- (4) a contract pursuant to the Colorado River Storage Project Act, 43 U.S.C. Section 620 (1986 and Supp. 1999); or
- (5) an agreement with an owner who has a valid water right subject to an application for a change in purpose, place of use or point of diversion

G. the applicant will obtain all other permits for the project required by state and federal law. A project shall not be operated under the Act until an applicant has obtained all other state and federal permits required for the project; and

H. the project will not impair water rights or cause harm to owners or land within the area of hydrologic effect.

[19.25.8.22 NMAC - N, 01-31-2001]

19.25.8.23 ACTION BY THE STATE ENGINEER ON THE APPLICATION:

If no timely protest has been properly filed or remains standing, the state engineer will, upon finding that the application meets the requirements of the Act and the Rules and Regulations of the state engineer, issue a permit to the applicant to construct and operate the project to artificially recharge, store, and recover all or part of the waters applied for. All applications will be conditionally approved as a pilot/demonstration project permit (see Section 15) unless the state engineer has granted a variance. The state engineer will deny an application if there is reason to believe that the granting of the application would impair existing water rights or the state's interstate stream obligations, cause harm to land owners within the area of hydrologic effect, be contrary to the conservation of water within the state, or would be detrimental to the public welfare of the state.

[19.25.8.23 NMAC - N, 01-31-2001]

19.25.8.24 APPEAL:

Upon receipt of notice from the state engineer of the decision made on the application, the applicant may, within thirty (30) calendar days of such receipt, request in writing that the decision be set aside. The request that the action be set aside shall specify whether

the applicant will submit information for reconsideration or will request that the matter proceed to hearing through the state engineer hearing process (19 NMAC 25.2).

[19.25.8.24 NMAC - N, 01-31-2001]

19.25.8.25 PERMIT -- CONTENTS:

The state engineer will grant an Underground Storage and Recovery Permit and monitor compliance with the permit in the exercise of the full oversight authority provided by the Act and as otherwise delegated to the state engineer by the laws of New Mexico. The state engineer permit shall automatically terminate if the permittee fails to comply with or maintain all other state and federal permits required for the project. A permit issued will set forth:

A. the name and mailing address of the governmental entity to which the permit has been issued;

B. the name of the declared underground water basin in which the project will be located;

C. the plan of operation and capacity of the project;

D. the monitoring program required;

E. duration of permit (see section 26)

F. all conditions required by these regulations and as otherwise deemed appropriate by the state engineer;

G. other relevant information the state engineer determines to be appropriate.

[19.25.8.25 NMAC - N, 01-31-2001]

19.25.8.26 PERMIT DURATION AND RENEWAL, IF NECESSARY:

The state engineer will determine whether the circumstances necessitate an Underground Storage and Recovery Permit being limited in duration. If the state engineer limits the duration of a permit, a renewal shall be requested in writing by the permittee and filed with the state engineer at least one year prior to the expiration date of the permit. Failure to file the request for permit renewal in a timely manner may result in the expiration of the permit. A permit may be renewed multiple times. Upon expiration of a permit, the permittee has the right to withdraw all waters within storage that are recognized and approved by the state engineer as being recoverable.

[19.25.8.26 NMAC - N, 01-31-2001]

19.25.8.27 MODIFICATION OF PROJECT PERMIT:

The state engineer retains jurisdiction over every permit issued under these regulations and may modify its conditions to prevent impairment to water rights, to prevent harm to land owners, to prevent detriment to the public welfare of the state, and to prevent actions that are contrary to the conservation of water within the state. The conditions of a permit may also be modified to meet the purposes of the Act, to meet the original intent of the permit, or to account for a change to the scope of a project resulting from information gathered during the operation and maintenance of a full-scale project. A revised notice must be published if the state engineer determines that the scope of the full-scale project has significantly changed as a result of the modification. The state engineer will set aside his action if the permittee requests in writing that the action be set aside for reconsideration or for hearing through the state engineer hearing process (19 NMAC 25.2). The request from the permittee must be filed within thirty (30) calendar days of receipt of notice from the state engineer that a condition of the permit has been modified. The permittee must specify the basis for the request. The Water Rights Division will review a request for reconsideration and a request for hearing will be forwarded to the Administrative Litigation Unit.

[19.25.8.27 NMAC - N, 01-31-2001]

19.25.8.28 CHANGE OF OWNERSHIP OF PERMIT:

A permit issued under these regulation may be changed in ownership to another governmental entity upon the filing of an application with the state engineer for Change of Ownership. The Change of Ownership shall be approved if the state engineer determines that all provisions of these regulations will be met. If approved, a Change of Ownership will include conditions deemed appropriate by the state engineer.

[19.25.8.28 NMAC - N, 01-31-2001]

19.25.8.29 STORED WATER NOT AVAILABLE FOR APPROPRIATION - STORED WATER NOT SUBJECT TO FORFEITURE:

Water stored in an aquifer for subsequent diversion for beneficial use pursuant to these regulations is not available for appropriation and is not subject to forfeiture pursuant to NMSA 1978, 72-5-28 (1907) or 72-12-8 (1931).

[19.25.8.29 NMAC - N, 01-31-2001]

19.25.8.30 USE OF RECOVERED WATER:

A permittee may use water recovered only for the same place(s) and purpose(s) of use for which the diversion of the water was authorized prior to storage unless a permit to change the place(s) and/or purpose(s) of use has been issued by the state engineer.

[19.25.8.30 NMAC - N, 01-31-2001]

19.25.8.31 STORAGE ACCOUNT – LIMIT ON AMOUNT OF WATER RECOVERED:

Based on the information provided in the capability report, and as reported by the permittee pursuant to Section 32, the state engineer will establish a storage account for each project. If the project includes stored water from more than one source, a sub-account will be established for each source. A permittee may recover only the amount of water, as recognized and approved by the state engineer, that has reached the aquifer, remained within the area of hydrologic effect, and may be recovered without impairment to water rights or harm to land owners within the area of hydrologic effect, unless such impairment and harm is mitigated by a method acceptable to the state engineer. The permittee is solely responsible for protecting their stored water.

[19.25.8.31 NMAC - N, 01-31-2001]

19.25.8.32 ANNUAL REPORT TO STATE ENGINEER:

Each permittee shall file an annual report with the state engineer. Upon submission of the annual report to the state engineer, the permittee shall file an annual fee (subject to amendment) in the amount of fifty cents (\$0.50) per acre-foot of water placed in storage during the period of time covered by the annual report. The annual report shall include:

- A. the total quantity of water stored and recovered under the permit
- B. the amount of water stored and recovered during the previous calendar year
- C. a discussion on the water quality of the recharge water, the water in the receiving aquifer, and the recovered water
- D. measurements of the static level of the water table (or potentiometric surface) within the area of hydrologic effect;
- E. discussion on effects to surface water, including springs, seeps, and wetlands
- F. discussion on the operation and maintenance of the facilities
- G. discussion on the development of the project facilities
- H. discussion of changes to estimates or parameters used in the capability report
- I. discussion of any other revisions to the capability report
- J. discussion on permittee's compliance with all other relevant state and federal permits required to operate the artificial recharge, storage, and recovery project;

K. list of the expiration dates for all other state and federal permits required to operate the recharge, storage and recovery facility

L. list of all significant deviations between monitored and modeled results for water level and water quality analysis

M. discussion of recommendations for changes to the monitoring program or the operation and maintenance of the site facilities that may be implemented upon approval by the state engineer

N. all other relevant information requested by the state engineer

O. a sworn affidavit attesting to the truthfulness and accuracy of the report

[19.25.8.32 NMAC - N, 01-31-2001]

19.25.8.33 PERMIT REVIEW:

The permittee shall attend a permit review meeting with a representative of the state engineer on an annual basis. The permit review meeting should coincide with the submittal of the annual report.

[19.25.8.33 NMAC - N, 01-31-2001]

19.25.8.34 PENALTY FOR FAILURE TO FILE ANNUAL REPORT:

The annual report shall be maintained on a calendar year basis and shall be filed with the state engineer no later than March 31 for the preceding calendar year. If a permittee fails to file an annual report by the deadline established on the permit, the state engineer may assess and impose a penalty of Five Hundred Dollars (\$500) for each month or portion of a month that the report is not filed. The total penalty assessed annually pursuant to this subsection shall not exceed Five Thousand Dollars (\$5,000).

[19.25.8.34 NMAC - N, 01-31-2001]

19.25.8.35 FORM OF REPORTS:

All records and reports required to be maintained and filed pursuant to these regulations shall be in a form acceptable to the state engineer.

[19.25.8.35 NMAC - N, 01-31-2001]

19.25.8.36 INVESTIGATION OF A PROJECT BY THE STATE ENGINEER:

The state engineer may at any time investigate and review a project to determine if the permittee is complying with the terms and conditions of the permit. The state engineer

has the authority and duty to enter upon, and to order the project owner to permit the entry upon, private property at any reasonable time to inspect the various means or proposed means of artificial recharge, storage, or recovery, to observe well construction and plugging, to read and verify the accuracy of meters and other measuring devices, and to inspect records.

[19.25.8.36 NMAC - N, 01-31-2001]

19.25.8.37 SHOW CAUSE ORDER:

Except as otherwise provided herein, if the state engineer has reason to believe that a permittee has violated a provision of the Act, or a condition of their permit, or a rule or regulation, the state engineer may issue a written notice directing that the person or governmental entity appear and show cause, at a hearing held before the state engineer not less than fifteen (15) days after receipt of the notice, why the person or governmental entity should not be ordered to cease and desist from the violation. The notice shall inform the person or governmental entity of the date, time and place of the hearing, and the consequences of the person's or governmental entity's failure to appear at the hearing.

[19.25.8.37 NMAC - N, 01-31-2001]

19.25.8.38 CEASE AND DESIST ORDER:

If the state engineer finds that a person or governmental entity is constructing or operating a project in violation of the Act, the state engineer may issue a temporary order directing the person or governmental entity to cease and desist the construction or operation pending final action by the state engineer. The order shall include written notice to the person or governmental entity of the date, time and place where the person or governmental entity shall appear at a hearing before the state engineer to show cause why the temporary order should be vacated. The hearing shall be held not less than fifteen (15) days after the date of the order and otherwise in accordance with the hearing procedures (19 NMAC 25.2).

[19.25.8.38 NMAC - N, 01-31-2001]

19.25.8.39 ISSUANCE OF ORDER:

After a hearing held pursuant to Sections 37 and 38, or after the expiration of the time to appear, the state engineer shall issue a decision and order in a form consistent with the hearing procedures under 19 NMAC 25.2. If the state engineer determines that a violation has occurred, the decision and order may include one or more of the following: a determination of violation, an order to cease and desist, a recommendation of a civil penalty, and an order directing that positive steps be taken by the permittee to abate or ameliorate any harm or impairment arising from the violation. Any person or

governmental entity affected by such decision may appeal to the district court pursuant to NMSA 1978, 72-7-1.

[19.25.8.39 NMAC - N, 01-31-2001]

19.25.8.40 CONTINUING VIOLATION:

If a person or governmental entity continues a violation after the state engineer has issued a decision and order pursuant to Section 39, the state engineer may apply for a temporary restraining order or a preliminary or permanent injunction from the district court.

Such action does not preclude the state engineer from seeking other forms of relief or enforcement against a violator.

[19.25.8.40 NMAC - N, 01-31-2001]

19.25.8.41 PENALTIES:

A person or governmental entity determined to be in violation of the Act, the terms or conditions of a permit issued, or the rules and regulations of the state engineer may be assessed a civil penalty. An action to recover penalties pursuant to this section shall be brought by the state engineer in the district court for the County in which the violation occurred. The civil penalty shall be in an amount not exceeding:

A. One Hundred Dollars (\$100) per day of violation not directly related to the illegal recovery or use of stored water; or

B. Ten Thousand Dollars (\$10,000) per day of violation directly related to the illegal recovery or use of stored water.

[19.25.8.41 NMAC - N, 01-31-2001]

19.25.8.42 PERMIT – REVOCATION AND/OR SUSPENSION:

The state engineer may permanently revoke or temporarily suspend a permit for good cause after an investigation and hearing pursuant to the provisions of 19 NMAC 25.2. Notice shall be sent by certified mail to the permittee at least thirty (30) days before any hearing on a revocation or suspension based on the permittee's alleged failure to comply with the terms and conditions of the permit. Upon revocation of a permit by the state engineer, the permittee has the right to withdraw all waters within storage that are recognized as recoverable. The method of withdrawal must be acceptable to the state engineer.

[19.25.8.42 NMAC - N, 01-31-2001]

19.25.8.43 CONSERVATION FEE EXEMPTIONS:

Conservation fees collected pursuant to NMSA 1978, 74-1-13 (1993) shall be charged only on water that is treated and stored underground and not on the same water subsequently recovered.

[19.25.8.43 NMAC - N, 01-31-2001]

19.25.8.44 OBLIGATIONS TO INDIAN NATIONS, TRIBES OR PUEBLOS:

Nothing in these regulations shall be construed to impair the rights of Indian nations, tribes or pueblos or affect the obligations of the United States to them.

[19.25.8.44 NMAC - N, 01-31-2001]

19.25.8.45 NON-EXEMPTION FROM PRIOR APPROPRIATION DOCTRINE:

Unless required by interstate obligations, nothing in these regulations shall be construed to exempt stored water from the rule that priority in time shall give the better right, pursuant to Chapter 72 NMSA 1978, or that priority of appropriation shall give the better right, pursuant to Article 16, Section 2 of the Constitution of New Mexico.

[19.25.8.45 NMAC - N, 01-31-2001]

19.25.8.46 LIMITATION OF DETERMINATION:

Any determination made by the state engineer for purposes of the Underground Storage and Recovery Regulations, including the validity or non-validity of a water right, is not binding in any other proceeding separate from the Underground Storage and Recovery Regulations.

[19.25.8.46 NMAC - N, 01-31-2001]

19.25.8.47 REQUEST FOR VARIANCE:

A variance to these regulations may be requested in writing by an authorized applicant or permittee. The request shall include a detailed justification for the variance and shall demonstrate that such a variance is necessary to preclude unreasonable hardship or that application of the regulations would not be practicable. The state engineer may grant the variance if the request is found to be reasonable and just. The state engineer shall respond in writing to the request for variance and, if the variance is granted, the state engineer may impose terms and conditions.

[19.25.8.47 NMAC - N, 01-31-2001]

19.25.8.48 KNOWLEDGE OF AND COMPLIANCE WITH RELEVANT STATUTES, RULES, REGULATIONS, AND CODES:

It shall be the responsibility of each applicant and permittee to know of and comply with all applicable statutes, rules, regulations, and codes.

[19.25.8.48 NMAC - N, 01-31-2001]

19.25.8.49 STATE ENGINEER OPTION TO REVISE REGULATIONS:

These regulations may be modified as needed to assist in administering Underground Storage and Recovery Permits. Any major revision to these regulations will be duly published and presented for public comment. Removal of a regulation or a section of these regulations, whether by a court or by the state engineer, shall not affect the validity of the remaining regulations.

[19.25.8.49 NMAC - N, 01-31-2001]

PART 9: PROHIBITIONS ON USE OF SURFACE WATER AND GROUND WATER IN DESIGNATED AREAS

19.25.9.1 ISSUING AGENCY:

Office of the State Engineer.

[19.25.9.1 NMAC - N, 07/31/03]

19.25.9.2 SCOPE:

This rule applies to all geographic areas within the jurisdiction of the state engineer. This rule shall not be construed to limit or otherwise alter the jurisdiction, power, or authority of the state engineer.

[19.25.9.2 NMAC - N, 07/31/03]

19.25.9.3 STATUTORY AUTHORITY:

Section 72-2-1 NMSA 1978 grants the state engineer the general supervision of waters of the state. Section 72-2-8 NMSA 1978 grants the state engineer the authority to adopt regulations and codes, and to issue orders that are necessary to accomplish its duties.

[19.25.9.3 NMAC - N, 07/31/03]

19.25.9.4 DURATION:

Permanent; until later amended, repealed or replaced.

[19.25.9.4 NMAC - N, 07/31/03]

19.25.9.5 EFFECTIVE DATE:

July 31, 2003, unless a later date is cited in the history note at the end of a section.

[19.25.9.5 NMAC - N, 07/31/03]

19.25.9.6 OBJECTIVE:

The objective of this Part is to place restrictions on wells and transfers of either surface water or ground water within the boundaries of certain areas as determined by the state engineer in the interest of safety and the protection of life and property within the state of New Mexico.

[19.25.9.6 NMAC - N, 07/31/03]

19.25.9.7 DEFINITIONS:

Unless otherwise defined below, terms used in this rule have the same meanings as set forth in Chapter 72 NMSA 1978. Unless defined below or in a specific section, all other words used in these regulations shall be given their customary and accepted meanings: "Superfund" means federal and state laws designed to clean up sites where past, improper disposal of hazardous substances caused soil, surface water and ground water contamination.

[19.25.9.7 NMAC - N, 07/31/03]

19.25.9.8 PROHIBITED ACTIVITIES:

It shall be unlawful for any person or persons to drill new wells, or transfer either surface water or ground water to existing wells in any areas designated by the state engineer as restricted from such activities.

[19.25.8 NMAC - N, 07/31/03]

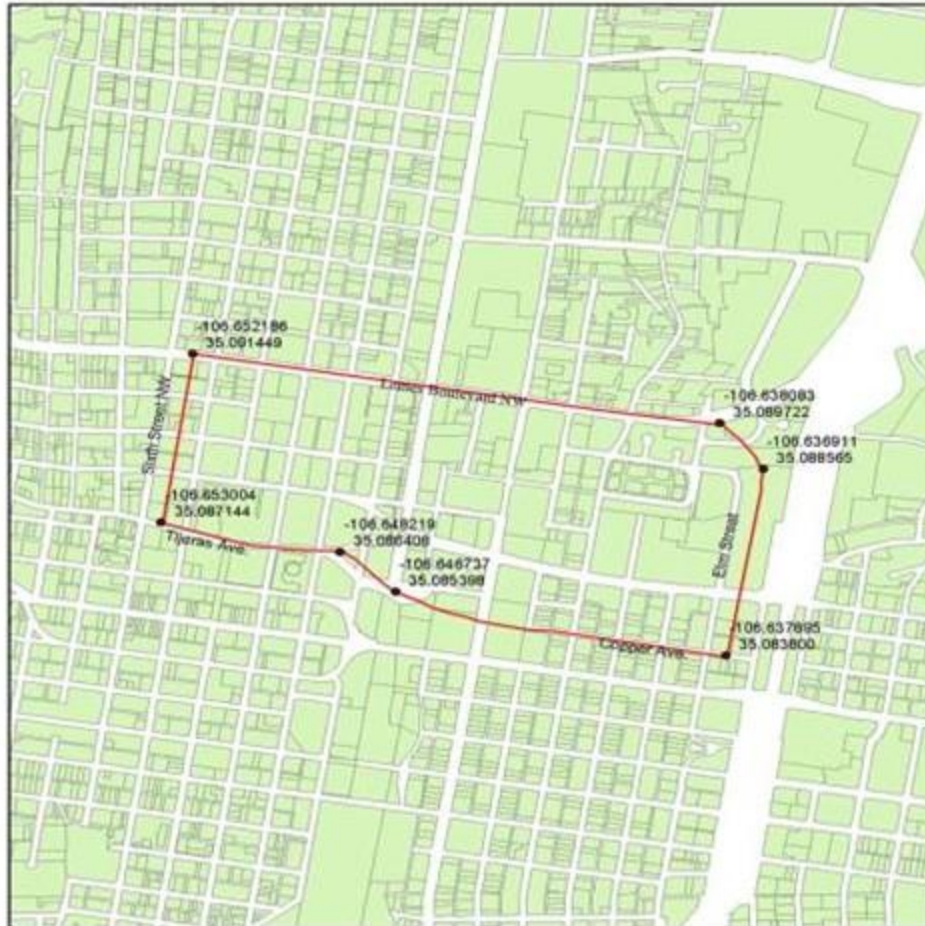

19.25.9.9 AREAS SUBJECT TO PROHIBITIONS:

By order of the office of the state engineer, it is prohibited to drill new wells, appropriate new surface water or ground water, or transfer either surface water or ground water to existing wells within the following geographic areas: **FRUIT AVENUE PLUME SUPERFUND SITE**. The state engineer hereby prohibits any drilling of new wells or transfer of either surface water or ground water to existing wells within the boundaries in Albuquerque, New Mexico identified as the Fruit Avenue Plume Superfund Site within which the ground water is contaminated with tetrachloroethene (PCE), trichloroethene (TCE), cis-1, 2-dichloroethene and trans-1, 2-dichloroethene. Both PCE and TCE levels

are above drinking water standards, and this prohibition is necessary to protect the public welfare. The Fruit Avenue Plume area is approximately bounded by Fruit Avenue to the north, Elm Street to the east, Tijeras/Martin Luther King Avenue to the south, and 4th Street to the west. The precise delineations of the area are as follows:

State Plane Nad-27 feet

Latitude	Longitude	X	Y
35.087144	-106.653004	379,437	1,487,207
35.091449	-106.652186	379,688	1,488,772
35.089722	-106.638083	383,904	1,488,127
35.088565	-106.636911	384,253	1,487,705
35.083800	-106.637895	383,952	1,485,972
35.085398	-106.646737	381,309	1,486,564
35.086408	-106.648219	380,867	1,486,933

Fruit Avenue Plume Superfund Site

0 315 630 1,260 1,890 2,520 Feet

[19.25.9.9 NMAC - N, 07/31/03]

19.25.9.10 PENALTIES:

Violation of this Part is a misdemeanor punishable by a fine of not less than twenty-five dollars (\$25.00), nor more than two hundred and fifty dollars (\$250.00), for each offense; and each day of continued violation shall constitute a separate offense; or by imprisonment in the county jail not to exceed one year or both for each and every violation pursuant to Section 72-12-11 NMSA 1978.

[19.25.9.10 NMAC - N, 07/31/03]

PART 10: REVIEW AND ELIGIBILITY OF PROPOSED WATER PROJECTS

19.25.10.1 ISSUING AGENCY:

New Mexico Water Trust Board.

[19.25.10.1 NMAC - Rp, 19.25.10.1 NMAC, 7/31/08]

19.25.10.2 SCOPE:

All persons applying for financial assistance under the water project fund from the New Mexico finance authority, NMSA 1978, 72-4A-5 and NMSA 1978, 72-4A-9.

[19.25.10.2 NMAC - Rp, 19.25.10.2 NMAC, 7/31/08]

19.25.10.3 STATUTORY AUTHORITY:

NMSA 1978, 72-4A-5 and NMSA 1978, 72-4A-9.

[19.25.10.3 NMAC - Rp, 19.25.10.3 NMAC, 7/31/08]

19.25.10.4 DURATION:

Permanent.

[19.25.10.4 NMAC - Rp, 19.25.10.4 NMAC, 7/31/08]

19.25.10.5 EFFECTIVE DATE:

July 31, 2008, unless a later date is cited at the end of a section.

[19.25.10.5 NMAC - Rp, 19.25.10.5 NMAC, 7/31/08]

19.25.10.6 OBJECTIVES:

A. Section 72-4A-5, NMSA 1978 provides that the New Mexico water trust board is required to adopt rules governing terms and conditions of grants and loans recommended by the board for appropriation by the state legislature from the water

project fund giving priority to projects that have urgent needs, that have been identified for implementation of a completed regional water plan that is accepted by the interstate stream commission and that have matching contributions from federal or local funding sources; and authorizes qualifying water projects to the authority that are for: (1) storage, conveyance or delivery of water to end users; (2) implementation of federal Endangered Species Act of 1973; (3) restoration and management of watersheds; (4) flood prevention; and (5) conservation, recycling, treatment or reuse of water as provided by law. Additionally, the board shall create a drought strike team to coordinate responses to emergency water shortages caused by drought conditions. Section 72-4A-9, NMSA 1978, creates the "water project fund" within the New Mexico finance authority.

B. Section 72-4A-5, NMSA 1978, provides that the board shall give priority to qualifying water projects that (1) have been identified by the board as being urgent to address public health and safety issues; (2) have matching contributions from federal or local funding sources available and (3) have obtained all requisite state and federal permits and authorizations necessary to initiate the qualifying water project. The purpose of these rules is to set forth the intent of the board and to outline, in general terms, the criteria and procedures to be used in evaluating and funding qualifying water projects.

C. Section 72-4A-5, NMSA 1978, provides that the board shall evaluate projects, including their environmental impacts, and recommend projects to the interstate stream commission pursuant to the provisions of Section 72-14-45, NMSA 1978.

D. Section 72-4A-6, NMSA 1978, provides that the authority shall provide support for the water trust board, develop application procedures and forms for qualifying entities to apply for grants and loans from the water project fund; and make loans or grants to qualifying entities for qualifying water projects authorized by the state legislature, provided that the service area for the project is wholly within the boundaries of the state or the project is an interstate project that directly benefits New Mexico.

E. Section 72-4A-9, NMSA 1978, provides that the authority may adopt separate procedures and rules for administration of the water project fund and recover from the water project fund costs of administering the water project fund and originating grants and loans.

[19.25.10.6 NMAC - Rp, 19.25.10.6 NMAC, 7/31/2008; A, 4/22/2025]

19.25.10.7 DEFINITIONS:

A. "Act" means the Water Project Finance Act, Sections 72-4A-1 through 72-4A-10, NMSA 1978, as the same may be amended and supplemented.

B. "Agreement" means the document or documents signed by the board and a qualifying entity which specify the terms and conditions of obtaining financial assistance from the water project fund.

C. "Applicant" means a qualifying entity which has filed a water project proposal with the authority for initial review and referral to the board's project review committee.

D. "Authority" means the New Mexico finance authority.

E. "Authorized representative" means one or more individuals duly authorized to act on behalf of the qualifying entity in connection with its financial application, water project proposal or agreement.

F. "Board" means the New Mexico water trust board created by the act.

G. "Bylaws" means the bylaws of the board adopted on September 25, 2001, and amended on June 27, 2007, and as may be further amended and supplemented.

H. "Financial application" means a written document filed with the authority by an applicant for the purpose of evaluating the applicant's qualifications for types of financial assistance which may be provided by the board.

I. "Financial assistance" means loans, grants and any other type of assistance authorized by the act, or a combination thereof, provided from the water project fund to a qualified entity for the financing of a qualifying water project.

J. "Policy committee" means a standing committee, appointed by the chairman of the board from the members of the board pursuant to the bylaws to review policies and policy related matters and make recommendations to the full board.

K. "Political subdivision" means a municipality, county, land grant-merced controlled and governed pursuant to Section 49-1-1 through 49-1-18 or 49-4-1 through 49-4-21 NMSA 1978, regional or local public water utility authority created by statute, irrigation district, conservancy district, special district, acequia or soil and water conservation district, water and sanitation district, or an association organized and existing pursuant to the Sanitary Projects Act, Chapter 3, Article 29 NMSA 1978.

L. "Project review committee" means a standing committee, appointed by the chairman of the board from the members of the board pursuant to the bylaws to review water projects to be recommended for funding from the water project fund.

M. "Qualifying entity" means a state agency, a political subdivision of the state, an intercommunity water or natural gas supply association or corporation organized under Chapter 3, Article 28 NMSA 1978, a recognized Indian nation, tribe or pueblo, the boundaries of which are located wholly or partially in New Mexico or an association of

such entities created pursuant to the Joint Powers Agreement Act, Chapter 11, Article 1 NMSA 1978 or other authorizing legislation for the exercise of their common powers.

N. "Qualifying water project" means a project recommended by the board for funding by the legislature which includes a water project serving an area wholly within the boundaries of the state for (1) storage, conveyance or delivery of water to end users; (2) implementation of federal Endangered Species Act of 1973 collaborative programs; (3) wastewater conveyance and treatment; (4) restoration and management of watersheds; (5) flood prevention; or (6) conservation, recycling, treatment or reuse of water as provided by law and which has been approved by the state legislature pursuant to Subsection B of Section 72-4A-9, NMSA 1978.

O. "State" means the state of New Mexico.

P. "State agency" means any agency or institution of the state.

Q. "Water project account" means a fund designated by a qualifying entity exclusively for receipt of financial assistance.

R. "Water project fund" means the fund of that name created in the authority by Section 72-4A-9, NMSA 1978.

S. "Water project proposal" means a written proposal submitted by a qualifying entity for review by the project review committee.

T. "Water trust fund" means the fund of that name created in the state treasury by Section 72-4A-8, NMSA 1978.

[19.25.10.7 NMAC - Rp, 19.25.10.7 NMAC, 7/31/2008; A, 12/30/2013; A, 4/22/2025]

19.25.10.8 ELIGIBILITY: PRIORITIZATION OF WATER PROJECTS:

The board will develop and consider a variety of factors in reviewing and evaluating water project proposals to determine which water projects to recommend as qualifying water projects for appropriation by the state legislature. The board shall give priority to projects that have urgent needs and that have matching contributions from federal or local sources as provided for in Section 72-4A-5 NMSA 1978. Pursuant to Section 72-4A-5.1 NMSA 1978, the board, in conformance with the state water plan and pursuant to the provisions of the Water Project Finance Act, shall prioritize the planning and financing of water projects required to implement the plan. The board shall identify opportunities to leverage federal and other funding. The board shall establish policies for prioritization of water projects.

[19.25.10.8 NMAC - Rp, 19.25.10.8 NMAC, 7/31/2008; A, 12/30/2013; A, 4/30/2015; A, 4/22/2025]

19.25.10.9 WATER PROJECT PROPOSAL, PROCEDURES AND APPROVAL PROCESS:

A. The authority will administer an outreach program to notify qualifying entities that water project proposals are being accepted to identify water projects for review by the project review committee and the board for recommendation for funding to the state legislature as qualifying water projects.

B. The authority will provide forms and guidelines for water project proposals and financial applications.

C. The authority staff will forward all completed water project proposals from qualified applicants for qualified water projects to the project review committee. The project review committee will consider the water project and may confer with outside parties, including any local interdisciplinary teams familiar with the water project, as necessary to obtain more information on the feasibility, merit, and cost of the water project. The project review committee will make a recommendation to the board on each water project proposal.

D. Upon the recommendation of the project review committee, the board will evaluate the qualifying water projects for recommendation to the legislature.

E. After completion of the review process by the project review committee and the board and receipt of a favorable recommendation on the water project proposal, the water project will be recommended by the board for approval by the state legislature, which recommendation and approval are required by Sections 72-4A-5 and 72-4A-9 NMSA 1978.

F. No later than January of each year, the board will recommend to the legislature a list of projects recommended for funding. After the legislature authorizes qualifying water projects, the project review committee will review evaluations of financial applications and water project proposals prepared by staff and recommend to the board a final list of projects to be authorized by the board for funding by the authority. The authority will provide financial assistance for qualifying projects as authorized by the legislature under policies jointly established by the board and authority.

[19.25.10.9 NMAC - Rp, 19.25.10.9 NMAC, 7/31/08; A, 12/30/13; A, 4/30/15]

19.25.10.10 EVALUATION OF FINANCIAL APPLICATION AND WATER PROJECT PROPOSAL:

The authority staff will complete an initial evaluation of the financial application and water project proposal upon receipt. Such evaluation will include, to the extent applicable, an evaluation of water project feasibility, administrative capacity, financial position, debt management and economic and demographic factors. The authority may

rely upon the advice of an interdisciplinary team in evaluating water project proposals and financial applications.

[19.25.10.10 NMAC - Rp, 19.25.10.10 NMAC, 7/31/08]

19.25.10.11 QUALIFYING WATER PROJECTS AND ELIGIBLE COSTS:

A. The board may authorize the authority to provide financial assistance from the water project fund to qualifying entities only for qualifying water projects as provided by Section 72-4A-6 and Section 72-4A-7, NMSA 1978.

B. Financial assistance shall be made only to qualify entities that:

(1) agree to provide for the operation and maintenance of the water project so that it will function properly over the structural and material design life;

(2) require the contractor of the construction project to post a performance and payment bond in accordance with the requirements of Section 13-4-18, NMSA 1978;

(3) provide written assurance signed by an attorney or provide a title insurance policy that the political subdivision has proper title, easements and rights of way to the property upon or through which the water project proposed for funding is to be constructed or extended;

(4) meet the requirements of the financial capability set by the authority to ensure sufficient revenues to operate and maintain the water project for its useful life and to repay the loan;

(5) agree to properly maintain financial records in accordance with all applicable laws; and

(6) agree to pay costs of originating grants and loans as determined by rules adopted by the authority.

C. Plans and specifications for a water project shall be approved by the authority after review and upon the recommendation of the state engineer and the environment department before grant or loan disbursements to pay for construction costs are made to a qualifying entity. Plans and specifications for a water project shall incorporate available technologies and operational design for water efficiency.

D. Financial assistance shall be made for eligible items, which include:

(1) matching requirements for federal and local cost shares;

(2) engineering feasibility reports;

- (3) contracted engineering design;
- (4) inspection of construction;
- (5) special engineering services;
- (6) environmental or archeological surveys;
- (7) construction;
- (8) land acquisition;
- (9) easements and rights of way; and
- (10) legal costs.

E. A qualified entity which has had financial assistance approved by the state legislature for financing a qualifying water project may apply to the board to redirect the financial assistance to a different water project made necessary by unanticipated events. The decision to redirect the financial assistance to a different qualifying water project will be at the sole discretion of the board and subject to approval of the state legislature as required by Subsection B of Section 72-4A-9, NMSA 1978.

[19.25.10.11 NMAC - Rp, 19.25.10.11 NMAC, 7/31/2008; A, 5/28/2010; A, 4/22/2025]

19.25.10.12 QUALIFYING WATER PROJECT FINANCING:

The authority may provide financial assistance packages that include loans, grants and any other type of assistance authorized by the authority. The structure, terms and conditions of the financial assistance will be determined by the authority. Financial assistance for qualifying water projects may be pooled, at the sole discretion of the authority, under policies jointly established by the board and authority.

[19.25.10.12 NMAC - Rp, 19.25.10.12 NMAC, 7/31/08; A, 4/30/15]

19.25.10.13 FINANCING APPROVAL REQUIREMENTS:

Based on the priority and evaluation factors set forth in Sections 19.25.10.8, 19.25.10.10, and 19.25.10.11, the board may recommend to the authority approval of the qualifying water project for financial assistance.

[19.25.10.13 NMAC - Rp, 19.25.10.13 NMAC, 7/31/08]

19.25.10.14 RECONSIDERATION OF BOARD DECISIONS:

Any applicant or qualifying entity may request reconsideration of a decision of the board by notifying the board in writing within 15 days following the meeting at which the decision was made. Notice of a decision made in an open meeting of the board is deemed to be given on the date of the meeting, and the time for notification of a request for reconsideration shall run from that date, regardless whether any written notice of the decision is given by the board. A request for reconsideration shall state with particularity the grounds for reconsideration, including any factual or legal matter on which the applicant or qualifying entity believes that there was an error by the board. Upon receiving a timely and proper request for reconsideration, the chairman of the board will set the matter for reconsideration at the board's next regularly scheduled meeting or at a special meeting called for the purpose, at the chairman's discretion. Upon reconsideration by the board, the board will notify the applicant or qualifying entity of the board's decision, in writing, within five working days of the decision. The decision of the board on reconsideration is final. A request for reconsideration not timely or properly made will not be considered by the board.

[19.25.10.14 NMAC - Rp, 19.25.10.14 NMAC, 7/31/08; A, 5/28/10]

19.25.10.15 FINANCIAL ASSISTANCE AGREEMENT:

A. The authority and the qualified entity will enter into an agreement to establish the terms and conditions of financial assistance from the water project fund. The agreement will include the terms of repayment and remedies available to the authority in the event of a default. The authority will monitor terms of the agreement and enforce or cause to be enforced all terms and conditions thereof, including prompt notice and collection.

B. The interest on any financial assistance extended shall be determined by the authority based on the cost of funds and ability of a qualified entity to repay a loan. The interest rate shall not change during the term of the financial assistance unless refinanced or unless the financial assistance is structured as a variable rate obligation.

C. The agreement will contain provisions which require financial assistance recipients to comply with all applicable federal, state and local laws and regulations.

D. In the event of default under a financial assistance agreement by a qualified entity, the authority may enforce its rights by suit or mandamus and may utilize all other available remedies under state and applicable federal law.

[19.25.10.15 NMAC - Rp, 19.25.10.15 NMAC, 7/31/08; A, 12/30/13]

19.25.10.16 ADMINISTRATIVE COSTS:

A. The board may impose and collect reasonable fees and costs in connection with the filing of a water project proposal or a financial application for approval of a water project and for financial assistance with the board and the authority. The board also may impose and collect an administrative fee from each qualifying entity that receives

financial assistance from the water project fund. If an administrative fee is assessed, the administrative fee will be a percentage of the principal amount of the financial assistance provided to a qualifying entity. The administrative fee may be withheld from the principal amount of the financial assistance and will be retained in the water project fund. Alternatively, the board may levy an annual fee equal to a percentage of the outstanding principal amount of a loan. Specific percentages will be based on, among other things, the volume of financial assistance being provided to qualifying entities, the administrative costs of the board and the authority, and the availability of other revenue sources to cover the board's and the authority's administrative costs. The filing and administrative fee or fees may be used for, among other purposes, reimbursing the board or the authority for all or part of the costs of issuing bonds and other administrative costs, including any audits of the water project fund and the water trust fund.

B. The board and the authority may establish such other charges, premiums, fees and penalties deemed necessary for the administration of the water project fund and the water trust fund.

[19.25.10.16 NMAC - Rp, 19.25.10.16 NMAC, 7/31/08]

19.25.10.17 ADMINISTRATION OF THE WATER TRUST FUND:

A. The water trust fund shall be administered by the state treasurer's office and shall be invested by the state investment officer in the same manner as land grant permanent funds are invested under state law. All investment earnings on the water trust fund shall be credited to the water trust fund. The water trust fund shall not be expended for any purpose.

B. Annual distributions to the water project fund from the water trust fund shall be made as required by the authority.

[19.25.10.17 NMAC - Rp, 19.25.10.17 NMAC, 7/31/08]

19.25.10.18 ADMINISTRATION OF THE WATER PROJECT FUND:

A. The water project fund shall be administered by the authority as a separate account but may consist of such subaccounts as the authority deems necessary to carry out the purposes of the fund.

B. Money in the water project fund may be used by the authority to (1) make loans or grants to qualified entities recommended by the water trust board, (2) hire contractors to provide financial and administrative capacity development and direct technical assistance to entities on water projects, and (3) pay administrative costs of the authority.

C. Money from repayments of loans made by the board for qualifying water projects shall be deposited in the water project fund. The water project fund shall also consist of any other money appropriated, distributed or otherwise allocated to the water project fund for the purpose of financing qualifying water projects.

D. The authority shall adopt a uniform accounting system for the water project fund and each account and subaccount established by the authority, based on generally accepted accounting principles.

E. The authority may establish procedures and adopt rules as required to administer the fund and to recover from the fund costs of administering the fund and originating grants and loans.

[19.25.10.18 NMAC - Rp, 19.25.10.18 NMAC, 7/31/2008; A, 4/22/2025]

19.25.10.19 BOND ISSUANCE:

A. The authority may issue and sell revenue bonds as required to provide funds to:

- (1)** replenish the principal balance of the water project fund;
- (2)** pay, fund or refund the principal of or interest or redemption premiums, if any, on bonds issued by the authority whether the bonds or interest to be paid, funded or refunded have or have not become due;
- (3)** establish or increase reserve funds to secure bonds; and
- (4)** pay the costs and expenses incident to the issuance of bonds.

B. The authority will consider market and other economic conditions in determining the type of sale and the timing of the issuance of bonds.

C. The bonds shall be authorized and issued by the authority in accordance with the provisions of the New Mexico Finance Authority Act, Chapter 6, Article 21, NMSA 1978.

[19.25.10.19 NMAC - Rp, 19.25.10.19 NMAC, 7/31/08]

19.25.10.20 AMENDMENT OF RULES:

This rule may be amended or repealed at any time by a majority vote of a quorum of the board.

[19.25.10.20 NMAC - Rp, 19.25.10.20 NMAC, 7/31/08]

PART 11: [RESERVED]

PART 12: DAM DESIGN, CONSTRUCTION AND DAM SAFETY

19.25.12.1 ISSUING AGENCY:

New Mexico Office of the State Engineer.

[19.25.12.1 NMAC - N, 3/31/2005]

19.25.12.2 SCOPE:

These regulations apply to the design and construction of all jurisdictional dams in New Mexico and are intended to facilitate the continued safe operation and maintenance of all non-federal jurisdictional dams. These regulations govern the review and acceptance of plans for construction, alteration, modification, repair, enlargement and removal of a jurisdictional dam. These regulations ensure the continued safe operation, maintenance, site security and emergency preparedness for existing non-federal jurisdictional dams. These regulations do not authorize the appropriation or use of water pursuant to 19.26 NMAC and 19.27 NMAC.

[19.25.12.2 NMAC - N, 3/31/2005]

19.25.12.3 STATUTORY AUTHORITY:

Section 72-5-32 NMSA requires any person, association or corporation, public or private, the state or the United States that is intending to construct a jurisdictional dam to submit detailed plans to the state engineer. Sections 72-5-9 and 72-5-10 NMSA establish the state engineer's authority over the construction of works and issuing certificates of construction. Sections 72-5-8 and 72-5-14 NMSA require construction to be completed in a time limit set by the state engineer and procedures for requesting an extension of time. Sections 72-5-11, 72-5-12 and 72-5-13 NMSA gives the state engineer jurisdiction over unsafe works, penalties for failure to comply with state engineer orders and priority of liens. Section 72-2-6 NMSA gives the state engineer the authority to assess fees. Section 72-2-8 NMSA gives the state engineer authority to adopt regulations and codes to implement and enforce any provision of any law administered by him. Section 72-8-1 NMSA gives the state engineer the authority to enter upon private property for the performance of his duties. Nothing in these rules shall be construed so as to limit the state engineer's authority to take lawful alternative or additional actions relating to the design, construction and safety of dams.

[19.25.12.3 NMAC - N, 3/31/2005]

19.25.12.4 DURATION:

Permanent.

[19.25.12.4 NMAC - N, 3/31/2005]

19.25.12.5 EFFECTIVE DATE:

March 31, 2005 unless a later date is cited at the end of a section.

[19.25.12.5 NMAC - N, 3/31/2005]

19.25.12.6 OBJECTIVE:

To establish minimum design requirements, minimum submittal requirements and dam site owner responsibilities that shall be addressed to the state engineer's satisfaction in order to ensure a dam is designed, constructed, operated, maintained and secured in a safe manner.

[19.25.12.6 NMAC - N, 3/31/2005]

19.25.12.7 DEFINITIONS:

Unless defined below or in a specific section of these regulations, all other words used herein shall be given their customary and accepted meaning.

A. Terms starting with the letter 'A' are defined as follows:

(1) **Abutment:** That part of the valley side against which the dam is constructed. The left and right abutments of dams are defined with the observer viewing the dam looking in the downstream direction.

(2) **Aesthetic fill:** Cosmetic fill added to the downstream slope of a dam that is not required to address the safe design. Aesthetic fill shall not be considered when determining the properties of the dam for the purposes of evaluating the jurisdictional status and shall not be used to support the safe design.

(3) **Alteration, modification, repair, rehabilitation or enlargement of an existing dam:** To change from the state engineer accepted construction drawings and specifications or current condition.

(4) **Appurtenant structure:** Auxiliary features of a dam such as outlets, spillways, access structures, tunnels and related housing at a dam.

(5) **ASTM:** Standards promulgated by ASTM international for testing the properties of materials. Methods cited in these regulations include laboratory compaction characteristics of soils.

B. Terms starting with the letter 'B' are defined as follows: **Breach:** An opening through a dam or spillway that is capable of draining a portion of the reservoir or the entire reservoir. A controlled breach is a constructed opening. An uncontrolled breach is an unintentional discharge from the reservoir.

C. Terms starting with the letter 'C' are defined as follows:

(1) **Consequences of failure:** Potential loss of life or property damage downstream of a dam caused by waters released at the dam or by waters released by partial or complete failure of dam; includes effects of landslides upstream of the dam on property located around the reservoir.

(2) **Crest width:** The thickness or width of a dam at the crest level (excluding corbels or parapets). In general, the term thickness is used for gravity and arch dams and width is used for other dams.

D. Terms starting with the letter 'D' are defined as follows:

(1) **Dam:** A man-made barrier constructed across a watercourse or off-channel for the purpose of storage, control or diversion of water.

(a) **Jurisdictional dam:** A dam 25 feet or greater in height, which impounds more than 15 acre-feet of water or a dam that impounds 50 acre-feet or more of water and is 6 feet or greater in height. For purposes of these regulations, reference to a dam means a jurisdictional dam unless otherwise noted. See figure of jurisdictional dam size.

(b) **Non-jurisdictional dam:** Any dam not meeting the height and storage requirements of a jurisdictional dam. The state engineer does not regulate the design, construction and operation of a non-jurisdictional dam unless the dam is unsafe and there is a threat to life or property, as determined by the state engineer. Waters impounded by a non-jurisdictional dam may not be exempt from water right permit requirements; therefore a separate state engineer water right permit for the water impounded in the reservoir created by a non-jurisdictional dam may be required. Non-

jurisdictional dams shall meet the requirements of 19.26.2.15 NMAC unless otherwise exempt. The structures listed below are considered non-jurisdictional dams:

(i) **Levee or diversion dike:** A structure where water flows parallel to the length of the levee or diversion dike as determined by the state engineer.

(ii) **Roadway embankment:** A structure across a watercourse designed for the sole purpose of supporting a roadbed or other means of conveyance for transportation as determined by the state engineer; where the area upstream has not been enlarged to increase flood storage; and where the embankment is provided with an uncontrolled conduit of sufficient capacity to satisfy requirements of the appropriate state or local transportation authority. If no transportation authority has jurisdiction over the structure, the current drainage design criteria of the New Mexico department of transportation shall apply.

(2) **Dam crest:** The uppermost surface of a dam, usually a road or walkway excluding any parapet wall, railing, etc.

(3) **Dam failure:** The breakdown of a dam, characterized by the uncontrolled release of impounded water.

(4) **Dam height:** The vertical distance from the lowest point on the downstream toe to the lowest point on the dam crest.

(5) **Dam incident:** An event at a dam that interrupts normal procedures and performance, affects the safety of the dam or results in a potential loss of life or damage to property.

E. Terms starting with the letter 'E' are defined as follows:

(1) **Earthquake:** A sudden motion or trembling of the earth caused by the abrupt release of accumulated stress along a fault.

(a) **Operating basis earthquake:** The earthquake that can reasonably be expected to occur within the service life of the dam or appurtenant structures.

(b) **Maximum credible earthquake:** The greatest earthquake that can reasonably be expected to be generated by a specific source on the basis of seismological and geological evidence.

(2) **Evacuation map:** A map prepared in collaboration with local emergency managers defining the area to be evacuated from a dam failure.

F. Terms starting with the letter 'F' are defined as follows:

(1) **Fetch:** The straight-line distance between the dam and farthest reservoir shore subject to wind forces. The fetch is one of the factors used to calculate wave heights in a reservoir.

(2) **Freeboard:** The vertical distance between the spillway crest and the lowest point of the dam crest not including camber.

(3) **Functional exercise:** A meeting in a conference room environment involving the dam owner and state and local emergency personnel with responsibilities in the emergency action plan. The exercise takes place in a stress-induced environment with time constraints and involves simulation of a dam failure and other specific events. The exercise is designed to evaluate both the internal capabilities and responses of the dam owner and the workability of the information in the emergency action plan used by emergency management officials.

G. Terms starting with the letter 'G' are defined as follows: **Geotextile:** Any fabric or textile (natural or synthetic) used as an engineering material in conjunction with soil, foundations or rock. Geotextiles provide the following uses: drainage, filtration, separation of materials, reinforcement, moisture barriers and erosion protection.

H. Terms starting with the letter 'H' are defined as follows: **High water line:** The highest water level elevation in the reservoir as determined from routing the spillway design flood or inflow design flood.

I. Terms starting with the letter 'I' are defined as follows:

(1) **Incremental impacts:** Under a given flood, earthquake or other conditions, the difference in impacts that would occur due to failure or misoperation of the dam and appurtenant structures compared to those that would have occurred without failure or misoperation of the dam and appurtenant structures.

(2) **Inundation map:** A map delineating the area that would be flooded by a particular flood event.

J. Terms starting with the letter 'J' [RESERVED]

K. Terms starting with the letter 'K' [RESERVED]

L. Terms starting with the letter 'L' are defined as follows:

(1) **Length of dam:** The length measured along the dam axis at the dam crest. This also includes the spillway, powerplant, navigation lock, fish pass, etc., where these form part of the length of the dam. If detached from the dam these structures shall not be included.

(2) **Loss of life:** The likely number of human fatalities that would result from a dam failure flood event. No allowances for evacuation or other emergency actions by the population shall be considered.

M. Terms starting with the letter 'M' [RESERVED]

N. Terms starting with the letter 'N' are defined as follows:

(1) **Naturally dry watercourse:** A watercourse or portion thereof, which under normal conditions is dry, which flows only in direct response to precipitation and whose channel is at all times above the groundwater table.

(2) **Normal operating level:** The water level elevation corresponding to the maximum storage level that excludes any flood control or surcharge storage.

(3) **North American vertical datum 1988 (NAVD 88):** The current vertical control datum in use in North America established from nine space geodetic stations. This basis of establishing elevation provides a precise surface, whereas the national geodetic vertical datum 1929 (NGVD 29) is elevation established from mean sea level.

O. Terms starting with the letter 'O' are defined as follows:

(1) **One-hundred year flood:** A flood that has 1 chance in 100 of being equaled or exceeded during any year.

(2) **Owner:** The individual, association or corporation, public or private, the state or the United States, owning the land upon which a dam is constructed; having a contractual right to construct, operate or maintain a dam; or the beneficiary of an easement to construct, operate or maintain a dam.

P. Terms starting with the letter 'P' are defined as follows:

(1) **Probable:** Likely to occur, reasonably expected, realistic.

(2) **Probable maximum precipitation:** Theoretically, the greatest depth of precipitation for a given duration that is physically possible over a given size storm area at a particular location during a certain time of year.

Q. Terms starting with the letter 'Q' [RESERVED]

R. Terms starting with the letter 'R' are defined as follows: Residual freeboard: The vertical distance between the high water line and the lowest point on the dam crest.

S. Terms starting with the letter 'S' are defined as follows:

(1) **Spillway:** A structure over or through which excess flow is discharged from a reservoir. If the rate of flow is controlled by mechanical means such as gates, it is considered a controlled spillway. If the geometry of the spillway is the only control, it is considered an uncontrolled spillway. For purposes of these regulations, an uncontrolled outlet conduit that is used to drain the reservoir is not considered a spillway.

(2) **Spillway crest:** The lowest level at which water can flow over or through the spillway.

(3) **Spillway design flood:** The required flood that a spillway must pass without failure of the dam.

(4) **Storage:** For purposes of determining whether a dam is jurisdictional, the storage is the volume of water impounded by the dam above the lowest elevation of the downstream toe to the elevation of the spillway crest. For dams with no spillway, storage is measured to the dam crest. Definitions of specific types of storage in reservoirs are:

(a) Dead storage is the storage volume of a reservoir that lies below the invert of the lowest outlet and therefore, cannot readily be withdrawn from the reservoir.

(b) Flood surcharge storage is the storage volume between the maximum operating level and the maximum water level during the spillway design flood.

(c) Live storage is the storage volume of a reservoir that is available for use and lies above the invert of the lowest outlet.

(d) Reservoir storage capacity is the sum of the dead and live storage of the reservoir.

(e) Maximum storage is the sum of the reservoir storage capacity and flood surcharge storage.

(5) **Sunny day failure:** Dam failure with the reservoir at the normal operating level.

T. Terms starting with the letter 'T' are defined as follows:

(1) **Tabletop exercise:** A meeting in a conference room environment involving the dam owner and state and local emergency personnel with responsibilities in the emergency action plan. The format is a discussion of an emergency event, response procedures to resolve concerns regarding coordination and responsibilities.

(2) **Toe:** The contact line between the outer shell of the dam and the natural ground surface.

U. Terms starting with the letter 'U' [RESERVED]

V. Terms starting with the letter 'V' [RESERVED]

W. Terms starting with the letter 'W' are defined as follows: Wave runup:
Vertical height above the water level to which water from a specific wave will run up the face of a structure or embankment.

X. Terms starting with the letter 'X' [RESERVED]

Y. Terms starting with the letter 'Y' [RESERVED]

Z. Terms starting with the letter 'Z' [RESERVED]

[19.25.12.7 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.8 FEE SCHEDULE:

The state engineer assesses fees for filing forms, reviewing plans and specifications for dams and appurtenant structures and construction inspections.

A. For filing an application for permit to construct and operate a dam the fees shall be \$25.

B. For filing an application to alter, repair or rehabilitate a dam the fee shall be \$25.

C. For each review of design plans, construction drawings and specifications for a dam the fee shall be \$2 per \$1000 or fraction thereof of the estimated construction cost. For determination of fees, inclusion of contingencies, taxes and other permit fees is not required. Assessment of multiple review fees for the same application is at the sole discretion of the state engineer.

D. For issuing an extension of time for construction of a dam the fee shall be \$50.

E. For inspecting construction of a dam the fee shall be \$100/8-hour day and actual and necessary traveling expenses.

F. For filing a proof of completion of works for a dam the fee shall be \$25.

G. For filing a change of ownership for a dam the fee shall be \$5.

H. The state engineer shall charge reasonable fees for copy and reproduction to offset the cost of the service, consistent with the state engineer's current policy adopted pursuant to the New Mexico Inspection of Public Records Act, NMSA 1978 Section 14-2 et seq.

[19.25.12.8 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.9 SIZE CLASSIFICATION:

A dam shall be less than or equal to the maximum height and storage to qualify for the size classification.

A. Small: A small dam is 25 feet or greater but less than or equal to 40 feet in height, or 50 acre-feet or greater but less than or equal to 1000 acre-feet of storage.

B. Intermediate: An intermediate dam is greater than 40 feet but less than or equal to 100 feet in height, or greater than 1000 acre-feet but less than or equal to 50,000 acre-feet of storage.

C. Large: A large dam is greater than 100 feet in height or greater than 50,000 acre-feet of storage.

[19.25.12.9 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.10 HAZARD POTENTIAL CLASSIFICATION:

The hazard potential classification is a rating for a dam based on the potential consequences of failure. The rating is based on loss of life, damage to property and environmental damage that is likely to occur in the event of dam failure. No allowances for evacuation or other emergency actions by the population shall be considered. The hazard potential classification is not a reflection of the condition of the dam.

A. Low hazard potential: Dams assigned the low hazard potential classification are those dams where failure or misoperation results in no probable loss of life and low economic or environmental losses. Losses are principally limited to the dam owner's property.

B. Significant hazard potential: Dams assigned the significant hazard potential classification are those dams where failure or misoperation results in no probable loss of human life but can cause economic loss, environmental damage, disruption of lifeline facilities, or can impact other concerns. Significant hazard potential classification dams are often located in predominantly rural or agricultural areas but could be located in populated areas with significant infrastructure.

C. High hazard potential: Dams assigned the high hazard potential classification are those dams where failure or misoperation will probably cause loss of human life.

[19.25.12.10 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.11 DESIGN OF A DAM:

Any person, association or corporation, public or private, the state, or the United States that is intending to construct a dam shall submit an application to construct and operate a dam and supporting documentation acceptable to the state engineer. This section primarily addresses the design and construction of embankment dams. Other types of dams shall conform to sound engineering principles and current state of the practice. Because each site, design and operating practice is unique, waivers of specific requirements in this section will be considered on a case-by-case basis. Request for waiver shall be in writing accompanied with documentation justifying the request. If the request is not justified to the satisfaction of the state engineer the request will be denied. If the supporting documentation for the design of a dam does not meet acceptable engineering standards and does not conform to these regulations, as determined by the state engineer, a quality management plan or third party review may be required by the state engineer. Construction shall not begin until the state engineer has accepted the supporting documentation and approved the application with permit conditions. The application and supporting documentation shall include the information described below.

A. Application: An application form shall be completed with original signature of the dam owner and accompanied with a filing fee in accordance with Subsection A of 19.25.12.8 NMAC. The form will be the only information available to the public before the project is approved for construction. All other supporting documentation is considered draft until accepted by the state engineer. A plan review fee in accordance with Subsection C of 19.25.12.8 NMAC shall accompany the submittal of the design report, construction drawings and specifications. A detailed estimate of the construction cost for the proposed dam and appurtenant structures shall be submitted in support of the plan review fee.

B. Water right: A water right is required for water impounded by the dam. If the dam owner has a permit for the diversion of water, documentation addressing the necessity for storage, diversion periods and release conditions for the reservoir may be required. This requirement is waived for flood control dams that do not detain water longer than 96 hours in accordance with Subparagraph (b) of Paragraph (7) of Subsection C of 19.25.12.11 NMAC or provide documentation that a waiver by the state engineer has been granted. Flood control dams that do not drain within 96 hours require a water right for water permanently stored beyond the 96-hour drain time requirement and for associated losses due to evaporation and other potential depletions to the system unless a waiver in accordance with 19.25.12.11 NMAC is obtained.

C. Design report: A design report, which includes information to evaluate the safe design of the dam and appurtenant structures, shall be submitted in a form acceptable to the state engineer. The final design report shall also be submitted in an electronic format acceptable to the state engineer. The design report may be submitted as a single report or as individual reports documenting the information described below. A professional engineer licensed in the state of New Mexico qualified in the design and construction of dams shall prepare or supervise the preparation of the design report. The front cover shall show the name of the dam, the county in which the dam is located,

the dam owner and the type of report. The first page behind the front cover shall show the name of the dam, the county in which the dam is located, a signed certification from the engineer and a certification for the state engineer in accordance with Subsections B and E of 19.25.12.12 NMAC. The design report shall contain the information described below and any other additional information determined necessary by the state engineer to evaluate if the design is safe.

(1) Hazard potential classification. A hazard potential classification shall be based on the dam failure condition that results in the greatest potential for loss of life and property damage. If the state engineer concurs, the classification may be based on the judgment and recommendation of the professional engineer. For all other cases, a low or significant hazard potential classification shall be supported by a dam breach and flood routing analysis, which includes calculations and data that supports the predicted dam failure flood. This analysis shall also address the potential for foreseeable future development. Evaluation of the effects of flooding from dam failure shall extend at least to the location downstream where the classification can be properly identified. The dam breach and flood routing analysis shall include, but not be limited to:

- (a)** description of the dam breach and flood routing methodology;
- (b)** a tabulation and justification of parameters used in the analysis;
- (c)** a sensitivity analysis of the parameters used in the analysis;
- (d)** references to all computer models, data and supporting justification used in the analysis;
- (e)** appropriate data sheets, computer program input and output computations and electronic files from computerized analysis;
- (f)** table of results for the flood routing for the sunny day failure and the failure and no failure scenarios for multiple flood events up to and including the spillway design flood as defined in Subparagraph (a) through (d) of Paragraph (3) of Subsection C of 19.25.12.11 NMAC; the table of results for all critical locations downstream shall include the depth of flow in feet, velocity of flow in feet per second, rate of flow in cubic feet per second and the incremental impacts; and
- (g)** dam failure inundation maps downstream of the dam for the sunny day failure and failure during the spillway design flood event showing the depth of flow in feet, average velocity in feet per second and rate of flow in cubic feet per second at critical locations downstream.

(2) Hydrologic analysis. The hydrologic analysis shall include a discussion of methodology used to calculate the spillway design flood for determining the available flood storage and spillway capacity. Consideration of how the dam will perform under

these hypothetical flood conditions shall be evaluated. The hydrologic analysis shall include, but not be limited to:

(a) a topographic map of the drainage area above the dam with the drainage area and sub-basins delineated and presented on a map of appropriate scale and size;

(b) a description of the topography, soils and vegetative cover and land treatment of the drainage area;

(c) a discussion of the depth, duration and distribution of the spillway design storm;

(d) a tabulation, discussion and justification of all hydrologic parameters and methodology used to calculate runoff from rainfall;

(e) a discussion of the peak inflow, volume of runoff and maximum reservoir water level elevation for the inflow hydrograph;

(f) a plot of the reservoir inflow and outflow hydrographs extended until flow is negligible and plotted on the same figure of appropriate size and scale;

(g) a table showing the reservoir area (in acres) and storage capacity (in acre-feet) for each foot of elevation above the bottom of the reservoir to the dam crest; the table shall be determined from the reservoir topography map; indicate the amount of dead storage, elevation of the invert of the outlet and elevation of the crest of each spillway; all elevations shall be based on North American vertical datum 1988 or more recent adjustment; and

(h) appropriate data sheets and computer program output computations from computerized analysis.

(3) Spillway design flood. The spillway design flood is the flood that a spillway must be capable of conveying without dam failure. For perimeter embankment dams with no spillway and no external drainage area, the dam must be capable of impounding the spillway design flood without dam failure. A spillway design flood less than these requirements is acceptable to the state engineer if an incremental damage analysis is presented to justify the inflow design flood in accordance with Paragraph (4) of Subsection C of 19.25.12.11 NMAC. The spillway design flood is based on size classification and hazard potential classification of the dam as described below.

(a) Dams classified as low hazard potential, regardless of size, shall have spillways designed to pass a flood resulting from a 100-year precipitation event expressed as a percentage of the probable maximum precipitation.

(b) Dams classified as small and intermediate, with a significant hazard potential rating shall have spillways designed to pass a flood resulting from 50 percent of the probable maximum precipitation.

(c) Dams classified as large, with a significant hazard potential rating shall have spillways designed to pass a flood resulting from 75 percent of the probable maximum precipitation.

(d) Dams classified as high hazard potential, regardless of size, shall have spillways designed to pass a flood resulting from the probable maximum precipitation.

(4) Incremental damage assessment. Where spillways are not in compliance with Paragraph (3) of Subsection C of 19.25.12.11 NMAC an incremental damage assessment shall justify the inflow design flood used to size the spillway. The spillway design flood from an incremental damage assessment is the flood above which the incremental increase in downstream water surface elevation due to failure of a dam is no longer considered to present an unacceptable additional downstream threat when compared to the same flood without dam failure. The lower limit is the flood resulting from the 100-year precipitation. The assessment shall compare the incremental impacts on downstream areas including existing and foreseeable future development. The assessment shall include a dam breach and flood routing analysis in accordance with Subparagraphs (a) through (g) of Paragraph (1) of Subsection C of 19.25.12.11 NMAC for the failure and non-failure conditions. Methods for assessing the damage between failure and non-failure conditions shall be fully documented.

(5) Spillway capacity. The spillway capacity shall be adequate to pass the spillway design flood in accordance with Paragraph (3) of Subsection C of 19.25.12.11 NMAC or accepted inflow design flood in accordance with Paragraph (4) of Subsection C of 19.25.12.11 NMAC without failure of the dam. If the outlet works are gated, the design discharge of the outlet works shall not be considered when routing the spillway design flood through the reservoir and spillway. The water level shall be at the normal operating level at the beginning of the spillway design storm. A spillway rating curve and table showing elevation in one-foot increments versus maximum discharge capacity shall be prepared. The rating curve and table shall include data from the crest of the spillway to the dam crest. The parameters used to calculate the spillway capacity shall be justified and appropriate data sheets and computer program output computations from computerized analysis shall be provided. Elevations shall be based on North American vertical datum 1988 or more recent adjustment.

(6) Spillway design. Spillways shall be evaluated for erosion potential during normal operation and the design flood event. Damage to a spillway during the design flood event is acceptable; however, a breach of the spillway is unacceptable. The spillway design shall address the minimum requirements described below.

(a) The material required for spillway lining depends on the spillway location, frequency of discharge and velocity of discharge to adequately address erosion and

breach potential. The design shall provide adequate justification for the material selected.

(b) The design shall provide aeration of the nappe for cavitation control where control weirs are used at the spillway crest.

(c) The spillway must discharge away from the toe of the dam and abutment slopes.

(d) The design shall address the potential for the accumulation of debris that may block the spillway.

(e) The design shall address energy dissipation to adequately control erosion of the natural channel due to spillway discharge reasonably expected to occur during the life of the dam.

(f) Channel lining shall be placed on a suitably prepared, stable subgrade. All edges and joints in channel lining material must be designed to prevent undermining and erosion. Concrete channel lining must be provided with adequate jointing to permit thermal expansion and contraction and adequate reinforcing to control thermal cracking. Adequate water stops are required at joints in the spillway lining. Concrete lining shall be adequately anchored against displacement and uplift and shall be provided with adequate subdrainage to relieve hydrostatic pressure and prevent frost heave.

(g) Where training dikes are used to divert the water away from the dam, the dike shall be designed with a compaction to at least 95% of the maximum standard Proctor density, ASTM D 698, or at least 90% of the maximum modified Proctor density, ASTM D 1557. Erosion protection for the dike shall be addressed in accordance with Paragraph (16) of Subsection C of 19.25.12.11 NMAC.

(7) Outlet works capacity. Dams shall be designed with a low level outlet to drain the entire contents above the elevation of the downstream toe of the dam. If environmental consequences prevent draining of the reservoir, the state engineer will grant a waiver if written justification is provided to the satisfaction of the state engineer. The outlet shall be sized to provide adequate capacity to satisfy water rights of downstream priority users. A stage discharge curve and table showing elevation in one-foot increments versus discharge capacity shall be prepared. The rating curve and table shall be from the invert of the outlet to the dam crest. The parameters used to calculate the outlet works capacity shall be justified and appropriate data sheets and computer program output computations from computerized analysis shall be provided. Elevations shall be based on North American vertical datum 1988 or more recent adjustment. The outlet works capacity shall meet the minimum requirements described below.

(a) Outlets for water storage dams shall drain the reservoir in 45 days with supporting calculations provided.

(b) Outlets for flood control dams shall drain the reservoir in 96 hours unless a waiver is granted by the state engineer. The 96-hour time frame begins once the reservoir storage drops to the emergency spillway crest or reaches its peak during the 100-year, 24-hour event. Documentation supporting the waiver shall include the time to drain more frequent events.

(8) Outlet works design. The outlet works design includes the intake structure, conduit and terminal structure. The outlet works design shall meet the minimum requirements described below.

(a) Minimum conduit diameter is 18 inches unless a waiver is granted by the state engineer. Documentation supporting a waiver shall include identification of methods to inspect the interior of the conduit.

(b) Metal conduits used in dams that are classified as significant hazard potential where the sole purpose of the dam is flood control, or in dams classified as low hazard potential, shall have adequate strength after corrosion for a minimum of 200 years, based on corrosivity testing of onsite soils. Cathodic or other protection of metal conduits is permissible and may be considered in this analysis. Metal conduits are not acceptable for dams classified as high hazard potential or dams classified as significant hazard potential with permanent water storage except as interior forms for cast-in-place concrete conduits.

(c) Outlet conduits for storage reservoirs shall be gated at the upstream end unless a waiver is granted by the state engineer. Where gates are located other than at the upstream end of the conduit, a guard gate or bulkhead shall be provided at the upstream end to allow draining of the conduit for inspection, maintenance and repair.

(d) Outlet conduits shall be adequately vented and shall include all supporting calculations. Where the outlet conduit ties directly to a downstream pipe, a by-pass valve shall be provided. An exception to the by-pass valve will be granted when the conduit discharges to an ungated downstream storm drain with adequate access for inspection and maintenance.

(e) Outlet controls and equipment shall be properly designed to be secure from damage due to vandalism, weather, ice, floating debris, wave action, embankment settlement and other reasonably foreseeable causes. The outlet control operators shall remain accessible during outlet works and spillway releases.

(f) Outlets for flood control structures shall be ungated. Where a gate is required to satisfy downstream release restrictions, a waiver from the state engineer is required. The written request for waiver shall include a plan for timely release of the floodwater.

(g) Outlet works intake structures shall be provided with trash racks or grates to prevent clogging with debris. Grate opening area or bar spacing shall be adequate to

satisfy applicable public safety requirements, if appropriate. Total area of grate openings must be at least three times the cross-sectional area of the outlet conduit.

(h) The design of the outlet works terminal structure shall address energy dissipation to prevent erosion and shall include supporting calculations.

(i) Outlet conduits shall be designed for full embankment loading and for hydrostatic pressure equal to the maximum reservoir head, acting separately and in combination, with an adequate factor of safety for the conduit material. If future increases in embankment height or reservoir head are foreseeable, allowance shall be made in the design.

(j) The conduit together with all joints and fittings shall be watertight at the design pressure and shall be pressure tested prior to backfilling. Conduits shall be designed for all reasonably foreseeable adverse conditions including corrosion, abrasion, cavitation, embankment settlement and spreading, thermal effects and seismic loading. The ability of the conduit to withstand deflection and separation at the joints shall be addressed in the design of the outlet conduit.

(k) Outlet works shall be supported by stable, well-consolidated foundation materials. Where the conduit is placed in embankment fill or native overburden materials, settlement analysis shall be performed.

(l) Minimizing seepage along conduits shall be addressed including the methods for ensuring compaction of backfill around and beneath the conduit. Seepage collars are not an acceptable design standard for controlling seepage.

(m) All supporting documentation and calculations for the outlet works design shall be provided. The outlet works design shall include all foreseeable loading conditions, including but not limited to ice loading, debris buildup, wave action and embankment settlement. Structural design calculations for the intake structure, conduit and outlet structure shall be submitted.

(9) Geological assessment. A geological assessment of the dam and reservoir site is required for all dams classified as high or significant hazard potential. The geological assessment may be included in the geotechnical investigation or seismic study, or may be submitted as a separate document. The geological assessment shall address regional geologic setting; local and site geology; geologic suitability of the dam foundation; slide potential of the reservoir rim and abutment areas; and seismic history and potential.

(10) Geotechnical investigation. A geotechnical investigation shall assess site conditions and support the design. A professional engineer licensed in the state of New Mexico qualified to provide geotechnical expertise in the design and construction of dams shall prepare, stamp and sign the geotechnical investigation, which may be submitted as a separate report. The scope of the geotechnical investigation is

dependent on the size classification, hazard potential classification, anticipated materials and construction methods, site geology and seismicity, anticipated soil strata and other site-specific conditions. The geotechnical investigation shall include a field investigation and laboratory testing. Results of field and laboratory testing shall be presented in a report, including recommended parameters to be used in design and construction of the dam and appurtenant structures. The field investigation and laboratory testing shall include but not be limited to the following:

(a) test borings in the footprint of the embankment, spillway excavations and appurtenant structures extending to bedrock or to a depth equal to at least the height of the dam; where appropriate, borings may include coring of bedrock materials to determine the quality and character of the rock;

(b) standard penetration tests or other field-testing to assess soil character and consistency;

(c) "undisturbed" sampling for further tests such as insitu density, shear strength and compressibility;

(d) supplemental test pits, if deemed necessary, to obtain bulk and undisturbed samples, assess soil layering and measure bedrock orientation;

(e) measurement of water level in drill holes;

(f) field permeability testing, if feasible;

(g) logs of test borings and test pits, location map and profile along dam axis with soil information shown;

(h) testing to determine the relevant properties of the material to be used in construction, including but not limited to shear strength, permeability, compressibility and filter characteristics; the testing method shall conform to accepted industry standards and be appropriate for the material being tested;

(i) evaluation of liquefaction potential and dynamic shear strength testing if deformation analysis is required; and

(j) identification of the location of the borrow material to be used during construction.

(11) Seepage and internal drainage. The effects of seepage and potential for internal erosion shall be evaluated. For dams with aesthetic fill on the downstream slope, the effects of seepage shall be evaluated with and without the aesthetic fill. A seepage analysis shall be performed to address the performance of the embankment under steady-state conditions for dams classified as high or significant hazard potential. All parameters and assumptions used in the analysis shall be summarized in a table

and justified in the seepage analysis. A waiver may be requested in writing for flood control dams that drain in 96 hours. The seepage analysis and internal drainage design shall include the minimum requirements described below.

(a) Flow nets of appropriate size and scale shall be prepared. The effects of anisotropy with respect to permeability shall be addressed. Ratios of horizontal to vertical permeability of less than 4 for constructed embankments and less than 9 for native deposits shall be supported by field and laboratory permeability tests. Appropriate data sheets and computer program output computations from computerized analysis shall be provided.

(b) The design shall address the effects of anticipated seepage beneath, around and through the dam. Seepage shall not exit on the dam face and excessive exit seepage gradients are unacceptable. All filter, transition and drainage zones within earth dams shall have a thickness adequate to address constructability and enhance seismic stability with a minimum thickness of 3 feet for each zone.

(c) Collector pipes and conduits for internal drains shall be made of non-corrodible material capable of withstanding the anticipated loads. If possible, pipes shall be located where they can be exposed for repair or replacement without threatening the stability of the dam. Collector pipes for drains shall be enveloped in a free-draining medium meeting filter criteria for adjacent embankment or foundation zones. Where surging or hydraulic gradient reversal is likely, perforation size must be less than the diameter at which 15 percent of the surrounding medium is finer. Where surging or hydraulic gradient reversal are unlikely, the perforation size must be less than the diameter at which 85 percent of the surrounding medium is finer.

(d) Drain pipes shall be sized to provide a flow depth no more than $\frac{1}{4}$ of the pipe diameter when carrying the anticipated discharge. Drain pipes shall be at least 6 inches in diameter unless the availability of technology for inspection and maintenance can be demonstrated. Individual pipes shall discharge to a gallery, well, manhole, or to daylight such that the flow of each pipe can be monitored and measured. Manifold connections, tees and wyes are not permitted. A seepage measuring device must be appropriate for the rate of anticipated flow. The measuring device must include an upstream catchment to detect any sediment in the seepage. Where pipes from internal drains are discharged to daylight, a rodent screen shall be provided.

(12) Stability analysis. Cross-sectional design for dams shall be supported by slope stability analysis. For dams with aesthetic fill on the downstream slope, the stability of the downstream slope shall be evaluated with and without the aesthetic fill. Dams classified as low hazard potential with upstream slopes no steeper than 3 horizontal to 1 vertical, downstream slopes no steeper than 2 horizontal to 1 vertical and which are 25 feet or less in height will not require slope stability analysis. Stability analysis of the reservoir rim is required where slopes are steeper than 3 horizontal to 1 vertical. The analysis model shall adequately represent the geometry and zoning, shear strength parameters, material unit weights, pore pressure and seepage conditions,

external loading and other relevant factors of the critical cross section or sections. Manual computations in the analysis will be accepted if judged to be sufficiently rigorous. Where appropriate, the analysis shall consider noncircular or block and wedge type failure surfaces as well as circular failures. All parameters and assumptions used in the analysis shall be summarized in a table and justified in the geotechnical investigation. A scale drawing, utilizing the same scale for vertical and horizontal dimensions, shall be provided for each cross-sectional model used in the analysis, with the critical failure surface(s) identified. Appropriate data sheets and computer program output computations from computerized analysis shall be provided. Dams shall be designed to provide the following minimum factors of safety from the stability analysis:

- (a)** 1.5 for steady state long-term stability;
- (b)** 1.5 for operational drawdown conditions;
- (c)** 1.3 for rapid drawdown conditions; and
- (d)** 1.3 for end of construction.

(13) Seismic design and analysis. Dams and appurtenant structures classified as high or significant hazard potential shall be analyzed for seismic stability. Seismic analysis for water storage dams shall be based on full reservoir under steady state seepage conditions. Flood control dams with ungated outlets that satisfy Subparagraph (b) of Paragraph (7) of Subsection C of 19.25.12.11 NMAC without waiver shall be designed for earthquake loads under empty reservoir conditions and need not consider steady-state seepage. Dams sited on active faults shall obtain a waiver from the state engineer. To obtain a waiver the analysis shall show that the location of the dam is unavoidable and the dam must be designed to withstand anticipated fault movement without compromising its integrity. Appropriate data sheets and computer program output computations from computerized analysis shall be provided. The seismic analysis shall meet the minimum requirements described below.

(a) A seismological investigation for the dam area and reservoir area shall be performed. This study may be part of the geological or geotechnical report for the structure, or may be a separate effort. The study shall determine and justify the appropriate seismic parameters to be used for design. The dam and appurtenant structures shall be capable of withstanding the operating basis earthquake with little to no damage and without interruption of function. The operating basis earthquake has a 50% probability of exceedance during the service life of the dam or appurtenant structures. In no case shall the service life be less than 100 years. The dam and appurtenant structures critical to the safety of the dam shall be capable of withstanding the design earthquake without failure. The seismic parameters shall be based on the design earthquake requirements described below.

(i) Dams classified as high hazard potential other than flood control structures shall be designed for the maximum credible earthquake or for a 1% probability of exceedance in 50 years (approximately 5000-year return frequency).

(ii) Dams classified as significant hazard potential or high hazard potential dams whose sole purpose is for flood control shall be designed for a 2% probability of exceedance in 50 years (approximately 2500-year return frequency).

(b) An analysis of materials in the foundation, reservoir area and proposed embankment shall be completed to determine the potential for liquefaction, earthquake-induced sliding, or other seismic sensitivity, which may be accomplished as part of the geotechnical investigation.

(c) Pseudostatic analysis will be acceptable for the following cases:

(i) the embankment is to be mechanically compacted to at least 95% of the maximum standard Proctor density, ASTM D 698, or at least 90% of the maximum modified Proctor density, ASTM D 1557; no materials prone to liquefaction are present in the foundation and peak ground acceleration is 0.20g or less; or

(ii) the embankment is to be mechanically compacted to at least 95% of the maximum standard Proctor density, ASTM D 698, or at least 90% of the maximum modified Proctor density, ASTM D 1557; potentially submerged portions of the embankment except for internal drain elements are constructed of clayey material; the dam is constructed on clayey soil or bedrock foundation and peak ground acceleration is 0.35g or less; and

(iii) all safety factor requirements in accordance with Subparagraphs (a) through (d) of Paragraph (12) of Subsection C of 19.25.12.11 NMAC are met;

(iv) minimum freeboard requirements in accordance with Subparagraphs (a) through (e) of Paragraph (15) of Subsection C of 19.25.12.11 NMAC are met; and

(v) the pseudostatic coefficient selected for analysis must be at least 50% of the predicted peak ground acceleration, but not less than 0.05g and the factor of safety under pseudostatic analysis shall be 1.1 or greater. In determining the factor of safety for pseudostatic analysis, a search for the critical failure surface shall be made.

(d) For dams not satisfying the requirements for pseudostatic analysis, a deformation analysis is required. The resulting embankment must be capable of withstanding the design earthquake without breaching and with at least 3 feet of freeboard remaining after deformation. The analysis shall also assess the potential for internal erosion as a result of cracking during deformation.

(14) Dam geometry. The dam geometry shall be supported by the stability and seismic analysis and shall meet the minimum requirements described below.

(a) The crest width shall be at least equal to the dam height in feet divided by 5 plus 8 feet, with the minimum permissible crest width being 10 feet and the maximum required crest width being 24 feet.

(b) Roads located on the crest shall have appropriate surfacing to provide a stable base that resists rutting and provides adequate friction for safety in wet conditions.

(c) The crest design shall provide a minimum of 2 feet of cover or the depth of frost penetration; whichever is greater, above clay cores to prevent cracking of the core due to desiccation or frost penetration.

(d) Turnarounds shall be provided on dead-end service roads on dam crests, located in such a manner that backing maneuvers longer than 300 feet are eliminated.

(e) The crest shall be provided with adequate cross slope to prevent ponding.

(f) The slope or slopes to which crest drainage is directed must be provided with adequate erosion protection to accept the crest drainage.

(g) The crest longitudinal profile shall be provided with adequate camber to maintain the profile after embankment settlement. Camber shall be based on a settlement analysis and shall be at least 2 percent of the total embankment height, with a minimum of 1 foot at the highest point of the dam. The tops of internal core zones shall also be provided with camber in a similar manner to the crest of the dam.

(h) In the event that safety berms, street curbs, or other longitudinal features which block, control, or concentrate drainage are required on the dam crest, the design shall provide for collection and conveyance of accumulated water to discharge away from the embankment without erosion.

(15) Freeboard. Dams shall be provided with adequate freeboard. Wave runup shall be determined taking into consideration wind speed, reservoir fetch, embankment slope and roughness of the slope surface. Freeboard shall satisfy the minimum requirements described below.

(a) Anticipated wave runup resulting from a 100 mph wind with reservoir level at the spillway crest will not overtop the dam.

(b) Anticipated wave runup resulting from a 50 mph wind with maximum reservoir level from routed spillway design flood will not overtop the dam.

(c) Clay core cover and capillary rise requirements in accordance with Subparagraph (c) of Paragraph (14) of Subsection C of 19.25.12.11 NMAC are satisfied.

(d) A minimum of 3 feet of freeboard remains after seismic deformation.

(e) In any case, at least 4 feet of freeboard shall be provided. The minimum of 4 feet of freeboard may be waived for perimeter embankment dams with no spillway and no external drainage area, provided a written request is made to the state engineer accompanied with supporting justification.

(16) Erosion protection. Erosion protection shall be addressed to protect the dam and appurtenant structures from erosion that can threaten the safety of the structure. Erosion protection shall address the minimum requirements described below.

(a) Wave erosion. The upstream slope shall be protected from wave erosion. The material selected and area of coverage shall be appropriate for the protection required with justification provided. Flood control dams in compliance with Subparagraph (b) of Paragraph (7) of Subsection C of 19.25.12.11 NMAC without waiver are exempt from wave protection.

(b) Surface erosion. The slope, crest, abutment and groins, toe areas and any other constructed areas associated with the dam and appurtenant structures shall be protected from wind erosion and erosion from concentrated and sheet flows. The material selected and area of coverage shall be appropriate for the protection required with justification provided.

(17) Geotextile design. Geotextiles are an acceptable material for use in dam design only if the geotextile is placed so that it does not jeopardize the dam or appurtenant structures during repair or failure of the geotextile. The geotextile shall be used in accordance with the manufacturer's recommendations and intended use for the product. Geotextile design computations shall be provided. Where a geotextile is used for fluid containment the installation shall be performed by certified personnel and the completed installation shall be certified by a qualified independent entity.

(18) Structural design. The structural design information for all appurtenant structures, addressing water, earth, ice and any other applicable load shall be provided. Reinforced concrete design including assumptions for loads and limiting stresses and sample calculations shall be provided. Appropriate data sheets and computer program output computations from computerized analysis shall be provided.

(19) Utilities design. Utility placement or relocation shall be addressed as applicable. Utilities located in the vicinity of the proposed embankment, spillway and seepage footprint should be relocated and trenches backfilled and compacted with suitable material to the satisfaction of the state engineer. If utilities are allowed to

remain, they will be required to satisfy applicable provisions for outlet conduits in accordance with Paragraph (8) of Subsection C of 19.25.12.11 NMAC.

(20) Miscellaneous design. Because each design is unique, all design elements not specifically addressed in these regulations shall be documented and justified with sample calculations and appropriate data sheets and computer program output computations from computerized analysis shall be included in the design report.

D. Construction drawings: Construction drawings shall be submitted in a form acceptable to the state engineer. The final construction drawings shall also be submitted in an electronic format acceptable to the state engineer. A professional engineer licensed in the state of New Mexico qualified in dam design and construction shall prepare the construction drawings. Illegible, mutilated, careless or otherwise poorly prepared drawings are not acceptable for filing with the state engineer. The construction drawings shall contain the information described below and any other additional information determined necessary by the state engineer to evaluate if the construction drawings are consistent with the design.

(1) Quality. Construction drawings and maps shall be made from actual field or photogrammetric surveys of an accuracy acceptable to the state engineer. Construction drawings and maps shall be prepared with permanent black ink on mylar. All original signatures, dates and acknowledgments appearing on the sheet(s) shall be in permanent ink. Construction drawings and maps shall always be rolled, never folded, for transmittal.

(2) Scale and size. Sheets shall range in size from twenty-two (22) to twenty-four (24) inches by thirty-four (34) to thirty-six (36) inches with one (1) inch margins on all sides. The scale(s) used on the drawings may vary according to requirements and space available to show all necessary data in detail clearly in feet and decimals and to be clearly legible when the drawings are reduced to eleven (11) inches by seventeen (17) inches. Detailed dimensions of appurtenant structures shall be given in feet and inches. All sheets shall have bar scales in order to allow scaling of reduced drawings.

(3) Sheet numbers. Each sheet shall be numbered sequentially with the first sheet being sheet number one in conjunction with the total numbered sheets (example Sheet 1 of 5). The sheet number on the last sheet shall equal the total number of sheets.

(4) Engineer's seal and signature. Each sheet shall have the responsible engineer's seal and signature.

Seals and signatures shall be presented in accordance with 16.39.3 NMAC.

(5) Orientation and date. The direction of north and the basis of bearings shall be shown on all maps. The date that field surveys are made or the date of the aerial photography used shall be shown on the maps.

(6) Title sheet. The first sheet of a set of construction drawings is the title sheet. The title sheet shall only contain sufficient information to summarize the scope of the project, the title of the project, signed certifications from the dam owner, engineer and a certification for the state engineer in accordance with Subsections A, B and E of 19.25.12.12 NMAC. The title sheet shall summarize the properties of the dam and shall include the following information, as appropriate:

- (a)** name of the dam (same as shown on the application);
- (b)** type of dam (material);
- (c)** hazard potential classification;
- (d)** maximum height above the downstream toe in feet;
- (e)** maximum length in feet;
- (f)** crest width in feet;
- (g)** slope of the upstream face (horizontal to 1 vertical);
- (h)** slope of the downstream face (horizontal to 1 vertical);
- (i)** elevation of the dam crest in feet;
- (j)** elevation of spillway crest in feet;
- (k)** length of the conduit in feet;
- (l)** invert elevation of the upstream end of the conduit in feet;
- (m)** invert elevation of the downstream end of the conduit in feet;
- (n)** freeboard in feet;
- (o)** residual freeboard in feet;
- (p)** maximum spillway discharge capacity in cubic feet per second;
- (q)** type of outlet conduit (give size and material);
- (r)** maximum outlet conduit discharge capacity in cubic feet per second; and
- (s)** location of the outlet works intake structure (using latitude and longitude in decimal degrees at least to the fifth place after the decimal).

(7) Vicinity map. A vicinity map of sufficient scale and size to locate the pertinent area shall be shown on the title sheet or second sheet of the drawings.

(8) Site topography. A detailed topography of the dam site including sufficient area upstream and downstream and at the abutments shall be provided. Elevations shall be based on North American vertical datum 1988 or more recent adjustment.

(9) Design details. Detailed information of the various construction features including plan view, elevations, cross-sections at the maximum section and along the outlet works, profile along and section through the centerline of the dam showing the foundation materials, construction features and cross-sections and a profile of the emergency spillway with dimensions and construction details shall be provided. Any other information necessary for the state engineer to determine the feasibility and safety of the dam shall be provided.

(10) Reservoir area, capacity and high water line traverse. The topography of any proposed reservoir site shall be determined to industry standards and a contour map with a contour interval of 1 foot shall be prepared. Elevations of the contours shall be tied to the North American vertical datum of 1988 or more recent adjustment.

The elevation of the high water line will be highlighted on the contour map. A curve and table of elevation versus area and storage capacity for the reservoir shall be prepared from the contour map. The curve and table shall be from the bottom of the reservoir to the dam crest. Area shall be provided in acres and storage capacity in acre-feet.

(11) Permanent bench mark. A permanent bench mark shall be established above the high water line at a location unlikely to settle or be disturbed. The North American vertical datum of 1988 or more recent adjustment for the bench mark elevation and the latitude and longitude in decimal degrees at least to the fifth place after the decimal for the bench mark location shall be provided. A detail of construction of the permanent bench mark shall be provided.

E. Specifications: A specification package shall be prepared for each project describing work to be done and materials to be used to supplement construction drawings. Specifications shall be submitted in a form acceptable to the state engineer. The specifications shall also be submitted in an electronic format acceptable to the state engineer. Reference to standard technical specifications is not acceptable. Inclusion of appropriate specification sections derived from model specifications is acceptable. Specifications must be clear and concise. Specifications shall include detailed methods of construction, qualities and sizes of materials, unit amounts to be used, methods and frequency of testing and quality control, construction supervision and frequency of inspection. Specifications shall be prepared by a professional engineer licensed in the state of New Mexico qualified in the design and construction of dams. The specifications shall contain the information described below and any other additional information determined necessary by the state engineer to evaluate if the construction methods are consistent with the design and construction drawings.

(1) The front cover of the specifications shall show the name of the dam (identical to the application) and the county in which the dam is located. The first page behind the front cover shall show the name of the dam (identical to the dam name on the application), the county in which the dam is located, a signed certification from the engineer and a certification for the state engineer in accordance with Subsections B and E of 19.25.12.12 NMAC.

(2) The specifications shall include a table of contents.

(3) The specifications shall be bound and submitted on 8 1/2-inch by 11-inch white paper.

(4) The general conditions shall include a statement that the construction drawings and specifications cannot be changed without the prior written approval of the state engineer and must recognize the authority of the state engineer to perform inspections during construction. An approved model statement is provided below. Changes to the model statement require prior approval of the state engineer. "All construction shall be performed in strict accordance with the accepted construction drawings and specifications. Changes to the accepted construction drawings or specifications require prior written approval of the state engineer. Representatives of the state engineer shall have full authority to perform inspections during construction and shall have full power to act pursuant to the law and in accordance with Title 19, Chapter 25, Part 12, Dam Design, Construction and Dam Safety of the New Mexico Administrative Code if construction drawings and specifications are not followed."

F. Boundary, easement or right of way plat of survey: A plat of survey shall be submitted in a form acceptable to the state engineer. A professional surveyor licensed in the state of New Mexico shall prepare a plat of survey showing the dam owner's property boundaries or easement or right of way granted by the land owner. The plat of survey shall be prepared in conformance with the requirements as set forth in the Minimum Standards for Surveying in New Mexico, 12.8.2 NMAC. The plat of survey shall clearly state to whom an easement is granted and what rights are conveyed with the easement. The plat of survey shall show the footprint of the dam and appurtenant structures and the high water line in the reservoir. The plat of survey shall be recorded with the county clerk of the county or counties in which the survey is located. A certificate signed by the surveyor in accordance with Subsection C of 19.25.12.12 NMAC shall appear on the plat of survey. A certified copy of the recorded plat of survey bearing the recorded page and endorsement of the county clerk shall be submitted to the state engineer for filing. Adequate property ownership, easement or right of way shall be required for the following conditions:

(1) to access the dam and outlet controls during normal and flood events;

(2) to prevent development encroachment into the reservoir area defined by normal operation and the spillway design flood that adversely affects the performance of the dam;

(3) to prevent development in the approach, control and discharge section of the spillway that may restrict flow through the spillway;

(4) to return outlet works and spillway discharge to the natural drainage and allow the outlet works to discharge freely; and

(5) to perform maintenance on the dam, appurtenant structures and surrounding areas to ensure the safe performance of the dam.

G. Dam site security: Dams classified as high or significant hazard potential shall address security at dams to prevent unauthorized operation or access. If in the opinion of the state engineer, the failure of the dam will result in catastrophic consequences, a security and risk management program for the dam will be required. Elements of a security and risk management program are:

(1) threat, vulnerability and risk assessments;

(2) physical security plans; and

(3) integration of security operational procedures.

H. Instrumentation plan: An instrumentation plan shall be submitted in a form acceptable to the state engineer. An instrumentation plan providing the ability to monitor and evaluate the performance of a dam is required for dams classified as high or significant hazard potential. Instrumentation details must be included on construction drawings and specifications must be consistent with the instrumentation plan. The instrumentation plan may be submitted as a separate report or as part of the design report. Minimum requirements of the instrumentation plan shall include:

(1) description and purpose;

(2) detailed description of installations;

(3) calibration and maintenance schedule and instructions;

(4) reading schedule and instructions;

(5) data reduction and interpretation instructions; and

(6) identification of critical readings.

I. Operation and maintenance manual: An operation and maintenance manual is required for dams classified as high or significant hazard potential. The operation and maintenance manual identifies activity necessary to address the continued safe operation, maintenance and overall performance of the dam. Any restrictions imposed by the design shall be addressed in the operation and maintenance manual. The

operation and maintenance manual shall conform to the requirements set forth in 19.25.12.17 NMAC.

J. Emergency action plan: An emergency action plan is required for dams classified as high or significant hazard potential. The emergency action plan identifies potential emergency conditions at a dam and specifies preplanned actions to be followed to minimize property damage and loss of life. The emergency action plan shall conform to the requirements set forth in 19.25.12.18 NMAC.

[19.25.12.11 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.12 CERTIFICATIONS:

Signed certifications by the dam owner, engineer, surveyor, local and state emergency management officials and the state engineer are required by these regulations on specific documents. Approved model certifications for the dam owner, engineer, surveyor, local and state emergency management officials and state engineer are provided below. Changes to the model certifications require prior approval of the state engineer.

A. DAM OWNER'S CERTIFICATE: A certificate followed by the dated signature of the dam owner and notary public acknowledgment is required on the title sheet of the construction drawings and first page behind the front cover of the operation and maintenance manual and emergency action plan. The following model certification is considered to be an example of the minimum that the dam owner shall certify. If the dam owner is a corporation, political subdivision or other governmental entity a model certificate is also provided.

I, (dam owner's name), being first duly sworn, upon my oath, state that I have read and examined the accompanying (construction drawings consisting of ____ sheets, operation and maintenance manual, or emergency action plan) and know the contents and representations therein for _____ dam and all that is shown herein is done with my free consent and in accordance with my wishes and state that the same are true and correct to the best of my knowledge and belief.

Dam owner signature

Date

Subscribed and sworn to before me this _____ day of _____, 20__.

Notary public

My commission expires _____ (SEAL)

If a claimant is a corporation, political subdivision or other governmental entity the following shall be used:

I, (representative's name), being first duly sworn, upon my oath, state that I am the _____ (officer) of the _____, a (corporation or political subdivision) duly organized under the laws of the state of _____, that the accompanying _____ (construction drawings consisting of _____ sheets, operation and maintenance manual, or emergency action plan) for _____ dam were made under authority of the board of directors of said (corporation or political subdivision) and that, in their behalf, I have read and examined the statements and representations and all that is shown herein is done with their free consent and in accordance with their wishes and state that the same are true and correct to the best of my knowledge and belief.

Representative signature, title Date

Subscribed and sworn to before me this _____ day of _____, 20____.

Notary public

My commission expires _____ (SEAL)

B. ENGINEER'S CERTIFICATE: A certificate followed by the dated signature, license number and seal of the engineer responsible for preparing the report, construction drawings, specifications, operation and maintenance manual and engineering elements of the emergency action plan is required. The certificate shall be placed on the title sheet of the construction drawings and first page behind the front cover of the report, specifications, operation and maintenance manual and emergency action plan. The following model certification is considered to be an example of the minimum that the engineer must certify to:

I, (engineer's name), hereby certify that I am a professional engineer licensed in the state of New Mexico, qualified in _____ (civil, geotechnical, etc.) engineering; that the accompanying _____ (report, construction drawings consisting of _____ sheets, specifications, _____ elements of the operation and maintenance manual, or _____ elements of the emergency action plan) for _____ dam was prepared by me or under my supervision; that the accompanying _____ (report, construction drawings consisting of _____ sheets, specifications, _____ elements of the operation and maintenance manual, or _____ elements of the

emergency action plan) is in compliance with the Dam Design, Construction and Dam Safety Regulations (19.25.12 NMAC) and that the same are true and correct to the best of my knowledge and belief.

(Engineer's signature) _____, License number _____
(SEAL)

Engineer's name

Date: _____

C. SURVEYOR'S CERTIFICATE: The professional surveyor licensed in the state of New Mexico preparing the plat of survey showing property boundaries, acquired easements or rights-of-way shall include a certificate on the plat of survey as modeled in Paragraph (2) of Subsection J of 12.8.2.9 NMAC, the Minimum Standards for Surveying in New Mexico. The following model certificate is considered to be an example of the minimum that the surveyor must certify to:

I, (surveyor's name), New Mexico professional surveyor no. (surveyor's license number), do hereby certify that this (boundary, easement, or right of way) plat of survey and the actual survey on the ground upon which it is based were performed by me or under my direct supervision; that I am responsible for this survey; that this survey meets the Minimum Standards for Surveying in New Mexico; and that it is true and correct to the best of my knowledge and belief. I further certify that this survey is not a land division or subdivision as defined in the New Mexico Subdivision Act and that this instrument is a (boundary, easement, or right of way) plat of survey of _____ dam.

(Surveyor's signature) _____, License number _____
(SEAL)

Surveyor's name

Date: _____

D. LOCAL AND STATE EMERGENCY MANAGEMENT OFFICIAL'S CERTIFICATE: Certificate forms for the local and state officials responsible for emergency management shall be placed at the front of the emergency action plan and immediately after the engineer's certificate. The local official's certificate shall be placed in front of the state official's certificate.

I hereby certify that the accompanying emergency action plan for _____ dam has been duly examined by me and accepted for filing on the _____ day of _____, 20__.

(Official's signature) _____

(Print official's name)

(Print name of local or state emergency management entity)

E. STATE ENGINEER'S CERTIFICATE: A certificate form for the state engineer acceptance shall be placed on the title sheet of the construction drawings and first page behind the front cover of the report, specifications, operation and maintenance manual and immediately after the state official responsible for emergency management in the emergency action plan. This certificate is to be signed by the state engineer or his representative after all necessary corrections or additions, if any, have been made.

I hereby certify that the accompanying _____ (report, construction drawings, specifications, operation and maintenance manual or emergency action plan) for _____ dam and appurtenant structures has been duly examined by me and accepted for filing on the _____ day of _____, 20____.

State engineer

[19.25.12.12 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.13 PERMIT CONDITIONS:

After reviewing the required documentation, the state engineer will notify the dam owner if any deficiencies are found with the submittal to construct and operate a dam. The dam owner will be given an opportunity to correct any deficiencies noted in the review process. Once all deficiencies have been addressed the state engineer will approve the application for permit to construct and operate a dam with conditions under which construction and operation shall occur. Failure to comply with conditions of the approved permit may result in the state engineer issuing an order to redesign, reconstruct or restrict operation of the dam and reservoir until conditions are met. Construction must be completed within two years of approving the application unless an extension of time for the construction is requested and approved by the state engineer. The permit conditions are described below and may include additional conditions determined necessary by the state engineer to ensure the dam is constructed and operated in a safe condition.

A. Engineer supervising construction: Prior to initiation of construction, the dam owner shall designate a professional engineer licensed in the state of New Mexico qualified in the design and construction of dams to supervise construction. If the state engineer finds the engineer acceptable, an order is issued approving the engineer and setting forth conditions under which the engineer will supervise construction. Construction supervision conditions are described below.

(1) The engineer supervising construction shall submit monthly progress reports that are signed and sealed. The report shall include:

- (a)** summary of construction activities;
- (b)** summary of test results;
- (c)** captioned and dated construction photographs; and
- (d)** a discussion of problems encountered and their solutions.

(2) Construction shall be in accordance with accepted drawings and specifications. State engineer approval of any modifications to the accepted drawings or specifications is required prior to undertaking the modifications. Requests for changes or modifications by the engineer supervising construction shall be submitted in writing, supported with appropriate documentation.

(3) The engineer supervising construction shall provide the state engineer a minimum of 72 hours notice to perform inspections as specified in the conditions of construction.

(4) Upon completion of construction, the engineer supervising construction shall submit to the state engineer the items described below.

(a) A construction completion report, which shall include a signed certification from the engineer supervising construction and a certification for the state engineer in accordance with Subsections B and E of 19.25.12.12 NMAC. The construction completion report shall also include:

- (i)** description of construction activities including problems and their solutions;
- (ii)** a summary of materials test data; and
- (iii)** captioned and dated construction photographs.

(b) Record mylar construction drawings including a signed certification on the title sheet from the dam owner and a certification for the state engineer in accordance with Subsections A and E of 19.25.12.12 NMAC. The record mylar drawings shall also contain a signed certificate from the engineer supervising construction that the dam was constructed in accordance with the record drawings and specifications and is in satisfactory condition. If design changes are made during construction, the design engineer may also be required to sign a certification in accordance with Subsection B of 19.25.12.12 NMAC. An approved model certificate for the engineer supervising construction is shown below. Changes to the language in the certification require prior approval by the state engineer.

I, _____, (engineer's name) state that I am a qualified professional engineer licensed in the state of New Mexico, that I have supervised the (construction, repair, rehabilitation) of _____ dam and appurtenant structures and find them to be completed in accordance with the record construction drawings and specifications and are now in a satisfactory condition for acceptance.

(Engineer's signature) _____, License number _____
(SEAL)

Engineer's name

Date: _____

B. State engineer's authority during construction: The state engineer may perform inspections at any time during construction of the dam and appurtenant structures. Inspections will vary with each project, based on the complexity of the design. Inspection of specific construction items are standard construction conditions in the permit and require the engineer supervising construction to provide the state engineer with a minimum of 72 hours advanced notice. If the state engineer receives a minimum of 72 hours advanced notice, a delay of construction to schedule a state engineer inspection is not required. State engineer inspection fees are charged in accordance with Subsection E of 19.25.12.8 NMAC. Fees for inspection of construction by the state engineer not paid on demand shall become a lien on any land or other property of the dam owner and may be recovered by the state engineer.

C. Completion of construction: Upon completion of construction, a proof of completion of works form for the dam shall be submitted in accordance with 19.25.12.14 NMAC. Owners of dams classified as high or significant hazard potential shall submit to the state engineer any required updates to the operation and maintenance manual in accordance with 19.25.12.17 NMAC and any required updates to the emergency action plan in accordance with 19.25.12.18 NMAC incorporating any modifications made during construction. Upon the satisfactory completion of all conditions in the permit, pending the issuance of a certificate of construction and license to operate a dam, use of the reservoir shall require written permission from the state engineer. Use of the dam and reservoir are restricted until the state engineer accepts the updated operation and maintenance manual and emergency action plan, if required.

D. Extension of time for construction: The state engineer will grant an extension of time for completing construction upon proper showing by the dam owner of due diligence or reasonable cause for delay and accompanied with a fee in accordance with Subsection D of 19.25.12.8 NMAC. An affidavit by a professional engineer licensed in the state of New Mexico qualified in the design and construction of dams shall be filed with the state engineer providing evidence that the design of the dam meets or exceeds the design requirements in accordance with 19.25.12.11 NMAC. An extension of time may be granted for a period not to exceed five (5) years. No extension of time shall be granted which in combination extend the time allowed by the permit beyond ten (10)

years from the initial date of approval of the application, unless the state engineer in his discretion expressly waives this limitation pursuant to NMSA 1978, Section 72-5-14. Failure to request an extension of time shall result in cancellation of the permit by the state engineer.

E. Operation conditions: Operation conditions will be identified in the permit to construct and operate a dam. Operation conditions are described below:

(1) The owner shall comply with the office of the state engineer rules and regulations for dams.

(2) Changes to the easements, that adversely affects the conditions outlined in paragraphs (1) through (5) of Subsection F of 19.25.12.11 NMAC require prior approval from the state engineer.

(3) Changes, alterations, or modifications to the dam or sediment removal or dredging not outlined in the operation and maintenance manual requires state engineer approval prior to making the change.

(4) The dam owner shall provide access to the state engineer for periodic dam safety inspections.

(5) The dam owner must comply with all state engineer safety orders issued for the dam.

(6) Owners of dams classified as low and significant hazard potential shall have the hazard classification periodically evaluated by a professional engineer licensed in New Mexico if downstream development occurs to ensure the dam design is not deficient.

(7) Operation of the dam must be in compliance with the approved operation and maintenance manual and emergency action plan.

(8) The dam owner shall operate the dam in compliance with any specific condition, requirement, or limitation established by the design engineer or otherwise applicable to the dam.

(9) Failure by the dam owner to comply with operation conditions may result in revocation of the permit or license to operate and an order to breach the dam in accordance with Subsection B or C of 19.25.12.19 NMAC.

[19.25.12.13 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.14 PROOF OF COMPLETION OF WORKS:

Upon completion of the construction conditions a proof of completion of works for the dam shall be filed on a form provided by the state engineer with appropriate fees in accordance with Subsection F of 19.25.12.8 NMAC. The proof of completion of works for the dam shall be filed with original signature of the dam owner and engineer supervising construction. The proof of completion of works form shall be provided to the state engineer as a separate submittal.

[19.25.12.14 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.15 CERTIFICATE OF CONSTRUCTION OF A DAM:

Upon receipt of the proof of completion of works form, the state engineer will determine if all construction conditions of the permit were met. Upon a determination by the state engineer that all construction conditions have been complied with, the state engineer shall issue a certificate of construction. The certificate of construction shall address the general properties of the dam and appurtenant structures. The dam owner shall record the certificate of construction with the county clerk of the county within which the works are located.

[19.25.12.15 NMAC - N, 3/31/2005]

19.25.12.16 LICENSE TO OPERATE A DAM:

Upon issuance of a certificate of construction the state engineer shall issue a license to operate a dam. The license to operate a dam shall address operation conditions and dams shall be operated in accordance with the operation conditions. In addition, dams classified as high and significant hazard potential shall operate in accordance with the operation and maintenance manual and emergency action plan prepared in accordance with Sections 17 and 18 of 19.25.12 NMAC. Failure to comply with the conditions of the license to operate a dam may result in a state engineer order that limits operation, requires specific action by the owner and if necessary the license to operate a dam may be revoked by the state engineer. If a license to operate a dam is revoked the state engineer may order the dam breached in accordance with Subsections B or C of 19.25.12.19 NMAC.

[19.25.12.16 NMAC - N, 3/31/2005]

19.25.12.17 OPERATION AND MAINTENANCE MANUAL:

Owners of dams classified as high or significant hazard potential shall prepare, maintain and adhere to an operation and maintenance manual that addresses the continued safe operation, maintenance and performance of the dam. Because each site, design and operating practice is unique, waivers of specific requirements in this section will be considered on a case-by-case basis. Request for waiver shall be in writing accompanied with documentation justifying the request. If the request is not justified to the satisfaction of the state engineer the request will be denied. If deemed appropriate,

the state engineer may require the owner to obtain the services of a professional engineer licensed in the state of New Mexico qualified in the design and construction of dams to prepare complex technical aspects of the operation and maintenance manual. The operation and maintenance manual shall be submitted in a form acceptable to the state engineer. The operation and maintenance manual shall also be submitted in an electronic format acceptable to the state engineer. The front cover shall identify the document as an operation and maintenance manual and shall show the name of the dam, the county in which the dam is located and the dam owner. The first page behind the front cover shall show the name of the dam, the county in which the dam is located, signed certifications from the dam owner, engineer if required and a certification for the state engineer in accordance with Subsections A, B and E of 19.25.12.12 NMAC. Operation or maintenance of the dam in violation of the procedures presented in the accepted operation and maintenance manual that affect the safety of the dam will result in an order being issued requiring the dam owner to address the problem. The state engineer may also issue an order restricting storage in order to improve the unsafe condition. Failure to comply with orders issued by the state engineer may result in the license to operate the dam being revoked and the dam being ordered breached in accordance with Subsection B or C of 19.25.12.19 NMAC. The operation and maintenance manual shall contain the information described below, if relevant to the project, and any other additional information determined necessary by the state engineer to evaluate if the dam will be operated and maintained in a safe condition.

A. General information: Information on the project shall include but not be limited to the following:

- (1) location and access;
- (2) purpose and description;
- (3) table of properties; and
- (4) history of construction, repairs and performance.

B. Operation: Operation instructions, frequency of operation and operator safety for the project shall include but not be limited to the following:

- (1) Reservoir:
 - (a) water right storage allocations;
 - (b) elevation, area and storage curve and table to the dam crest;
 - (c) elevation of the high water line;
 - (d) discharge rating table for the outlet conduit;

- (e) discharge rating table for the spillway;
 - (f) emergency reservoir evacuation procedures; and
 - (g) first filling criteria and monitoring requirements.
- (2) Outlet works:
 - (a) first operation;
 - (b) seasonal startup;
 - (c) seasonal shutdown;
 - (d) installation and removal of bulkhead;
 - (e) operation procedures for specific equipment; and
 - (f) electrical systems and controls.
- (3) Operator safety:
 - (a) confined space entry and permits;
 - (b) fall protection;
 - (c) lockout/tag out; and
 - (d) other applicable safety requirements.

C. Instrumentation: Instrumentation for the project shall include but not be limited to the following:

- (1) description and purpose;
- (2) detailed description of installation;
- (3) calibration and maintenance schedule and instructions;
- (4) reading schedule and instructions;
- (5) data reduction and interpretation;
- (6) identification of critical readings and notification procedures; and
- (7) schedule for reporting data with interpretations to the state engineer.

D. Security: Projects that include security measures shall describe the security measures along with instructions for monitoring, maintaining and inspection.

E. Maintenance: Maintenance requirements and frequency shall be included.

F. Inspection: Inspection requirements, frequency and recommended checklist shall be included.

G. Updates and revisions: An update and revision procedure shall be included.

H. Appendices: Appendices shall include documentation that supports and supplements the manual. The appendices shall include but not be limited to the following:

- (1) captioned and dated photographs;
- (2) key sheets from the record construction drawing set;
- (3) instrumentation construction drawings;
- (4) instrumentation rating tables and calibration details;
- (5) monitoring and inspection forms;
- (6) instrumentation plan to ensure any restrictions imposed by the design are incorporated into the operation and maintenance manual; and
- (7) copies of any relevant procedures.

[19.25.12.17 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.18 EMERGENCY ACTION PLAN:

Owners of dams classified as high or significant hazard potential shall prepare, maintain and exercise an emergency action plan for immediate action in the event of a potential dam failure. Because each site and operating practice is unique, waivers of specific requirements in this section will be considered on a case-by-case basis. Request for waiver shall be in writing accompanied with documentation justifying the request. If the request is not justified to the satisfaction of the state engineer the request will be denied. The emergency action plan shall follow the format provided by the state engineer or a format that has prior approval of the state engineer. The emergency action plan shall also be submitted in an electronic format acceptable to the state engineer. The front cover shall identify the document as an emergency action plan and shall show the name of the dam, the county in which the dam is located and the dam owner. The pages immediately behind the front cover shall show the name of the dam, the county in which the dam is located, signed certifications from the dam owner,

engineer, local and state officials responsible for emergency management and a certification for the state engineer in accordance with Subsections A, B, D and E of 19.25.12.12 NMAC. The dam owner shall coordinate with the local emergency management office in preparing the emergency action plan. The coordination is required to ensure that there is an agreement on the evacuation limits and responsibilities. The dam owner shall submit a copy to the local and state officials responsible for emergency management for acceptance prior to submittal to the state engineer. The dam owner shall review the emergency action plan annually, update as necessary and furnish a copy of updates to all official copyholders. The dam owner shall exercise the emergency action plan to verify those involved in its implementation know their roles and responsibilities. It is recommended the dam owner conduct a functional exercise of the emergency action plan every 5 years with a table top exercise conducted 2 to 3 years before the functional exercise. The exercise may result in updates to ensure the emergency action plan maintains operational readiness, timeliness and responsiveness. Failure to act in accordance with the accepted emergency action plan that affects public safety will result in an order being issued requiring the dam owner to address the problem. Failure to comply with orders issued by the state engineer may result in the license to operate the dam being revoked and the dam being ordered breached in accordance with Subsection B or C of 19.25.12.19 NMAC. A professional engineer licensed in the state of New Mexico qualified in the design and construction of dams shall prepare engineering information for the emergency action plan as specified below. An emergency action plan shall contain the information described below and any other additional information determined necessary by the state engineer or emergency management official to evaluate the planned response to an emergency situation by the dam owner.

A. Notification flowchart: A notification flowchart showing who is to be notified, by whom and in what priority.

B. Emergency detection, evaluation and classification: Procedures for reliably and timely identifying an emergency situation to ensure that an appropriate course of action is implemented. A professional engineer licensed in the state of New Mexico qualified in the design and construction of dams shall prepare this element.

C. Responsibilities: A list designating responsibilities for the emergency action plan related tasks including, but not limited to developing, maintaining, exercising, implementing, warning, evacuation and termination of the emergency.

D. Preparedness: A list of materials, equipment and manpower available to moderate or alleviate the effects of a dam failure or spillway release.

E. Evacuation map: An evacuation map delineating the areas that will be evacuated as a result of dam failure. The evacuation map shall extend to a point where the consequences of dam failure does not pose a threat to life and evacuation or restricting access is not required. If available, shape files from geographic information system software of the evacuation map shall be submitted. Evacuation maps shall

include the following information at critical locations downstream when required by the local official responsible for emergency management:

- (1) distance downstream from the dam;
- (2) arrival time of the leading edge of the flood wave;
- (3) peak flow depth, incremental rise or water surface elevation in feet; and
- (4) peak velocity in feet per second.

F. Inundation map: An inundation map delineating the areas that will be flooded as a result of dam failure. The inundation map shall be supported by a dam breach and flood routing analysis report. The dam breach and flood routing analysis shall evaluate the sunny day failure, failure at the high water line and any additional event deemed appropriate by the dam owner. If appropriate considering the consequences of dam failure, a simplified dam breach and flood routing analysis may be used with approval from the state engineer. If a dam is located downstream, failure scenarios with the downstream dam shall also be evaluated. Evaluation of the effects of flooding from dam failure shall extend at least to the location downstream where the consequences of dam failure does not pose a threat to life and evacuation or restricting access is not required. A professional engineer licensed in the state of New Mexico qualified in the design and construction of dams shall prepare this element. If available, shape files from geographic information system software of the inundation map shall be submitted. Inundation maps shall include the following information at critical locations downstream:

- (1) distance downstream from the dam;
- (2) arrival time of the leading edge of the flood wave;
- (3) peak flow depth, incremental rise and water surface elevation in feet; and
- (4) peak velocity in feet per second.

G. Appendices: All information that supports and supplements the material used in the development and maintenance of the emergency action plan. The dam breach and flood routing analysis report shall be submitted as a separate document.

[19.25.12.18 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.19 CHANGES TO AN EXISTING DAM:

A dam owner proposing to reconstruct, enlarge, modify, restore reservoir capacity, repair, remove or breach an existing dam must make application to and receive approval from the state engineer prior to undertaking any such action. The current condition of the dam, the type of repair or modification and the proposed means to

achieve the repair or modification shall dictate the detail of the information provided to the state engineer in order to obtain approval. Because each site, design change and operating practice is unique, waivers of specific requirements in this section will be considered on a case-by-case basis. Request for waiver shall be in writing accompanied with documentation justifying the request. If the request is not justified to the satisfaction of the state engineer the request will be denied. Existing dams present the same hazards to life and property downstream as new dams. Therefore, owners of dams classified as high or significant hazard potential shall evaluate the current condition of the dam and address in the submittal to the state engineer whether the dam is in compliance with the design requirements in Subsection C of 19.25.12.11 NMAC. If the state engineer determines compliance with requirements in Subsection C of 19.25.12.11 NMAC are critical to the safety of the dam, the state engineer shall issue an order requiring the deficiency be addressed as part of the proposed change. Owners of dams classified as low hazard potential shall comply with the design requirements in Subsection C of 19.25.12.11 NMAC for the proposed change only. Maintenance activity performed in accordance with 19.25.12.17 NMAC does not require prior state engineer approval. Dam owners shall not abandon a dam without breaching or removing the dam to ensure the dam no longer poses a risk to life, property, the environment surrounding the dam or downstream of the dam. In the event of any changes of ownership affecting the title to a dam, the new owner shall file a change of ownership form for a dam with the state engineer. Recognition of the responsibility and liability associated with dam ownership is required along with fees for filing the change in ownership form for a dam in accordance with Subsection G of 19.25.12.8 NMAC. This section exempts federal dams if no change to the water storage permit is required. A proposed change to an existing dam shall require the submittal of the information described below and any other additional information determined necessary by the state engineer to evaluate if the change to the dam is safe.

A. Proposed changes to an existing dam: For dam owners proposing to reconstruct, enlarge, modify, restore reservoir capacity, repair or add aesthetic fill to an existing dam, the information described below is required prior to undertaking any such action.

(1) An application to alter, repair or rehabilitate the dam and appurtenant structures. Fees for filing the application and for reviewing drawings and specifications shall be in accordance with Subsections B and C of 19.25.12.8 NMAC. Review fees identified in Subsection C of 19.25.12.8 NMAC are waived for the first review if the state engineer requires the change to address a dam safety deficiency.

(2) Documentation of sufficient water rights if changes in storage or release requirements are proposed in accordance with the requirements of Subsection B of 19.25.12.11 NMAC.

(3) A design report addressing the proposed change in accordance with the requirements of Subsection C of 19.25.12.11 NMAC. Owners of dams classified as high or significant hazard potential shall submit a design report addressing whether the

existing condition of the dam is in compliance with the design requirements listed in Subsection C of 19.25.12.11 NMAC. Where the existing condition of the dam is not in compliance with the design requirements of Subsection C of 19.25.12.11 NMAC, the design report shall propose changes to address compliance with the design requirements of Subsection C of 19.25.12.11 NMAC or request a waiver that the deficiency is not critical to the safety of the dam and provide adequate justification for the waiver.

(4) Construction drawings and specifications addressing the proposed change in accordance with the requirements of Subsections D and E of 19.25.12.11 NMAC.

(5) A plat of survey showing the dam owner's property boundaries, easement, or right of way. The plat of survey shall be in accordance with the requirements of Subsection F of 19.25.12.11 NMAC.

(6) For dams classified as high or significant hazard potential, a dam site security assessment in accordance with the requirements of Subsection G of 19.25.12.11 NMAC.

(7) For dams classified as high or significant hazard potential, an instrumentation plan in accordance with the requirements of Subsection H of 19.25.12.11 NMAC.

(8) For dams classified as high or significant hazard potential, an updated operation and maintenance manual and emergency action plan in accordance with the requirements of Sections 17 and 18 of 19.25.12 NMAC.

B. Removal or breach of dams classified as high or significant hazard potential: Dam owners intending to breach or remove a dam classified as high or significant hazard potential shall submit a plan to the state engineer for approval prior to breaching or removing the dam. The plan shall evaluate the potential effects of the dam removal or breach on life, property and the environment downstream. A professional engineer licensed in the state of New Mexico qualified in the design and construction of dams shall prepare the plan. The state engineer will revoke the license to operate a dam upon completion of all construction conditions. The plan shall meet the conditions described below.

(1) The reservoir shall be emptied in a controlled manner, which will not endanger lives or damage property downstream.

(2) The dam or breach area shall be excavated down to the level of natural ground and the breach shall be of sufficient width to safely pass the 100-year, 24-hour flood peak discharge without attenuation of the flood through the reservoir.

(3) The side slopes of the breach shall be excavated to a stable angle.

(4) The breach shall be armored as necessary to prevent erosion of the breach area.

(5) The plan shall address the control of sediment previously deposited in the reservoir.

(6) Drawings and specifications shall be prepared in accordance with the appropriate requirements listed in Subsections D and E of 19.25.12.11 NMAC and shall include a title sheet with required certifications and signatures, the location, dimensions and lowest elevation of the breach and any other detail to sufficiently describe the proposal.

(7) Designation of the professional engineer licensed in the state of New Mexico qualified in the design and construction of dams that will supervise construction of the breach or dam removal. Submittal of the professional engineer's qualifications for state engineer approval is required.

C. Removal or breach of dams classified as low hazard potential: Owners of dams classified as low hazard potential shall submit a written notice to the state engineer of intent to breach the dam. The state engineer will revoke the license to operate a dam upon completion of all construction conditions. The breach notice shall meet the minimum requirements described below.

(1) The bottom width elevation of the breach shall be to original ground.

(2) The bottom width of the breach shall be a minimum of one-half the height of the dam but not less than 10 feet.

(3) The side slopes shall not be steeper than one horizontal to one vertical.

(4) The excavated material shall not be placed in the streambed.

D. Closure of a tailings facility: A closure plan must be prepared to address the closure of a tailings facility. State engineer approval is required before any modification occurs to a jurisdictional tailings dam. A professional engineer licensed in the state of New Mexico qualified in the design and construction of tailings dams shall prepare the closure plan, which shall include a design report, drawings and specifications prepared in accordance with the appropriate requirements listed in Subsections C, D and E of 19.25.12.11 NMAC. The state engineer will revoke the license to operate a dam upon completion of all construction conditions. The plan shall address the following issues:

(1) long-term stability under static and dynamic conditions;

(2) control of surface runoff to avoid erosion;

(3) plan for long term monitoring, if appropriate; and

(4) identification of an engineer licensed in the state of New Mexico qualified in tailings dam design and construction to supervise implementation of the closure plan; submittal of the engineer's qualifications for state engineer approval is required.

E. Construction and operating conditions: After reviewing the required documentation, the state engineer will notify the dam owner if any deficiencies are found with the submittal. The dam owner will be given an opportunity to correct any deficiencies noted in the review process. Once all deficiencies have been addressed the state engineer will approve the amended application or proposed change with conditions under which construction and operation shall occur. Action by the state engineer will be in accordance with 19.25.12.13 NMAC, appropriately modified to address the proposed changes.

F. Proof of completion of works, certificate of construction and license to operate: The requirement for a proof of completion of works form for the dam, certificate of construction and license to operate a dam for changes to a dam will be made on a case by case basis by the state engineer. The proof of completion of works form for the dam, certificate of construction and license to operate a dam, if required, shall be in accordance with the Sections 14, 15 and 16 of 19.25.12 NMAC, appropriately modified to address the proposed changes. If the dam is breached, the state engineer will cancel the permit and revoke the license to operate a dam.

[19.25.12.19 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.20 CHANGES TO AN EXISTING NON-JURISDICTIONAL DAM:

A dam owner proposing to reconstruct, enlarge, or modify a non-jurisdictional dam, resulting in a jurisdictional dam after construction is completed, shall comply with 19.25.12.11 NMAC before construction begins. If the ownership of a non-jurisdictional dam changes, resulting in a jurisdictional dam, the owner shall comply with 19.25.12.11 NMAC. The state engineer will give the owner a reasonable amount of time to comply with 19.25.12.11 NMAC. If the owner fails to comply with 19.25.12.11 NMAC, the dam will be ordered breached in accordance with Subsection B or C of 19.25.12.19 NMAC.

[19.25.12.20 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.21 EXISTING DAMS:

The state engineer may inspect existing dams to verify dams are operated and maintained in a safe manner. Access to the dam site shall be made available to the state engineer upon request. If a critical dam safety problem is observed by the state engineer or reported to the state engineer, an order may be issued requiring the dam owner to address the problem. If a dam incident occurs at a dam, the dam owners shall report the incident to the state engineer within 72 hours. If a major repair is required at an existing dam, the plan to repair the dam shall be in accordance with 19.25.12.19 NMAC. Minor repairs not identified as maintenance activity in accordance with

19.25.12.17 NMAC require state engineer approval. Failure to comply with state engineer directives or these regulations may result in an order to reduce storage or to take corrective action. Failure to comply with orders issued by the state engineer may result in the license to operate a dam being revoked and the dam ordered breached in accordance with Subsection B or C of 19.25.12.19 NMAC. Owners of existing dams shall comply with the requirements described below.

A. Owners acquiring property with a dam shall promptly notify the state engineer on a form provided by the state engineer of the change in ownership. Recognition of the responsibility and liability associated with dam ownership is required along with fees for filing the change in ownership form for a dam in accordance with Subsection G of 19.25.12.8 NMAC.

B. Owners of dams classified as low or significant hazard potential shall evaluate the hazard classification if downstream development occurs. The dam owner shall submit the results of the hazard potential evaluation prepared in accordance with Paragraph (1) of Subsection C of 19.25.12.11 NMAC to the state engineer for approval. If the hazard potential classification changes due to downstream development, the state engineer shall give the dam owner a time limit to address deficiencies. Deficiencies shall be addressed in accordance with Subsection C of 19.25.12.11 NMAC and Sections 17 and 18 of 19.25.12 NMAC.

C. Dams classified as high or significant hazard potential shall be inspected on an interval no greater than 5 years by a professional engineer licensed in the state of New Mexico qualified in the design and construction of dams. The owner is responsible for securing the services of the professional engineer. The professional engineer shall provide a signed and sealed report to the state engineer describing the findings of the inspection and recommendations for corrective action or changes to the operating procedures. Routine inspection by the state engineer as described in 19.25.12.21 NMAC satisfies this requirement.

D. Owners of dams classified as high or significant hazard potential in an unsafe condition may receive an order from the state engineer to address the deficiency pursuant to NMSA 1978, Section 72-5-11 (1979). The state engineer may also issue an order to an owner of a non-jurisdictional dam if the dam is unsafe and a threat to life or property, as determined by the state engineer. Owners shall comply with orders issued by the state engineer pursuant to NMSA 1978, Section 72-5-12 (1979).

E. Owners of dams classified as high or significant hazard potential shall comply with 19.25.12.17 NMAC requiring an operation and maintenance manual. Upon compliance with 19.25.12.17 NMAC the state engineer will issue a license to operate the dam.

F. Owners of dams classified as high or significant hazard potential shall comply with 19.25.12.18 NMAC requiring an emergency action plan. Dams classified as significant hazard potential for flood control purposes with no permanent storage shall

comply by December 31, 2012. Owners of 5 or more dams classified as high or significant hazard potential may propose a schedule for compliance with the emergency action plan requirement. The schedule must propose compliance dates for each dam and all dams must be in compliance by December 31, 2015. The compliance schedule is subject to review and approval or modification by the state engineer.

G. Dam owners that transfer the entire water right out of the reservoir shall have their license to operate a dam revoked and will receive from the state engineer an order to breach the dam in accordance with Subsection B or C of 19.25.12.19 NMAC.

H. Dam owners that fail to obtain state engineer approval prior to construction of a dam shall comply with all conditions imposed by the state engineer within a time limit established by the state engineer or the state engineer may order the dam breached in accordance with Subsection B or C of 19.25.12.19 NMAC.

[19.25.12.21 NMAC - N, 3/31/2005; A, 12/31/2010]

19.25.12.22 SEVERABILITY:

If any portion of this part is found to be invalid, the remaining portion of this part shall remain in force and not be affected.

[19.25.12.22 NMAC - N, 3/31/2005]

PART 13: ACTIVE WATER RESOURCE MANAGEMENT

19.25.13.1 ISSUING AGENCY:

Office of the State Engineer.

[19.25.13.1 NMAC - N, 12/30/2004]

19.25.13.2 SCOPE:

The state engineer adopts these rules and regulations to undertake the supervision of the physical distribution of water, to prevent waste, and to administer the available supply of water by priority date or by alternative administration, as appropriate. These rules apply to all water rights within the state from all sources of water, surface water and hydrologically connected groundwater.

[19.25.13.2 NMAC - N, 12/30/2004]

19.25.13.3 STATUTORY AUTHORITY:

These rules and regulations are established pursuant to constitutional authority set forth in Article XVI of the New Mexico Constitution, and statutory authority enumerated in

Sections 72-1-2; 72-2-8; 72-2-9; 72-2-9.1; 72-3-1-5; 72-4-20; 72-5-3 through 5; 72-5-18; 72-5-23; 72-5-24; 72-6-1 through 7; 72-8-1; 72-9-2; 72-12-1; 72-12-2; 72-12-8(D); 72-12-24; 72-13-2; 72-13-4 NMSA.

[19.25.13.3 NMAC - N, 12/30/2004]

19.25.13.4 DURATION:

Permanent.

[19.25.13.4 NMAC - N, 12/30/2004]

19.25.13.5 EFFECTIVE DATE:

December 30, 2004, unless a later date is cited at the end of a section.

[19.25.13.5 NMAC - N, 12/30/2004]

19.25.13.6 OBJECTIVE:

The objective of these rules is to establish the framework for the state engineer to carry out his responsibility to supervise the physical distribution of water to protect senior water right owners, to assure compliance with interstate stream compacts and to prevent waste by administration of water rights. These framework rules employ long-standing statutory mechanisms specified at Section 72-3-1 through Section 72-3-5 NMSA, which describe procedures for the creation of water master districts and the appointment of water masters with certain defined duties and authorities. In addition, these rules fulfill the mandates of Section 72-2-9.1 NMSA, requiring the state engineer to adopt rules for priority administration based on appropriate hydrologic models and expedited marketing and leasing within water master districts subject to priority administration.

[19.25.13.6 NMAC - N, 12/30/2004]

19.25.13.7 DEFINITIONS:

Unless defined below in a specific section of these rules, all words used herein shall be given their customary and accepted meanings. All uses of masculine pronouns or possessives shall be held to include the feminine.

A. Adjudication: A comprehensive court proceeding to establish the elements of each water right for all water right owners on a stream system with respect to the state of New Mexico and as among each other, including the priority, amount, purpose, periods and place of use and the specific tracts of land to which the water right is appurtenant, as provided by Section 72-4-19 NMSA.

B. Administrable water right: A water right or right to impound, store or release water, the elements of which have been determined by a court of competent jurisdiction or determined on an interim basis by the state engineer under these rules and regulations. The state engineer may make determinations of the elements of a water right for purposes of administration prior to the commencement or completion of, and during the pendency of, a water rights adjudication. State engineer determinations made for purposes of administration are subject to review by any court of competent jurisdiction and are not binding on that court. Such determinations are subject to the decrees of an adjudication court of competent jurisdiction, and are not binding on such an adjudication court.

C. Administration: Distribution by a water master of available water supplies within a water master district or sub-district, subject to any legal constraints identified by or imposed on the state engineer, for specific beneficial uses by the owners of administrable water rights that are in-priority. There are four forms of administration available to achieve different objectives. These forms are defined below together with subsidiary definitions. A water master may, based on the applicable district-specific regulations, use any of these forms of administration, depending on the specific legal and physical aspects of the water supplies that are subject to administration and the existence or absence of agreements for alternative administration. Administration may also combine these forms within a water master district, as the water master finds appropriate or necessary. The specific form of administration, or combination of forms of administration, that will be utilized in each water master district will be established through promulgation of district-specific regulations. Notice of such promulgation will be provided pursuant to Subsection D of 72-2-8 NMSA.

(1) Direct flow administration

(a) Direct flow water: All the flow of a stream, including storage reservoir inflows that are legally bypassed through that reservoir, but excluding sources of flow augmentation such as storage water releases or imported water.

(b) Direct flow administration: Distribution of direct flow water by a water master for diversion and beneficial use, or for diversion and storage in a reservoir, in accordance with the affected administrable water rights. Direct flow administration consists of both protection of available direct flow water for diversion and use by in-priority administrable water rights, and protection of direct flow water from out-of-priority diversion. Direct flow administration may incorporate changes to the water master's determination of which water rights are in-priority and which are out-of-priority on a daily basis, depending on the currently available direct flows.

(2) Storage water administration

(a) Storage water: Water stored in a reservoir in-priority and in accordance with the conditions of an administrable water right and subsequently released from

storage. Storage water does not include direct flow water that is bypassed through a reservoir.

(b) Storage water administration: Administration by a water master of the release from reservoirs and subsequent downstream diversion of storage water in accordance with the requirements of the applicable administrable water rights for such release and diversion. Storage water administration includes both the distribution of storage water released for the benefit of those having rights to its use, and also the protection of storage water releases from diversion by water right owners having only an administrable water right to direct flow water. Conveyance losses that occur as a result of the delivery of storage water shall be borne by the owner of the applicable administrable water right, and storage water administration shall account for those conveyance losses. For purposes of administration, imported water shall be administered in the same manner as storage water; however, imported water is subject to 100% depletion. The beneficial use of imported water is exclusive in the owner of the right to its use and is not subject to priority call in the basin of use, but its diversion from the basin of origin is subject to priority administration in that basin.

(3) Depletion limit administration

(a) Depletion limit: The amount of surface water that is available for depletion by both surface water rights and hydrologically connected groundwater rights within a water master district or sub-district, taking into account interstate stream compact compliance requirements. Taking into account the conjunctive nature of surface and groundwater, the depletion limit may be greater than, or less than, the physically available surface water supply.

(b) Administration date[s]: A date, or dates, to be determined by the state engineer, where administration within a specific water master district is to be in effect for a period of time to be determined by the state engineer for interstate stream compact compliance purposes, or to address substantial long-term groundwater effects on surface supply, as expressed in a depletion limit. If an administration date is determined and published for a district, no water rights with priority dates later than the administration date shall be exercised in the absence of a replacement plan approved by the state engineer.

(c) Depletion limit administration: Administration by a water master to curtail water rights with priority dates junior to an administration date. Such out-of-priority rights shall not use water in the absence of a replacement plan approved by the state engineer.

(d) Replacement water: Water acquired temporarily by an out-of-priority administrable water right from an in-priority administrable water right pursuant to a replacement plan for the purpose of offsetting surface water depletions attributable to an out-of-priority administrable water right and preventing impairment of in-priority administrable water rights.

(e) Replacement plan: A plan submitted by the owner(s) of administrable water rights, and approved by the state engineer for no more than two consecutive years, subject to renewal, for the purpose of offsetting depletions attributable to out-of-priority administrable water rights.

(4) Alternative administration: Administration that is based on water sharing agreement among affected water right owners, and that is acceptable to the state engineer. Such administration may include voluntary shortage sharing such as, but not limited to, percentage division or pro rata allocation, rotation of water use, and reduced diversions. Where there is an existing shortage sharing agreement between acequias or community ditches confirmed on the first Monday of April of each year in accordance with Section 73-2-47 NMSA or thereafter as necessary, it shall be recognized in the district-specific regulations, but nothing in this section shall be taken to impair the authority of the state engineer and water master to regulate the distribution of water from the various stream systems of the state to the ditches and irrigation systems entitled to water therefrom under the provisions of this article. Alternative administration may be substituted for any of the forms of administration above described.

D. Administration date[s]: See definition under Subsection C of 19.25.13.7 NMAC.

E. Consumptive irrigation requirement: See definition under Subsection S of 19.25.13.7 NMAC.

F. Consumptive use: The quantity of water beneficially consumed during the application of water to beneficial use.

G. Conveyance loss: The quantity of water that is effectively removed from a stream system due to seepage or evapotranspiration as calculated between a measurement device used to measure the available water supply and a downstream point of diversion for an administrable water right or a downstream point of delivery.

H. Depletion: That consumptively used portion of a diversion that has been evaporated, transpired, incorporated into crops or products or used by livestock, or man-made consumptive uses such as, but not limited to, municipal, industrial and domestic uses, or otherwise removed from, and not returned to, the available water supply, including all incidental depletions associated with the beneficial use. Depletions shall include, but not be limited to:

(1) any increase in depletions resulting from construction projects for the restoration and maintenance of fish and wildlife habitat that result in increased depletion of water over that amount that would have been depleted had there been no restoration; such projects are subject to the permitting authority of the state engineer;

(2) any increase in depletions resulting from changes in reservoir operations that increase the amount of water depleted over that amount which would have been depleted had there been no change in the reservoir's operations; such as, but not

limited to, changes in historic release patterns; such changes are subject to the permitting authority of the state engineer.

I. Depletion limit: See definition under Subsection C of 19.25.13.7 NMAC.

J. Depletion limit administration: See definition under Subsection C of 19.25.13.7 NMAC.

K. Direct flow administration: See definition under Subsection C of 19.25.13.7 NMAC.

L. Direct flow water: See definition under Subsection C of 19.25.13.7 NMAC.

M. District: When used in these regulations, means water master district.

N. Diversion: The quantity of water taken from a ground or surface water source by a constructed structure or project to supply a beneficial use.

O. Expedited marketing and leasing: Any process within a district in which water rights are subject to priority administration whereby changes in use or place of use of water may be effected so as to minimize costly and time-consuming administrative procedures. Expedited marketing and leasing processes may include, but are not limited to, expedited permit proceedings before the state engineer through the use of the appropriate hydrologic models adopted by the state engineer for the district. Subsection C of 72-2-9.1 NMSA expressly provides that rules and regulations concerning expedited marketing and leasing "shall not apply to acequias or community ditches or to water rights served by an acequia or community ditch."

P. Farm delivery requirement: See definition under Subsection S of 19.25.13.7 NMAC.

Q. Imported water: Water removed from, and not returned to, its hydrologic basin of origin delivered for use in a different basin or drainage.

R. In-priority: If the currently available direct flow water is sufficient for distribution to a specific use administrable water right, then that right is in-priority. If a water right has a priority date that is senior to the applicable administration date, that water right is in-priority. In the case of storage water, that amount of the total inflow to a reservoir that exceeds the volume of water that must flow through the dam to serve senior administrable water rights to direct flow water is in-priority for storage.

S. Irrigation water requirements: Irrigation water requirements can be expressed in several ways, depending on circumstances:

(1) Consumptive irrigation requirement (CIR): The quantity of irrigation water, expressed as a depth or volume, exclusive of effective rainfall, that is

consumptively used by plants or is evaporated from the soil surface during one calendar year. The CIR may be numerically determined by subtracting effective rainfall from the consumptive use.

(2) Farm delivery requirement: The quantity of water, exclusive of effective rainfall, that is delivered to the farm head gate or is diverted from a source of water that originates on the farm itself, such as a well or spring, to satisfy the consumptive irrigation requirement of crops grown on a farm during the irrigation accounting year, or as otherwise provided by permit.

(3) Project diversion requirement: The annual quantity of water necessary to be diverted from a source of water to satisfy the farm delivery requirement and to account for off-farm ditch conveyance delivery losses during the irrigation accounting year.

T. Measuring devices: Gauging or metering devices, installed and operated as required by the state engineer.

U. Out-of-priority: If the currently available direct flow water is insufficient to serve all administrable water rights, and therefore an administration date is adopted or a priority call placed, then those administrable water rights are out-of-priority that have a priority date junior to the applicable administration date or are junior to the priority of the water right placing the priority call. In the case of storage water, if the inflow to a reservoir is equal to, or less than, the quantity of water necessary to serve downstream senior Administrable water rights from the direct flow, then such direct flow must be bypassed and the right to impound and store water in that reservoir is out-of-priority. Water that was stored in-priority is not available for use except by those with administrable water rights to the use of the storage water.

V. Priority administration: All the forms of administration defined under administration are methods of priority administration. Priority administration involves any administrative scheme implemented by a water master in accordance with the priority dates of administrable water rights, including direct flow, storage water and depletion limit administration. See, generally, administration.

W. Project: Any man-made works intended physically to control or to use water for a beneficial purpose of use.

X. Replacement water: See definition under Subsection C of 19.25.13.7 NMAC.

Y. Replacement plan: See definition under Subsection C of 19.25.13.7 NMAC.

Z. Return flow: That amount of diverted water returned to the available water supply.

AA. State engineer: The New Mexico state engineer, or his designated appointee.

BB. Storage water: See definition under Subsection C of 19.25.13.7 NMAC.

CC. Storage water administration: See definition under Subsection C of 19.25.13.7 NMAC.

DD. Waste: Diversion of water in excess of that amount reasonably necessary to supply a beneficial use in accordance with accepted water use practices that are consistent with considerations of water conservation.

EE. Water master: An official duly appointed by, and under the general supervision of, the state engineer, pursuant to Section 72-3-2 NMSA, who shall have immediate charge of the diversions and distribution of waters in the water master district.

FF. Water master district: An area designated as a water district or sub-district by the state engineer for purposes of administration, as provided in Section 72-3-1 NMSA.

GG. Water master district manager: The state engineer district supervisor is the manager of any water master district within his particular state engineer district and the direct supervisor of the water master.

[19.25.13.7 NMAC - N, 12/30/2004]

19.25.13.8 CONSTRUCTION:

These rules and regulations shall be construed as consistent with, and subject to, the authorities of the state engineer for the administration of water in the state of New Mexico. These rules and regulations shall not be construed as imposing any limitation on the authority of the state engineer to administer water rights, act on water rights applications, permit water rights, or order the curtailment, in whole or in part, of the use of water under any water right. Subsection H of 72-2-8 NMSA provides that these rules and regulations are presumed to be the correct implementation of the law.

[19.25.13.8 NMAC - N, 12/30/2004]

19.25.13.9 USE OF THESE RULES AND REGULATIONS:

These rules and regulations provide the framework for the promulgation of specific water master district rules and regulations.

[19.25.13.9 NMAC - N, 12/30/2004]

19.25.13.10 STATE ENGINEER ADOPTION OF DISTRICT-SPECIFIC RULES AND REGULATIONS:

For every district in which water rights administration is requested, or the state engineer determines in the performance of his duties under Section 72-2-1 NMSA that water rights administration is required for the economical and satisfactory apportionment of water, the state engineer shall adopt rules and regulations, pursuant to Subsection D of 72-2-8 NMSA, specific to the water master district, which incorporate and adapt the provisions of these rules and regulations to the needs of the specific district.

[19.25.13.10 NMAC - N, 12/30/2004]

19.25.13.11 STATE ENGINEER AUTHORITY TO CREATE WATER MASTER DISTRICTS AND APPOINT WATER MASTERS:

The state engineer may create water master districts and appoint water masters in any drainage areas of the state pursuant to Section 72-3-1 through Section 72-3-5 NMSA and these regulations. The water master district manager shall provide the water master with guidelines for administration, including his determination, for purposes of administration, of all administrable water rights within the water master district. Water master guidelines shall be in the form of a water master manual applicable to each water master district or sub-district. Comments from the public shall be taken and considered prior to finalizing the water master manuals. Notice shall be provided in accordance with Subsection D of 72-2-8 NMSA. The state engineer may administer water rights pursuant to a draft water master manual for a specific period of time, which will be determined in the district-specific regulations, prior to finalizing a manual so that the adopted manual will be based upon actual experience and the collective comments of the water right owners in the district.

[19.25.13.11 NMAC - N, 12/30/2004]

19.25.13.12 CREATION OF A WATER MASTER DISTRICT:

The state engineer may create water master districts within the state, provided that:

A. the state engineer finds that the creation of such a water master district is necessary for the economical and satisfactory administration of water;

B. the boundaries of the water master districts are in conformity with drainage areas as defined by the state engineer;

C. the water master districts are designated by names; and

D. as far as possible, the water master districts comprise one or more stream systems or stream reaches, including hydrologically connected groundwater, as defined by the state engineer.

[19.25.13.12 NMAC - N, 12/30/2004]

19.25.13.13 CHANGING A WATER MASTER DISTRICT:

Water master districts may be changed from time to time, as may be necessary in the opinion of the state engineer, for the economical and satisfactory apportionment of water.

[19.25.13.13 NMAC - N, 12/30/2004]

19.25.13.14 CREATION OF WATER MASTER SUBDISTRICTS:

When, in his opinion, it shall be in the best interests of the state and the owners of water rights within any stream system within the state, the state engineer may divide water master districts further into sub-districts, each of which shall be designated by a distinct name.

[19.25.13.14 NMAC - N, 12/30/2004]

19.25.13.15 APPOINTMENT OF A WATER MASTER:

Where the state engineer has created a water master district, the state engineer shall:

A. appoint a water master for such district upon the written application of a majority of the water right owners of any water master district; or

B. appoint a water master to administer the water master district and sub-districts where the state engineer finds that the public safety or interests of the state or water right owners in any water master district in the state require the appointment of a water master; where a water master has been appointed pursuant to such a finding, he may be appointed on either a temporary or a permanent basis.

[19.25.13.15 NMAC - N, 12/30/2004]

19.25.13.16 GENERAL AUTHORITY OF A WATER MASTER:

The water master shall have immediate charge of the administration of waters within a water master district as necessary to protect the public safety and the interests of water right owners in a district or for the economic and satisfactory apportionment of water to all administrable water rights from the available water supply, and shall so regulate and control the waters of the district as to prevent waste. Administration implemented by the water master may be direct flow administration, storage water administration, depletion limit administration, alternative administration, or any combination thereof, as defined by district-specific regulations, depending on the physical and legal circumstances affecting the water resources and administrable water rights of the water master district. The water master may, as necessary, to effect administration:

- A.** determine the available supply of water from time to time, considering conveyance losses, as appropriate and necessary for effective administration;
- B.** implement administration of the storage, diversion, and use of the waters of the water master district in accordance with the administrable water rights;
- C.** administer the diversion of the waters of the water master district in priority or under an alternative administration;
- D.** administer diversions of the waters of the water master district in accordance with any administration date declared by the state engineer;
- E.** facilitate the formation and operation of water right owner groups to, among other things, improve the management of water supplies, water conservation, cooperation among water right owners and administration;
- F.** facilitate the negotiation and implementation of alternative administration agreements, including cooperative agreements, for sharing available water supplies;
- G.** adjust headgates and restrict diversions or pumping as required to administer water in accordance with principles of prior appropriation and beneficial use, to prevent the illegal use of water, and to prevent waste; and
- H.** exercise all such authority as is required to accomplish effective water rights administration.

[19.25.13.16 NMAC - N, 12/30/2004]

19.25.13.17 SPECIFIC DUTIES OF A WATER MASTER:

Taking into account the available water supply in general and considering conveyance losses, the water master shall implement administration in the district. The water master is authorized to do the following, as may be provided by district-specific rules and regulations and as necessary to effect administration:

- A.** determine the physical capacity of diversion and delivery structures for each point of diversion expressed as a maximum rate of flow in cubic feet per second (cfs);
- B.** determine the maximum rate of flow, expressed in cfs, required to meet the total demand for administrable water rights served by that point of diversion;
- C.** take into account water needed to provide for adequate hydraulic pressure to ensure maximum irrigation efficiency and charge of the system;
- D.** take into account water needed for additional uses such as, but not limited to, silt-flushing;

E. during times of high stream flow, when there are no legal constraints imposed upon the physical administration of the available water supply, relax limits on the amount of water that may be diverted in order that the delivery system might operate more efficiently, except that under no circumstances may the total CIR of water rights served from the project increase;

F. with respect to all agricultural uses, require the designation by the water right owner of land to be irrigated in a particular season and verify the irrigability of that land;

G. ensure that water diversions do not exceed the amount needed to serve administrable water rights, except as provided in Subsections C through E, above;

H. administer direct flow water for delivery to in-priority administrable water rights, curtail diversions by out-of-priority administrable water rights, ensure the delivery of storage water to those having rights to its use, and protect storage water releases from diversion by those without rights to its use;

I. establish protocols for communication and exchange of information with water right owners as required for administration;

J. maintain accurate records of all administration activities, including meter readings, and establish a protocol for the inspection and copying of such records, at the requestor's expense;

K. identify waste and illegal use of water, including re-diversion and reuse of return flows other than as specifically provided for in an administrable water right;

L. upon a determination that a use is illegal or constitutes waste, cap, lock or otherwise temporarily disable any mechanism for illegal diversion; no permanent disablement may occur without hearing before the state engineer;

M. where he has determined that a facility must be permanently disabled, issue an order directing that the diversion be permanently disabled, which order shall be heard by the state engineer as provided below; pending review of the water master's order, the temporary disablement of the disputed diversion shall remain in place;

N. perform all such duties as are required to accomplish administration.

[19.25.13.17 NMAC - N, 12/30/2004]

19.25.13.18 NO CHANGE IN DITCH SYSTEM MANAGEMENT:

Except as required in the performance of the water master's duties to regulate the distribution of water from the various stream systems of the state to the points of diversion of ditches and irrigation systems entitled to water therefrom, these rules and regulations shall not be construed to affect the internal management of projects,

including acequias or community ditches and other water delivery systems, in accordance with Section 72-9-2 NMSA, which provides for the distribution of water from the ditches and acequias according to local or community customs, rules and regulations that have been properly adopted. The state engineer's authority, and that of his water master, to regulate the diversion of water from the source to a ditch or acequia is unaffected by either Section 72-9-2 NMSA or this provision.

[19.25.13.18 NMAC - N, 12/30/2004]

19.25.13.19 WATER MASTER SUPERVISION OF MEASUREMENT:

In all districts in which water masters are appointed, water masters shall have the authority to supervise the measurement of water in order to conduct administration.

[19.25.13.19 NMAC - N, 12/30/2004]

19.25.13.20 HEADGATES AND MEASURING DEVICES REQUIRED:

The state engineer shall determine those points of diversion from, and return flow discharge to, the stream system where measuring devices are necessary for the efficient administration of water within the water master district. The owners of private ditches, the commissioners of acequias or community ditches, the boards of irrigation and conservancy districts, and all other owners of administrable water rights and operators of projects that are notified by the water master of the need to comply with this rule shall cause to be installed and maintained headgates and measuring devices of types and at locations acceptable to the water master, as may be provided by district-specific rules and regulations, once promulgated and adopted by the state engineer and ordered by the state engineer, or as otherwise ordered pursuant to Paragraph 3 of Subsection B of Section 72-2-8 NMSA.

[19.25.13.20 NMAC - N, 12/30/2004]

19.25.13.21 WATER TO BE DIVERTED OR DELIVERED THAT WILL BE PLACED TO ACTUAL BENEFICIAL USE; ESTABLISHING BENEFICIAL USE REQUIREMENTS:

If a particular water right is in-priority, the water master shall allow the diversion or delivery of water that will be put to actual beneficial use without waste. The water master shall make such investigations, including inspections of lands, well records, diversion records and municipal records, as are necessary to determine, for purposes of administration, the current beneficial use needs for all types of water uses under administrable water rights during periods of priority administration. Water deliveries for irrigation uses shall not be made unless the land on which water will be used has an administrable water right as determined by the state engineer. Nothing in this provision shall be construed to allow the water master to prefer some beneficial uses to other beneficial uses on any grounds other than priority, unless he is doing so pursuant to

local agreements through alternative administration. Such determination shall not affect the maximum legal entitlement to water.

[19.25.13.21 NMAC - N, 12/30/2004]

19.25.13.22 FARM DELIVERY AND PROJECT DIVERSION REQUIREMENT DETERMINATIONS:

In the absence of applicable court orders or adjudication decrees, the state engineer shall, prior to administration, make a determination of farm delivery and project diversion requirements in water master districts that are subject to administration. The project diversion requirement may be expressed as a maximum rate of diversion, an annual maximum diverted volume of water for a specified use, or both. The state engineer may modify these determinations based on new information, including field experience of the water master. None of the requirements of this provision shall apply if a determination adequate for effective water administration has been made by a court of competent jurisdiction.

[19.25.13.22 NMAC - N, 12/30/2004]

19.25.13.23 OBJECTIONS TO, AND STATE ENGINEER REVIEW OF, WATER MASTER DECISIONS:

Objections to any act or failure to act of a water master shall be made in the first instance informally, or in writing, to the water master who shall take prompt action on the objection if he determines that any action is warranted. If the water master fails to resolve the objection, further objections shall be made to the state engineer, who shall hear the matter in accordance with Section 72-3-3 NMSA. Streamlined processes for the prompt hearing of appeals from water master decisions shall be set up for each water master district. Filing of an objection to an act or failure to act by the water master will not stay the water master's action or failure to act, or his authority to administer the water right, pending resolution of the objection.

[19.25.13.23 NMAC - N, 12/30/2004]

19.25.13.24 WATER MASTER ADMINISTRATION OF AN ADMINISTRATION DATE:

In the event that the state engineer determines an administration date for a water master district, the water master shall oversee the curtailment of all administrable water rights junior to the administration date. The water master shall not allow out-of-priority use in the absence of a replacement plan approved by the state engineer.

[19.25.13.24 NMAC - N, 12/30/2004]

19.25.13.25 WATER MASTER ENTRY ON PRIVATE OR PUBLIC LAND:

Pursuant to Section 72-8-1 NMSA, the water master shall have the right to enter private or public lands in order to:

- A. install, inspect, read, and adjust measuring devices and require the replacement or repair of such measuring devices;
- B. inspect and adjust headgates or require the repair of such headgates;
- C. make seepage evaluations;
- D. conduct inspections of canals, wells, wasteways or sluiceways;
- E. prevent waste and prevent illegal water use;
- F. cap, lock or otherwise temporarily disable any mechanism for illegal diversion;
and
- G. perform such other duties as are required to accomplish administration.

[19.25.13.25 NMAC - N, 12/30/2004]

19.25.13.26 WATER MASTER REPORTS:

Annually, the water master shall submit a report including a record of total diversions and deliveries of direct flow water and storage water, as applicable, a statement of expenditures, a list of infrastructure and metering improvements needed or performed, problems encountered, and any other pertinent issues or aspects of administration. The report shall also address the amount of water needed to supply the requirements of the water master district, the amount available, the works which are without their proper supply, the supply required during the period preceding the water master's next regular report and such other information as the state engineer may require. The report shall be submitted to the state engineer and be publicly available for inspection and copying, at the requestor's expense.

[19.25.13.26 NMAC - N, 12/30/2004]

19.25.13.27 ADMINISTRABLE WATER RIGHTS:

The water master district manager for each water master district will define each administrable water right by its elements as set forth in Subsections A through G below. In all instances where the state engineer makes determinations of priority based on best available evidence as set forth in Subsections A through G below, he shall publish a list of his determination of the water rights in the water master district for review and provide opportunity to affected water right owners to informally present evidence. The state engineer shall hear objections to the water master district manager's determination of an administrable water right in accordance with Section 72-2-16

NMSA. Filing of an objection to the water master district manager's determination of an administrable water right will not stay the state engineer's administration based upon that determination, pending resolution of the objection. Appeals from decisions of the state engineer shall be in accordance with Section 72-7-1 NMSA. The water master district manager for each water master district will define each administrable water right by its elements as set forth in:

A. a partial final decree or a final decree entered by an adjudication court of competent jurisdiction, subject to any state engineer permit issued subsequent to entry of said adjudication decree; or, if no decree has been entered, then;

B. a subfile order entered by an adjudication court of competent jurisdiction; or, if no subfile order has been entered, then;

C. an offer of judgment signed by the defendant in a water rights adjudication; or, if no offer of judgment has been signed, then;

D. a hydrographic survey conducted and filed in accordance with Section 72-4-17 NMSA or Section 72-4-16 NMSA; or, if no hydrographic survey has been filed, then;

E. a license issued by the state engineer; or, if no license has been issued, then:

F. a permit issued by the state engineer, accompanied by proof of actual beneficial use; and

G. a determination made by the state engineer based on the best available evidence, consisting of, where available, any filings with the office of the state engineer, field or documentary evidence of beneficial use associated with the right including historical aerial photography, diversions records of historical diversions, historical studies containing evidence regarding water use, and data regarding irrigation and water delivery system requirements.

[19.25.13.27 NMAC - N, 12/30/2004]

19.25.13.28 SUPERSESSON BY A COURT:

Any determinations made by the state engineer for administration purposes within any district subject to administration in the absence of a completed adjudication shall be subject to any decrees issued by an adjudication court of competent jurisdiction or any court of competent jurisdiction.

[19.25.13.28 NMAC - N, 12/30/2004]

19.25.13.29 ADMINISTRATION BY ADMINISTRATION DATE:

The state engineer may adopt an administration date, based on his best professional judgment of the water supply available for consumptive use by water right owners in the water master district or for depletion within the state of New Mexico as may be appropriate, and the date on which that administration date will be effective, by order in accordance with Paragraph 3 of Subsection B of 72-2-8 NMSA, for any water master district. The state engineer may revise an administration date as necessary to achieve the objectives of these rules and regulations. The state engineer shall publish the adoption or revision of an administration date once a week for two consecutive weeks in two newspapers of general circulation within the water master district affected by such adoption or revision. Upon the effective date of an administrative date, all out-of-priority administrable water rights must cease diversion, except as provided by an approved replacement plan. Determination of an administration date shall be ordered to implement depletion limit administration and shall be specifically provided for by the provisions of district-specific regulations to achieve compliance with an interstate stream compact; or, in the state engineer's performance of his duties under Section 72-2-1 NMSA upon further formal state engineer action pursuant to Section 72-2-8 NMSA for reasons of public safety or the interests of the water right owners in the district.

[19.25.13.29 NMAC - N, 12/30/2004]

19.25.13.30 OBJECTION TO, AND STATE ENGINEER REVIEW OF, STATE ENGINEER DETERMINATION OF AN ADMINISTRATION DATE:

Owners of administrable water rights are encouraged to resolve objections to the state engineer's determination of an administration date informally with the state engineer's district office. If such informal negotiations fail, the state engineer shall hear objections to his determination of an administration date in accordance with Section 72-2-16 NMSA. Filing of an objection to an administration date will not stay the state engineer's administration by administration date, pending resolution of the objection. Appeals from decisions of the state engineer shall be in accordance with Section 72-7-1 NMSA.

[19.25.13.30 NMAC - N, 12/30/2004]

19.25.13.31 APPLICATION FOR APPROVAL OF REPLACEMENT PLANS:

Replacement plans are available only during state engineer priority administration of the available water supply to prevent serious and imminent economic harm in response to, and only until water rights are permanently transferred, if necessary. The state engineer may approve replacement plans based on the adopted generalized hydrologic analysis that, in his professional judgment, provide sufficient replacement water to fully offset depletions to surface waters caused by out-of-priority diversions in order to prevent impairment of senior water right owners by the junior water right owner that would otherwise be out-of-priority. Replacement plans may be approved temporarily until permanent transfer of water is effected for water right owners who are likely to face permanent curtailment, or for limited periods when a water right owner is not likely to face permanent curtailment. The owner of an out-of-priority administrable water right

that is subject to administration in a water district may submit to the state engineer an application for approval of a replacement plan. The application shall contain the following information:

- A.** the name and address of the applicant;
- B.** the location, amount and priority date of applicant's existing administrable water right;
- C.** each source of replacement water and the amount of historic consumptive use related to the water right that is the source of replacement water, to be established by documentation satisfactory to the state engineer;
- D.** an estimate of the amount of water to be diverted by the applicant;
- E.** a map acceptable to the state engineer showing the source and point of diversion of the replacement water and the location of the proposed use;
- F.** a copy of any agreement between the applicant and the owner of water to be used as replacement water, or other documentation demonstrating to the state engineer's satisfaction that the applicant has a legal entitlement to a source of water to be used as replacement water;
- G.** the expected duration of the plan; and
- H.** any other information the state engineer deems necessary.

[19.25.13.31 NMAC - N, 12/30/2004]

19.25.13.32 GENERALIZED HYDROLOGIC ANALYSIS:

The state engineer will develop a generalized hydrologic analysis for a water master district subject to administration as the basis for the development, review and approval of replacement plans within that water master district. The generalized hydrologic analysis will be based upon, and obtained from, the best available hydrologic model or models designated by the state engineer for the water master district. The hydrologic models based upon the best available hydrogeologic data will take into account existing surface and groundwater diversions and the combined effect of groundwater and surface water uses on the basin groundwater and surface water system. Adoption of a generalized hydrologic analysis shall be undertaken in conjunction with the public rule-making process for district-specific regulations pursuant to Subsection D of 72-2-8 NMSA. The generalized hydrologic analysis shall include guidelines for the approval of applications. If an applicant agrees to the use of the generalized hydrologic analysis in the review of his application, the state engineer shall expedite his review of the application on that basis. The generalized hydrologic analysis may be adopted as part of basin-specific regulations developed by the state engineer for a specific water master

district, or subsequent thereto. A generalized hydrologic analysis shall not be adopted in the absence of proposed district-specific regulations for administration. After consideration of public comment on a proposed generalized hydrologic analysis, the state engineer may adopt a generalized hydrologic analysis for use to evaluate replacement plans pertinent to administration within the water master district. In order to adopt a generalized hydrologic analysis, the state engineer shall find that it is sufficiently conservative to assure that any replacement plan that is approved:

A. will not impair in-priority administrable water rights and by limiting diversions under the replacement plan to no more than the average of recent historical beneficial use will be a sufficient basis for such a finding; and

B. will not result in any increase in depletions within the water master district; accepting an applicant's assurance that no water shall be diverted under that portion of the in-priority administrable water right that is committed to the replacement plan, and finding that foregone average historic depletions associated with the temporarily transferred in-priority water right are at least 10 percent greater than the average historic depletions associated with the out-of-priority administrable water right, are together a sufficient basis for such a finding.

[19.25.13.32 NMAC - N, 12/30/2004]

19.25.13.33 APPROVAL OF REPLACEMENT PLANS:

The state engineer shall determine the adequacy of each source of water proposed for use as replacement water based upon the generalized hydrologic analysis adopted by the state engineer. Replacement plans shall be approved for a period not to exceed two years but may be renewed upon application. Upon finding that the approval of a replacement plan meets the criteria of Section 19.25.13.32 NMAC, is necessary to prevent crop loss or other serious economic harm to the owner of an out-of-priority administrable water right, and is not contrary to conservation of water or the public welfare of the state, the state engineer shall approve the replacement plan. The state engineer may require such terms and conditions for the approval of a replacement plan as he deems to be necessary, including time limitations on the duration of the replacement plan. State engineer approvals of replacement plans shall be presumed to be in proper implementation of the provisions of the water laws administered by him as provided by Subsection H of 72-2-8 NMSA. Any approved replacement plan shall continue in effect during the course of objections and appeals proceedings.

[19.25.13.33 NMAC - N, 12/30/2004]

19.25.13.34 AMENDMENT AND RENEWAL OF REPLACEMENT PLANS:

The holder of a replacement plan may submit an application to the state engineer at any time during the term of the replacement plan to amend or renew the replacement plan. Upon state engineer determination that the permanent acquisition of a senior water right

to replace the depletions caused by the exercise of an out-of-priority water right is not required, or upon a showing of a good faith effort to permanently acquire a senior water right in the absence of such a determination, the state engineer may approve the renewal or amendment of a replacement plan in the same manner as set forth in Section 19.25.13.33 NMAC, after a review of any new information or evidence of changed conditions submitted in support of the application.

[19.25.13.34 NMAC - N, 12/30/2004]

19.25.13.35 ACCURACY OR SUFFICIENCY OF INFORMATION; MODIFICATION:

Each applicant for, or holder of, a replacement plan is responsible for the accuracy and sufficiency of all material information provided in support of the application to the state engineer before or after approval of the replacement plan. If an approved replacement plan proves to be insufficient to replace depletions, the state engineer may require the holder of a replacement plan to provide additional replacement water at any time during the term of the replacement plan or within a reasonable period after the term of the replacement plan if necessary to offset cumulative impacts.

[19.25.13.35 NMAC - N, 12/30/2004]

19.25.13.36 REVOCATION OF REPLACEMENT PLANS:

The state engineer may revoke approval of a replacement plan, in whole or in part, where material information provided by the applicant for, or the present holder of, the replacement plan is inaccurate; for non-compliance with the terms and conditions of the replacement plan; or for non-compliance with these rules. Upon revocation of a replacement plan, to the extent of the revocation, all diversions authorized by the revoked portion of the replacement plan must cease and the holder of the replacement plan must, within a reasonable period after revocation of the replacement plan, replace the diversion and depletion overruns incurred, if any.

[19.25.13.36 NMAC - N, 12/30/2004]

19.25.13.37 FALLOWING AND NON-USE REQUIREMENTS:

Water once committed to a replacement plan cannot be used for any other purpose during the term of the replacement plan. In the event that the source of replacement water is irrigated land, the land to which the water right being used for replacement water is appurtenant shall be fallowed. Fallowed land shall not be irrigated from any source, including domestic and supplemental wells, without written approval by the state engineer. Fallowed land shall be specifically identified by map or survey, or by other means acceptable to the state engineer. Without written approval by the state engineer, no water shall be diverted on, or delivered to, fallowed land during the period in which the water is being used as replacement water. In the event the source of replacement water is not irrigated land, the use to which the owner of the water right that is the

source of replacement water is entitled under his right shall, during the term of the replacement plan, be reduced by the amount of water committed to the replacement plan.

[19.25.13.37 NMAC - N, 12/30/2004]

19.25.13.38 FORMATION OF WATER RIGHT OWNER GROUPS:

Water right owners are encouraged to form water right owner groups for the purpose of discussion and negotiation among themselves, with other water right owners, or with the water master, regarding the possibility of shortage sharing agreements and other forms of alternative administration and joint application for replacement plans. Subject to the exemption for acequias and community ditches under Subsection C of 72-2-9.1 NMSA, in the event that water right owner groups, aided by the water master, attempt to reach an agreement for Alternative administration, such efforts by the water right owner groups and the water master shall constitute promotion of expedited marketing and leasing as required by that statute.

[19.25.13.38 NMAC - N, 12/30/2004]

19.25.13.39 REPLACEMENT PLANS BY WATER RIGHT OWNER GROUPS:

Water right owners may, individually or collectively, submit applications for replacement plans as described above. Except as may be limited by a specific regulation or order, water conservancy districts, irrigation districts, municipalities, or other entities may initiate and submit plans in accordance with these rules. Water right owner groups operating under an approved replacement plan shall notify the state engineer of any plan participant who is not in compliance with the replacement plan.

[19.25.13.39 NMAC - N, 12/30/2004]

19.25.13.40 OBJECTIONS TO, AND APPEALS FROM, APPROVALS, DENIALS AND REVOCATIONS OF REPLACEMENT PLANS:

Within thirty days after approval of a replacement plan, the state engineer shall cause to be published a summary of the approved replacement plan providing for the opportunity to appeal the approval, denial or revocation of a replacement plan pursuant to Section 72-2-16 NMSA. The state engineer shall hear objections to his approval, denial or revocation of all part of a replacement plan in accordance with Section 72-2-16 NMSA but shall endeavor to hear such objections in the same prompt manner as provided by Section 72-3-3 NMSA for review of water master actions. Filing of an objection to an approval, denial or revocation of a replacement plan will not stay the state engineer's determination that all water use under all, or part of, a revoked replacement plan must cease, pending resolution of the objection.

[19.25.13.40 NMAC - N, 12/30/2004]

19.25.13.41 APPEALS FROM STATE ENGINEER DECISIONS:

All appeals from state engineer review of objections to any actions or decisions made pursuant to these rules and regulations shall be in accordance with Section 72-7-1 NMSA.

[19.25.13.41 NMAC - N, 12/30/2004]

19.25.13.42 REQUEST FOR ADMINISTRATION FROM THE INTERSTATE STREAM COMMISSION:

The state engineer shall proceed with water rights administration when requested to do so by the New Mexico interstate stream commission for the purpose of compliance with interstate stream compacts, which request shall be in the form of a resolution.

[19.25.13.42 NMAC - N, 12/30/2004]

19.25.13.43 EMERGENCY ADMINISTRATIVE ACTIONS:

The state engineer may determine that the need for water rights administration in a specific district is so urgent that water rights administration may proceed directly under order issued pursuant to the procedural requirements of Paragraph 3 of Subsection B of 72-2-8 NMSA.

[19.25.13.43 NMAC - N, 12/30/2004]

19.25.13.44 EXPEDITED MARKETING AND LEASING:

The state engineer will review and analyze permit applications in water master districts affected by priority administration on an expedited basis utilizing the appropriate hydrologic model adopted by the state engineer for the water master district. Expedited review of permit applications in water master districts affected by priority administration shall fulfill the requirements of Subsection C of 72-2-9.1 NMSA for the promotion of expedited marketing and leasing of water rights.

[19.25.13.44 NMAC - N, 12/30/2004]

19.25.13.45 KNOWLEDGE OF AND COMPLIANCE WITH STATUTES, RULES, REGULATIONS AND CODES:

It shall be the responsibility of all applicants and permittees to know of, and comply with, all applicable statutes, rules, regulations and codes.

[19.25.13.45 NMAC - N, 12/30/2004]

19.25.13.46 RETROACTIVE EFFECT:

These rules and regulations shall have retroactive effect on all water master districts already formed at the time of promulgation of these rules and regulations.

[19.25.13.46 NMAC - N, 12/30/2004]

19.25.13.47 SEVERABILITY:

If any provision or provisions of these regulations are found to be invalid, the remaining provisions shall continue to be in effect.

[19.25.13.47 NMAC - N, 12/30/2004]

19.25.13.48 ENFORCEMENT:

The state engineer may enforce these rules by all means within his legal authority.

[19.25.13.48 NMAC - N, 12/30/2004]

19.25.13.49 STATE ENGINEER OPTION TO REVISE RULES AND REGULATIONS:

The state engineer may modify these rules and regulations as needed to accomplish the objectives of these rules and regulations. Removal of a regulation or a section of these rules and regulations, whether by a court or by the state engineer, shall not affect the validity of the remaining rules and regulations.

[19.25.13.49 NMAC - N, 12/30/2004]

19.25.13.50 LIBERAL CONSTRUCTION:

These rules shall be liberally construed to carry out their purpose in accordance with Subsection H of 72-2-8 NMSA.

[19.25.13.50 NMAC - N, 12/30/2004]

PART 14: STRATEGIC WATER RESERVE

19.25.14.1 ISSUING AGENCY:

New Mexico Interstate Stream Commission.

[19.25.14.1 NMAC - N, 12-15-2005]

19.25.14.2 SCOPE:

These regulations will assist the interstate stream commission in implementing the strategic water reserve and in managing water and water rights held for the strategic water reserve.

[19.25.14.2 NMAC - N, 12-15-2005]

19.25.14.3 STATUTORY AUTHORITY:

These regulations are written pursuant to Section 72.14-3.3 NMSA 1978, authorizing the interstate stream commission to establish a strategic water reserve and requiring the promulgation of rules in conformity therewith.

[19.25.14.3 NMAC - N, 12-15-2005]

19.25.14.4 DURATION:

Permanent.

[19.25.14.4 NMAC - N, 12-15-2005]

19.25.14.5 EFFECTIVE DATE:

December 15, 2005, unless a later date is cited at the end of a section.

[19.25.14.5 NMAC - N, 12-15-2005]

19.25.14.6 OBJECTIVE:

These regulations will ensure that water and water rights acquired for the strategic water reserve are used only for the purposes of the reserve, that adequate public notice exists in each affected area for the acquisition or disposal of water rights and that the procedures for the acquisition of water and water rights for the strategic water reserve comply with the state engineer transfer procedures.

[19.25.14.6 NMAC - N, 12-15-2005]

19.25.14.7 DEFINITIONS:

Unless defined below or in a specific section of these regulations, all other words used herein shall be given their customary and accepted meanings. "**Water rights**" means valid existing surface or groundwater rights that have sufficient seniority and a consistent, historic beneficial use to effectively contribute to the purpose of the strategic water reserve.

[19.25.14.7 NMAC - N, 12-15-2005]

19.25.14.8 LIBERAL CONSTRUCTION:

These regulations shall be liberally construed to carry out their intended purpose.

[19.25.14.8 NMAC - N, 12-15-2005]

19.25.14.9 IMPLEMENTATION OF STRATEGIC WATER RESERVE - RIVER REACH OR BASIN PRIORITIES:

A. During the first quarter of each year, the interstate stream commission, after consultation with the state engineer, and the attorney general, shall adopt river reach or ground water basin priorities for the strategic water reserve and for the acquisition of water or water rights and storage rights for the reserve. In establishing such priorities, the interstate stream commission shall consider:

- (1)** the urgency of need for water or water rights to be held in the strategic water reserve in a river reach or basin;
- (2)** the unavailability of water rights for sale or lease in the river reach or basin and/or whether storage exists for such water;
- (3)** the cost, location and seniority of the water or water rights in the river reach or basin;
- (4)** whether and to what extent water rights to be purchased or leased will assist the state in complying with its interstate stream compacts or court decrees or will assist the state in managing its waters for the benefit of threatened or endangered species;
- (5)** whether water or water rights are available by donation; and
- (6)** written comments, if any, from interested public and private entities.

B. The interstate stream commission shall publish its designated river reach or ground water basin priorities in newspapers of general circulation throughout the state. In addition, the interstate stream commission shall publish its designated river reach or ground water basin priorities on its website.

[19.25.14.9 NMAC - N, 12-15-2005]

19.25.14.10 IMPLEMENTATION OF STRATEGIC WATER RESERVE - PRIORITIZATION WITHIN RIVER REACH OR BASINS:

Consistent with Section 72-14-3.3 NMSA 1978, for each priority river reach or ground water basin, the interstate stream commission shall establish additional prioritization in coordination with the governing bodies of each Indian nation, tribe, pueblo, board of

county commissioners, municipality, special district established pursuant to Chapter 73 NMSA 1978, soil and water conservation district, water authority and water planning region within each affected river reach or ground water basin. Upon making the initial prioritization of river reach or groundwater basin, the commission shall notify the governing bodies of each such entity. Within thirty (30) days after adoption of such initial river reach or ground water basin priorities by the commission as provided in the preceding paragraph, or at the next regularly scheduled meeting of the commission that occurs at least fifteen (15) days after adoption of such priorities as provided in the preceding paragraph, the governing bodies of each such entity and any other interested public and private entities, shall submit comments and suggestions as to this additional prioritization of the acquisition of water or water rights within each priority river reach or groundwater basin. The interstate stream commission will publish notice of, and hear public comments regarding, its prioritization decisions.

[19.25.14.10 NMAC - N, 12-15-2005]

19.25.14.11 ACQUISITION OF WATER OR WATER RIGHTS:

Consistent with its prioritizations, the interstate stream commission shall acquire water or water rights from willing sellers or lessors. The commission shall acquire water or water rights at a price no higher than appraised market value, based upon the best available information and considering the seniority and the consistent historic beneficial use of the water or water rights. The interstate stream commission may acquire water or water rights by donation at any time. Acquisitions shall be contingent upon a successful transfer of the water rights to the interstate stream commission pursuant to the procedures for transfer of water rights established by the state engineer. The interstate stream commission shall not purchase or lease water or water rights that will result in an increase in net depletions in the affected river reach or that will create cumulative adverse impacts on existing water users or delivery systems or the ability of the state of New Mexico to properly manage its waters or meet interstate obligations. The commission shall not acquire water or water rights that are served by or owned by an acequia or community ditch established pursuant to Articles 2 and 3 of Chapter 73 NMSA 1978 for inclusion in the strategic water reserve. The interstate stream commission shall not acquire water or water rights that are served by an irrigation district established pursuant to Article 10 of Chapter 73 NMSA 1978 except through a contractual arrangement with the district board of directors or the interstate stream commission may establish a special water users association pursuant to 73-10-48 NMSA 1978. The interstate stream commission acquires water or water rights from a member of an irrigation or conservancy district established pursuant to Chapter 73 NMSA 1978, the interstate stream commission shall utilize funds from the strategic water reserve to pay the annual assessment to the district that would accrue to the district absent the transaction.

[19.25.14.11 NMAC - N, 12-15-2005]

19.25.14.12 APPLICATION FOR PERMIT WITH THE STATE ENGINEER:

All acquisitions of water or water rights by the commission for the strategic water reserve are subject to approval by the state engineer and shall comply with all state engineer rules and regulations governing surface and ground water transfer applications.

[19.25.14.12 NMAC - N, 12-15-2005]

19.25.14.13 MANAGEMENT OF WATER:

A. The interstate stream commission shall manage water and water rights within the strategic water reserve in order to assist the state in complying with its interstate compacts and court decrees or to assist the state and water users in water management efforts for the benefit of threatened or endangered species or in a program intended to avoid additional listings of species.

B. If water or water rights are purchased, leased or acquired through donation to assist the state and water users in water management efforts for the benefit of threatened or endangered species or in connection with a program intended to avoid additional listings of species, the interstate stream commission shall manage such water or water rights in conjunction with collaborative programs or processes where they exist.

C. The commission shall expedite the transfer and management of water rights donated to the strategic water reserve.

D. Water or water rights acquired for the strategic water reserve shall remain in their river reach or groundwater basin of origin.

[19.25.14.13 NMAC - N, 12-15-2005]

19.25.14.14 ADMINISTRATIVE COSTS:

The interstate stream commission shall determine annually its administrative costs associated with the strategic water reserve and consistent with Section 72-14-3.3 NMSA 1978 such costs shall be paid for from funds received for the strategic water reserve.

[19.25.14.14 NMAC - N, 12-15-2005]

19.25.14.15 DISPOSAL OF WATER RIGHTS:

The interstate stream commission may sell or lease water or water rights from the strategic water reserve only upon a finding by the commission that such water or water rights are no longer necessary for the reserve and only at a price no less than appraised market value. The interstate stream commission may lease water or water rights from the strategic water reserve to the United States but shall not sell water rights from the strategic water reserve to the United States. The interstate stream commission shall

utilize proceeds from the leasing of water rights from the strategic water reserve for carrying out the purposes of the strategic water reserve. Any sale of water or water rights from the strategic water reserve shall first be offered for the original purpose of use. Proceeds from such sales shall be used by the office of the state engineer to adjudicate water rights.

[19.25.14.15 NMAC - N, 12-15-2005]

19.25.14.16 ANNUAL LEGISLATIVE REPORT:

On or before December 15th of each year, the interstate stream commission shall report to the appropriate committee of the legislature on the status of the strategic water reserve.

[19.25.14.16 NMAC - N, 12-15-2005]

PART 15: PECOS RIVER BASIN LAND MANAGEMENT FUND

19.25.15.1 ISSUING AGENCY:

New Mexico Interstate Stream Commission.

[19.25.15.1 NMAC - N, 5/15/2010]

19.25.15.2 SCOPE:

This rule governs the administration of the Pecos river basin land management fund.

[19.25.15.2 NMAC - N, 5/15/2010]

19.25.15.3 STATUTORY AUTHORITY:

Section 72-1-2.4 to -2.6 NMSA.

[19.25.15.3 NMAC - N, 5/15/2010]

19.25.15.4 DURATION:

Permanent.

[19.25.15.4 NMAC - N, 5/15/2010]

19.25.15.5 EFFECTIVE DATE:

May 15, 2010, unless a later date is cited at the end of a section.

[19.25.15.5 NMAC - N, 5/15/2010]

19.25.15.6 OBJECTIVE:

The objective of this part is to implement the Pecos river basin land management fund, Section 72-1-2.5 NMSA.

[19.25.15.6 NMAC - N, 5/15/2010]

19.25.15.7 DEFINITIONS:

A. "Commission" means the New Mexico interstate stream commission.

B. "Commission lands" means the lands in the lower Pecos river basin acquired by the commission pursuant to Sections 72-1-2.2 and 72-1-2.4 NMSA.

C. "Land management fund" or "fund" means the Pecos river basin land management fund created pursuant to Section 72-1-2.5 NMSA.

[19.25.15.7 NMAC - N, 5/15/2010]

19.25.15.8 THE LAND MANAGEMENT FUND:

A. Managing commission lands: The commission shall manage commission lands in a cost-effective manner so as to minimize any threat to public health and safety and adverse impacts to adjacent landowners, to provide benefits to local economies and to promote the general welfare of the lower Pecos river basin.

B. Depositing revenues from commission lands: The fund consists of appropriations, grants, donations or bequests to the fund, income from land and water rights purchased pursuant to Chapter 72, Article 1 NMSA, revenue from land sold pursuant to Chapter 72, Article 1 NMSA and income from investment of the fund or money otherwise accruing to the fund. Money in the fund shall be invested pursuant to Chapter 6, Article 10 NMSA. Money in the fund shall not revert to any other fund at the end of a fiscal year. Money in the fund shall be disbursed on warrants signed by the secretary of the department of finance and administration pursuant to vouchers signed by the director of the commission or the director's authorized representative.

C. Administering the fund: The commission shall use money from the land management fund to manage commission lands and to manage the commission's augmentation well fields in the lower Pecos river basin, including those augmentation well fields created pursuant to the strategic water reserve, Section 72-14-3.3 NMSA.

[19.25.15.8 NMAC - N, 5/15/2010]

PART 16-19: [RESERVED]

PART 20: NAMBE - POJOAQUE - TESUQUE WATER DISTRICT: ACTIVE WATER RESOURCES MANAGEMENT

19.25.20.1 ISSUING AGENCY:

Office of the State Engineer.

[19.25.20.1 NMAC - N, 9/12/2017]

19.25.20.2 SCOPE:

This rule shall be read in conjunction with the settlement agreement and as a supplement to 19.25.13 NMAC, and shall apply to all administrable surface water and groundwater rights within the Nambé-Pojoaque-Tesuque water master district.

[19.25.20.2 NMAC - N, 9/12/2017]

19.25.20.3 STATUTORY AUTHORITY:

This rule is established pursuant to constitutional authority set forth in Article 16 of the Constitution of New Mexico, and statutory authority enumerated in Chapter 72, including, but not limited to, Sections 72-1-1 (1941); 72-1-2 (1907); 72-2-6 (1965); 72-2-8 (1976); 72-2-9 (1907); 72-2-9.1 (2003); 72-2-18 (2007); 72-3-1 (1919); 72-3-2 (2007); 72-3-3 (1953); 72-3-4 (1965); 72-3-5 (1941); 72-5-3 (1941); 72-5-4 (1941) 72-5-5 (1965); 72-5-18 (2007); 72-5-20 (1941); 72-5-22 (1907); 72-5-23 (1986); 72-5-24 (1985); 72-5-25 (1971); 72-5-28 (2002); 72-5-39 (1965); 72-6-1 - 72-6-7 (2014); 72-7-1 (1971); 72-8-1 (1907); 72-9-2 (1907); 72-12-1 (2003); 72-12-2 (1931); Subsection D of 72-12-8 (2002); 72-12-15 (1949); 72-12-16 (1949); 72-12-18 (1953); 72-12-24 (1959); 72-12-27 (1967) NMSA 1978 and the authority provided under the settlement agreement in *State of New Mexico ex rel. State Engineer and United States of America, Pueblo de Nambé, Pueblo de Pojoaque, Pueblo de San Ildefonso, and the Pueblo de Tesuque v. R. Lee Aamodt, et al.*, No. 66cv6639 (D.N.M.) (dated April 19, 2012).

[19.25.20.3 NMAC - N, 9/12/2017]

19.25.20.4 DURATION:

Permanent.

[19.25.20.4 NMAC - N, 9/12/2017]

19.25.20.5 EFFECTIVE DATE:

September 12, 2017

[19.25.20.5 NMAC - N, 9/12/2017]

19.25.20.6 OBJECTIVE:

The objective of this rule is to provide for the distribution and administration of the available water supply and administrable water rights in the Nambé-Pojoaque-Tesuque basin ("NPT basin"), including the prevention of illegal diversions, waste and over-diversions, and to implement the terms and conditions of the settlement agreement and the final decree entered in *State of New Mexico ex rel. State Engineer and United States of America, Pueblo de Nambé, Pueblo de Pojoaque, Pueblo de San Ildefonso, and the Pueblo de Tesuque v. R. Lee Aamodt, et al.*, No. 66cv6639 (D.N.M.).

[19.25.20.6 NMAC - N, 9/12/2017]

19.25.20.7 DEFINITIONS:

Unless otherwise defined below or in 19.25.13.7 NMAC, all words herein shall be given their customary and accepted meanings. All uses of masculine pronouns or possessives shall be held to include the feminine.

A. "Aamodt case" means the civil action filed in the United States District Court for the District of New Mexico in *State of New Mexico ex rel. State Engineer and United States of America, Pueblo de Nambé, Pueblo de Pojoaque, Pueblo de San Ildefonso, and the Pueblo de Tesuque v. R. Lee Aamodt, et al.*, No. 66cv6639 (D.N.M.) (the general adjudication of water rights of the Nambé-Pojoaque-Tesuque stream system).

B. "Aamodt Litigation Settlement Act" means the Claims Resolution Act of 2010, Pub. L. No. 11-291, tit. VI, §§ 601, 626, 124 Stat. 3064, 3134-56 (2010).

C. "Acequia" means a community ditch under the laws of New Mexico and Section 73-2-27 NMSA 1978.

D. "Administrable water right" or "water right" means a right to the use of water or a right to impound, store or release water determined by the decree court in subfile orders, the partial final judgment and decree ("PFD"), or the final decree, or a right established pursuant to a permit issued by the state engineer or recognized by a license issued by the state engineer.

E. "Administration" is defined in Subsection C of 19.25.13.7 NMAC. Administration includes:

- (1) direct flow administration,
- (2) storage water administration,
- (3) depletion limit administration, and

(4) alternative administration. Alternative administration includes, but is not limited to, Pueblo alternative administration, defined in Subsection LL of 19.25.20.7 NMAC and Tesuque alternative administration, set forth in 19.25.20.121 NMAC.

F. "AFY" means acre-feet of water per year.

G. "Agricultural use" means the use of surface or groundwater for cultivating the soil and growing crops or irrigating pasture for livestock grazing. Agricultural uses do not include domestic, community, commercial, industrial or livestock uses.

H. "CIR" or "consumptive irrigation requirement" means the quantity of irrigation water expressed as a depth or volume, exclusive of effective rainfall, that is consumptively used by plants or is evaporated from the soil surface during one calendar year. The CIR may be numerically determined by subtracting effective rainfall from the consumptive use.

I. "Commercial or industrial use" means the diversion and consumption of water in connection with any activity that provides, or offers to provide, goods or services for consideration, not including domestic uses incidental to a commercial or industrial facility.

J. "Compliance order" means a written order issued by the state engineer pursuant to Section 72-2-18 NMSA 1978 or the settlement agreement to an owner of record or person making an illegal diversion, violating a requirement or prohibition of Chapter 72 NMSA 1978, a regulation, code, order or special order adopted by the state engineer pursuant to Section 72-2-8 NMSA 1978, a condition of a permit or license issued by the state engineer pursuant to law, an order entered by the decree court adjudicating a water right, or the terms of the settlement agreement, partial final decree or final decree.

K. "Connection fund" or "Pojoaque valley water utility connect fund" means the Pojoaque valley water utility connection fund administered by Santa Fe county to pay the cost of connecting well water right owners to the county water utility.

L. "County water utility" or "CWU" means the water utility organized by the county to do the following:

- (1) receive water distributed by the regional water authority ("RWA");
- (2) provide the water received under Paragraph (1) of Subsection L of 19.25.20.7 NMAC to customers on non-Pueblo land in the NPT basin; and carry out any other activities in accordance with the Aamodt Litigation Settlement Act.

M. "Curtailment order" means a verbal or written order from the water master directing an owner of record or person diverting water to immediately curtail such diversion, in whole or in part.

N. "Decree court" means the United States District Court for the District of New Mexico in the Aamodt case.

O. "Domestic use" means the use of water for indoor and outdoor household purposes, including water used for drinking, sanitation, the irrigation of not to exceed one acre of noncommercial trees, lawn, garden, or landscaping, the care and feeding of household pets, and such uses of water incidental to a governmental, commercial or non-profit facility. Domestic uses do not otherwise include the use of water for agricultural purposes, and do not include any use of water for commercial, industrial, community or livestock watering purposes.

P. "Election" or "elect" means a choice to connect or not connect to the county water utility under the terms of the settlement agreement.

Q. "FDR" or "farm delivery requirement" means the quantity of water, exclusive of effective rainfall, that is delivered to the farm headgate or is diverted from a source of water that originates on the farm itself, such as a well or spring, to satisfy the CIR of crops grown on the farm during the irrigation accounting year, or as otherwise provided by permit.

R. "Final decree" means the *Final Judgment and Decree of the Water Rights of the Nambé, Pojoaque, and Tesuque Stream System* entered by the decree court.

S. "Household" means a single or multi-family residence including outbuildings such as guest houses, barns, and sheds.

T. "Hydrologic model" means the hydrologic model developed by the state of New Mexico and the United States pursuant to the settlement agreement, as updated and further developed by the state engineer for the administration and use of water in the NPT basin, and for determining the effects of administrative actions subject to the settlement agreement. Any generalized hydrologic analysis adopted by the state engineer for the NPT district shall be based upon the hydrologic model.

U. "Illegal diversion" means any of the following:

(1) a diversion that exceeds the quantity of an administrable water right or beneficial use requirements;

(2) a diversion in violation of a rule, statute, license, permit, PFD, final decree, subfile order, or other court order, other than a diversion described in paragraph (1) of this Subsection;

(3) in the case of an acequia or other entity entitled to divert and distribute water on behalf of its membership or constituency, any diversion that exceeds the sum total quantity of all the administrable water rights in that acequia or other entity;

- (4) waste;
- (5) a diversion in violation of a curtailment order or compliance order;
- (6) a diversion that is out-of-priority;
- (7) any diversion from an unauthorized point of diversion;
- (8) a diversion for conveyance to an unauthorized place of use or for an unauthorized purpose of use;
- (9) a diversion of groundwater in excess of the agreed amount of use pursuant to an election made under the settlement agreement; or
- (10) a diversion of surface or groundwater that is contrary to the alternative administration set forth in the settlement agreement.

V. "Interfere" or "interference" means a material adverse effect on the quality, divertible quantity, or the cost of diversion of surface water historically used to satisfy surface water rights subject to the settlement agreement.

W. "Livestock use" means the diversion and consumption of water for the care and feeding of domestic animals such as cattle or horses. Livestock use does not include the use of water in connection with the operation or maintenance of feedlots or agricultural use of water.

X. "Mitigation fund" means the fund created and administered by the state to mitigate impairment to non-Pueblo groundwater rights as a result of a new or changed Pueblo use of water on Pueblo land.

Y. "Mutual domestic water consumers association" or "MDWCA" means an association organized under or subject to the provisions of the Sanitary Projects Act, Sections 3-29-1 through 3-29-20 NMSA 1978.

Z. "Nambé Pojoaque Tesuque basin" or "NPT basin" means the Nambé-Pojoaque-Tesuque stream system, also known as the Pojoaque basin, which is the geographic area limited by a surface water divide (which can be drawn on a topographic map), within which rainfall and runoff flow into arroyos, drainages, and named tributaries that drain to:

- (1) the Rio Pojoaque; or
- (2) the two unnamed arroyos immediately south of the Rio Pojoaque; and
- (3) the two arroyos (including the Arroyo Alamo) that are immediately to the north of the confluence of the Rio Pojoaque and the Rio Grande.

The term "NPT basin" includes the San Ildefonso Eastern Reservation recognized by the Act of September 14, 1961, 75 Stat. 505, Sec. 8.

AA. "Nambe Pojoaque Tesuque water master district" or "NPT district" is the same geographic area as the NPT basin.

BB. "Non-Pueblo water right" means a water right held by a non-Pueblo owner.

CC. "Offset water" means any quantity of water provided to offset adverse stream depletion effects caused by a particular diversion of water.

DD. "Out-of-priority" is defined under Subsection U of 19.25.13.7 NMAC.

EE. "Owner of record" means a person named in a subfile order or in a permit, license, change of ownership form or other documentation filed with the state engineer identified as the current owner of an administrable water right. For purposes of administration by the water master, the term owner of record shall include a lessee or other person authorized to use or manage the use of water, or the representative of an acequia or other entity authorized to divert water on behalf of its membership or constituency. The owner of record may or may not be the legal current owner of the water right.

FF. "Partial final decree" or "PFD" means the *Partial Final Judgment and Decree of the Water Rights of the Pueblos of Nambé, Pojoaque, San Ildefonso, and Tesuque* entered by the decree court on March 23, 2016 (docket no. 10547).

GG. "PDR" or "project diversion requirement" means the annual quantity of water necessary to be diverted from a source of surface water to satisfy the farm delivery requirement and to account for off-farm ditch conveyance delivery losses during the irrigation accounting year.

HH. "Person" means an individual, multiple individuals, legal entity, Pueblo or combination thereof.

II. "Post-1982 well agreement" means the *Post-1982 Domestic Wells Stipulation and Settlement Agreement* (May 27, 1999) (docket no. 5516) adopted and approved by the decree court (Oct. 4, 2001) (docket no. 5549) to provide for the appointment of a water master, metering of domestic wells under well permits issued by the state engineer after January 13, 1983, and agreed-upon amounts of water for domestic use without restriction as to indoor or closed system use.

JJ. "Pre-basin well" means a well in the NPT basin in existence prior to November 29, 1956.

KK. "Priority administration" is defined in Subsection 5 of 19.25.13.7 NMAC.

LL. "Pueblo alternative administration" means the form of alternative administration whereby the Pueblos agree to share water pursuant to section 4 of the settlement agreement.

MM. "Pueblos" means collectively the Pueblos of Nambé, Pojoaque, San Ildefonso, and Tesuque. "Pueblo" means each of the Pueblos of Nambé, Pojoaque, San Ildefonso or Tesuque.

NN. "Pueblo land" means any real property that is:

(1) held in trust by the United States for a Pueblo within the NPT basin:

(a) prior to March 21, 2016, the date on which the decree court approved the settlement agreement, or

(b) on or after March 21, 2016, if the real property is located within the exterior boundaries of the Pueblo as recognized and confirmed by patent issued under the Act of December 22, 1858 (11 Stat. 374, chapter 5) or within the exterior boundary of any territory set aside for the Pueblo by law, executive order or court decree;

(2) owned by a Pueblo within the NPT basin:

(a) prior to March 21, 2016, the date on which the decree court approved the settlement agreement, or

(b) acquired by a Pueblo on or after March 21, 2016, if the real property is located within the exterior boundaries of the Pueblo as recognized and confirmed by patent issued under the Act of December 22, 1858 (11 Stat. 374, chapter 5) or within the exterior boundary of any territory set aside for the Pueblo by law, executive order or court decree;

(3) owned by a Pueblo or held by the United States in trust for the benefit of a Pueblo outside the NPT basin that is located within the exterior boundaries of the Pueblo as recognized and confirmed by patent issued under the Act of December 22, 1858 (11 Stat. 374, chapter 5); or

(4) within the exterior boundaries of any real property located outside the NPT basin set aside for a Pueblo by law, executive order or court decree if the land is contiguous to land held in trust by the United States for that Pueblo as of January 1, 2005.

OO. "Pueblo water rights" means the water rights of the Pueblos as determined in the PFD, including the following:

(1) **"Alternative water"** means an amount of water equivalent to the Pueblo of Pojoaque's supplemental water rights and which the Pueblo of Pojoaque may receive through the regional water system;

(2) **"Existing basin use rights"** means those water rights as defined in the PFD;

(3) **"First priority rights"** means those water rights as defined in the PFD;

(4) **"Future basin use rights"** means those water rights as defined in the PFD;

(5) **"Reserved water rights"** means those water rights of the Pueblos of Nambé and San Ildefonso to reserved water rights to consumptively use the surface and groundwater of the NPT, to be diverted and used in accordance with the settlement agreement;

(6) **"Supplemental Pueblo rights"** means those water rights as defined in the PFD. The Pueblo of Pojoaque has a supplemental right to consumptively use groundwater and surface water of the NPT, to be diverted and used in accordance with the settlement agreement;

PP. **"Red tag"** means a tag affixed to a point of diversion by the water master to notify an owner of record or person that any further diversion of water is illegal.

QQ. **"Regional water authority"** or **"RWA"** means the Pojoaque basin regional water authority organized by the Pueblos and county of Santa Fe to operate and maintain the diversion and treatment facilities, transmission pipelines and other facilities of the regional water system.

RR. **"Regional water system"** means the regional water system as defined in the Aamodt Litigation Settlement Act.

SS. **"Report on anticipated uses"** means the report filed by each Pueblo each year describing the anticipated uses of that Pueblo's water rights for a calendar year.

TT. **"Section 4 protection"** means the protection provided non-Pueblo water rights during Pueblo alternative administration of the first priority rights of the Pueblos pursuant to section 4 of the settlement agreement.

UU. **"Section 72-12-1 well"** means a well permitted by the state engineer under Sections 72-12-1.1, 72-12-1.2, and 72-12-1.3 NMSA 1978, or their predecessor statutes.

VV. "Settlement agreement" means the settlement agreement approved by the decree court on March 21, 2016 (docket no. 10543) and incorporated into the decree court's partial final decree entered on March 23, 2016 (docket no. 10547), as authorized, ratified and confirmed by Section 602(18) of the Aamodt Litigation Settlement Act.

WW. "Settlement party" means any person that signed the settlement agreement or authorized a representative to sign the settlement agreement, and their successors in interest.

XX. "State engineer" means the New Mexico state engineer or his designated appointee.

YY. "Subfile order" means an order entered by the decree court adjudicating a non-Pueblo water right.

ZZ. "TBI letter" means written notice to the water master of the acreage to be irrigated under a ditch during a calendar year.

AAA. "Tributary" means the Rio Pojoaque, Rio Cuyamungue, Rio Tesuque, Rio Nambé, Rio Chupadero, or Rio en Medio.

BBB. "Water master" means the Nambé-Pojoaque-Tesuque water master or any of the sub-district water masters of the Nambé-Pojoaque-Tesuque water master district.

[19.25.20.7 NMAC - N, 9/12/2017]

19.25.20.8 CONSTRUCTION:

This rule shall be construed consistent with, and subject to, the authority of the state engineer for the administration of water in the state of New Mexico, and the authority of the state engineer under the settlement agreement and final decree. This rule shall not be construed as imposing any limitation on the authority of the state engineer to administer water rights created under state law, act on water rights applications pursuant to state law, permit water rights under state law, or order the curtailment, in whole or in part, of the use of water pursuant to state law or under the terms of the settlement agreement or final decree. This rule shall be construed consistent with the settlement agreement and the Constitution of New Mexico.

[19.25.20.8 NMAC - N, 9/12/2017]

19.25.20.9 SEVERABILITY:

If any provision of this rule is found to be invalid, the remainder shall continue to be in effect.

[19.25.20.9 NMAC - N, 9/12/2017]

19.25.20.10 KNOWLEDGE OF AND COMPLIANCE WITH STATUTES, RULES, REGULATIONS AND CODES:

It shall be the responsibility of all persons to know of, and comply with, all applicable statutes, rules, regulations and codes.

[19.25.20.10 NMAC - N, 9/12/2017]

19.25.20.11-19.25.16.100 [RESERVED]:

19.25.20.101 GENERAL AUTHORITY AND DUTIES OF THE NPT DISTRICT WATER MASTER:

A. The water master has the general authority and duties set out in 19.25.13.16 NMAC and 19.25.13.17 NMAC. In addition, the water master has the authority and duties described in this Section.

B. The water master may, as necessary to effect administration, and implementation of and compliance with the terms and conditions of the settlement agreement, the PFD and the final decree:

- (1) supervise all diversions from surface and underground water sources;
- (2) curtail surface and groundwater diversions to ensure compliance;
- (3) issue verbal or written orders requiring installation, calibration, repair, and replacement of adequate headgates and surface water measurement devices at all surface water diversion works, and all groundwater diversion measuring devices as necessary;
- (4) issue verbal or written orders requiring calibration, repair, replacement or installation of meters in accordance with the requirements of Subsection C of 19.27.5.13 NMAC to measure the amount of water diverted from each well;
- (5) issue or affix to points of diversion curtailment orders or red tags that provide notice of illegal diversions or diversions that are out of priority under priority administration or contrary to those allowed under the settlement agreement or final decree. Once a red tag has been affixed, the owner of record or person shall not divert water until the water master has removed the tag;
- (6) issue verbal or written curtailment orders to owners of record or persons making illegal diversions and document such illegal diversions;
- (7) issue verbal or written orders to achieve the objectives of this rule;

(8) take any action necessary to close, cap, lock or otherwise temporarily disable any diversion headgate, pump, or equipment to ensure compliance, and affix to the diversion structure a red tag whenever the water master takes such action;

(9) ensure compliance with applicable state engineer, water master or court orders;

(10) determine whether a new or changed Pueblo use of its first priority rights will interfere with any surface water rights eligible for section 4 protection, and the amount of any offsets required;

(11) determine if the change in point of diversion, purpose or place of use of Pueblo-owned state law water rights within the lands of a Pueblo will impair groundwater rights or interfere with any surface water rights. A determination by the water master of projected hydrologic effects from such changes to state water law rights within a Pueblo shall include consideration of remedies proposed by the Pueblo to reduce groundwater effects below the threshold level of impairment;

(12) enter private, public, or Pueblo lands to inspect, monitor, and maintain all measuring facilities and to operate, close or lock headgates;

(13) with respect to agricultural lands, enter upon private or public lands to verify the irrigability of lands designated by owners of record to be irrigated in a particular season and determine whether and to what extent irrigation occurs;

(14) maintain records, including records of elections made pursuant to the settlement agreement and subsequent compliance with such elections; and

(15) respond in a timely manner to requests for priority administration.

C. The water master may exercise any remedy available to him under applicable law to enforce compliance by owners of record and Pueblos with their obligations under the settlement agreement, the final decree, any election made pursuant to the settlement agreement, and this rule.

[19.25.20.101 NMAC - N, 9/12/2017]

19.25.20.102 WATER MASTER REPORT:

A. The water master shall by March first of each calendar year submit a report to the state engineer that describes all administrative action taken under or required by this rule in the previous calendar year.

B. The report shall be available to the public for inspection and copying at the office of the state engineer, at the requestor's expense by June first, and will be posted on the office of the state engineer's website.

C. The report shall include the information described in 19.25.13.26 NMAC and shall also include:

- (1) the quantity of water diverted through each meter for each quarter and total for the year;
- (2) a summary of all notices of alleged violation, and disposition thereof; and
- (3) a summary of all other actions taken by the water master during the year, including
 - (a) the number of times each meter was actually inspected to verify proper operation;
 - (b) actions taken to verify reported meter readings including a description of procedures used for any spot-checking; and
 - (c) other information as appropriate.

[19.25.20.102 NMAC - N, 9/12/2017]

19.25.20.103 REPORTING OF LANDS TO BE IRRIGATED:

A. By March first of each year, the mayordomo, acequia commissioner, or designated representative of each acequia and the members of each private ditch shall notify the water master in writing of the acreage under that ditch to be irrigated ("TBI letters") during that calendar year. TBI letters from acequias and members of private ditches shall be accompanied by maps that clearly identify the non-Pueblo lands to be irrigated that year and the respective acreage of the tracts. Where the ditch serves as a source of irrigation water for both Pueblo and non-Pueblo lands, the TBI letters shall include only information for non-Pueblo lands.

B. Pueblo lands intended to be irrigated shall be reported by the Pueblos in their annual report on anticipated uses of water.

C. Based upon the information provided, the water master shall determine the maximum diversion rate for each ditch in the stream system required to meet the total projected demand that year, including the demand associated with valid impoundments under each ditch for livestock uses, if any. The water master shall notify the mayordomo, acequia commissioner, or designated representative that submitted the TBI letter of each acequia, the members of each private ditch, and the Pueblos of the maximum diversion rates for all ditches and post the maximum diversion rate for each ditch at the point of diversion or headgate of the ditch.

[19.25.20.103 NMAC - N, 9/12/2017]

19.25.20.104 DISTRIBUTION OF WATER BY ACEQUIAS:

The water master shall regulate the rate and annual volume of diversions from the tributaries in the NPT basin by acequias in accordance with this rule. This rule shall not be construed to affect the internal management of acequias and the distribution of water by acequias in accordance with Section 72-9-2 NMSA 1978.

[19.25.20.104 NMAC - N, 9/12/2017]

19.25.20.105 GENERAL PRINCIPLES FOR USE AND ADMINISTRATION OF SURFACE WATER AND GROUNDWATER:

These general principles apply to the administration of all surface water rights and groundwater rights in the NPT basin.

A. The NPT basin is fully appropriated and there shall be no new appropriations of surface or groundwater.

B. No surface or groundwater diverted within the NPT basin may be delivered for use outside the NPT basin other than for Pueblo use on Pueblo land.

C. Diversions from the Rio Grande shall not be considered to be diversions within the NPT basin.

D. Any water rights diverted by the regional water authority within the NPT basin, whether based on state or federal law, including contractual rights to water, shall be administered at the point of diversion in accordance with state law and regulation.

E. For agricultural uses, the amount of water shall not exceed 4.65 AFY per acre diverted by the ditch at the point of diversion from the source of surface water (PDR), or 3.35 AFY per acre delivered at the farm headgate or well head (FDR), or a consumptive irrigation requirement of 1.84 AFY per acre (CIR), whichever is less.

F. For non-agricultural uses, the consumptive use amount shall be deemed to be equal to the amount of the diversion. The diversion amount shall not exceed the consumptive use amount unless a return flow plan is approved by the state engineer.

G. The priority and amount of water for all surface water rights is the priority and amount of water adjudicated in the final decree.

H. The point of diversion, purpose or place of use of non-Pueblo water rights may only be changed in accordance with state law and this rule.

I. After March 21, 2016, permits for new groundwater points of diversion in the NPT basin may only be issued on the condition that the diversion be metered and only as set forth in this rule.

J. The replacement, repair or deepening of a well pursuant to a permit from the state engineer shall not be considered a change in point of diversion, purpose or place of use.

K. An application for a change in point of diversion or place or purpose of use of a water right into or out of an acequia or community ditch subject to Sections 73-2-1 through 73-2-68 NMSA 1978 or Sections 73-3-1 through 73-3-11 NMSA 1978 shall include the documentary evidence of the applicant's compliance with the requirements of Section 72-5-24.1 NMSA 1978.

[19.25.20.105 NMAC - N, 9/12/2017]

19.25.20.106 METERING OF NON-PUEBLO AND PUEBLO WELLS:

A. Pursuant to the well metering order for the NPT basin issued by the state engineer, each well owner of record shall install a totalizing meter in accordance with the requirements of Subsection C of 19.27.5.13 NMAC and any additional requirements of the state engineer, to measure the amount of water diverted from each well.

B. Each Pueblo shall install a totalizing meter to measure the amount of water diverted from each well located on Pueblo land, consistent with the well metering order for the NPT basin issued by the state engineer.

C. Each well owner of record shall file a meter installation and inspection report with the state engineer in accordance with the requirements of Subsection C of 19.27.5.13 NMAC and any additional requirements of the state engineer. Pursuant to the settlement agreement and the final decree, each Pueblo shall file a report with the state engineer consistent with the requirements of Subsection C of 19.27.5.13 NMAC.

D. Each well owner of record shall submit meter readings to the state engineer in accordance with the requirements of Subsection C of 19.27.5.13 NMAC and any additional requirements of the state engineer. Pursuant to the settlement agreement and the final decree, each Pueblo shall file a report with the state engineer consistent with the requirements of Subsection C of 19.27.5.13 NMAC.

E. The requirements of this Section shall also apply to all new wells drilled on Pueblo land after the effective date of this rule and a meter shall be installed on such wells at the time the well is drilled.

[19.25.20.106 NMAC - N, 9/12/2017]

19.25.20.107 DIVERSION, USE, AND ADMINISTRATION OF SURFACE WATER FOR NON-PUEBLO WATER RIGHTS:

Diversion, use, and administration of surface water for non-Pueblo water rights shall be subject to the following provisions.

A. Change in point of diversion from surface water to groundwater for agricultural uses. The state engineer may issue permits to change the point of diversion of a water right for agricultural use from surface water to groundwater, provided:

- (1) Water rights from within the NPT basin are moved to the new point of diversion in accordance with state law and this rule;
- (2) The priority and amount of the water rights that may be moved shall be determined under state law and shall be reduced in amount to account for historic supply at the original surface point of diversion.

B. Section 4 protection upon change in point of diversion, purpose or place of use of surface water. Section 4 protection and offset requirements for interference shall only apply to the amount of water that is determined to be the current use of water under a surface water right. The current use of water under a surface water right is the calculated average yearly use of water under the right for the five-year period immediately preceding any application to change the point of diversion, purpose or place of use of that right.

[19.25.20.107 NMAC - N, 9/12/2017]

19.25.20.108 DIVERSION, USE, AND ADMINISTRATION OF GROUNDWATER FOR NON-PUEBLO WATER RIGHTS:

A. Determination of priority and amount.

(1) The priority and the diversion amount for a Section 72-12-1 well, a pre-basin well or well drilled under a permit from the state engineer shall be the priority and amount adjudicated in the final decree or authorized in a subsequent permit or license issued by the state engineer, unless the use is limited by the terms of an election under the settlement agreement.

(2) If no amount is set forth in the final decree or in a subsequent permit or license, then the amount shall be the amount of historic beneficial use of water from the well.

B. Determination of historic beneficial use.

(1) If no specific amount of water is set forth in the final decree or in a subsequent permit or license, then the amount of historic beneficial use per household shall be presumed to be the following:

- (a) 0.7 afy for pre-basin wells (in existence prior to November 29, 1956);
- (b) 0.7 afy for Section 72-12-1 wells permitted before January 13, 1983;
- (c) 0.7 afy for Section 72-12-1 wells permitted after January 13, 1983 that entered into the post-1982 well agreement;
- (d) 0.5 afy for Section 72-12-1 wells permitted after January 13, 1983 that did not enter into the post-1982 well agreement.

(2) In no event shall the total diversion amount from a Section 72-12-1 well exceed 3 afy.

(3) Any owner of record seeking to prove an amount of historic beneficial use greater than the amounts set forth in Subsection (B)(1) of this Section shall provide the following information for review and evaluation by the water master:

(a) meter readings taken in compliance with state engineer requirements, consistent with the metering order for the NPT basin, for a period of one to three calendar years, which may be the first calendar year of meter readings at the owner of record's request; and

(b) a map of the area of the claimed beneficial use prepared by either a licensed professional surveyor or licensed professional engineer in the state of New Mexico formatted as required by 19.26.2.24 NMAC, or a hydrographic survey map or aerial photograph acceptable to the state engineer that designates the claimed area of beneficial use from each point of diversion; and

(c) any other documentation acceptable to the state engineer that demonstrates the history and continuity of historic beneficial use, and may include deeds, survey plats, affidavits or other evidence to substantiate the claim.

(4) The water master will determine the amount based upon the evidence submitted pursuant to Paragraph 3 of Subsection B of this Section of the highest amount of historic beneficial use in one calendar year,

(5) Any historic beneficial use amount less than 0.5 afy is not subject to a reduction under the settlement agreement. An owner of record who elects to reduce historic beneficial use pursuant to an election made under the settlement agreement may be subject to restrictions no sooner than five years after the entry of the well metering order for the NPT basin, but in no event shall an owner of record be required to reduce below 0.5 afy.

C. Elections relating to the settlement agreement and connection to county water utility.

(1) An owner of record of a water right from a well used for domestic, commercial or industrial purposes may elect pursuant to the settlement agreement to connect to the county water utility for water service as soon as that service is available.

(2) Except for new groundwater points of diversion for domestic, commercial or industrial uses, an owner of record of a groundwater right shall not be required to connect to the county water utility and shall not be required to cease use of their well.

(3) An owner of record that becomes a settlement party that makes an election and is in compliance with the terms of the election shall be eligible for protections under sections 4 and 3.1.7 of the settlement agreement.

D. State engineer permits to replace, repair or deepen a well:

(1) Section 72-12-1 well:

(a) Permits for replacement wells, or permits to deepen or repair a well, may be issued to Section 72-12-1 well owners of record until such time as those owners connect to the county water utility under the terms of the settlement agreement.

(b) No replacement well permit will be issued to a Section 72-12-1 well owner of record that makes an election to continue use of the well for domestic purposes in perpetuity, or to connect to the county water utility upon transfer of ownership of the property, until such well owner of record has provided documentation of compliance with all applicable county requirements.

(c) If the county water utility is unable to deliver water to an owner of record that has connected to the county water utility for water service, the CWU shall convey title to the water right back to the previous owner of record, who may apply to the state engineer for a permit to recommence diversions from the well or drill a replacement well for the purpose of diverting groundwater in the amount previously conveyed and permitted to the county water utility.

(2) Pre-basin or permitted wells (other than Section 72-12-1 wells): Permits for replacement wells, or permits to repair or deepen a well (other than Section 72-12-1 wells) may be issued in accordance with state law and rules, provided the well is metered and operated in compliance with any conditions of an applicable permit.

E. New groundwater points of diversion. Permits for new groundwater points of diversion for domestic, agricultural, commercial or industrial uses, including a permit for a Section 72-12-1 well, may be issued provided:

(1) Water rights from within the NPT basin are moved to the new groundwater point of diversion in accordance with state law and this rule;

(2) The priority and amount of the moved rights shall be determined under state law and reflect reductions in amount to account for historic supply; and

(3) The permitted diversions shall cease and the well owner of record shall connect to the county water utility as soon as water service is available.

(4) Existing mutual domestic water consumers associations and existing commercial users shall be required to cease the newly permitted diversion and connect to the county water utility once water service is available, unless they made an election to continue such water use under the terms of the settlement agreement and this rule.

(5) An application for a change in point of diversion or place or purpose of use of a water right into or out of an acequia or community ditch subject to Sections 73-2-1 through 73-2-68 NMSA 1978 or Sections 73-3-1 through 73-3-11 NMSA 1978 shall include the documentary evidence of the applicant's compliance with the requirements of Section 72-5-24.1 NMSA 1978.

F. Change in point of diversion, purpose or place of use of groundwater.

(1) The point of diversion, purpose or place of use of groundwater rights from a pre-basin well or well drilled under a permit from the state engineer, other than wells permitted under Section 72-12-1, may be changed in accordance with state law and this rule. The point of diversion, purpose or place of use of groundwater rights from a well permitted under Section 72-12-1 may only be changed in accordance with 19.25.20.110 NMAC.

(2) Upon any such change, section 4 protection shall not apply unless the new diversion is metered and operated in compliance with any applicable permit conditions and consistent with the terms of the settlement agreement.

G. Supplemental groundwater points of diversion.

(1) Permits for a supplemental point of diversion from groundwater for an agricultural use may be issued, provided:

(a) The total diversion from surface and groundwater is limited to the historic supply of the surface water diversion.

(b) If a surface water diversion is permitted to continue and is not metered, the acreage served by the supplemented and supplemental points of diversion is reduced by the percentage of deficiency in the historic supply.

(c) If a groundwater point of diversion is used to supplement another groundwater point of diversion, both diversions shall be metered.

19.25.20.109 CONVEYANCE OF OWNERSHIP OF GROUNDWATER RIGHTS FOR DOMESTIC USE TO THE COUNTY WATER UTILITY:

A. General Provisions.

(1) Ownership of water rights for domestic use from a Section 72-12-1 well or a pre-basin well may be conveyed to the county water utility for the full or partial amount of the water right.

(2) The CWU may change the point of diversion, place and purpose of use of the water rights by application to the state engineer.

B. Section 72-12-1 wells. The amount of the water right to be conveyed to the county water utility per household from each Section 72-12-1 well shall be limited to one of the following options:

(1) **Full amount for single household wells.** If a household elects to connect to the CWU and to no longer divert water from a Section 72-12-1 well, ownership of the full amount adjudicated shall be conveyed to the CWU. If no amount is specified in the final decree or determined pursuant to Subsection (B) of 19.25.20.108 NMAC, the amount shall be presumed to be the following:

(a) 0.7 afy for Section 72-12-1 wells permitted before January 13, 1983;

(b) 0.7 afy for Section 72-12-1 wells permitted after January 13, 1983 that entered into the post-1982 well agreement;

(c) 0.5 afy for Section 72-12-1 wells permitted after January 13, 1983 that did not enter into the post-1982 well agreement.

(2) **Partial amount for single household wells.** If a household elects to connect to the CWU for indoor uses and to continue to divert a portion of its water right from a Section 72-12-1 well for outdoor use only, the household shall convey ownership of 0.3 afy to the CWU, as follows:

(a) A household with a water right of 0.4 afy or greater shall convey ownership of 0.3 afy to the CWU.

(i) The household may continue to divert the amount of the household's remaining right from the Section 72-12-1 well for outdoor use only.

(ii) The well shall be metered, not interconnected with the CWU water system, and the outdoor use shall be limited to irrigation not to exceed the amount of the household's remaining right in the well for up to one acre of noncommercial trees, lawn or garden, and if allowed, livestock watering.

(b) A household with an adjudicated water right for a single household that does not define a specific amount of water shall convey ownership of 0.3 afy to the CWU.

(i) The household may continue to divert up to 0.2 afy from the Section 72-12-1 well for outdoor use only.

(ii) The amount that may be diverted may exceed 0.2 afy per household based upon a determination of greater historic beneficial use by the water master pursuant to Subsection (B) of 19.25.20.108 NMAC.

(iii) The well shall be metered, not interconnected with the CWU water system, and the outdoor use shall be limited to irrigation not to exceed the amount of the household's remaining right in the well for up to one acre of noncommercial trees, lawn or garden, and, if allowed, livestock watering.

(3) **Full amount for multiple household wells.** If a household with a water right from a multiple household Section 72-12-1 well elects to connect to the CWU and to no longer divert water from the well, ownership of the full amount per household adjudicated shall be conveyed to the CWU. If no specific amount is defined in the final decree or determined pursuant to Subsection (B) of 19.25.20.108 NMAC, the amount per household is presumed to be the following amounts (or as limited by the maximum amount for all households combined from the Section 72-12-1 well):

(a) 0.7 afy for Section 72-12-1 wells permitted before January 13, 1983;

(b) 0.7 afy for Section 72-12-1 wells permitted after January 13, 1983 that entered into the post-1982 well agreement;

(c) 0.5 afy for Section 72-12-1 wells permitted after January 13, 1983 that did not enter into the post-1982 well agreement.

(4) **Partial amount for multiple household wells.** If a household with a water right from a multiple household Section 72-12-1 well elects to connect to the CWU for indoor uses and to continue to divert a portion of its water right from the well for outdoor use only, the household shall convey ownership of 0.3 afy to the CWU, as follows:

(a) A household with water right of 0.4 afy or greater shall convey ownership of 0.3 afy to the CWU.

(i) The household may continue to divert the amount of the household's remaining right in the well for outdoor use only (limited by the maximum amount for all households combined from the Section 72-12-1 well).

(ii) The well shall be metered, not interconnected with the CWU water system, and the outdoor use shall be limited to irrigation not to exceed the amount of the household's remaining right in the well for up to one acre of noncommercial trees, lawn or garden, and if allowed, livestock watering.

(b) A household with an adjudicated water right from a multiple household Section 72-12-1 well that does not define a specific amount of water shall convey ownership of 0.3 afy to the CWU.

(i) The household may continue to divert the amount of the household's remaining right from the Section 72-12-1 well for outdoor use only (limited by the maximum amount for all households combined from the Section 72-12-1 well).

(ii) The well shall be metered, not interconnected with the CWU water system, and the outdoor use shall be limited to irrigation not to exceed the amount of the household's remaining right in the well for up to one acre of noncommercial trees, lawn or garden, and, if allowed, livestock watering.

C. Pre-Basin Wells. Ownership of domestic use water rights from pre-basin wells may be conveyed to the CWU. The CWU may change the point of diversion, place and purpose of use of the water right by application to the state engineer. The amount of the water right to be conveyed to the county water utility from each pre-basin well shall be limited to one of the following options chosen by the owner of record:

(1) **Full amount for single household wells.** If a household elects to connect to the CWU and to no longer divert water from a pre-basin well, the household shall convey ownership of the full amount adjudicated to the CWU. For pre-basin wells that have not been adjudicated a specific amount of water in the final decree or determined pursuant to Subsection (B) of 19.25.20.108 NMAC, the amount is presumed to be 0.7 afy per well.

(2) **Partial amount for single household wells.** If a household elects to connect to the CWU and to continue to divert water from a pre-basin well for outdoor or other adjudicated uses only, the household shall convey ownership of 0.3 afy to the CWU as follows:

(a) A household with an adjudicated water right of 0.4 afy or greater shall convey ownership of 0.3 afy to the CWU.

(i) The household may continue to divert the amount of the household's remaining right in the well for outdoor or other adjudicated uses only.

(ii) The well shall be metered and not interconnected with the CWU water system.

(b) For pre-basin wells that have not been adjudicated a specific amount of water, the amount of water conveyed to the CWU shall be 0.3 afy.

(i) The household may continue to divert up to 0.4 afy from the pre-basin well for outdoor or other adjudicated uses only.

(ii) The amount of the retained water right may exceed 0.4 afy per based upon a determination of greater historic beneficial use by the water master pursuant to Subsection (B) of 19.25.20.108 NMAC, reduced by the total amount of the water right conveyed to the CWU from the well.

(iii) The well shall be metered and not interconnected with the CWU water system.

(3) **Full amount for multiple household wells.** If a household with a water right from a multiple household pre-basin well elects to connect to the CWU and to no longer divert water from the well, ownership of the full amount per household adjudicated in the final decree shall be conveyed to the CWU. If no specific amount is defined in the final decree or determined pursuant to Subsection (B) of 19.25.20.108 NMAC, the amount is presumed to be 0.5 afy per household (or as limited by the maximum amount for all households combined from the pre-basin well).

(4) **Partial amount for multiple household wells.** If a household with a water right from a multiple household pre-basin well elects to connect to the CWU for indoor uses and to continue to divert a portion of its water right from the well for outdoor or other adjudicated uses only, the household shall convey ownership of 0.3 afy to the CWU, as follows:

(a) A household with an adjudicated water right of 0.4 afy or greater shall convey ownership of 0.3 afy to the CWU.

(i) The household may continue to divert the amount of the household's remaining right in the well for outdoor or other adjudicated uses only (limited by the maximum amount for all households combined from the pre-basin well).

(ii) The well shall be metered and not interconnected with the CWU water system.

(b) A household with an adjudicated water right from a multiple household pre-basin well that does not define a specific amount of water shall convey ownership of 0.3 afy to the CWU.

(i) The household may continue to divert up to 0.4 afy from the pre-basin well for outdoor or other adjudicated uses only (limited by the maximum amount for all households combined from the pre-basin well).

(ii) The amount that may be diverted may exceed 0.4 afy per household based upon a determination of greater historic beneficial use by the water master pursuant to Subsection (B) of 19.25.20.108 NMAC, reduced by the total amount of the water right conveyed to the CWU from the well.

(iii) The well shall be metered and not interconnected with the CWU water system.

D. Subsequent conveyance of ownership of the remaining amount to CWU. A household that elected a partial conveyance of ownership may subsequently convey ownership of the remaining amount of the domestic use water right to the CWU. The CWU may change the point of diversion, place and purpose of use to the CWU by application to the state engineer.

[19.25.20.109 NMAC - N, 9/12/2017]

19.25.20.110 EXPEDITED MARKETING AND LEASING AND EXPEDITED PERMIT PROCEEDINGS:

A. New Domestic Well Points of Diversion. Permits for new groundwater points of diversion for domestic uses, including a permit for a Section 72-12-1 well, may be issued provided:

(1) Water rights from within the same hydrologic unit in the NPT basin are moved to the new groundwater point of diversion in accordance with this rule;

(2) The priority and amount of the moved rights shall be determined under state law and reflect reductions in amount to account for historic supply; and

(3) Any permitted diversions shall cease and the household shall connect to the county water utility as soon as water service is available.

B. Expedited change of a valid, existing water right to a Section 72-12-1 domestic well permit. The applicant for a new Section 72-12-1 domestic well permit or the owner of an existing Section 72-12-1 domestic well water right may apply to change the point of diversion, place and purpose of use of a valid, existing water right, other than a Section 72-12-1 water right, from the same hydrologic unit within the NPT basin into the Section 72-12-1 domestic well.

(1) **Application form and content.** Applications shall be prepared on a form prescribed by the state engineer. An application shall include the following information:

(a) the name and address of applicant,

(b) the pertinent state engineer file number(s),

- (c) the source of water supply for the move-from point of diversion,
- (d) the source of water supply for the move-to point of diversion,
- (e) the priority date of the water right,
- (f) the diversion amount to be retired,
- (g) the consumptive use amount to be moved,
- (h) the move-from purpose of use,
- (i) the legal description of the move-from place of use,
- (j) the location of the move-from point of diversion,
- (k) the location of move-to point of diversion, and
- (l) other information the state engineer deems necessary.

(2) **Process.** Consistent with the issuance of a Section 72-12-1.1 domestic well permit pursuant to Section 72-12-1.1 NMSA, public notice is not required nor is protest allowed for an application for permit to change a valid, existing water right to a Section 72-12-1 domestic well permit.

(3) Once a valid, existing water right has been approved by the state engineer for an expedited change to a Section 72-12-1 domestic well, the point of diversion, place and purpose of use of the water right may subsequently be changed into another Section 72-12-1 domestic well from the same hydrologic unit within the NPT basin.

C. Expedited change of point of diversion, place and purpose of use of groundwater rights for domestic use to the county water utility.

The CWU may file one or more applications to the state engineer for permit to change the point of diversion, place and purpose of use of groundwater rights for domestic use whose ownership is conveyed to the CWU, including Section 72-12-1 domestic well water rights. The application may include multiple water rights. The CWU may consumptively use the full amount of the water right changed to the CWU.

(1) **Application form and content.** Applications shall be prepared on a form prescribed by the state engineer. An application shall include the following information:

- (a) the name and address of applicant,
- (b) the pertinent state engineer file number(s),

- (c) the source of water supply for the move-from point of diversion,
- (d) the source of water supply for the move-to point of diversion,
- (e) the consumptive use amount to be moved,
- (f) the location of the move-to point of diversion, and
- (g) other information the state engineer deems necessary.

(2) **Process.** The state engineer may adopt a generalized hydrologic analysis based upon the hydrologic model setting out guidelines for the expedited processing of applications filed pursuant to this Subsection.

(a) If the state engineer has adopted such a generalized hydrologic analysis, and if the CWU agrees to the use of the generalized hydrologic analysis in the review of the application, then the state engineer shall expedite the processing of the application as provided in the generalized hydrologic analysis.

(b) If the state engineer does not adopt such a generalized hydrologic analysis, or if the CWU does not agree to the use of the generalized hydrologic analysis, then notice of the application shall be published as provided under 19.26.2.12 and 19.27.1.30 NMAC, except that only the OSE file number or subfile number of the move-from water rights need be provided in the notice of the application. The notice shall provide that the full legal description of the water rights being moved is available in the final decree posted on the state engineer's website and available in the district office.

D. Water rights served by an acequia or community ditch may not be moved under this Section.

[19.25.20.110 NMAC - N, 9/12/2017]

19.25.20.111 CONNECTION FUND:

A. An owner of record of a water right from a well used for domestic, commercial or industrial purposes that elects pursuant to the settlement agreement to connect to the county water utility for water service as soon as that service is available shall be entitled to payment from the connection fund, as administered by Santa Fe county, for the expense of connecting to the county water utility. The county shall notify owners of record when service is available.

B. No water right owner of record electing to connect to the county water utility shall be required to cease use of their well and connect to the county water utility until such expenses have been paid by the connection fund or other third party.

C. If service is not available to an owner that elected to connect because Santa Fe county determines that the expense of connection exceeds the allowed connection expenses, the owner may pay the additional expenses so that the expenses of connection will be covered and service made available.

[19.25.20.111 NMAC - N, 9/12/2017]

19.25.20.112 DIVERSION, USE, AND ADMINISTRATION OF SURFACE WATER AND GROUNDWATER BY PUEBLOS:

Diversion, use, and administration of surface water and groundwater by the Pueblos under this rule shall be subject to, and in accordance with, the settlement agreement, the PFD and the final decree.

A. General principles.

(1) The Pueblos have decreed first priority water rights to consumptively use the surface and groundwater of the NPT basin for agricultural, community, domestic, livestock, commercial or industrial purposes in the amounts defined in the partial final decree. The Pueblos' first priority rights are designated as existing basin use rights or future basin use rights. The Pueblos' first priority rights are not subject to forfeiture, abandonment or loss by non-use.

(2) A Pueblo may lease, for any term up to 99 years, any portion of its first priority rights to another Pueblo or another water user for use within the NPT basin.

(3) For agricultural uses of a Pueblo's first priority rights, the amount of water shall not exceed 4.65 AFY per acre diverted by the ditch at the point of diversion from the surface source of water (PDR), or 3.35 AFY per acre delivered to the farm headgate or diverted at the well head (FDR), or a CIR of 1.84 AFY per acre, whichever is less.

(4) For non-agricultural uses, the consumptive use amount shall be deemed to be equal to the amount of the diversion. The diversion amount shall not exceed the consumptive use amount unless a return flow plan is approved by the state engineer.

(5) The provision of offset water by a Pueblo shall not constitute use of that Pueblo's first priority rights.

B. First priority rights: existing basin use rights.

(1) The current points of diversion, purposes and places of use of the Pueblos' existing basin use rights are set out in appendices one through four of the partial final decree. For the purposes of administering the mitigation fund, the exercise by the Pueblos of their existing basin use rights for the purposes and at the points of diversion and places of use set out in the PFD shall be presumed to not impair non-Pueblo groundwater rights.

(2) If a Pueblo consumes water in excess of the quantity designated in the PFD as the Pueblo's existing basin use rights, the excess consumption shall be deemed to be an exercise of that Pueblo's available supplemental or future basin use rights.

(3) No notice or other administrative process is required for the Pueblos to use water under such rights for the purposes and at the points of diversion and places of use set out in appendices one through four of the PFD.

C. First priority rights: future basin use rights on Pueblo land.

(1) Community, domestic and livestock uses.

(a) A Pueblo may exercise its future basin use rights to divert and consumptively use groundwater on that Pueblo's lands for new community or domestic uses by Pueblo members or their households or livestock uses.

(b) Surface water may be diverted and used for such uses subject to the provisions in section 4 of the settlement agreement.

(c) The owner of record of a non-Pueblo groundwater right that suffers impairment as a result of a Pueblo's exercise of its future basin use right for new community, domestic and livestock uses may seek reimbursement from the mitigation fund for the cost of mitigating the impairment in accordance with 19.25.20.118 NMAC.

(2) Agricultural uses from loss of section 4 protection for non-Pueblo agricultural uses.

(a) A Pueblo may exercise its future basin use rights to divert and consumptively use surface or groundwater on that Pueblo's land for new agricultural uses to the extent that non-Pueblo agricultural water rights are determined to be no longer eligible for section 4 protection under 19.25.20.122 NMAC.

(b) Any increase in a Pueblo's exercise of future basin use rights for agricultural uses implemented pursuant to this paragraph shall divert water from the same tributary from which water was diverted to irrigate the non-Pueblo water rights acreage that is no longer eligible for section 4 protection.

(3) Commercial and industrial uses and other new agricultural uses.

(a) A Pueblo may exercise its future basin use rights to divert and consumptively use surface or groundwater on that Pueblo's land for new commercial or industrial uses or new agricultural uses on that Pueblo's land in addition to those described above at Subparagraph a of Paragraph 2 of Subsection C of 19.25.20.112 NMAC.

(b) The owner of record of a non-Pueblo groundwater right that suffers impairment as a result of the Pueblo's exercise of its future basin use rights for new commercial, industrial or other agricultural uses may seek reimbursement from the mitigation fund for the cost of mitigating the impairment in accordance with 19.25.20.118 NMAC.

(c) The Pueblo shall offset any interference with non-Pueblo surface water rights caused by the new use in an amount determined by the water master in accordance with 19.25.20.115 NMAC.

(d) Non-Pueblo water rights eligible for section 4 protection shall not be curtailed to provide water for the new commercial, industrial or other agricultural use under Pueblo alternative administration.

D. Reserved water rights. The reserved water rights of the Pueblo of Nambé may be exercised in the NPT basin provided that:

- (1) The exercise shall not impair Pueblo or non-Pueblo water rights,
- (2) Non-Pueblo water rights shall not be curtailed to provide water for the exercise of these rights, nor shall the exercise of these rights be curtailed under priority administration or Pueblo alternative administration.
- (3) Any interference with any surface water rights resulting from the use of the reserved water rights of the Pueblo of Nambé shall be offset by the United States or the regional water authority in an amount determined by the state engineer in accordance with 19.25.20.115 NMAC.

E. Supplemental Pueblo rights.

- (1) Until alternative water is available for delivery to the Pueblo of Pojoaque, the Pueblo of Pojoaque has the right to divert the entirety of its supplemental Pueblo rights from wells located on Pueblo of Pojoaque lands. The Pueblo shall not divert its supplemental Pueblo rights to the extent alternative water is available for Pueblo use from the regional water system.
- (2) Until alternative water is available for delivery to the Pueblo of Pojoaque, the Pueblo of Pojoaque and the Pueblo of San Ildefonso shall maintain in effect a forbearance agreement for the exercise of at least 475 AFY of the Pueblo of San Ildefonso's first priority rights. During the tenure of the forbearance agreement the Pueblo of San Ildefonso shall forgo the exercise of 475 AFY of its first priority rights in accordance with the terms of the settlement agreement.
- (3) Until alternative water is available for delivery to the Pueblo of Pojoaque, the Pueblo may divert all or a part of its supplemental Pueblo rights from surface water allocated to the Pueblos and released from Nambé reservoir, provided the other

Pueblos and the Pojoaque Valley irrigation district agree after consultation with the United States and the United States bureau of reclamation.

(4) The owner of record of any non-Pueblo groundwater right that suffers impairment as a result of the Pueblo of Pojoaque's exercise of its supplemental Pueblo rights may seek reimbursement from the mitigation fund for the cost of mitigating the impairment in accordance with 19.25.20.118 NMAC.

F. Water rights acquired under state law.

(1) A Pueblo may acquire water rights in addition to the rights set forth in the PFD in accordance with, and subject to, state law and regulation. These rights shall be subject to priority administration in accordance with state law, and shall be eligible for section 4 protection.

(2) Water rights acquired by the Pueblos under state law after March 21, 2016 by or for the benefit of a Pueblo shall not be subject to forfeiture, abandonment or loss by non-use as long as the title to the water rights remains in the Pueblo or the United States acting as trustee for the Pueblo.

[19.25.20.112 NMAC - N, 9/12/2017]

19.25.20.113 PUEBLO REPORTING OF PUEBLOS' USES OF WATER UNDER THEIR FIRST PRIORITY RIGHTS; NOTICE OF OTHER PROPOSED ACTIONS:

A. Annual reports of anticipated uses.

(1) By December 31 of each year, each Pueblo shall submit to the water master a report on its anticipated uses of water under its first priority rights from groundwater for the next calendar year. By March first of each year, each Pueblo shall submit to the water master a report on its anticipated uses of water under its first priority rights from surface water for that calendar year. These reports on anticipated uses shall include the anticipated annual diversion and consumptive use amounts, points of diversion, and purposes and places of use of the Pueblos' first priority rights for each anticipated use for the calendar year.

(2) Pueblo lands intended to be irrigated shall be reported by the Pueblos in their annual reports on anticipated uses.

(3) For purposes of administration, the anticipated diversion and consumptive use amounts, points of diversion, and purposes and places of use of the Pueblo of Pojoaque's supplemental Pueblo rights for the next calendar year shall also be reported to the water master by December 31 and March first each year in the Pueblo's reports on anticipated uses.

B. Notice of proposed actions.

A Pueblo intending to take the following actions shall advise the water master, in writing, of any such proposed action at least 60 days in advance of implementing the proposed action.

(1) any change in the point of diversion, place or purpose of use of existing basin use rights of a Pueblo on that Pueblo's land from those set out in appendices one through four of the PFD; or

(2) any new or changed exercise of Pueblo future basin use water rights on that Pueblo's lands; or

(3) any change in the point of diversion, place or purpose of use of water rights acquired under state law on that Pueblo's land.

[19.25.20.113 NMAC - N, 9/12/2017]

19.25.20.114 CHANGES TO POINT OF DIVERSION, PURPOSE OR PLACE OF USE OF PUEBLO WATER RIGHTS ON THAT PUEBLO'S LANDS:

A. A Pueblo may change the point of diversion, purpose or place of use of its first priority water rights for use on that Pueblo's land from the uses set out in appendices one through four of the PFD as provided below.

(1) Prior consultation with the state engineer or the water master is not required for such changes.

(2) Changes shall be reported to the water master in the annual report of anticipated uses or at least 60 days prior to making any such change.

(3) After receiving the report, the water master shall determine whether any change in use will impair non-Pueblo groundwater rights in accordance with 19.25.20.116 NMAC.

(4) The owners of record of any such rights may seek reimbursement from the mitigation fund for the cost of mitigating the impairment in accordance with 19.25.20.118 NMAC.

(5) A Pueblo making a change in the exercise of its future basin use rights shall offset any resulting interference with non-Pueblo surface water rights in an amount determined by the water master in accordance with 19.25.20.115 NMAC.

(6) Non-Pueblo water rights eligible for section 4 protection shall not be curtailed to provide water for changes to the uses of water under future basin use rights for new commercial, industrial or agricultural uses under Pueblo alternative administration.

(7) Future basin use rights for domestic, community or livestock uses may not be changed. A Pueblo discontinuing uses of water under such rights may make new uses of water under its future basin use rights.

B. A Pueblo may change the point of diversion, purpose or place of use of any water rights acquired under state law for use on that Pueblo's land as provided below.

(1) Changes shall be reported to the water master at least 60 days prior to making any such change.

(2) The water master shall determine if the proposed change will impair any Pueblo or non-Pueblo groundwater rights, and consider any remedies proposed by the Pueblos to reduce the impacts resulting from the proposed change on groundwater rights to below the threshold for impairment.

(3) The water master shall determine if the proposed use will cause interference with any Pueblo or non-Pueblo surface water rights.

(4) An application shall be denied if the proposed change will cause interference with any Pueblo or non-Pueblo surface water rights or will impair any Pueblo or non-Pueblo groundwater rights and remedies are not available to offset or mitigate the interference or to reduce groundwater effects below the level of impairment.

[19.25.20.114 NMAC - N, 9/12/2017]

19.25.20.115 WATER MASTER DETERMINATION OF INTERFERENCE AND OFFSETS TO SURFACE WATER RIGHTS FROM EXERCISE OF PUEBLO WATER RIGHTS ON PUEBLO LANDS:

A. A Pueblo seeking a new or changed use of water under Pueblo future basin use water rights on that Pueblo's lands shall advise the water master, in writing, of any such proposed action at least 60 days before implementing the proposed action. Within 30 days of receiving notice of such a proposed action (or report of anticipated uses of water) under 19.25.20.114 NMAC, the water master shall determine and advise the Pueblo and other affected Pueblos and owners of record whether the proposed action interferes with Pueblo surface water rights or non-Pueblo surface water rights and the amount of any offsets that may be required to avoid interference. In making these determinations, the water master shall use the hydrologic model developed by the state of New Mexico and the United States.

B. A Pueblo whose proposed action is determined to cause interference shall offset the interference in the amount determined by the water master. Prior to implementing the proposed action, the Pueblo causing the interference shall notify the water master how it will offset any interference. Within 10 days of receiving such notification, the water master shall notify that Pueblo and any affected owners of record and other affected Pueblos whether the proposed actions are sufficient to offset any interference.

The Pueblo shall not implement the proposed action until the water master determines that the amount of the offset and the delivery method are sufficient to offset any interference.

C. The water master may work with the affected parties to resolve such matters either formally or informally and may discuss matters with one or more affected parties without the need to have all parties present.
